TABLE OF CONTENTS

2022 ODOT DISPARITY STUDY SUMMARY REPORT

Executive Summary	1
Introduction	2
Legal Framework.....	3
ODOT and Local Agency Procurement and the Federal DBE Program	7
Contract Data Examined	10
Utilization Analysis	14
Availability Analysis.....	20
Disparity Analysis	27
Further Exploration of Observed Disparities.....	32
Disparity Results from Other Statewide Studies.....	33
Information About Marketplace Conditions — Historical Context.....	34
Quantitative Information About Marketplace Conditions.....	42
Qualitative Information About Marketplace Conditions	47
Summary of Quantitative and Qualitative Analyses and Neutral Measures.....	55
Overall DBE Goal and Projections of Neutral Participation	68
Public Comment Process for the 2022 Disparity Study Report.....	77

APPENDIX A. DEFINITION OF TERMS.....A-1

APPENDIX B. ODOT CONTRACT DATA

Contract Data Sources	B-1
Analysis of Primary Type of Work Involved in Each Contract/Subcontract.....	B-4
Ownership of Utilized Firms	B-5

APPENDIX C. AVAILABILITY DATA COLLECTION

Survey Methods.....	C-1
NAICS Codes Included in the Survey.....	C-2
Development of Survey Instrument	C-5
Establishments Successfully Contacted	C-6
Establishments in the Availability Database	C-7
Analysis of Potential Non-Response Bias.....	C-8
Analysis of Other Potential Limitations	C-11
Availability Survey Instrument.....	C-13

APPENDIX D. ADDITIONAL UTILIZATION AND DISPARITY ANALYSES FOR ODOT CONTRACTS

Utilization Results	D-2
Bids and Proposals.....	D-8
Disparity Index.....	D-10
Statistical Significance of Results.....	D-11

Federal DBE Program M-12

Implementation of 2016 Study Recommendations M-17

APPENDIX N. STEP 2 ADJUSTMENT REFLECTING DISPARITIES IN BUSINESS OWNERSHIP RATES

Summary N-2

SUMMARY REPORT — Executive Summary

Oregon Department of Transportation (ODOT) receives funds from the U.S. Department of Transportation. It must operate the Federal Disadvantaged Business Enterprise (DBE) Program for its federally funded contracts.

Keen Independent Research LLC (Keen Independent) conducted a disparity study to help ODOT set its next three-year overall goal for DBE participation in its Federal Highway Administration (FHWA)-funded contracts and determine whether it needs to apply DBE contract goals to help it meet its overall DBE goal. The disparity study follows federal regulations and court decisions regarding DBE and other business assistance programs.

Utilization, Availability and Disparity Analyses

Keen Independent compared the utilization and availability of minority- and white woman-owned businesses (MBE/WBEs) in ODOT's FHWA-funded contracts and in its state-funded transportation contracts.

Utilization. About 19.5 percent of the dollars of ODOT's FHWA-funded contracts from October 2017 through September 2020 went to minority- and woman-owned businesses.

Availability. Keen Independent conducted a large survey of companies in Oregon and two counties in Washington state to determine the availability of MBE/WBEs and other firms for public sector contracts.

MBE/WBEs were 29 percent of the businesses indicating qualifications and interest in public sector contracts in this survey. Through a contract-by-contract analysis of MBE/WBEs and other firms available to perform specific types, sizes and locations of ODOT and local agency contracts and subcontracts, Keen Independent determined that 23.5 percent of ODOT's FHWA-funded contract dollars would go to minority- and woman-owned firms if there were a level playing field for those firms.

The study team calculated similar “dollar-weighted” availability benchmarks to perform disparity analyses for specific sets of contracts and to help ODOT determine its new overall DBE goal.

Disparity analysis. Utilization of MBE/WBEs (19.5%) was less than what would be expected based on the dollar-weighted availability of firms qualified and interested in performing ODOT contracts and subcontracts (23.5%).

There was a large disparity for FHWA-funded contracts where ODOT did not set a DBE contract goal (7.6% utilization compared with 20.1% MBE/WBE availability). For those contracts, there were substantial disparities between the utilization and availability of African American-, Asian-Pacific American-, Subcontinent Asian American-, Hispanic American-, Native American- and white woman-owned firms. When examining state-funded contracts, there was also a substantial disparity between the utilization of MBE/WBEs (15.2%) and availability (28.8%).

Marketplace Conditions

There is considerable quantitative and qualitative evidence that there is not a level playing field for people of color and women, and for minority- and woman-owned firms, in the Oregon marketplace.

Overall DBE Goal

ODOT is required to set an overall three-year goal for DBE participation in its FHWA-funded transportation contracts. Federal regulations govern how these goals are determined. For ODOT's consideration, the study team calculated a goal of at least 18.23 percent for DBE participation in ODOT's FHWA-funded contracts for FFY2023 through FFY2025, higher than its current 15.40 percent DBE goal. ODOT must decide whether it will continue to use DBE contract goals to achieve its overall DBE goal, with all DBE groups continuing to be eligible to meet a contract goal. Study results support continuing contract goals, for all DBE groups.

SUMMARY REPORT — Introduction

Agencies that receive federal funds from the U.S. Department of Transportation must operate the Federal Disadvantaged Business Enterprise (DBE) Program. The Program requires each agency to set an overall three-year goal for DBE participation in its federally funded contracts and to use race- and gender-neutral measures and, if necessary, DBE contract goals to meet that overall DBE goal.

For federal fiscal years (FFY) 2020 through 2022, ODOT has an overall goal of 15.40 percent for participation of DBEs in its contracts funded by the Federal Highway Administration. To help it achieve this level of DBE participation, ODOT sets goals for the utilization of DBEs on many of its individual FHWA-funded contracts. Bidders on those contracts must either meet the goal ODOT has set for the contract or make good faith efforts to do so. ODOT also makes race- and gender-neutral efforts to encourage participation of DBEs in its contracts.

2022 Disparity Study

ODOT retained Keen Independent Research LLC (Keen Independent) to perform its 2016 disparity study and its 2019 availability study to help it set overall annual goals and to improve how it operated the Federal DBE Program. ODOT solicited proposals and selected Keen Independent to perform the 2022 study.

The disparity study is based on relevant case law, including the Ninth Circuit decisions that favorably reviewed the study team's methodology for measuring availability, analyzing disparity, and collecting and analyzing qualitative information.

In addition to providing information for ODOT's next overall three-year DBE goal for FHWA-funded contracts, the study helps ODOT determine whether it needs to continue to apply DBE contract goals to meet its overall DBE goal.

Research methods. The study included:

- A survey of firms available to perform work on public sector transportation contracts in Oregon.
- Analysis of prime contractors and subcontractors on past FHWA-funded and state-funded contracts.
- Disparity analyses that compare participation of minority- and woman-owned firms on ODOT contracts with what would be expected from the availability analysis.
- In-depth interviews with businesses, trade association representatives and other interested individuals.
- Additional input from the study website, mail and designated telephone hotline and email address.

Study team. Local subconsultants, Donaldson Consulting and HDR, participated with Keen Independent in this study. Ms. Donaldson and Stacy Thomas (now with HDR) participated in the 2016 disparity study. The firm Holland & Knight and the survey firm Customer Research International (CRI) also assisted in the study.

Public input. The 2022 ODOT Disparity Study started in September 2021 with a draft report delivered in May 2022.

Through surveys, interviews, public meetings and other research, the study team obtained comments from more than 315 businesses, trade organizations and other groups over the course of the study. The study team successfully contacted 4,144 businesses in the availability survey.

An External Stakeholder Group of business and community representatives participated in this effort from October 2021 through June 2022.

SUMMARY REPORT — Legal framework

The legal framework for this disparity study is based on regulations for the Federal DBE Program, Official USDOT Guidance and other sources including court decisions related to the Federal DBE Program and minority- and woman-owned business enterprise programs. (Appendix A provides definitions of terms used in this study.)

History of U.S. Supreme Court and Other Cases

ODOT has been operating some version of the Federal DBE Program since the early 1980s. Several legal developments changed how ODOT implements the Program.

- The 1989 U.S. Supreme Court decision in *City of Richmond v. J.A. Croson Company* established the strict scrutiny standard of review for race-conscious programs adopted by state and local governments¹ and its 2005 decision in *Adarand Constructors, Inc. v. Peña* established the same standard of review for federal race-conscious programs.²

The study team discusses the strict scrutiny standard on the following page and in detail in Appendix L of this report.

- The Federal DBE Program has been held to be constitutional “on its face” in subsequent legal challenges, but a court may still find that an agency implementing the program fails to meet the strict scrutiny legal standard in its implementation of the Program (see Appendix L).

¹ *City of Richmond v. J.A. Croson Company*, 488 U.S. 469 (1989).

² *Adarand Constructors, Inc. v. Peña*, 515 U.S. 200 (1995).

³ *Western States Paving Co. v. Washington State DOT*, 407 F.3d 983 (9th Cir. 2005), cert. denied, 546 U.S. 1170 (2006).

- In 2005, Western States Paving Company successfully challenged Washington State Department of Transportation’s implementation of the Federal DBE Program. The U.S. Ninth Circuit Court of Appeals decision in *Western States Paving*³ affected agencies operating the Federal DBE Program located in the Ninth Circuit (including agencies in Oregon).
- Public agencies in the Ninth Circuit, including ODOT, adjusted implementation of the Federal DBE Program to comply with the *Western States Paving* case and Official USDOT Guidance⁴ issued in response to the decision.
- Some agencies in the Ninth Circuit, including ODOT, reinstated use of DBE contract goals after completing disparity studies.
- When the California Department of Transportation (Caltrans) returned to using DBE contract goals, after it completed a disparity study, its operation of the DBE Program was challenged in court. In 2013, the Ninth Circuit Court of Appeals held in *AGC, San Diego Chapter v. California DOT*⁵ that Caltrans’ implementation of the Federal DBE Program was valid and complied with its decision in *Western States Paving*.

David Keen of Keen Independent Research led the disparity study used to defend Caltrans’ implementation of the program and testified as an expert witness in that case. The methodology for the 2022 ODOT study is based on the methodology reviewed and approved by the Ninth Circuit.

⁴ USDOT Guidance, available at http://www.fhwa.dot.gov/civilrights/dbe_memo_a5.htm (January 2006).

⁵ *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation, et al.*, 713 F. 3d 1187 (9th Cir. 2013).

SUMMARY REPORT — Legal framework

Strict Scrutiny Standard of Review

Different legal standards apply for judicial review of programs that are race- and gender-conscious and equity programs that have no race or gender component.

In *City of Richmond v. J.A. Croson Company*, the U.S. Supreme Court established that government contracting programs with race-conscious measures must satisfy the strict scrutiny standard of constitutional review. As described in detail in Appendix L, the strict scrutiny standard is very difficult for a government entity to meet.

Under the strict scrutiny standard, a governmental entity must have a strong basis in evidence that:

- There is a *compelling governmental interest* in remedying specific past identified discrimination or its present effects; and
- Any program adopted is *narrowly tailored* to remedy the identified discrimination. There are a number of factors a court considers when determining whether a program is narrowly tailored (see Appendix L).

A government agency must satisfy both components of the strict scrutiny standard. A race-conscious program that fails to meet either one is unconstitutional.

1. U.S. Supreme Court in 1989 that ruled in *City of Richmond v. J.A. Croson Co.*

SUMMARY REPORT — Legal framework

Intermediate Scrutiny for Gender-Based Programs

Certain Federal Courts of Appeal, including the Ninth Circuit Court of Appeals, apply the “intermediate scrutiny” standard to gender-conscious programs. It is more easily met than strict scrutiny.

The courts have interpreted this intermediate scrutiny standard to require that gender-based classifications be:

- Supported by both “sufficient probative” evidence or “exceedingly persuasive justification” in support of the stated rationale for the program; and
- Substantially related to the achievement of that underlying objective.⁶

Intermediate scrutiny, as interpreted by the Ninth Circuit and other federal circuit courts of appeal, requires a direct, substantial relationship between the objective of the gender preference and the means chosen to accomplish the objective. The measure of evidence required to satisfy intermediate scrutiny is less than that necessary to satisfy strict scrutiny. Unlike strict scrutiny, it has been held that the intermediate scrutiny standard does not require a showing of government involvement, active or passive, in the discrimination it seeks to remedy.⁷ (See Appendix L for additional information.)

⁶ See e.g., *AGC, SDC v. Caltrans*, 713 F.3d at 1195; *H. B. Rowe, Inc. v. NCDOT*, 615 F.3d 233, 242 (4th Cir. 2010); *Western States Paving*, 407 F.3d at 990 n. 6; *Coral Constr. Co.*, 941 F.2d at 931-932 (9th Cir. 1991); *Equal. Found. v. City of Cincinnati*, 128 F.3d 289 (6th Cir. 1997); *Eng’g Contractors Ass’n*, 122 F.3d at 905, 908, 910; *Ensley Branch N.A.A.C.P.*

v. Seibels, 31 F.3d 1548 (11th Cir. 1994); *Contractors Ass’n of E. Pa. v. City of Philadelphia*, 6 F.3d at 1009-1011 (3d Cir. 1993); see also, *U.S. v. Virginia*, 518 U.S. 515, 532 and n. 6 (1996)(“exceedingly persuasive justification.”)

⁷ *Coral Constr. Co.*, 941 F.2d at 931-932; see *Eng’g Contractors Ass’n*, 122 F.3d at 910.

SUMMARY REPORT — Legal framework

Rational Basis Standard for Small Business Programs

Small business programs and other race- and gender-neutral efforts are not subject to strict scrutiny or intermediate scrutiny standards of legal review. They can be challenged in court but are more easily defended.

- Where a challenge to the constitutionality of a statute or a regulation does not involve a fundamental right or a suspect class, the appropriate level of scrutiny to apply is the rational basis standard.
- When applying rational basis review under the Equal Protection Clause of the Fourteenth Amendment of the United States Constitution, a court is required to inquire “whether the challenged classification has a legitimate purpose and whether it was reasonable [for the legislature] to believe that use of the challenged classification would promote that purpose.”⁸

Courts applying the rational basis test generally find that a challenged law is upheld “as long as there could be some rational basis for enacting [it],” that is, that “the law in question is rationally related to a legitimate government purpose.”⁹

So long as a government legislature had a reasonable basis for adopting the classification the law will pass constitutional muster.¹⁰

⁸ See, e.g., *Heller v. Doe*, 509 U.S. 312, 320 (1993); *Cunningham v. Beavers* 858 F.2d 269, 273 (5th Cir. 1988); see also *Lundeen v. Canadian Pac. R. Co.*, 532 F.3d 682, 689 (8th Cir. 2008) (stating that federal courts review legislation regulating economic and business affairs under a ‘highly deferential rational basis’ standard of review).

⁹ See, e.g., *Kadrmas v. Dickinson Public Schools*, 487 U.S. 450, 457-58 (1998); *Crawford v. Antonio B. Won Pat International Airport Authority*, 917 F.3d 1081, 1095-1096 (9th Cir. 2019); *Gallinger v. Becerra*, 898 F.3d 1012, 1016-1018 (9th Cir. 2018); *Price-Cornelison v. Brooks*, 524 F.3d 1103, 1110 (10th Cir. 1996); *White v. Colorado*, 157 F.3d 1226, (10th Cir. 1998) see also *City of Cleburne v. Cleburne Living Ctr., Inc.*, 473 U.S. 432, 440, (1985) (citations omitted); *Heller v. Doe*, 509 U.S. 312, 318-321 (1993) (Under rational basis standard, a legislative classification is accorded a strong presumption of validity); see, e.g., *Sherman v. Department of Revenue*, 335 Or. 468, 71 P.3d 67 (Or. S. Ct. 2003);

Knapp v. City of Jacksonville, 342 Or. 268, 151 P.3d 143 (Or. S. Ct. 2007); *Qwest Corp. v. Public Utility Comm’n*, 205 Or. App. 370, 135 P.3d 321 (Or. App. 2006); *Kane v. Beaverton*, 202 Or. App. 431, 122 P.3d 137 (Or. App. 2005).

Beaverton*, 202 Or. App. 431, 122 P.3d 137 (Or. App. 2005).

SUMMARY REPORT — ODOT and Local Agency Procurement and the Federal DBE Program

Public Sector Procurement in Oregon

The State Public Contracting Code requires public agencies to follow specific guidelines when procuring construction, goods or services. Also, Oregon operates an Emerging Small Business (ESB) program that reserves bidding on certain small state-funded contracts to ESBs.

Figure 2 summarizes requirements for ODOT. Most of the cities and counties Keen Independent reviewed in the procurement analysis use procurement processes similar to what is summarized below.

2. ODOT procurement practices

	Construction (public improvements)	Goods and services (and non-A&E-related prof. services)	A&E, photogrammetric mapping, transportation planning, land surveying	Other services related to A&E
Bidding thresholds				
Requiring competitive sealed bids/proposals	Above \$100,000	Above \$150,000	Above \$250,000	Above \$250,000
Intermediate procurements	\$5,001–\$100,000	\$10,001–\$150,000	\$100,001–\$250,000	\$100,001–\$250,000
Small procurements ("direct appointment" for A&E)	\$5,000 or below	\$10,000 or below	\$100,000 or below	\$100,000 or below
Bidding requirements				
Competitive sealed bids/proposals	Public advertising	Public advertising	Public advertising	Public advertising
Intermediate procurements	Solicitation of at least 3 firms for quotes (internal policy)	Solicitation of at least 3 firms for quotes or proposals	Solicitation of at least 3 firms for proposals	Solicitation of at least 3 firms for proposals
Small procurements	No bidding required	No bidding required	No bidding required	No bidding required
Means of public advertising	Local newspaper and/or electronic and (if \$125,000+) a statewide trade publication	Local newspaper and/or electronic	Local newspaper and/or electronic	Local newspaper and/or electronic
Basis for award				
Competitive sealed bids	Lowest responsible bidder	Lowest responsible bidder whose bid substantially complies with requirements		
Competitive sealed proposals	Responsive proposer with the best responsive proposal	Qualifications, price and other factors	Qualifications, price and other factors	Qualifications, price and other factors
Intermediate procurements	Offer that will best serve the interests of the contracting agency	Offer that will best serve the interests of the contracting agency	Qualifications, price and other factors	Qualifications, price and other factors
Small procurements	No bidding required	No bidding required	No bidding required	No bidding required
Other				
Payment and performance bonds	100% (if \$100,000+)			

SUMMARY REPORT — ODOT and Local Agency Procurement and the Federal DBE Program

Federal DBE Program

Regulations in 49 Code of Federal Regulations (CFR) Part 26 govern how agencies implement the Federal DBE Program. Three important requirements are:

- Setting overall goals for DBE participation. (49 CFR Section 26.45)
- Meeting the maximum feasible portion of the overall DBE goal through race- and gender-neutral means. (49 CFR Section 26.51)
 - Race- and gender-neutral measures include promoting the participation of small or emerging businesses.¹¹
 - If an agency can meet its overall DBE goal solely through race- and gender-neutral means, it must not use race- and gender-conscious measures when implementing the Federal DBE Program.
- Appropriate use of race- and gender-conscious measures, such as contract-specific DBE goals. (49 CFR Section 26.51)
 - Because these measures are based on the race or gender of business owners, use of these measures must satisfy standards in order to be legally valid.

- Measures such as DBE quotas are prohibited; DBE set-asides may only be used in limited and extreme circumstances (49 CFR Section 26.43).
- Some agencies restrict eligibility to participate in DBE contract goals programs to certain racial, ethnic and gender groups based on pertinent evidence of discrimination for those groups.

Based on these requirements, agencies receiving USDOT funds set overall goals for DBE participation and use race-neutral measures to encourage DBE participation. Some public agencies, including many state departments of transportation, also use race- and gender-conscious measures such as DBE contract goals to help meet their overall DBE goals.

Note that to be certified as a DBE for participation in the Program, a firm must be socially and economically disadvantaged as defined in 49 CFR Part 26. Revenue limits, personal net worth limits and other restrictions apply. Most DBEs are minority- or woman-owned firms, but white male-owned firms that can demonstrate social and economic disadvantage can be certified as DBEs as well.

The Certification Office for Business Inclusion and Diversity (COBID) is the agency in Oregon that reviews and approves applications to be a DBE in Oregon (see Appendix M of this report for more explanation).

¹¹ Note that all use of the term “race- and gender-neutral” refers to “race-, ethnic- and gender-neutral” in this report.

SUMMARY REPORT — ODOT and Local Agency Procurement and the Federal DBE Program

USDOT Guidance

The USDOT instructs that agencies should ascertain evidence for discrimination and its effects separately for each group presumed to be disadvantaged in 49 CFR Part 26.¹² The USDOT suggests consideration of both statistical and anecdotal evidence. The USDOT's Guidance provides that recipients should consider evidence of discrimination and its effects.¹³

The USDOT's Guidance is recognized by the federal regulations as "valid, and express the official positions and views of the Department of Transportation"¹⁴ for state and local governments in the Ninth Circuit.

Some agencies limit participation in DBE contract goals to those DBE groups for which there is sufficient evidence of discrimination in the transportation contracting industry in their market area (sometimes called "underutilized DBE" or "UDBE" contract goals programs). Implementation of such contract goals programs requires approval of a waiver from USDOT.¹⁵

¹² Questions and Answers Concerning Response to *Western States Paving Company v. Washington State Department of Transportation* (January 2006) [hereinafter USDOT Guidance], available at 71 Fed. Reg. 14,775; see 49 CFR Section 26.9; see, also, 49 CFR Section 26.45.

Current ODOT Operation of the Federal DBE Program

ODOT has been operating some version of the Federal DBE Program since the 1980s.

Overall DBE goal for FFY2020–FFY2022. ODOT established an overall triennial DBE goal for FFY2020 through FFY2022 of 15.37 percent DBE participation in its FHWA-funded contracts. ODOT is attempting to meet that goal through race-neutral means as well as DBE contract goals.

Race-neutral measures. Race-neutral measures implemented by ODOT include the following:

- Outreach and networking;
- Distribution of information about bid opportunities;
- Supportive services to small businesses, including education and training;
- Requirements for prompt payment (primes and subs); and
- Ability to limit bidding to ESBs for state-funded construction contracts up to \$250,000.

Appendix M describes additional measures, including how ODOT has responded to Keen Independent recommendations in the 2016 study.

DBE contract goals. ODOT sets goals for some of its FHWA-funded contracts to help it achieve its overall DBE goal. Appendix M describes operation of the DBE contract goals program element.

¹⁴ *Id.*, 49 CFR Section 26.9; See, 49 CFR Section 23.13.

¹⁵ 49 CFR Section 26.15.

SUMMARY REPORT — Contract data examined

Contract and Subcontract Data

ODOT provided Keen Independent data for state- and FHWA-funded transportation-related contracts awarded from Federal Fiscal Year 2018 through Federal Fiscal Year 2020 (October 1, 2017, through September 30, 2020). The 2022 Disparity Study also included local agency contracts that use ODOT-administered funds.

In total, Keen Independent examined 1,334 prime contracts and 3,017 subcontracts. (This does not include purchases primarily made from a national market.) Figure 3 presents the number and dollar value of contracts in FHWA- and state-funded contracts. Appendix B describes the methods used to compile and analyze these data.

The final Keen Independent database of contracts totaled \$1.5 billion for FFY2018–FFY2020 (the three-year study period).

3. Number and dollars of ODOT and local agency transportation contracts and subcontracts, FFY2018–FFY2020

	ODOT	Local agency	Total
Number of contracts and subcontracts			
FHWA-funded	3,071	495	3,566
State-funded	785	0	785
Total	3,856	495	4,351
Dollars (by millions)			
FHWA-funded	\$ 1,222	\$ 108	\$ 1,330
State-funded	174	0	174
Total	\$ 1,396	\$ 108	\$ 1,504

Source: Keen Independent Research from ODOT procurement data.

Types of Work in ODOT Contracts

Based on information in the contract and subcontract records, Keen Independent coded the primary type of work involved in each prime contract and subcontract using NAICS codes (North American Industry Classification System codes), augmented to show additional subspecialties. NAICS codes are standardized federal system for classifying firms into a subindustry according to the detailed type of work they perform.

To augment the NAICS codes for certain highly specialized types of work, Keen Independent also used 8-digit codes Standard Industrial Classification (SIC) codes. Specialties such as “striping or pavement marking” and “concrete flatwork” were coded through this method.

Figure 4 shows ODOT dollars of prime contracts and subcontracts, by funding source and according to the primary type of work performed. Thirty-three different types of work accounted for about 97 percent of the total FHWA-funded contract dollars. The largest category of construction spending was engineering. The availability analysis described beginning on page 20 focused on these 33 subindustries.

SUMMARY REPORT — Contract data examined

4. Dollars of ODOT and local agency FHWA- and state-funded transportation contracts and subcontracts by subindustry, FFY2018–FFY2020

Type of work	FHWA-funded		State-funded		Combined	
	Dollars (1,000s)	Percent	Dollars (1,000s)	Percent	Dollars (1,000s)	Percent
Engineering	\$ 189,732	14.26 %	\$ 13,985	8.04 %	\$ 203,717	13.54 %

SUMMARY REPORT — Contract data examined

Firms with locations in Oregon and the two counties in southwest Washington (Clark and Skamania counties) performed most of the dollars of the FHWA- and state-funded contracts and subcontracts.

- The “geographic market area” for ODOT contracts extends beyond Oregon to include Clark and Skamania counties in Washington state (see Figure 5).
- As shown in Figure 6, businesses in Oregon and the two Washington counties account for 84 percent of FHWA- and state-funded transportation contract dollars from October 2017 through September 2020 (after exclusion of purchases typically made from national markets).
- Keen Independent’s availability analysis and research on the local marketplace focused on this geographic area.

5. Geographic market area for ODOT transportation contracts

6. Percentage of ODOT and local agency transportation contract dollars going to firms with locations in Oregon and two Washington counties, FFY2018–FFY2020

Source: Keen Independent Research from ODOT contract data.

SUMMARY REPORT — Utilization analysis

Keen Independent examined the ownership of firms performing ODOT and local agency FHWA- and state-funded contracts awarded from October 1, 2017, through September 30, 2020.

FHWA-Funded Contracts

All FHWA-funded contracts. Of the \$1.3 billion in FHWA-funded contract dollars, about 21 percent went to minority- and woman-owned companies. (Unless otherwise specified, each of the tables showing utilization results combines ODOT and local government contracts.)

Participation of MBE/WBEs included:

- A total of \$34.7 million (in 94 contracts and subcontracts) going to 29 different Hispanic American-owned businesses;
- \$30.5 million to 12 Native American-owned firms;
- \$30.0 million to 29 African American American-owned firms;
- \$16.5 million to 13 Asian-Pacific American-owned firms;
- \$14.0 million to seven Subcontinent Asian American-owned businesses; and
- \$133 million (695 contracts and subcontracts) to 117 different white woman-owned companies.

Of the \$259 million of contract dollars awarded to MBE/WBEs, \$199 million went to firms certified as DBEs, with the balance going to non-certified firms (see the bottom portion of Figure 7). Keen Independent’s estimate of DBE participation on FHWA-funded contracts during the study period is comparable to the overall DBE participation that ODOT reported to FHWA for those federal fiscal years.

Appendix B describes the methods Keen Independent used to identify the ownership of companies performing ODOT contracts and subcontracts.

7. Dollars of ODOT FHWA-funded contracts going to MBEs, WBEs and other firms, FFY2018–FFY2020

	Number of procurements	Dollars (1,000s)	Percent of dollars
Business ownership

Total	3,566	\$ 1,330,439	100.00 %

Source: Keen Independent Research from ODOT procurement data.

SUMMARY REPORT — Utilization analysis

FHWA-funded contracts with DBE contract goals. Figure 8 provides MBE/WBE utilization for FHWA-funded contracts with DBE goals.

White woman-owned firms (11.0%) accounted for most of the total participation of MBE/WBEs on FHWA-funded contracts without goals.

In total, 22.5 percent of ODOT contract dollars went to minority and woman-owned firms.

As with the other utilization tables, the bottom portion of Figure 8 examines dollars going to different groups based on whether they were certified as DBEs. As shown, DBEs received 17.9 percent of ODOT contract dollars when DBE contract goals were applied, which was higher than the participation of DBEs for all FHWA-funded contracts (15%) reported in Figure 7.

8. Dollars of ODOT FHWA-funded contracts with DBE contract goals going to MBEs, WBEs and other firms, FFY2018–FFY2020

	Number of procurements	Dollars (1,000s)	Percent of dollars

SUMMARY REPORT — Utilization analysis

FHWA-contracts without DBE goals. ODOT did not set DBE contract goals on FHWA-funded contracts under \$1 million. There were also some FHWA-funded contracts above \$1 million that did not have goals.

Figure 9 provides MBE/WBE utilization for FHWA-funded contracts without DBE goals.

In total, 7.6 percent of the dollars on ODOT FHWA-funded contracts without DBE contract goals went to minority and woman-owned firms, considerably less than for FHWA-funded contracts with contract goals.

This MBE/WBE participation was split between firms certified as DBEs (3.5 percentage points) and firms that were not DBE-certified (4.1 percentage points).

9. Dollars of ODOT FHWA-funded contracts without DBE contract goals going to MBEs, WBEs and other firms, FFY2018–FFY2020

SUMMARY REPORT — Utilization analysis

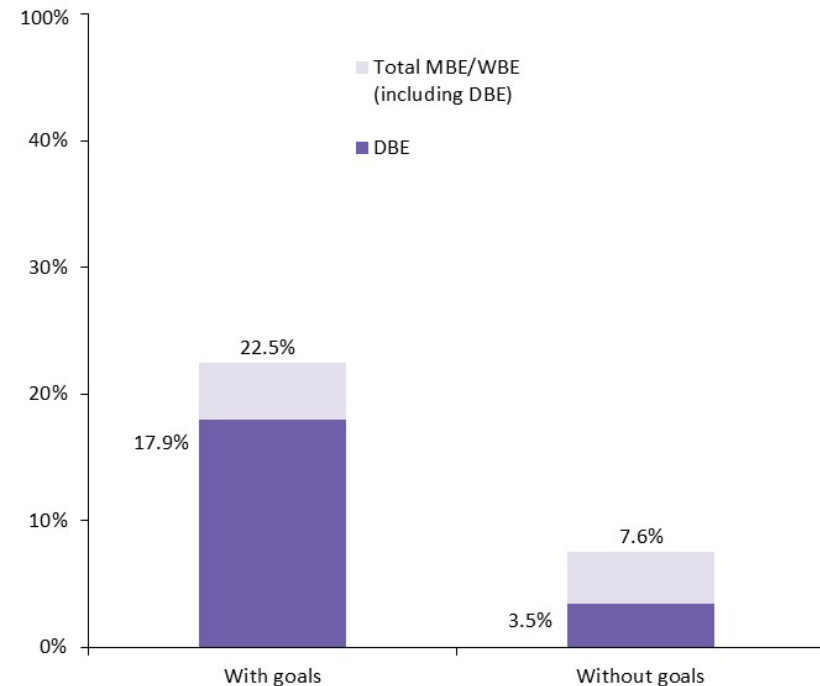

Summary of MBE/WBE utilization on FHWA-funded contracts.

Figure 10 compares the utilization of minority- and woman-owned companies on FHWA-funded contracts with and without DBE contract goals.

- The portion of each bar in dark purple represents the share of total contract dollars going to firms certified as DBEs (e.g., 3.5% for contracts without goals).
- The lighter portion of each bar is utilization of minority- and woman-owned firms not certified as DBEs (4.1% for contracts without goals). Note that the numerical percentages are not written out for this participation of non-certified firms.
- The numeral at the top of each bar shows total MBE/WBE participation for firms that were and were not DBE-certified (e.g., 7.6% for contracts without goals).

Figure 10 demonstrates that the share of FHWA-funded contract dollars going to MBE/WBEs was much lower on FHWA-funded contracts without goals (7.6%) than contracts with goals (22.5%).

10. Comparison of MBE/WBE utilization on ODOT FHWA-funded contracts with and without DBE contract goals, FFY2018–FFY2020

Source: Keen Independent Research from ODOT procurement data.

SUMMARY REPORT — Utilization analysis

State-Funded Contracts

Keen Independent examined \$174 million of state-funded transportation contracts for FFY2018 through FFY2020.

ODOT did not set DBE contract goals on any of these contracts, but the State’s Emerging Small Business (ESB) program applied to some of these contracts. The top portion of Figure 11 shows the number, dollars and share of dollars of state-funded contracts going to MBE/WBEs. The bottom portion examines utilization of firms certified as DBEs compared with firms that were not DBE-certified.

All of these state-funded contracts were awarded by ODOT (there were no local agency contracts in these data).

MBE/WBE utilization. Participation of MBE/WBEs included:

- \$8.6 million going to 13 Hispanic American-owned businesses;
- \$5.6 million going to three Native American-owned firms;
- \$2.8 million to five Subcontinent Asian American-owned businesses;
- \$2.2 million to six Asian-Pacific American-owned; and
- No contracts or subcontracts awarded to firms identified as African American-owned.

White woman-owned businesses received \$6.9 million or about 4.0 percent of state-funded contract dollars. There were 38 different white woman-owned companies that received 89 state-funded prime contracts or subcontracts during the study period.

DBE utilization. Of the \$26.6 million of state-funded contract dollars awarded to MBE/WBEs, \$16.0 million went to firms that were certified as DBEs (shown in the bottom of Figure 9).

11. Dollars of ODOT state-funded contracts going to MBEs, WBEs and other firms, FFY2018–FFY2020

	Number of procurements	Dollars (1,000s)	Percent of dollars
Business ownership			
African American-owned	0	\$ 0	0.00 %
Asian-Pacific American-owned	6	2,230	1.28
Subcontinent Asian American-owned	8	2,805	1.61
Hispanic American-owned	33	8,594	4.94
Native American-owned	15	5,557	3.19
Total MBE	62	\$ 19,186	11.03 %
WBE (white woman-owned)	89	6,915	3.97
Total MBE/WBE	151	\$ 26,101	15.00 %

Non-DBE	723	157,998	90.80
Total	785	\$ 174,012	100.00 %

Source: Keen Independent Research from ODOT procurement data.

SUMMARY REPORT — Utilization analysis

ESB utilization. Keen Independent also identified firms receiving state-funded contracts that were certified as Emerging Small Businesses (ESBs). Figure 12 presents these results.

Participation of MBEs included:

- \$1.1 million going to two Native American-owned businesses;
- \$0.5 million going to six Hispanic American American-owned firms;
- \$0.1 million to two Asian Pacific American-owned businesses; and
- No contracts or subcontracts awarded to firms identified as African American or Subcontinent Asian American-owned.

White woman-owned businesses received \$2.4 million or 1.4 percent of state-funded contract dollars. There were 17 different white woman-owned companies that received 51 state-funded prime contracts or subcontracts during the study period.

White male-owned firms obtained \$15.2 million or 8.7 percent of state-funded contracts. Fifty-four white male-owned firms received 210 prime contracts or subcontracts.

During the study period, the ESB program can be applied to state-funded contracts of less than \$100,000.

12. Dollars of state-funded contracts going to ESBS and other firms, FFY2018–FFY2020

	Number of procurements	Dollars (1,000s)	Percent of dollars
ESB-certified firms			
African American-owned	0	\$ 0	0.00 %
Asian-Pacific American-owned	2	152	0.09

SUMMARY REPORT — Availability analysis

Keen Independent performed a survey of available firms to provide data for the benchmark used in the disparity analysis and when preparing a new overall goal for DBE participation in ODOT contracts. The study team contacted businesses in the geographic market area to identify companies indicating they were qualified and interested (ready, willing and able) to work on ODOT transportation contracts and subcontracts. The survey asked about the types of work performed, ability to work in a specific location, size of contracts bid and the race, ethnicity and gender ownership of the firm. Figure 13 provides an overview of the steps.

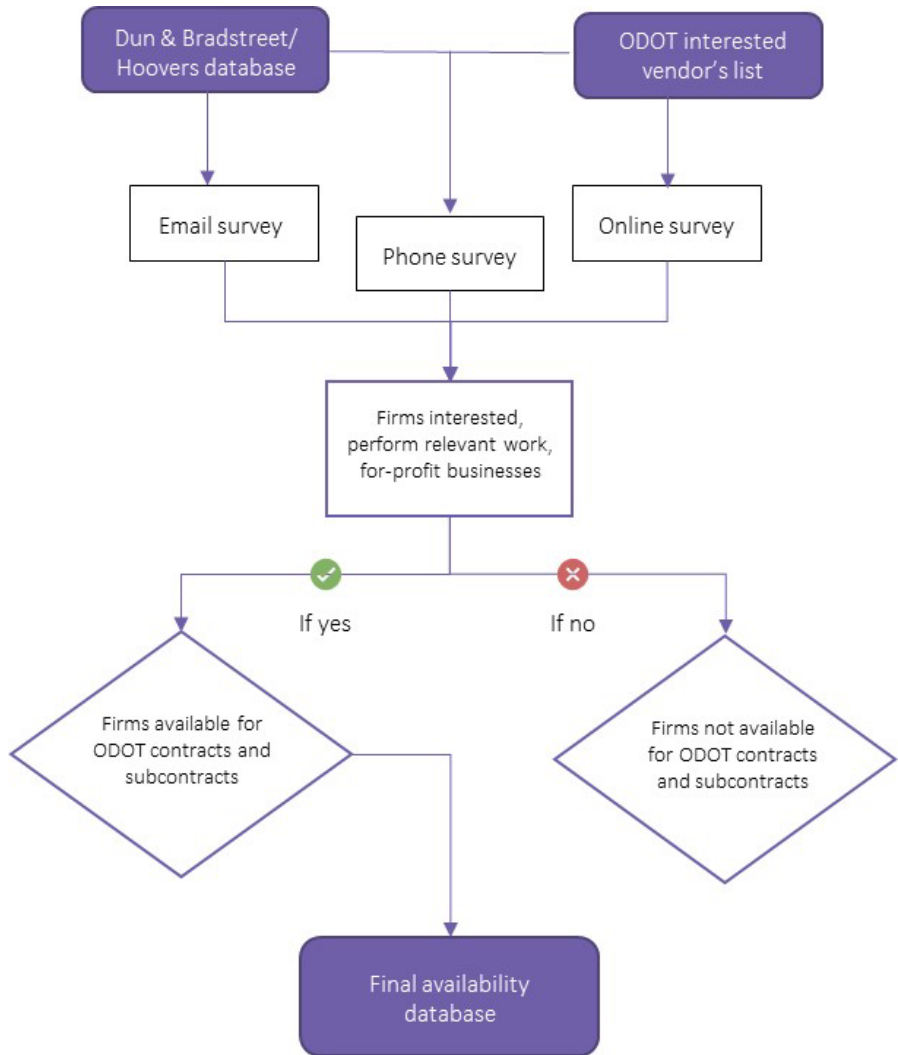

Methodology

List of firms to be surveyed. In addition to an ODOT list of firms interested in bidding on its contracts, Keen Independent compiled the list of firms to be contacted in the availability survey from the Dun & Bradstreet (D&B) Hoover’s business establishment database. Use of D&B information has been accepted and approved in connection with disparity study methodology. The study team obtained listings for companies that D&B identified as:

- Having a location in Oregon or in two counties in Washington State (Clark and Skamania); and
- Performing work or providing goods the study team determined were potentially related to ODOT transportation contracts and subcontracts.

More than 13,000 business establishments were on this initial list. Only some of the firms were determined to be qualified and interested in ODOT contracts, as described below. (Appendix C provides additional information.)

13. Keen Independent ODOT availability survey process

SUMMARY REPORT — Availability analysis

Availability surveys. The study team conducted telephone surveys with business owners and managers of businesses on the D&B list. Customer Research International (CRI) performed the surveys under Keen Independent’s direction. Surveys were conducted between December 2021 and January 2022.

CRI used the following steps to complete telephone surveys with business establishments.

- CRI contacted firms by telephone.¹⁶ There were 9,711 business establishments called that had working phone numbers for the correct business.
- Interviewers indicated that the calls were made on behalf of Oregon Department of Transportation to gather information about companies interested in performing work for ODOT or to other cities and counties in Oregon.
- Some firms indicated in the phone calls that they did not perform relevant work or had no interest in work with ODOT or other cities and counties in Oregon, so no further survey questions were necessary. (Such surveys were treated as complete at that point.)
- When a business was unable to conduct the interview in English, the study team called back with a bilingual interviewer (English/Spanish) to collect basic information about the company. Keen Independent then followed up with these firms with a bilingual interviewer to offer the option of filling out a written version of the full survey (in English).
- Up to eight phone calls were made at different times of day and different days of the week to attempt to reach each company.

¹⁶ The study team offered business representatives the option of completing surveys via fax or email if they preferred not to complete surveys via telephone. Businesses were also able to complete the survey on the study website.

SUMMARY REPORT — Availability analysis

Information collected. Survey questions covered topics including:

- Status as a private business (as opposed to a public agency or not-for-profit organization);
- Status as a subsidiary or branch of another company;
- Types of work performed or goods supplied;
- Qualifications and interest in performing work or supplying goods for ODOT or other public agencies;
- Qualifications and interest in performing work as a prime contractor or as a subcontractor;
- Largest prime contract or subcontract bid on or performed in the previous five years;
- Regions in Oregon where the company can perform work;
- Year of establishment; and
- Race/ethnicity and gender of firm owners.

Screening of firms for the availability database. Keen Independent considered businesses to be potentially available for ODOT contracts or subcontracts if they reported possessing all of the following characteristics:

- Were a private business;
- Were able to do work in an Oregon region (Portland/Hood River, Northwest, Southwest, Central and Eastern); and
- Reported qualifications and interest in work with ODOT and whether they were interested in prime contracts or subcontracts or both.

SUMMARY REPORT — Availability analysis

Availability Survey Results

The study team successfully contacted 4,144 businesses in this survey, or 43 percent of the 11,026 firms that were called that had working phone numbers. Most of these businesses indicated that they were not interested in ODOT work. There were 724 businesses in the final database of companies indicating qualifications and interest in ODOT contracts or subcontract.

- About 13.5 percent of firms in the market area available for ODOT transportation contracts were owned by people of color and 15.6 percent were owned by white women. In total, MBE/WBEs accounted for about 29 percent of available firms.
- “Majority-owned firms” are companies that are not MBE/WBEs. They comprised 71 percent of the firms available for ODOT contracts.
- Only some of these MBE/WBE firms were certified as DBEs under the Federal DBE Program. Of the total available firms, 24 percentage points were MBE/WBEs that were not DBE-certified and 5 percentage points were DBE-certified.

Appendix C provides information about availability survey response rates, confidence intervals and analysis of any differences in response rates between groups.

Figure 14 presents the number of businesses included in the availability database for each racial/ethnic group. Results for the 2022 survey are very similar to the 2019 and 2016 studies, with the exception of African American-owned firms, which comprised a larger share of available firms in 2022.

14. Number of businesses included in the availability database, 2021

Race/ethnicity and gender	2022 Study		2019 Study	2016 Study
	Number of firms	Percent of firms	Percent of firms	Percent of firms

SUMMARY REPORT — Availability analysis

Methodology for Developing Dollar-Weighted Availability Benchmarks

Although MBE/WBEs comprise a large share of total firms available for ODOT contracts, there are industry specializations in which there are relatively few minority- and woman-owned firms. Also, Keen Independent found that minority-owned firms were less likely than other companies to be available for the largest ODOT FHWA-funded contracts (see discussion of bid capacity in Appendix H).

Keen Independent conducted a contract-by-contract availability analysis based on the specific types and sizes of ODOT contracts and subcontracts from October 1, 2017, through September 30, 2020, and dollar-weighted those results.

- The study team used the availability database developed in this study, including information about the type of work a firm performed, ability to do work in a geographic location, the size of contracts or subcontracts it bid, and the race, ethnicity and gender of its ownership.
- To determine availability for a contract or subcontract, Keen Independent first identified and counted the firms indicating that they performed that type of work of that size.
- The study team then calculated the MBE and WBE share of firms available for that contract (by group).

Once availability had been determined for every ODOT contract and subcontract, Keen Independent weighted the availability results based on the share of total ODOT contract dollars that each contract represented.

Figure 15 provides an example of this dollar-weighted analysis. Appendix C further discusses these methods.

15. Example of an availability calculation for an ODOT subcontract

One of the subcontracts examined was for temporary traffic control site (\$12,689) on a 2020 contract in Northwest Oregon. To determine the number of MBE/WBEs and majority-owned firms available for that subcontract, the study team identified businesses in the availability database that:

- Were in business in 2020;
- Indicated that they performed temporary traffic control work;
- Reported ability to perform work in Northwest Oregon;
- Indicated qualifications and interest in such subcontracts; and
- Reported bidding on work of similar or greater size in the past five years in Oregon.

There were 45 businesses in the availability database that met those criteria. Of those businesses, 11 were MBE/WBEs. Therefore, MBE/WBE availability for the subcontract was 24 percent (i.e., $11/45 = 24.4\%$).

The contract weight was $\$12,689 \div \$1.5 \text{ billion} = 0.001\%$ (equal to its share of total procurement dollars). Keen Independent made this calculation for each prime contract and subcontract.

SUMMARY REPORT — Availability analysis

Dollar-Weighted Availability Results

Keen Independent used the approach described on the previous page to estimate the availability of MBE/WBEs and majority-owned businesses for FHWA- and state-funded prime contracts and subcontracts.

Availability analysis indicates that about 23.5 percent of ODOT FHWA-funded contract dollars might be expected to have gone to minority- and woman-owned businesses during the FFY2018–FFY2020 study period. The left-hand column of Figure 16 provides these availability benchmarks. (Note that these results include FHWA-funded contracts awarded by local agencies.)

The dollar-weighted availability estimate for state-funded contracts during the study period (28.8% for MBE/WBEs) is greater than the FHWA-funded contracts (23.5%) due to a different mix of types, sizes and locations of contracts and subcontracts.

MBE/WBE dollar-weighted availability for all contracts combined (24.1%) is similar to availability results for FHWA-funded contracts.

Note that not all of these MBE/WBEs are currently DBE-certified or would be eligible for certification, as further discussed later in this Summary Report.

16. Dollar-weighted MBE/WBE availability for ODOT FHWA- and state-funded contracts, FFY2018–FFY2020

Race/ethnicity and gender	FHWA	State	Total
African American-owned	9.31 %	9.07 %	9.28 %
Asian-Pacific American-owned	0.66	1.28	0.73
Subcontinent Asian American-owned	0.20	0.26	0.21
Hispanic American-owned	1.86	3.39	2.03
Native American-owned	2.06	2.58	2.12
Total MBE	14.08 %	16.58 %	14.37 %
WBE (white woman-owned)	9.38	12.18	9.71
Total MBE/WBE	23.46 %	28.76 %	24.08 %
Majority-owned firms	76.54	71.24	75.92
Total	100.00 %	100.00 %	100.00 %

Note: Percentages may not add to totals due to rounding.

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

SUMMARY REPORT — Availability analysis

Figure 17 presents overall dollar-weighted availability estimates by MBE/WBE group for FHWA-funded contracts with goals and without DBE goals

The dollar-weighted availability estimate for FHWA-funded contracts without goals (20.1% for MBE/WBEs) is lower than the FHWA-funded contracts with goals (24.3%) due to a somewhat different mix of type, size and region for these sets of contracts and subcontracts.

17. Dollar-weighted MBE/WBE availability for ODOT FHWA-funded contracts with and without goals, FFY2018–FFY2020

Race/ethnicity and gender	FHWA-funded contracts with goals	FHWA-funded contracts without goals
African American-owned	10.26 %	5.57 %
Asian-Pacific American-owned	0.56	1.04
Subcontinent Asian American-owned	0.14	0.44
Hispanic American-owned	2.02	1.21
Native American-owned	2.24	1.36
Total MBE	15.22 %	9.62 %
WBE (white woman-owned)	9.10	10.48
Total MBE/WBE	24.32 %	20.10 %
Majority-owned firms	75.68	79.90
Total	100.00 %	100.00 %

Note: Percentages may not add to totals due to rounding.

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

SUMMARY REPORT — Disparity analysis

All FHWA-Funded Contracts

Disparity analyses compare the share of contract dollars going to minority- and woman-owned businesses with the share that might be expected based on the availability analysis for those contracts.

The estimates of share of contract dollars going to MBE/WBEs in Figure 18 and subsequent graphs and tables come from the utilization analyses presented in pages 14 through 19 of this Summary Report. The availability benchmarks in the disparity analyses come from the dollar-weighted availability estimates described in the Availability section of the Summary Report (pages 25 and 26).

As shown in Figure 18, the share of ODOT FHWA-funded contract dollars going to minority- and woman-owned firms for FFY2018–FFY2020 (19.5%) was lower than what might be expected based on the analysis of firms available to do business with ODOT (23.5%).

The Federal DBE Program applied to these contracts and many had DBE contract goals. (As previously mentioned, this analysis includes contracts that ODOT awarded and those using FHWA funds that local agencies awarded.)

18. Utilization and availability of MBE/WBEs for ODOT FHWA-funded contracts, FFY2018–FFY2020

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

SUMMARY REPORT — Disparity analysis

Figure 19 compares utilization and availability for each MBE group and for white woman-owned firms for FHWA-funded contracts.

- Utilization of African American-owned companies was below what would be expected based on the dollar-weighted availability of those firms for ODOT and local agency contracts.
- Utilization exceeded availability benchmarks for other groups.

Following direction from court decisions, Keen Independent calculated disparity indices to compare utilization and availability.

- A disparity index is calculated by dividing utilization by availability and multiplying by 100, where a value of “100” equals parity.
- An index of less than 80 is described as “substantial.”¹⁷
- Disparity indices were below 80, and therefore substantial, for African American-owned firms for ODOT FHWA-funded contracts, even with the Federal DBE Program in place.

19. Disparity analysis for ODOT FHWA-funded contracts, FFY2018–FY2020

	Utilization	Availability	Disparity index
African American-owned	2.26 %	9.31 %	24
Asian-Pacific American-owned	1.24	0.66	187
Subcontinent Asian American-owned	1.05	0.20	200+
Hispanic American-owned	2.61	1.86	140
Native American-owned	2.29	2.06	111
Total MBE	9.45 %	14.08 %	67
WBE (white woman-owned)	10.01	9.38	107
Total MBE/WBE	19.46 %	23.46 %	83
Majority-owned	80.54	76.54	105
Total	100.00 %	100.00 %	

Note: Numbers may not add to totals due to rounding.
Disparity index = 100 x Utilization/Availability.

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

¹⁷ Courts deem a disparity index below 80 as being “substantial” and have accepted it as evidence of adverse impacts against MBE/WBEs. For example, see, e.g., *Ricci v. DeStefano*, 557 U.S. 557, 129 S.Ct. 2658, 2678 (2009); *Midwest Fence*, 840 F.3d 932, 950 (7th Cir. 2016); *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation, et al.*, 713 F. 3d 1187, 1191, 2013 WL 1607239

(9th Cir. April 16, 2013); *H.B. Rowe Co.*, 615 F.3d 233, 243-245; *Rothe Development Corp v. U.S. Dept of Defense*, 545 F.3d 1023, 1041; *Eng’g Contractors Ass’n of South Florida, Inc. v. Metropolitan Dade County*, 122 F.3d at 914, 923 (11th Circuit 1997); *Concrete Works of Colo., Inc. v. City and County of Denver*, 36 F.3d 1513, 1524 (10th Cir. 1994).

SUMMARY REPORT — Disparity analysis

FHWA-Funded Contracts With and Without DBE Contract Goals

FHWA-funded contracts with DBE contract goals. Figure 20 examines utilization and availability for FHWA-funded contracts with goals.

- Utilization was substantially below for availability for African American-owned firms; and
- Utilization exceeded availability for Asian-Pacific American, Subcontinent Asian American-, Hispanic American-, Native American- and white woman-owned firms.

It appears that the DBE contract goals program has more success encouraging participation of white woman-owned firms and minority-owned firms other than African American-owned businesses.

20. Disparity analysis for ODOT FHWA-funded contracts with goals, FFY2018–FY2020

	Utilization	Availability	Disparity index
African American-owned	2.78 %	10.26 %	27
Asian-Pacific American-owned	1.54	0.56	200+
Subcontinent Asian American-owned	1.29	0.14	200+
Hispanic American-owned	3.10	2.02	153
Native American-owned	2.80	2.24	125
Total MBE	11.51 %	15.22 %	76
WBE (white woman-owned)	11.00	9.10	121
Total MBE/WBE	22.50 %	24.32 %	93
Majority-owned	77.50	75.68	102
Total	100.00 %	100.00 %	

Note: Numbers may not add to totals due to rounding.
Disparity index = 100 x Utilization/Availability.

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

SUMMARY REPORT — Disparity analysis

FHWA-funded contracts without DBE contract goals. Figure 21 examines utilization and availability for FHWA-funded contracts without goals. This provides an indication of outcomes for minority- and woman-owned companies on FHWA-funded contracts but for application of DBE contract goals under the Federal DBE Program.

For FHWA-funded contracts without goals, utilization was substantially below availability for businesses owned by:

- African Americans;
- Asian-Pacific Americans;
- Subcontinent Asian Americans;
- Hispanic Americans;
- Native Americans; and
- White women.

For each racial, ethnic and gender group of business owners identified in the federal regulations governing the Federal DBE Program, there were substantial disparities in their participation in FHWA-funded contracts without DBE contract goals.

21. Disparity analysis for ODOT FHWA-funded contracts without goals, FFY2018–FY2020

	Utilization	Availability	Disparity index
African American-owned	0.23 %	5.57 %	4
Asian-Pacific American-owned	0.04	1.04	4
Subcontinent Asian American-owned	0.13	0.44	30
Hispanic American-owned	0.69	1.21	57
Native American-owned	0.32	1.36	24
Total MBE	1.42 %	9.62 %	15
WBE (white woman-owned)	6.16	10.48	59
Total MBE/WBE	7.58 %	20.10 %	38
Majority-owned	92.42	79.90	116
Total	100.00 %	100.00 %	

Note: Numbers may not add to totals due to rounding.
Disparity index = 100 x Utilization/Availability.

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

SUMMARY REPORT — Disparity analysis

State-Funded Contracts

Keen Independent also compared the participation of minority- and woman-owned companies in ODOT’s state funded contracts, even though they somewhat differ in type of work, size and location from ODOT’s FHWA-funded contracts.

Figure 22 indicates that there were also disparities between the utilization and availability of MBEs and WBEs for ODOT’s state funded contracts.

- Utilization was substantially below the availability benchmark for minority-owned firms as a group; and
- Utilization of white woman-owned companies was substantially below the availability benchmark for WBEs for these contracts.

Appendix D provides additional information for these disparity analyses.

22. Disparity analysis for ODOT state-funded contracts, FFY2018–FFY2020

	Utilization	Availability	Disparity index
MBE (minority-owned)	11.03 %	16.58 %	66
WBE (white woman-owned)	3.97	12.18	33
Total MBE/WBE	15.00 %	28.76 %	52
Majority-owned	85.00	71.24	119
Total	100.00 %	100.00 %	

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

SUMMARY REPORT — Further exploration of observed disparities

Appendix D of this report provides additional analyses supporting the disparity analysis results reported here, including results for different subsets of contracts, analysis of bids and proposals on ODOT contracts and statistical significance of results. Statistical significance analyses are summarized here.

Statistical Confidence in Results

Examination of whether chance in sampling could explain any disparities. Keen Independent can reject sampling in the collection of utilization and availability information as an explanation for any disparities.

- Keen Independent attempted to compile a complete “population” of FHWA- and state-funded contracts for the study period above \$10,000 (and subcontracts of any size). There was no sampling of ODOT contracts. This accounts for nearly all of the dollars of ODOT transportation contracts. Using a population of contracts above \$10,000 provides statistical confidence in utilization results.
- Keen Independent’s availability survey attempted to obtain a population of firms within the regional market area available for ODOT contracts. There was no sampling of firms to be included in the survey since Keen Independent obtained the complete list of firms that Dun & Bradstreet identified as doing business within relevant lines of work.

The overall response rate to the survey was very high (43%), the confidence interval for MBE/WBE availability is within +/- 1 percentage point (using a finite population correction factor, as explained in Appendix D).

Monte Carlo simulation to examine chance in contract awards. One can be more confident in making certain interpretations from the disparity results if they are not easily replicated by chance in contract and subcontract awards. For example, if there were only ten ODOT contracts examined in the disparity study, one might be concerned that any resulting disparity might be explained by random chance in the award of those contracts.

Keen Independent performed Monte Carlo simulation to determine whether chance could explain the disparities observed for MBEs when examining ODOT contracts. Results of these analyses were:

- Chance in contract awards could be rejected as an explanation for the observed disparities for MBEs for FHWA-funded contracts without DBE contract goals; and
- Chance in contract awards could be rejected as an explanation for the observed disparities for MBEs and for WBEs for state-funded contracts.

It is important to note that this test may not be necessary to establish statistical significance of results and it may not be appropriate for very small populations of firms.¹⁸ Appendix D provides further discussion.

¹⁸ Even if there were zero utilization of a particular group, Monte Carlo simulation might not reject chance in contract awards as an explanation for that result if there were a small number of firms in that group or a small number of contracts and subcontracts

included in the analysis. Results can also be affected by the size distribution of contracts and subcontracts.

SUMMARY REPORT — Disparity results from other statewide studies

Keen Independent completed a state-wide disparity study for the Oregon Department of Aviation (ODA) in 2021, which included 48 airports receiving funds from the Federal Aviation Administration.

The results of the ODA study are important to the 2022 ODOT Disparity Study.

- Many of the federally funded construction and engineering contracts for airports in Oregon involved similar subindustries as ODOT FHWA-funded contracts, and there was cross-over in the firms performing work on these contracts.
- The geographic market area for airport contracts in that study was nearly identical to the market area for ODOT contracts.
- ODOT typically handled the procurement of ODA contracts.
- Keen Independent employed the same methodology for completing the ODA study as used in the 2022 ODOT Disparity Study.
- ODA and individual airports did not use DBE contract goals during the October 2014 through September 2019 study period.

Minority- and woman-owned companies obtained less than 3 percent of ODA and other airport FAA-funded contracts. There were substantial disparities between MBE utilization and availability and WBE utilization and availability. The full ODA study provides additional information.

23. MBE/WBE utilization and availability for Oregon Department of Aviation and other airport FAA-funded contracts, October 2014–September 2019

	Utilization	Availability	Disparity index
MBE (minority-owned)	1.48 %	5.99 %	25
WBE (white woman-owned)	1.28	9.29	14
Total MBE/WBE	2.76 %	15.28 %	18
Majority-owned	97.24	84.72	115
Total	100.00 %	100.00 %	

Note: Number of contracts/subcontracts analyzed is 1,076.

SUMMARY REPORT — Information about marketplace conditions — Historical context

Keen Independent summarizes information about the Oregon marketplace in three major parts: historical context, quantitative information and qualitative information.

Analysis of Historical Conditions

In the 2021 Availability and Disparity Study for the Oregon Department of Aviation (ODA) and 2016 Availability and Disparity Study for the Oregon Department of Transportation (ODOT), Keen Independent discussed historic examples of discrimination against African Americans, Hispanic Americans, Asian Americans, Native Americans and women in Oregon that even predated establishment of Oregon as a state in 1859.¹⁹ Some of the discrimination was state-sponsored, including examples of discrimination regarding state transportation infrastructure.²⁰ Such discrimination is not limited to Oregon, and is a part of a larger discussion of race, ethnicity and gender in this country.

The following eight pages provide updates to the discussions in the 2021 ODA Availability and Disparity Study and 2016 ODOT Availability and Disparity Study. It is not intended to provide a comprehensive historical narrative on all groups, or the subsequent efforts of individuals of all backgrounds to right these wrongs.

African Americans. Oregon was the only free state accepted in the Union with an exclusionary clause in the state constitution. The State prohibited African Americans to be in the state, own property and make contracts. The exclusionary laws in Oregon remained intact and continued to deem it illegal for African Americans to live in Oregon even after federal passage of the Fourteenth Amendment.²¹ It was not until voters repealed these laws in 1926 and changes to the state constitution in 2002 were made that the vestiges of racial discrimination were completely removed from Oregon’s state constitution.

There is a long history of exclusionary practices aimed at African Americans in Oregon concerning employment, union membership, marriage, education, housing and many other aspects of daily life.^{22, 23, 24}

SUMMARY REPORT — Information about marketplace conditions — Historical context

Examples of anti-Black racism from the past 60 years include redlining in low-income African American communities,²⁵ shutting down speeches from African American leaders,²⁶ unofficial “Sundown Laws” in certain Oregon communities that warned people of color to be out of town by sundown,²⁷ and disparities caused by environmental racism and economic displacement of families in the Portland area.^{28, 29}

In 2020, this systemic racism came into the international spotlight after the killings of unarmed African Americans, including George Floyd and Breonna Taylor. These events sparked national #BlackLivesMatter protests, including in Oregon.³⁰

SUMMARY REPORT — Information about marketplace conditions — Historical context

Asian Americans. The 2021 ODA Availability and Disparity Study and 2016 ODOT Availability and Disparity Study also discussed past discrimination against Asian Americans in Oregon. This group includes Chinese Americans, Japanese Americans, individuals from India and other people. This section briefly discusses some of this history.

- **Chinese Americans.** As with African Americans, Oregon enacted anti-Chinese provisions regarding landholding, taxation and suffrage provisions in its constitution.³¹ There was violence against people from China that included massacres.³² Communities were segregated, public education of children was banned and Chinese Americans faced other forms of discrimination in Oregon well into the 1900s.³³ Oregon's Cantonese Chinese population dropped from 10,390 in 1900 to 2,086 in 1940.³⁴

Despite the repeal of the federal Chinese Exclusion Law in 1943, the state's Chinese population remained low due to other discriminatory legislation, such as the 1952 McCarran-Walter Act. As legislation and immigration quotas expanded, the Chinese and other Asian American populations increased in Oregon.³⁵ In 2018, there were 57,000 individuals of Chinese descent in the state, which was the largest group among Asian American-Pacific Islanders.³⁶

- **Japanese Americans.** Japanese workers began coming to Oregon after the United States prohibited immigration of Chinese workers in the late 1800s. By the 1920s, the Oregon state legislature enacted laws that prohibited first-generation Japanese Americans from owning or leasing land and receiving business licenses.³⁷ Groups like the American Legion Native Sons and Daughters of the Golden West perpetuated and solidified anti-Japanese sentiment, which unfortunately helped lead to the Immigration Act of 1924, and eventually justified Japanese American internment during WWII.³⁸

³⁸ Edited by Lee, J. (2017). *Japanese Americans: The history and culture of a people*. Santa Barbara, CA: ABC-CLIO.

SUMMARY REPORT — Information about marketplace conditions — Historical context

Most Japanese Americans in Oregon at the outbreak of World War II were removed to out-of-state internment camps such as Tule Lake in northern California.³⁹ After the war, many non-minority residents campaigned to discourage Japanese Americans' return. Most did return to Oregon, but often came back to vandalized homes, boycotts of their businesses, or loss of their property altogether.^{40, 41} Federal reparations were provided to interned Japanese in 1988 after the passing of the Civil Liberties Act.⁴²

- **People from India.** Oregon saw immigration of men from India in the 1890s and early 1900s who were attracted to jobs in the lumber and railroad industries. There was substantial violence against Indians by those who believed they were unfairly competing for jobs. Waves of violence against East Indians extended across the Pacific Northwest, including a 1907 killing in Boring and attacks in 1910 against Indians in the St. Johns neighborhood of Portland.^{43, 44}

The federal Immigration Act in 1917 outlawed immigration from India along with many other Asian countries. The Oregon constitution also prohibited Indians from becoming citizens or voting.^{45, 46}

SUMMARY REPORT — Information about marketplace conditions — Historical context

In 2020, the COVID-19 pandemic in tandem with political and economic competition with China contributed to a rise in anti-Asian sentiment. Nationally over, 10,900 hate incidents against Asian Americans were recorded by Stop AAPI Hate from March 2020 to December 2021. These incidents include verbal harassment, physical assault and civil rights violations (e.g., workplace discrimination, housing discrimination and refusal of service). One-hundred and thirty-one of these crimes occurred in Oregon.⁴⁷

Additionally, 99 reports by Asian Americans were filed with the Oregon Department of Justice regarding bias and discrimination from January 2020 to March 2021.⁴⁸

SUMMARY REPORT — Information about marketplace conditions — Historical context

Latino Americans. Due to the lack of a workforce, industries across the United States encouraged Mexican workers to immigrate during World War I, resulting in 1 million Mexican nationals entering the United States from 1910 to 1920.⁴⁹ Oregon’s railroad and agricultural industries benefited from these workers.⁵⁰ By 1930, there were 1,568 residents of Mexican descent in the state.⁵¹ However, U.S. policies changed during the Great Depression, and many Mexican nationals and Mexican American citizens were deported. Because of “whites-only” employment policies and other discrimination during the Great Depression, the only jobs available to many Latinos was “stoop labor,” hard agricultural work.

Despite these hardships, the Latino population in Oregon continued to grow. By the 1980s, 2.5 percent of the state population identified as Latino, a number that has continued to increase. Currently, there are five cities in the state with majority Latino populations (i.e., Gervais, Boardman, Nyssa, Woodburn and Cornelius). The 2019 Census estimates found that Latinos comprise roughly 13.4 percent of the state population.⁵² Despite this growth, Latinos have continued to face bias and discrimination. For example, in the 1990s, legislators attempted to pass laws that denied rights to undocumented immigrants from Mexico, as well as an English-only law that unfairly disadvantaged those who lack English language skills.⁵³

SUMMARY REPORT — Information about marketplace conditions — Historical context

Native Americans. The nation as a whole and Oregon have a history marked by the killing and dislocation of indigenous peoples. Federal policy against tribal self-determination initiated after World War II has had a particular impact on the state, where a total of 62 tribes and bands were “terminated,” more than one-half of the total terminated tribes in the country. Termination, which ended the protective federal trust status of indigenous people, has had severe negative effects on indigenous peoples in Oregon.^{55, 56} Tribal land and resources were sold at minimal rates, particularly those with timberlands; tribes lost sovereignty and federal recognition; individuals were forced to assimilate into “mainstream” white culture; and laws prohibited enrollment in tribes, leading to a drop in enrolled tribal populations.⁵⁷

As of 2019, 1.8 percent of the state’s population identified as American Indian and/or Alaska Native, roughly 76,000 people.

Like Latino Americans, Native Americans have been disproportionately impacted by COVID-19. For example, Native Americans in Oregon entered the emergency department due to symptoms of the virus at a rate of 280 per 10,000, compared to a rate of 213 per 10,000 for other people.⁵⁸

Women. Women, too, have been discriminated against since Oregon’s founding. State laws and practices prohibited women from owning property and being employed in certain professions. While the State granted women right to vote in 1912, seven years before the 19th Amendment was passed by U.S. Congress, these provisions only applied to white women and excluded first-generation immigrant women from Asia and Native American women who were not married to white men from voting.⁵⁹

Despite an early history of measured equality in the realm of voting, other forms of state sponsored discrimination persisted. For example, in 1956, the Oregon Supreme Court upheld law that regulated gendered participation in certain occupations and events.⁶⁰ And, before federal legislation in the 1970s, it was common for women in Oregon to face discrimination when attempting to obtain housing and loans.⁶¹ Legislatively, equal rights among the genders was not finalized until 2014 when the Oregon Equal Rights for Women Initiative was passed.⁶²

SUMMARY REPORT — Information about marketplace conditions — Historical context

Summary Effects of Historic Discrimination in Oregon

Past societal discrimination has shaped the composition of the Oregon population, affected inter-generational creation of wealth, and established long-lasting stereotypes for certain “outside” groups.

Although it may no longer be codified in state and local laws, instances of discrimination against people of color and women in Oregon continue today based on information from disparity studies and other research conducted in Oregon in recent years. For example, a 2011 and a 2015 Fair Housing Council of Oregon audit found barriers in the housing market for black and Latino renters in Portland.^{63, 64} More recently, analysis of phone calls to a housing discrimination hotline revealed that many callers still face racial discrimination.⁶⁵

The historical information above provides context for Keen Independent’s analysis of the Oregon construction and engineering industries and topics such as access to capital in the state.

SUMMARY REPORT — Quantitative information about marketplace conditions

Keen Independent examined U.S. Census Bureau data, results from the availability survey conducted for this study and other data sources on conditions for minority- and woman-owned firms in the local marketplace. As summarized in the next five pages, the combined information indicates that people of color and women face barriers entering study industries as employees and as business owners. Once formed, there is evidence of greater barriers for minority- and woman-owned firms in the marketplace, including when competing for work.

Study appendices provide in-depth quantitative analyses of the following issues for people of color and women in Oregon:

- Entry and advancement in study industries (Appendix E);
- Business ownership (Appendix F);
- Access to capital (Appendix G); and
- Business success (Appendix H).

Entry into Study Industries

People of color were 24 percent of the Oregon workforce between 2015 and 2019 and women accounted for about 47 percent of all workers (data combine the state and Clark County and Skamania County, Washington). Analysis of the workforce in the study industries indicates barriers to employment for some minority groups and for women in certain industries.

- Among construction workers, African Americans, Asian-Pacific Americans, Subcontinent Asian Americans, and women were underrepresented compared to representation among workers in all other industries. These differences were statistically significant.

In Oregon, representation of people of color in construction trades such as electricians and among construction supervisors was low when compared to representation in the construction industry as a whole.

There were two construction trades examined in which there were no women in the Census Bureau sample data for Oregon.

- After controlling for educational attainment, African Americans, Hispanic Americans, Native Americans and women constituted a smaller portion of the Oregon professional services workforce when compared to representation among workers in all other industries. These differences were all statistically significant.
- All minority groups and women were underrepresented in the Oregon goods industry. Underrepresentation was statistically significant for Asian-Pacific Americans, Subcontinent Asian Americans, Hispanic Americans and women.
- In the other services industry, all racial and ethnic minority groups (except for Hispanic Americans) and women represented a smaller portion of workers than would be expected based on representation among workers in all other industries. These differences were statistically significant for African Americans, Asian-Pacific Americans, Subcontinent Asian Americans and women.

Any barriers to entry or advancement in the study industries might affect the relative number of businesses owned by people of color and women in these industries in local area.

SUMMARY REPORT — Quantitative information about marketplace conditions

Business Ownership

Keen Independent examined whether there were differences in business ownership rates for workers in the Oregon construction, professional services, goods and other services industries related to race, ethnicity and gender.

- People of color working in the Oregon construction industry were less likely than non-Hispanic whites to own a business. Similarly, women in the construction industry were less likely than men to be self-employed.

Even after statistically controlling for factors including education, age, family status and homeownership, statistically significant disparities in business ownership rates were still found for African Americans, Hispanic Americans and non-Hispanic white women. These disparities were substantial.

- In the Oregon professional services industry, after controlling for other factors, there was a statistically significant disparity in the business ownership rate for Subcontinent Asian Americans working in the industry (substantial disparity).
- After controlling for personal characteristics including age and education, there was a statistically significant disparity in the rate of business ownership for Asian Americans working in the Oregon goods industry. This disparity was substantial.

But for these disparities, there would be more firms in Oregon owned by:

- African Americans, Hispanic Americans and white women in construction;
- Subcontinent Asian Americans in the professional services industry; and
- Asian Americans in the goods industry.

These results are largely consistent with recent disparity studies in Oregon. A statewide Oregon DBE disparity study (2021) reported lower rates of business ownership in the construction industry for African Americans, Hispanic Americans, Native Americans and women. Minorities and women working in the architecture and engineering industry were also less likely to be business owners.⁶⁶

The 2016 ODOT disparity study also reported lower rates of business ownership in the construction and engineering industries for people of color and women.⁶⁷

Appendix F presents detailed results of the business ownership analyses conducted for this study.

⁶⁷ Keen Independent Research. (2016). *2016 Availability and Disparity Study*. Oregon Department of Transportation.

SUMMARY REPORT — Quantitative information about marketplace conditions

Access to Capital

Business start-up and long-term business success depend on access to capital. Discrimination at any link in that chain may produce cascading effects that result in racial and gender disparities in business formation and success.

The information presented here indicates that people of color and women continued to face disadvantages in accessing capital that is necessary to start, operate and expand businesses. Appendix G of this report further describes these results.

National results. Capital is required to start companies, so barriers to accessing capital can affect the number of people of color and women who are able to start businesses. In addition, minority and female entrepreneurs start their businesses with less capital (based on national data). Several studies have demonstrated that lower start-up capital adversely affects prospects for those businesses.

Quantitative information about access to capital for businesses available for governmental entity work. Availability survey results for Oregon businesses indicate that minority-owned companies were more likely than other firms to report difficulties obtaining lines of credit or loans. As shown in Figure 27, 35 percent of minority-owned firms and 12 percent of woman-owned firms reported difficulties compared to just 9 percent of majority-owned companies.

Access to bonding is highly related to access to capital. Among construction firms indicating in the availability survey that they had tried to obtain a bond, MBEs and WBEs were more likely to report difficulties obtaining bonding than other firms.

27. Responses to availability survey question concerning loans

Source: Keen Independent Research from 2021 availability survey.

Quantitative information about homeownership and mortgage lending. Wealth created through homeownership can be an important source of funds to start or expand a business. Any discrimination against people of color in home purchases and home mortgages can negatively affect formation, success and growth of firms owned by people of color.

- People of color in Oregon were less likely to own a home compared with non-Hispanic whites. Hispanic Americans and Native Americans also tended to have lower home values.
- There are also disparities in access to home mortgages. High-income minority households applying for conventional home mortgages in Oregon were more likely to have their applications denied than high-income non-Hispanic whites. This may indicate discrimination in mortgage lending and may affect access to capital to start or expand businesses.
- People of color (except Asian Americans) in Oregon were more likely to have subprime loans than non-Hispanic whites. This may be evidence of predatory lending practices affecting people of color in the state.

SUMMARY REPORT — Quantitative information about marketplace conditions

Business Success

Keen Independent explored different types of business outcomes in the Oregon marketplace for minority- and woman-owned firms compared with majority-owned companies. In summary, many different data sources and measures suggested disparities in marketplace outcomes for minority- and woman-owned businesses and evidence of greater barriers for people of color and women to start and operate businesses in Oregon construction, professional services, goods and other services industries. (See Appendix H for detailed results.)

Business closure, expansion and contraction. The study team used a 2010 SBA study of minority business dynamics to examine business closures, expansions and contractions for privately held businesses between 2002 and 2006. Compared with majority-owned firms in Oregon, that study found that:

- Asian American-owned firms were less likely to expand; and
- African American-, Asian American and Hispanic American-owned businesses were more likely to close.

Data regarding the COVID-19 pandemic also indicate that MBEs and WBEs were more likely to close than other firms.

Business revenue and earnings. The study team used data from different sources to analyze business receipts and earnings for businesses owned by people of color and women.

- In general, analysis of U.S. Census Bureau data from the 2017 Annual Business Survey showed lower average receipts for businesses owned by people of color and women in Oregon than businesses owned by non-minorities or men.

- Data from 2015–2019 American Community Survey for Oregon indicated that:
 - Businesses owned by people of color had lower earnings than non-Hispanic white business owners in all study industries combined, with similar results in some individual study industries; and
 - Women business owners had lower earnings than men in each study industry (these differences were also statistically significant).
- Regression analyses using U.S. Census Bureau data for business owner earnings indicated that there were statistically significant negative effects of race and gender on earnings in some study industries, particularly for women.
- Data from availability surveys showed that, across the study industries in Oregon, MBEs and WBEs had lower revenue compared with majority-owned firms.

Bid capacity. From Keen Independent’s availability survey, there was evidence that minority-owned firms had lower bid capacity than majority-owned firms in Oregon study industries. However, there were no statistically significant differences in the bid capacity of MBEs and WBEs after accounting for the types of work firms perform and length of time in business.

SUMMARY REPORT — Quantitative information about marketplace conditions

Difficulties with prequalification, insurance and project size. The availability survey included other yes/no questions about whether the business experienced barriers in the Oregon marketplace. Results indicate that MBEs and WBEs are more likely than majority-owned companies to be affected by certain barriers to doing business.

For example, relatively more MBEs and WBEs than majority-owned firms reported that they difficulties related to:

- Being prequalified;
- Insurance requirements on contracts; and
- Large project size.

For additional information about the types of difficulties companies experience in the local marketplace, see Appendix H for quantitative results and Appendix J for qualitative information.

Difficulties learning about bid opportunities. Availability survey results also indicate greater barriers for MBEs and for WBEs in learning about work. Relatively more MBEs and WBEs than majority-owned firms reported difficulties learning about bid opportunities with:

- Public entities in Oregon;
- Private sector clients; and
- Prime contractors.

Bid restrictions. Minority- and white woman-owned businesses were more likely than majority-owned firms to report difficulties related to:

- Brand name specifications;
- Obtaining supply or distributor relationships; and
- Competitive disadvantages due to pricing from suppliers.

Payment and approvals. Responses to questions concerning difficulty obtaining payment and approvals indicated that, compared to majority-owned firms, MBE/WBE firms were more likely to indicate difficulties related to receiving payment from public agencies and from prime contractors.

SUMMARY REPORT — Qualitative information about marketplace conditions

Introduction and Methodology

Keen Independent collected qualitative information about entry and advancement in the ODOT study industries through surveys, interviews, public meetings and other means. The study team also provided opportunity for public comments via mail and the designated telephone hotline as well as a study website and email address.

Through these methods, the study team obtained comments from representatives of more than 315 businesses, trade organizations and other groups over the course of the study.

In addition, Keen Independent reviewed qualitative information reported in other disparity studies in Oregon.

Comments were received from African American, Asian-Pacific American, Subcontinent Asian American, Hispanic American, Native American and white business owners including businesses owned by men and by women.

Appendix J presents qualitative information in detail. Examples of topics discussed in Appendix J are listed below.

- Starting a business;
- Dynamic firm size, types of work and markets served;
- Current conditions in the Oregon marketplace;
- Keys to business success;
- Working with ODOT;
- Whether there is a level playing field;
- Challenges not faced by other businesses;
- Access to capital;
- Bonding and insurance;
- Issues with prompt payment;
- Unfair treatment in bidding;
- Stereotyping and double standards;
- “Good ol’ boy” and other closed networks;
- Business assistance programs and certifications; and
- Other insights and recommendations for ODOT.

The following seven pages summarize some of these results. (See Appendix J for a synopsis of examples of comments gathered as part of this disparity study.)

SUMMARY REPORT — Qualitative information about marketplace conditions

Overview of Starting and Succeeding in Business

Most current business owners interviewed described struggles in starting a business. Some people of color and women who provided comments appeared to have some additional challenges.

Working in the industry before starting a business. Many business owners worked in the industry or a related industry before starting their firms.

I started from scratch. It was in the industry that I have years of experience in and had an opportunity to do work and take on my own projects and give myself more bandwidth of what I can do.

I-39. Hispanic American male owner of a DBE professional services firm

Challenges to starting, sustaining and growing a business. Most business owners and representatives reported facing challenges at start-up and beyond.

I had to figure out how to run a business. I didn't know what I was doing.

I-20. African American male owner of a DBE specialty services firm

When I started my business, I didn't realize that when you have a contract, it is possible that you don't get paid for some time I suffered initially quite significantly. I tried to go out on my own and then had to go back.

I-58. Hispanic American male owner of an MBE specialty services firm

[I] struggled with finding clients [and] I didn't know what my market was.

I-21. White female owner of a DBE/WBE/ESB professional services firm

[I was] literally by myself [with] a laptop and a business card Having to start [a business] is a challenge ... I just did a lot of networking, joining chambers [of commerce] ... to network to grow my business.

I-16. Hispanic American male owner of an MBE specialty services firm

There's all sorts of challenges around market penetration.

I-61. African American male owner of a DBE/MBE/ESB professional services firm

Access to capital is a challenge for all businesses.

TO-13. African American female representative of a micro-business assistance provider

SUMMARY REPORT — Qualitative information about marketplace conditions

Current Conditions in the Oregon Marketplace

Business owners and representatives reported on the economic conditions in the local marketplace.

Impact of Covid-19 pandemic. Akin to the effects of the Great Recession on the industry described in the 2016 ODOT Disparity Study and 2021 ODA Disparity Study, COVID-19 has had a significant impact on conditions in Oregon, as well as throughout the nation.

Many business owners and trade association representatives reported unfavorable economic conditions due to the COVID-19 pandemic.

When the pandemic first hit, I thought my business was over ... because everything stopped.

I-16. Hispanic American male owner of an MBE specialty services firm

Supply chain issues. Several participants noted supply chain issues that impacted operations, and/or have led to an increase in materials cost.

We have seen a lot more effect in the supply chain. That has been a big deal. The price on steel and availability of materials was reduced for over a year. The business is slowing down a bit

I-41. White female owner of a professional services firm

Staffing constraints. Others reported trouble locating qualified employees.

[There is a] shortage of people, shortage of everything.

I-63. White male representative of a majority-owned construction related firm

Paycheck Protection Program (PPP) loans. A few interviewees commented on receiving government assisted PPE loans.

Keys to Business Success

When business owners were asked to report the keys to business success, relationship building and recruiting and sustaining a qualified workforce rose to the top.

Creating and maintaining customer relationships. Many interviewees described the importance of relationships with customers and others as a key factor for success. Some also cited their reputation as an integral element.

So much of it is who you know ‘Oh, you’re [so and so’s son]! Come out and do some work for me.’

I-50. White male owner of a construction related firm

Importance of employees to business success. Many participants noted that building and retaining a skilled team of employees was a key factor for success.

Having work is the first part [of success for the business]. Number two is having good employees.

I-44. White male owner of a specialty services firm

Access to capital, bonding and insurance. Many expressed that success was dependent on access to capital, bonding and insurance. For some firms, limited access to capital was an on-going barrier.

We had [no start-up capital]. Started from scratch with nothing.

I-36. Asian-Pacific American male owner of a professional services firm

Trying to build a client base and have cashflow are challenges that have made it unclear if her firm would be successful.

I-19. African American female owner of a DBE professional services firm

SUMMARY REPORT — Qualitative information about marketplace conditions

Experiences with ODOT

Working with ODOT was easy for some firms, and more difficult for others.

Pursuit of opportunities with ODOT. Although the pursuit of opportunities with ODOT was understood by some firms, it was more challenging for others.

Most [jobs] are published. There is Bid Locker and OregonBuys. Between those two, I get most of the information. I am not getting any emails, though.

I-4. African American male owner of a DBE construction-related firm

The interviewee noted that finding out about ODOT opportunities requires a business to be assertive, tech-savvy and attend meetings for information and networking. Though he has been to many events, *[I] haven't seemed to find the right [door] when it comes to ODOT.*

I-16. Hispanic American male owner of an MBE specialty services firm

Experiences working with ODOT. Business owners and representatives reported mixed experiences when working with ODOT.

It's been easy to work with [ODOT]. They are in constant communication and do what it takes to get the work done. They make sure you get paid on time.

I-4. African American male owner of a DBE construction-related firm

The interviewee said that when an ODOT job is awarded it does not necessarily mean that the award results in notice to proceed.

AS-18. African American male representative of a construction related firm

Contractor/subcontractor relationships. Business owners and representatives were asked to comment on their experiences with prime contractor-subcontractor relationships.

Although some subcontractors had positive experiences, many more reported challenges when working with primes.

[There are] historical belief systems [among] primes: 'How do I know [subcontractors are] capable?'

TO-3. White female representative of a trade organization

At times it can feel like [clients and primes] don't value you much.

I-37. White female owner of a WBE construction-related firm

When there is no hard goal, and contractors are just looking to show a good faith effort, they ask [subcontractors] for quotes with no intention of using the DBE from which they requested a quote. As a small DBE sub, this does not help us at all.

PM1-13. Asian-Pacific American female owner of a firm

Generally, after [the prime] give[s] us the opportunity, they find a reason to stall a job then remove the firm from the job.

I-55. White female representative of a construction-related firm

In the field, it creates resentment. The bigger companies have their practices, but it doesn't always pan out [for subcontractors].

I-4. African American male owner of a DBE construction-related firm

SUMMARY REPORT — Qualitative information about marketplace conditions

Reports that the Playing Field is not Level for MBE/WBEs

Many individuals indicated that there was not a level playing field for business owners of color and women business owners.

Access to capital. Firm owners and others indicated that access to capital is particularly challenging for business owners who are people of color and women.

Lack of access to capital [is an issue]. Women and people of color do not have [the] luck of getting venture financing. Less than 5 percent of capital goes to women, and less than 1 percent goes to people of color out of investment capital. There is a lack of access to the right side of the capital. They also traditionally can't get access to a bank loan. We are talking about major barriers and hurdles.

TO-12. White female representative of a business assistance provider

Bonding and insurance. A firm's bonding and/or insurance capacity greatly impacts the size of contracts the firm can bid on.

For the work that I am going into, the only thing that sits in the back of my mind is bonding I don't know want any special treatment. I just want opportunities is all.

I-7. Native American male owner of a construction-related firm

The cost of the insurance, it puts me in a place where you have to maintain those residual costs.

I-4. African American male owner of a DBE construction-related firm

Issues with prompt payment. Slow payment can be especially damaging for firms that do not have the same access to capital as other companies.

Currently, we are going to turn down public work ... cannot bankroll them. [It is not feasible].

I-55. White female representative of a construction-related firm

We were in a situation where these big firms owed us so much money, we were seriously considering not working for these [local agencies] because we were going to go under.

I-28. White male owner of a construction-related firm

Unfair treatment in bidding. Some participants reported encountering bid shopping and other unfair treatment in bidding in the Oregon marketplace. Few reported getting feedback on bids they submitted to public agencies and primes.

There is a lot of bid 'fishing' that goes on. That happens a lot. We have had a general contractor inform us that is happening. That is why it becomes hard to win.

I-60. African American male owner of a DBE/MBE construction related firm

The only feedback we get is being told to go look at the company who won. I would like to receive feedback I would like some way to find out why we are getting these ratings in the RFP's. [Like] a feedback meeting. Even if the vendor is silent, I would happily get on a 'Zoom' call where I am muted just to listen to why we got the rating we got.

I-18. White male owner of a professional services firm

SUMMARY REPORT — Qualitative information about marketplace conditions

Stereotyping and double standards. Some business owners faced racial- and gender-based stereotyping.

The interviewee reported double-standards when working on all-male teams. *There was a lot of second-guessing of our analyses.*

I-9. White female owner of a professional services firm

There is an opinion that if I get a contract [as] an MBE, that I don't know what I am doing ... the toughest thing so far

I-8. African American female owner of an ESB and MBE construction-related firm

“Good ol’ boy” network and other closed networks. Some business owners and representatives said that closed networks persist in the Oregon marketplace.

It is relationship based Oregon runs on a ‘good ol’ boy’ system.

I-59. White male owner of a professional services firm

I feel always like it's this ‘good ol’ boy’ network — they're going through this process because they have to, but they already know who they're going to give [the contract] to.

I-16. Hispanic American male owner of an MBE specialty services firm

The construction industry happens to be more of a ‘good ol’ boys’ club. There are connections, there is loyalty.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

A few business owners reported benefitting from being part of closed networks.

All my peers are southern Oregon white guys.

I-34. White male owner of a professional services firm

The interviewee reported that her firm benefits from using personal connections and networks, but added *if you are outside that network, it can be hard to bust in.*

I-9. White female owner of a professional services firm

Some reported that, although still operating in the marketplace, the “good ol’ boys” club has weakened over time.

I feel like we're in a transitional phase in the industry There's a lot of people retiring that are used to doing business one way Things have changed so much in the [time] that I've been working, and I see a lot of change coming

I-31. White female representative of a majority-owned firm

... as a nation we are getting a little better around the awareness of that. When [closed networks do] happen, I think equally the customers and the primes are very, very sensitive. Agencies are [too]. So, as hard as it is, we are in a lot better place I think And the issues will always remain there, but I think they are getting better.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

SUMMARY REPORT — Qualitative information about marketplace conditions

Insights About Assistance Programs and the DBE Program

Although awareness of business assistance programs was limited, a number of business owners and representatives commented on certification programs.

Available assistance. A number of business owners and representatives were aware of business assistance programs. For some, such programs, including the DBE Program, were useful and provided value to their firm.

The DBE Program ... is an amazing program for small businesses. It needs to be backed up by the right organizations who are really looking at it, monitoring it, executing it, supporting small businesses.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

However, more interviewees noted that they were unaware of or did not take advantage of any business assistance programs.

When I've talked with [my local] business and development person, they're very sweet, but [they say], 'We just don't really have any of those [assistance programs]' And then when I look at other start-up [assistance], usually they're private entities, they're not government entity tech programs, and either they're super local, [for example], you have to live ... in Portland, or they're competition I haven't really seen anything else besides that related to a woman-owned business.

I-46. White female owner of a DBE professional services firm

Certification programs. Experiences with certification were positive for some business owners.

When there are RFP issues or intentions are directly tied to percentages in a contract, it drives companies like ours to pull in partners. It adds challenges for us, but in states where it is actively laid out, you get prime vendors more engaged.

I-27. White male representative from a construction-related firm

Some other business owners found the process of becoming certified difficult with limited or no reward.

The word in minority communities [about the certification process] is, 'Don't waste your time' They don't think it will help.

I-19. African American female owner of a DBE professional services firm

Amount of paperwork and documents required took us two-and-a-half weeks. They found a discrepancy ... didn't ... reach out ... we got an automatic denial ... no dollar in my bank ... from being ... certified.

I-3. White male representative of a Native American female-owned professional services firm

It was like going to college [and getting a degree] I can say I have it, but I don't use it It was a lot of work.

I-21. White female owner of a DBE, WBE and ESB professional services firm

Finding and working with companies that take part in working with certified companies has been a problem.

AS-35. African American male owner of a professional services firm

SUMMARY REPORT — Qualitative information about marketplace conditions

Other Interviewee Insights and Suggestions for ODOT

Some commented on how ODOT may improve the procurement process and increase participation among minority- and woman-owned firms and other small businesses.

RFPs and award of contracts. Some business owners encouraged more transparency and to level the playing field for bidders.

Have the process [be] as transparent as possible and give information to people on how to be eligible [to work].

I-49. White female owner of a WBE professional services firm

[ODOT] needs to treat everyone the same and have a level field.

I-20. African American male owner of a DBE specialty services firm

The questions for solicitation lend themselves to firms that have been in business for a long time or firms with many people The challenge is [also] the time involved to complete the RFP.

I-12. Hispanic American female owner of a DBE professional services firm

I would like to see the RFP be set more to the average companies and not just firms with specialties in public work.

I-3. White male representative of a Native American female-owned professional services firm

Equal treatment when [minority-owned firms] are awarded work. That we [are given] the same opportunities and experiences as majority firms.

I-60. African American male owner of a DBE/MBE construction-related firm

Unbundling. A number of business owners indicated that procurements of smaller sizes would benefit minority- and woman-owned firms and other small businesses.

Some of these RFPs ... are written to scale [small firms] out when actually in fact they want your expertise, and they should have been designed to put you first and everybody else second.

I-16. Hispanic American male owner of an MBE specialty services firm

Take the bigger contracts and break them down into smaller contracts for smaller firms to pick up.

I-4. African American male owner of a DBE construction-related firm

Relationship building. Encouraging relationship building was a common suggestion for ODOT.

What might be helpful is having a good resource [list of] firms who are historically disadvantaged that have worked with ODOT, so firms like us can find them and partner with them.

I-27. White male representative of a construction-related firm

It would be helpful if more pools could be established, so that when ODOT has contract work, they can connect easily with small businesses to get that work done.

AS-68. White female owner of a professional services firm

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

Keen Independent examined quantitative and qualitative results for the Oregon marketplace and ODOT transportation contracts for MBEs and WBEs as a whole and for specific groups. The study team also assessed race- and gender-neutral responses to any barriers to participation of minority- and woman-owned businesses that ODOT might employ that go beyond its current efforts.

Both sets of information are important when ODOT determines whether it can meet its future goal for DBE participation solely through race- and gender-neutral means, and if not, the specific DBE groups that would be eligible to participate in any DBE contract goals program.

The following is a short summary; ODOT should review all of the results in the report and other information it has when making these determinations.

Summary for Minority- and Woman-Owned Firms as a Whole

Keen Independent's comparisons of utilization and availability for ODOT transportation contracts found:

- Substantial disparities in the utilization of MBEs and utilization of WBEs in FHWA-funded contracts without DBE contract goals;
- Substantial disparities in the utilization of MBEs (overall) and the utilization of WBEs in ODOT's state-funded contracts; and
- There were also substantial disparities in the utilization of MBEs and WBEs for airports in Oregon reported in the 2021 Oregon Department of Aviation disparity study.

Examples of quantitative information for people of color and women overall for the Oregon marketplace includes the following.

- Availability survey results for Oregon businesses indicate that minority-owned companies were more likely than other firms to report difficulties obtaining lines of credit or loans compared to majority-owned firms.
- Among construction firms indicating in the availability survey that they had tried to obtain a bond, MBEs and WBEs were more likely to report difficulties obtaining bonding than majority-owned firms.
- Home equity is an important source of funds for business start-up and growth. Fewer people of color in Oregon own homes compared with non-Hispanic whites.
- High-income minority households applying for conventional home mortgages in Oregon were more likely to have their applications denied than high-income non-Hispanic whites.
- People of color (except Asian Americans) in Oregon were more likely to have subprime loans than non-Hispanic whites. This may be evidence of predatory lending practices affecting people of color in the region.
- Data regarding the COVID-19 pandemic indicate that MBEs and WBEs were more likely to close than other firms.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

- In general, analysis of U.S. Census Bureau data from the 2017 Annual Business Survey showed lower average receipts for businesses owned by people of color and women in Oregon than businesses owned by non-minorities or men. National data indicated that these general patterns persist across the study industries.
- Data from 2015–2019 American Community Survey for Oregon indicated that:
 - Businesses owned by people of color had lower earnings than non-Hispanic white business owners in all study industries combined, with similar results in some individual study industries; and
 - Women business owners had lower earnings than men in each study industry (these differences were also statistically significant).

Data from availability surveys showed that, across the study industries in Oregon, MBEs and WBEs had lower revenue compared with majority-owned firms.

- Regression analyses using U.S. Census Bureau data for business owner earnings indicated that there were statistically significant negative effects of race and gender on earnings in some study industries, particularly for women.
- Answers to availability survey questions concerning marketplace barriers indicated that relatively more MBEs and WBEs than majority-owned firms face difficulties related to:
 - Being prequalified;
 - Insurance requirements; and
 - Large project size.

- Availability survey results also indicate greater barriers for MBEs and for WBEs in learning about work. Relatively more MBEs and WBEs than majority-owned firms reported difficulties learning about bid opportunities with public entities in Oregon, private sector clients and with prime contractors.
- Minority- and white woman-owned businesses were more likely than majority-owned firms to report difficulties related to brand name specifications, obtaining supply or distributor relationships and competitive disadvantages due to pricing from suppliers.
- Compared to majority-owned firms, minority- and woman-owned firms were more likely to indicate difficulties related to receiving payment from public entities in Oregon, prime contractors and other customers.
- Minority-owned businesses were more likely to indicate difficulties obtaining approval from inspectors or prime contractors than majority-owned firms.

There is also considerable qualitative information in this report and past disparity studies in Oregon that indicate race and gender discrimination against people of color and women and affecting minority- and woman-owned companies.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

Additional Information for Specific Groups

Keen Independent also examined results by minority group.

African American-owned firms. There were substantial disparities in the utilization of African American-owned companies in ODOT FHWA-funded contracts (in total, with DBE contract goals and without DBE contract goals) and in state-funded contracts. (Appendix D provides detailed results for state-funded contracts.)

Additional evidence regarding disparities for African Americans and African American-owned companies in the Oregon marketplace included the following.

- Statistically significant disparities in the representation of African Americans working in the Oregon construction, professional services and other services industries.
- After controlling for other factors in business ownership regression analyses, statistically significant, substantial disparities in business ownership rates for African Americans working in the Oregon construction industry. This suggests that the number of African American-owned construction firms in Oregon is lower than there would be if there were a level playing field.
- Disparities in the denial rates of home mortgages to high-income African American households in Oregon. (This occurred for other groups as well, as discussed in the following pages.) It may indicate discrimination in mortgage lending and may affect access to capital for people of color to start and expand businesses.

- Based on 2002 to 2006 analyses, African American-owned businesses in Oregon were more likely to close than white-owned businesses (consistent with more recent data).

Asian-Pacific American-owned firms. There were substantial disparities in the utilization of Asian-Pacific American-owned businesses in FHWA-funded contracts without DBE contract goals. Utilization was in line with availability of Asian-Pacific American-owned firms for state-funded contracts, as discussed in Appendix D.

Additional quantitative information from the Oregon marketplace includes the following. (Note that some data sources combined results for all Asian Americans or Asian American-owned companies.)

- Statistically significant disparities in the representation of Asian-Pacific Americans working in the Oregon construction, goods and other services industries.
- After controlling for other factors, statistically significant, substantial disparity in business ownership rates for Asian-Pacific Americans working in the Oregon goods industry. This indicates that the number of Asian-Pacific American-owned goods firms in Oregon is lower than there would be if there were a level playing field.
- Disparities in the denial rates of home mortgages to high-income Asian American households in Oregon.
- Based on 2002 to 2006 analyses, Asian American-owned businesses in Oregon were less likely to expand and more likely to close than white-owned businesses.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

Subcontinent Asian American-owned firms. There was a substantial disparity in the utilization of Subcontinent American-owned businesses in FHWA-funded contracts without DBE contract goals. Utilization exceeded availability of Subcontinent American-owned firms for state-funded contracts.

Results for Subcontinent Asian Americans from the marketplace analyses included the following.

- Statistically significant disparities in the representation of Subcontinent Asian Americans working in the Oregon construction, goods and other services industries.
- After controlling for other factors, a statistically significant, substantial disparity in the business ownership rate for Subcontinent Asian Americans working in the Oregon professional services industry. (The number of Subcontinent Asian American-owned professional services firms in Oregon is lower than there would be if there were a level playing field.)
- Disparities in the denial rates of home mortgages to high-income Asian American households in Oregon.
- Based on 2002 to 2006 analyses, Asian American-owned businesses in Oregon were less likely to expand and more likely to close than white-owned businesses.

Hispanic American-owned firms. There was a substantial disparity in the utilization of Hispanic American-owned businesses in FHWA-funded contracts without DBE contract goals. Utilization exceeded availability of Hispanic American-owned firms for state-funded contracts.

Additional information for Hispanic Americans and Hispanic American-owned businesses included the following.

- Statistically significant disparities in the representation of Hispanic Americans working in the Oregon professional services and goods industries.
- After controlling for other factors, statistically significant, substantial disparity in the business ownership rate for Hispanic Americans working in the Oregon construction industry (suggesting a depressed number of Hispanic American-owned construction firms in Oregon).
- Disparities in the denial rates of home mortgages to high-income Hispanic American households in Oregon.
- Based on 2002 to 2006 analyses, Hispanic American-owned businesses in Oregon were more likely to close than white-owned businesses.

Native American-owned firms. There was a substantial disparity in the utilization of Native American-owned businesses in FHWA-funded contracts without DBE contract goals. Utilization exceeded availability of Native American-owned firms for state-funded contracts.

- When examining marketplace conditions for Native Americans in Oregon, Keen Independent identified statistically significant disparities in the representation of Native Americans working in the Oregon professional services industry.
- Other data sets for Native Americans from U.S. Census Bureau data and other sources for the Oregon marketplace often did not have large enough samples to analyze results specific to Native Americans or Native American-owned businesses. Sometimes results were grouped with other people of color. In general, those data showed disparities compared with non-Hispanic whites.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

Woman-owned firms. Much of the evidence regarding disparities for women and woman-owned companies is summarized in the general summary of conclusions for MBEs and for WBEs.

Examples of additional information include:

- Statistically significant disparities in the representation of women working in the Oregon construction, professional services, goods and other services industries. There were also quantitative barriers to advancement for women in construction, and some construction occupations where there were no women in the U.S. Census Bureau sample data for those disciplines.
- After controlling for other factors in business ownership regression analyses, statistically significant, substantial disparities in business ownership rates for women working in the Oregon construction industry. This suggests that the number of white woman-owned construction firms in Oregon is lower than there would be if there were a level playing field.

Summary of group-specific analyses. Based on this information, there is some evidence of disparities related to participation in ODOT transportation contracts and in the Oregon marketplace for each minority group examined in this study, as well as for women and woman-owned businesses.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

Additional Neutral Remedies

In the 2016 Disparity Study, Keen Independent recommended improvements in ODOT's operation of the Federal DBE Program as well as other measures to level the playing field for small businesses, including minority- and woman-owned companies.

ODOT has had some successes addressing each area of the recommendations objectives. For example, the State has expanded the size of contracts that can be restricted to bidding from ESBs under the Small Contracting Program. ODOT now has a quarterly DBE newsletter and has extensive outreach efforts.

Based on the quantitative and qualitative information in this study and review of good practices for other state DOTs, ODOT's additional neutral efforts could focus on the following seven needs.

1. Certification of additional eligible minority- and woman-owned firms as DBE;
2. Additional efforts to introduce firms to ODOT and local agency prime contract and subcontract opportunities;
3. Further measures to increase DBE participation as prime contractors and consultants;
4. Encouraging DBE participation in new subindustries;
5. Additional capacity-building for DBEs;
6. Addressing other barriers to doing business with ODOT; and
7. Other improvements to operation of the Federal DBE Program regarding neutral measures and other program elements.

1. Certification of additional eligible minority- and woman-owned firms as DBEs. Minority- and woman-owned firms comprised 29 percent of the firms in the availability database for this study. Only in one out of every five of those firms were certified as DBEs.

The dollar-weighted availability of MBE/WBEs for FHWA-funded contracts, 23.46 percent, is composed almost equally of availability for certified DBEs (11.41 percentage points) and minority- and woman-owned firms that are not DBE certified (12.05 percentage points). The study team reviewed available information on revenue and past attempts to be certified to determine whether many of the non-certified companies could be certified. Only one firm in the availability database would not be eligible based on the revenue information provided. (Keen Independent did not have personal net worth information from the availability surveys.)

COBID is the certifying agency for DBEs in Oregon. Some business owners and others interviewed in this study had favorable input about the certification process and some had negative comments, as presented in Appendix J.

Additional assistance with DBE certification. Although ODOT is not responsible for DBE certification, it could do more to reach out to minority- and woman-owned firms that are potential DBEs to encourage certification and assist them in reviewing their eligibility.

Potential impact on overall DBE utilization for FHWA-funded contracts. If all of the MBE/WBEs obtaining ODOT FHWA-funded contracts for FFY2018 through FFY2020 had been DBE-certified, ODOT's DBE utilization would have been at least 4 percent higher than shown in this report. In other words, certification of DBEs alone could increase DBE participation by at least 4 percentage points.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

2. Additional efforts to introduce firms to ODOT and local agency prime contract and subcontract opportunities. More than 40 percent of MBE/WBEs completing the availability survey reported difficulties learning about bid opportunities with public entities in Oregon (a percentage twice that for majority-owned firms.) Some interviewees said that the new OregonBuys system was confusing or that they found it generally difficult to find public sector bid opportunities. About one-half of MBE/WBEs indicated difficulties learning about subcontracting opportunities with prime contractors.

This lack of understanding about how to find bid opportunities is in spite of ODOT outreach and education efforts, which have been extensive.

Providing additional information about bid opportunities. The State of Oregon converted its online source of bid information from ORPIN to OregonBuys in mid-2021. Companies must be registered with OregonBuys to do business with any state agency and receive notices of bid opportunities.

The lack of knowledge about how to learn about ODOT work was evident even after ODOT has conducted training and added information to its website. In addition to general State efforts to educate potential bidders about OregonBuys, ODOT should consider devoting even more resources to help potential prime contractors and subcontractors become aware of and register in the system. Keen Independent's availability database for the disparity study can be one tool to reach out to potential new contractors, consultants and other vendors.

Schedule of future opportunities for consulting contracts. ODOT also provides a 12-month schedule of future construction contract opportunities (prime contracts), but does not publish one for engineering and other professional services contracts. It might attempt to assemble such a list, even if it is not complete.

Additional on-demand training of potential contractors and consultants. Keen Independent's 2019 study of good practices among state DOTs for the Transportation Research Board and FHWA found that even the most successful DBEs valued training that was specific to how contractors and consultants were expected to work with the state DOT and other agencies.⁶⁸ Providing that training on-demand through videos or online materials was a plus.

ODOT could continue to invest in such training.

Potential impact on overall DBE utilization for FHWA-funded contracts. If coupled with DBE certification of firms, increasing the pool of minority- and woman-owned companies knowing of and competing for ODOT and local agency prime contracts and subcontracts would have a positive impact on race-neutral DBE participation in ODOT's FHWA-funded contracts.

The study team was unable to quantify the potential effect.

⁶⁸ National Academies of Sciences, Engineering, and Medicine 2019. *Compendium of Successful Practices, Strategies, and Resources in the U.S. DOT Disadvantaged Business*

Enterprise Program. Washington, DC: The National Academies Press. <https://doi.org/10.17226/25538>.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

3. Further measures to increase DBE participation as prime contractors and consultants. DBEs accounted for only 1.6 percent of total FHWA-funded prime contract dollars for FFY2018–FFY2020.

Enhancing the impact of the ESB program on DBEs. ODOT and other state agencies can limit bidding on small state-funded contracts to firms certified as Emerging Small Businesses (ESBs). For construction contracts, this program was limited to contracts up to \$100,000 for FFY2018–FFY2020. Most contracts went to ESBs that were majority-owned, with MBE/WBE participation of 21.5 percent for state-funded ESB contracts under \$100,000. HB 3055, passed in 2021, increased the size limit for the program to contracts up to \$250,000.

A comprehensive review of ESB Program effectiveness in Oregon is beyond the scope of this study, but the results for ODOT suggest that it should be more effective in encouraging participation of minority- and woman-owned businesses as prime contractors on small ODOT contracts. ODOT might work with COBID and others to seek changes or improvements so that the program can have a greater impact on the participation of minority- and woman-owned companies on state-funded small contracts, which could lead to greater competitiveness of DBEs on FHWA-funded prime contracts.

Creating a parallel program for FHWA-funded prime contracts under \$250,000. The Small Contracting Program does not apply to FHWA-funded contracts. Also, ODOT could not apply preferences for ESBs to federally funded contracts as ESB certification excludes firms located outside of Oregon.

If allowable under federal requirements, ODOT might consider developing a small contracts program to increase the participation of economically disadvantaged businesses in its FHWA-funded contracts up to \$250,000. COBID would need to certify such firms, and there would likely need to be state legislation to allow for such a program.

An economically disadvantaged business might include firms that meet the following criteria:

- A for-profit business that is independent from other companies;
- Located anywhere in the United States (not limited to Oregon);
- Have average annual revenue over three years that is below the size standards for a small business in their subindustry, as determined by the U.S. SBA (the same as for DBE certification); and
- Have owners with personal net worth below the limits established under the Federal DBE Program (\$1.32 million, not counting equity in primary residence and in the business).

Because such a certification would be parallel with DBE certification, a DBE applying for the program could be accepted by showing an approved DBE certification. Firms certified in Oregon as ESBs would need to supplement their information with personal net worth statements. Firms with higher revenue than ESBs, but below SBA size standards, could be certified as well.

Potential impact on overall DBE utilization for FHWA-funded contracts. There are too many unknowns to accurately project the impact on overall utilization of DBEs on FHWA-funded contracts as a whole (large and small) if ODOT developed such a program. A rough estimate might be a 1 percentage point increase in overall DBE participation if all ODOT FHWA-funded contracts could be awarded under such a program and assuming that one-half of the firms certified under this program were DBEs and won 50 percent of these prime contracts. (Analysis based on FFY2018–FFY2020 contracts.) Long term impacts could be greater if more experience on small contracts led to DBE success for larger contracts.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

4. Encouraging DBE participation in new subindustries. For DBE participation on FHWA-funded contracts to grow, DBEs would need to sustain strong participation in certain fields but also expand in other types of work.

Analysis of current DBE participation in FHWA-funded contracts.

Three areas of work accounted for almost one-half of all DBE participation on FHWA-funded contracts for FFY2018–FFY2020:

- Traffic control;
- Excavation, site prep, grading and drainage; and
- Installation of guardrails, fencing or signs.

Among all firms, DBEs performed 61 percent of the dollars of these three types of work on FHWA-funded contracts. There may be room for existing DBEs to expand the amount of work performed in these fields, but, together, the three areas only accounted for 12 percent of total FHWA-funded contract dollars (for FFY2018–FFY2020).

There were four additional areas where total spending was smaller, but DBEs accounted for about one-half or more of the dollars on FHWA-funded contracts. They were:

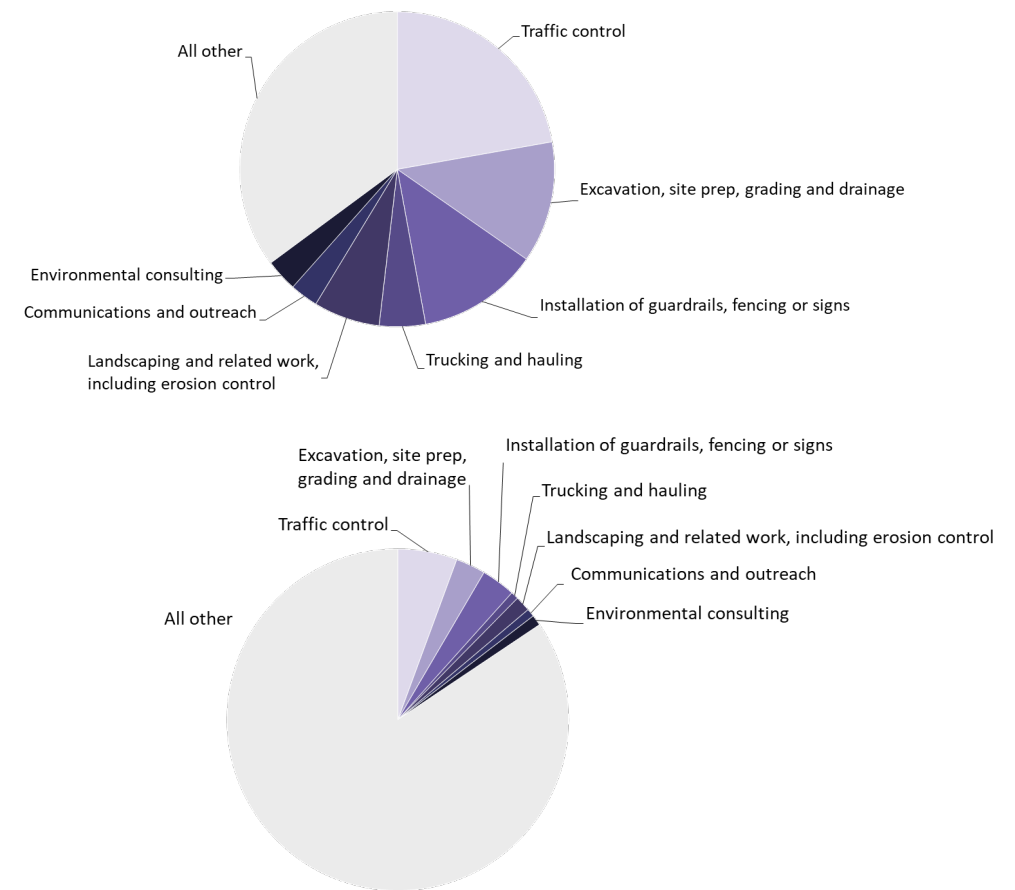

- Trucking and hauling;
- Landscaping and related work, including erosion control;
- Communications and outreach; and
- Environmental consulting.

In each of these four areas, DBEs accounted for about one-half or more of FHWA-funded contract dollars for that discipline. Together, they accounted for 18 percent of total DBE participation on FHWA-funded contracts. There may be opportunity for growth in DBE participation,

but together the four areas are just 4 percent of total spending on FHWA-funded contracts.

In sum, two-thirds of current DBE participation are in fields in which it will be difficult to see growth in DBE utilization that would materially change overall DBE utilization on FHWA-funded contracts.

28. Share of DBE contract dollars (top) and share of total contract dollars (bottom) in each subindustry for FHWA-funded contracts, FFY2018–FFY2020

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

Capacity-building and other assistance focused on areas with low DBE participation. Opportunities for growth in DBE participation might be greatest in the other types of construction and engineering work that account for 84 percent of total FHWA-funded contract dollars. Combined, DBEs obtained only 6 percent of the FHWA-funded contract dollars in these other areas for FFY2018–FFY2020.

Continued monitoring of potential overconcentration of DBEs in FHWA-funded contracts. Although not directly related to neutral remedies, ODOT must continue to monitor potential overconcentration of DBEs in FHWA-funded contracts to be compliant with regulations governing the Federal DBE Program (49 CFR Section 26.33). In addition to the results reported above, Keen Independent analyzed whether DBEs accounted for a dominant share of firms available for specific types of work.

Based on firms in the availability database, there was no worktype where DBEs were more than 18 percent of available firms reporting that they performed that type of work. DBEs did not appear to constitute a dominant portion of firms available for any type of ODOT transportation-related work.

According to federal regulations, ODOT must take action if there is overconcentration of DBEs in a certain type of work that would unduly burden opportunities of non-DBEs to participate in that work. Measures mentioned in the regulations include incentives, technical assistance, business development programs, mentor-protégé programs and varying the use of DBE contract goals. Any determination of overconcentration and steps to address it must be submitted for approval to FHWA.

Potential impact on overall DBE utilization for FHWA-funded contracts. If DBE participation could increase from 6 percent to 10 percent in the broad set of construction, engineering and other work beyond the seven subindustries discussed here, total DBE participation in FHWA-funded contracts could increase by 3.4 percentage points. (This assumes continued strong DBE participation in the disciplines discussed here.) This could happen through:

- Growth of DBEs in the areas with little utilization;
- Diversification of existing DBEs into new fields; and
- Entry of new DBEs into subindustries with low current participation.

Such an increase might be a long-term objective, to be achieved through supportive services of ODOT and others, mentorship, reducing barriers in ODOT and local agency procurement processes, addressing bonding and access to capital, and other initiatives. This hypothetical calculation shows the possible gain, not a projection of what can be achieved from specific measures.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

5. Additional capacity-building for DBEs. ODOT and other groups have held training sessions and other assistance related to capital and bonding. They both remain barriers to the success of many minority- and woman-owned businesses. ODOT might consider measures other state DOTs have taken to better ensure that DBEs can obtain working capital loans and bonds.

Examples of working capital loan programs. There are several examples of regional or statewide working capital programs across the country that focus on capital needs for contractors and consultants. For example, Wisconsin DOT has operated a loan program that covers mobilization since the 1980s. At the time of this report, the American Indian Chamber of Commerce now provides the guarantee, with any Wisconsin bank or credit union eligible to provide the loan.

DBEs awarded WisDOT contracts or subcontracts can apply for the loan, with the contract and the guarantee combining to provide collateral for the loan. Loans can be up to \$250,000. WisDOT provides a capacity building business assessment and additional assistance as part of the application process.

Funds are provided as a line of credit that the DBE can draw upon as needed. Payments made to the DBE are through a two-party check.⁶⁹

Examples of bonding programs. There are many sources of education and training about bonding for construction contractors in the region (see Appendix K). However, there may be a need for additional assistance in actually obtaining bonds for public sector construction

projects. A joint effort that includes ODOT might be the best way to approach this barrier for some small contractors.

As an example of a bond guarantee program, the Colorado Department of Transportation partnered with Lockton Companies to launch the Bond Assistance Program in July 2019, for construction contracts of \$3 million or less. CDOT provides a guarantee of 50 percent.⁷⁰

Firms certified as emerging small businesses (ESBs), including DBEs, are eligible to participate. A potential participant starts the process by undergoing an assessment of whether it is bondable. A firm can participate in the program on one contract only. The surety fee is 2 percent of the contract, and the ESB must participate in a funds control program with the management company (0.75% fee).

Obtaining bonding through the program also helps a contractor meet CDOT's prequalification requirements to bid on a construction contract. For firms not yet prequalified, it provides proof of bonding. For firms that are prequalified, it can be used to increase the size of contract on which the firm can bid as a prime.

Florida DOT has a similar Bond Guarantee Program. There are other examples around the country as well that ODOT could review.

Potential impact on overall DBE utilization for FHWA-funded contracts. The study team was unable to project the potential effect on overall DBE participation from these initiatives alone. These or other steps might be viewed as necessary for other measures, such as a small contracting program, to be fully successful.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

6. Addressing other barriers to doing business with ODOT. The 2016 Disparity Study identified many different barriers to participation of small businesses including minority- and woman-owned firms in ODOT contracts, especially as prime contractors and consultants. Discussions with ODOT indicate that more can be done to address such disadvantages. Examples of potential steps include:

- Unbundling more contracts;
- Simplifying bidding and prequalification processes;
- Changing evaluation criteria to ensure that they do not inappropriately disadvantage smaller and newer businesses (for example, avoid counting number of staff or years a firm has been in business and instead evaluating experience of the business owner and staff proposed for the project);
- Reviewing whether there is any additional flexibility when bonding is required;
- Reevaluating ODOT requirements concerning hourly rates for consultants;
- Assessing the impact of any excessive ODOT insurance requirements on small businesses;
- Further speeding payment of prime contractors and subcontractors on ODOT projects; and
- Creating additional opportunities for relationship building between DBEs.

These are just some of the examples ODOT and local governments could implement to make their procurement processes more small-business friendly and equitable to firms that have had little participation in these opportunities.

It was not possible to accurately project the potential impact of these types of initiatives on DBE participation.

7. Other improvements to operation of the Federal DBE Program regarding neutral measures and other program elements. Other areas for improvement of program operation are discussed below. These efforts would help monitor and support other steps to increase neutral participation of DBEs in ODOT's contracts.

FTA review of ODOT operation of the Federal DBE Program. At the time of this report, ODOT had received preliminary comments from a review of its operation of the Federal DBE Program for FTA-funded contracts. The review encompassed ODOT's neutral efforts under the Federal DBE Program.

Some of the initial results of the review pertained to whether there was direct, independent access of the DBE liaison officer to the Executive Director. The review also included comments about monitoring DBE participation on contracts and accurate reporting of DBE participation in ODOT's DBE Uniform Reports prepared for FTA.

Proper execution of these functions is required under regulations in 49 CFR Part 26 not only for FTA-funded contracts but for any USDOT-funded contracts. Areas for improvement identified in the final FTA review will also apply to ODOT's operation of the program for FHWA-funded contracts as well.

ODOT was in the process of responding to these issues at the time of this report.

SUMMARY REPORT — Summary of quantitative and qualitative analyses and neutral measures

Tracking of MBE/WBE participation as well as DBE participation. ODOT should develop processes and information systems for better ongoing tracking and regular reporting of DBE participation for its USDOT-funded and its non-federally funded contracts. It should also begin reporting of MBE/WBE businesses, regardless of certification.

- **Improvements to Uniform Reports.** Review of ODOT's Uniform Reports of DBE Commitments/Awards and Payments indicated large differences between DBE participation based on commitments/awards and DBE utilization based on payments. ODOT should improve its tracking and reporting to ensure accuracy in both sets of utilizations figures.
- **Tracking DBE and MBE/WBE participation for addition sets of contracts.** Because reports limited to DBEs miss ODOT utilization of MBE/WBE firms that are too large to be DBE certified or have chosen not to be certified, Keen Independent recommends that ODOT also track participation of all minority- and woman-owned firms, including those that are not currently certified. It should do so for FHWA-funded contracts (separately for contracts with goals and for contracts without goals) and for its state-funded contracts.

ODOT can better monitor the success of its neutral efforts as well as whether its future MBE/WBE participation is in line with the MBE/WBE availability benchmarks identified in this study (or refined benchmarks based on future work). It should do so for individual MBE groups as well as for white woman-owned businesses. Such information will help ODOT to assess whether its inclusion of individual DBE groups in any race- or gender-conscious programs continues to be narrowly tailored under the requirements of the Federal DBE Program and legal decisions in the Ninth Circuit.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

ODOT is required to set an overall annual goal for DBE participation in its FHWA-funded transportation contracts. Federal regulations govern how these goals are determined. Agencies such as ODOT must determine “the level of DBE participation you would expect absent the effects of discrimination.”⁷¹

This section provides information for ODOT to consider as it sets its overall triennial DBE goal for FHWA-funded contracts and its projection of how much of the goal to be met through race-neutral measures.

This section is organized in three parts based on the process that 49 CFR Part 26.45 outlines for agencies to set their overall goals and project the portion to be met through neutral means:

- Establishing a base figure;
- Consideration of a step 2 adjustment; and
- Portion of overall DBE goal for FHWA-funded contracts to be met through neutral means.

Establishing a Base Figure

Establishing a base figure is the first step in calculating an overall goal for DBE participation in ODOT’s FHWA-funded contracts. For the base figure for FHWA-funded contracts, calculations focus on current and potential DBEs and other firms available for ODOT’s contracts.

The study team’s approach to calculating ODOT’s base figure is consistent with:

- Court-reviewed methodologies in several states, including Washington, California, Illinois and Minnesota;
- Instructions in The Final Rule effective February 28, 2011, that outline revisions to the Federal DBE Program; and
- USDOT’s “Tips for Goal-Setting in the Disadvantaged Business Enterprise (DBE) Program.”

Projections of the types, sizes and locations of future FHWA-funded contracts and subcontracts. Discussions with ODOT indicate that analysis of FHWA-funded projects for FFY2018–FFY2020 provide the best projection of types, sizes and locations of FHWA-funded contracts for FFY2023 through FFY2025.

- The mix of FHWA-funded projects for the three years beginning October 2022 is expected to be similar to FHWA-funded projects from October 2018 through September 2020.
- Large projects such as Columbia River Bridge project will have a separate DBE goal and not be included in calculations presented here.
- As funds from the Infrastructure Investment and Jobs Act still need to be allocated, there is no projection for these funds.

In sum, there is no better information than historical information to project FHWA-funded contracts and subcontracts for these three years.

⁷¹ 49 CFR Section 26.45(b).

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

Calculations to convert MBE/WBE availability to current and potential DBEs for the base figure. Figure 29 provides the calculations to derive current/potential DBE availability when starting from the 23.46 percent MBE/WBE availability figure for FHWA-funded contracts.

There were three groups of MBE/WBEs that Keen Independent did not count as potential DBEs when calculating the base figure:

- **Graduated or been denied DBE certification.** The study team examined whether there were, in recent years, MBE/WBEs that graduated from the DBE Program or had applied for DBE certification in Oregon and had been denied (based on information supplied by ODOT’s Office of Civil Rights). No firms were identified in this review.
- **Revenue exceeding DBE limits.** When identifying potential DBEs, Keen Independent did not count MBE/WBEs from the availability surveys that reported having average annual revenue for the most recent three years exceeding the revenue limits for DBE certification for their subindustry. One MBE/WBE appeared to exceed these limits. It was counted as a non-DBE in the base figure analysis.
- **BOLI list.** Keen Independent reviewed whether there were any firms in the availability survey database that were ineligible for work based on their inclusion on the Oregon Bureau of Labor and Industries (BOLI) List of Contractors Ineligible to Receive Public Works Contracts (as of March 2022). No firms from the availability survey were on the BOLI list.

Based on the review explained above, Keen Independent reclassified one MBE/WBE to be a non-DBE in the base figure analysis. This reduced the base figure for FHWA-funded contracts by 0.04 percentage points.

The base figure for ODOT’s overall DBE goal is therefore 23.43 percent. It represents the level of current/potential DBE participation anticipated for FFY2023–FFY2025 based on analysis of ODOT and local agency FHWA-funded contracts from October 2017 through September 2020.

29. Overall dollar-weighted availability estimates for current and potential DBEs for FHWA-funded contracts, FFY2023–FFY2025

Calculation of base figure from past contracts	Availability
Total MBE/WBE	23.46 %
Less firms that graduated from the DBE program or denied DBE certification in recent years or exceed revenue threshold	0.04
Subtotal	23.43 %
Plus white male-owned firms	-
Current and potential DBEs	23.43 %
Current DBEs only	11.41 %

Note: Numbers may not add to totals due to rounding.

Source: Keen Independent availability analysis.

If the types, sizes and locations of FHWA-funded work were to substantially change for the FFY2023 through FFY2025 period, ODOT could reexamine its overall DBE goal for this time period.

Dollar-weighted availability of current DBEs. Keen Independent also calculated the base figure if it only counted current DBEs. (“Potential DBEs” are included in the analysis, but counted as non-DBEs.) The base figure would be 11.41 percent if limited to currently certified DBEs.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

Step 2. Determining if an Adjustment is Needed — 49 CFR Section 26.45(d)

Per the Federal DBE Program, ODOT must consider potential adjustments to the base figure as part of determining its overall annual DBE goal for FHWA-funded contracts. Federal regulations outline factors that an agency must consider when assessing whether to make any such “step 2 adjustments” to its base figure:

1. Current capacity of DBEs to perform work, as measured by the volume of work DBEs have performed in recent years;
2. Information related to employment, self-employment, education, training and unions;
3. Any disparities in the ability of DBEs to get financing, bonding and insurance; and
4. Other relevant factors.⁷²

Keen Independent completed an analysis of each of the above step 2 factors and was able to quantify the effect of certain factors on the base figure. Other information examined was not as easily quantifiable but is still relevant to ODOT as it determines whether to make any step 2 adjustments.

1. Current capacity of DBEs to perform work, as measured by the volume of work DBEs have performed in recent years. USDOT’s “Tips for Goal-Setting” suggests that agencies should examine data on past DBE participation on their USDOT-funded contracts in recent years (i.e., the percentage of contract dollars going to DBEs).

Figure 30 shows DBE participation based on commitments/award data from ODOT Uniform Reports of DBE Awards or Commitments and Payments that ODOT submitted to FHWA. Using the most recent five fiscal years of results at the time of this report, the median DBE participation is 13.69 percent. As this value is lower than the 23.43 percent base figure, it suggests a possible downward step 2 adjustment based on this factor.

30. DBE participation on FHWA-funded contracts based on ODOT Uniform Reports to FHWA, FFY2017 through FFY2021

Source: ODOT Uniform Reports of DBE Awards or Commitments and Payments.

⁷² 49 CFR Section 26.45.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

USDOT “Tips for Goal-Setting” suggests taking one-half of the difference between the base figure and evidence of current capacity as one approach to calculate the step 2 adjustment for that factor. (In effect, this means *averaging* the two numbers.)

The difference between the 23.43 percent DBE participation and 13.69 percent base figure is 9.74 percentage points (23.43% - 13.69% = 9.74%). One-half of this difference is a downward adjustment of 4.87 percentage points (9.74% ÷ 2 = 4.87%). The DBE goal would then be calculated as follows: 23.43% - 4.87% = 18.56%. (These calculations are presented in the top portion of Figure 31.)

2. Information related to employment, self-employment, education, training and unions. Keen Independent’s analyses indicate that there are barriers that certain minority groups and women face related to entry and advancement and business ownership in the Oregon construction, professional services, goods and other services industries (see Quantitative Analysis in this Summary Report and Appendices E through J).

The study team used regression analyses to investigate whether race, ethnicity and gender affected rates of business ownership among workers in Oregon study industries. There were statistically significant disparities in business ownership for certain minority groups and women in some of the study industries. (See Quantitative Analysis in this Summary Report as well as Appendix F.)

Keen Independent analyzed the impact that those barriers in business ownership would have on the base figure if these groups owned businesses at the same rate as similarly situated nonminorities and white men. This type of inquiry is sometimes referred to as a “but for” analysis because it estimates the availability of MBE/WBEs *but for* the effects of race- and gender-based discrimination.

Quantification of the business ownership factor indicates an upward step 2 adjustment of 10.96 percentage points to reflect the “but-for” analyses of business ownership rates. Appendix N explains these calculations.

If ODOT made this adjustment, the overall DBE goal for FHWA-funded contracts would be 34.39 percent (23.43% + 10.96% = 34.39%). The bottom portion of Figure 31 shows these calculations.

31. Potential step 2 adjustments to ODOT’s overall DBE goal for FHWA-funded contracts

Step 2 adjustment component	Value	Explanation
Lower adjustment of overall DBE goal for current capacity		
Base figure	23.43 %	From base figure analysis
Evidence of current capacity	<u>13.69</u>	Past DBE participation
Difference	9.74 %	
	÷ <u>2</u>	Reduce by one-half
Adjustment	4.87 %	Downward adjustment for current capacity
Base figure	23.43 %	From base figure analysis
Adjustment for current capacity	- <u>4.87</u>	Downward step 2 adjustment
Overall DBE goal	18.56 %	Lower range of DBE goal
Upward adjustment of overall DBE goal for business ownership		
Base figure	23.43 %	From base figure analysis
Adjustment for "but for" factors	+ <u>10.96</u>	"But for" step 2 adjustment for business
Overall DBE goal	34.39 %	Upward adjustment of DBE goal for business

Note: Numbers may not add to totals due to rounding.

Source: Keen Independent Research analysis.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

3. Any disparities in the ability of DBEs to get financing, bonding and insurance. Analysis of access to financing and bonding revealed quantitative and qualitative evidence of disadvantages for minorities, women and MBE/WBEs.

The information about financing and bonding supports an upward step 2 adjustment in ODOT’s overall annual goal for DBE participation in FHWA-funded contracts.

4. Other factors. The Federal DBE Program suggests that federal aid recipients also examine “other factors” when determining whether to make any step 2 adjustments to their base figure.⁷³

Among the “other factors” examined in this study was the success of MBE/WBEs relative to majority-owned businesses in the Oregon marketplace. There is quantitative and qualitative evidence that certain groups of MBE/WBEs are less successful than majority-owned firms, and face greater barriers in the marketplace, even after considering neutral factors.

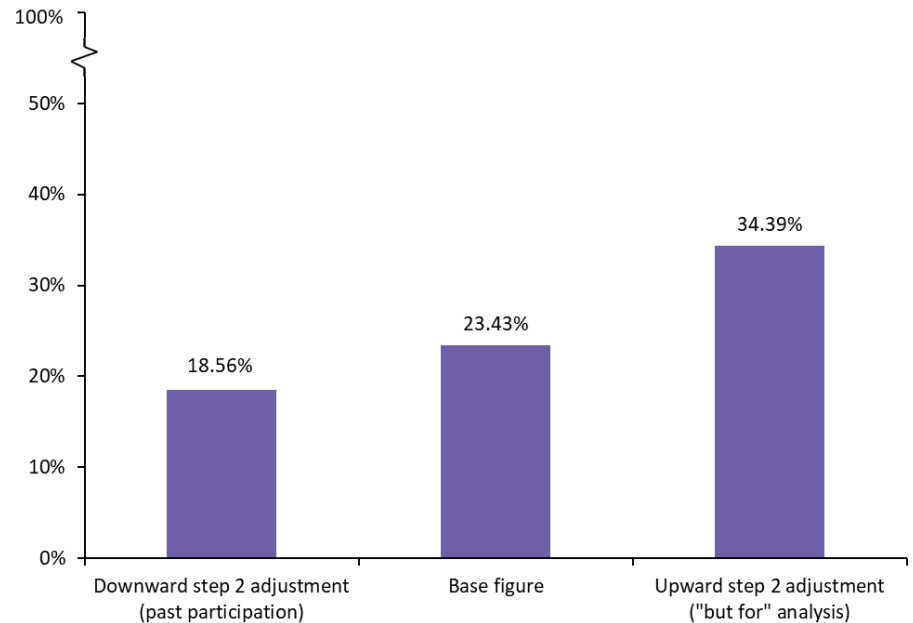

There is no straightforward way to project the number of MBE/WBEs available for ODOT and local agency work but for the effects of these other factors.

Summary. ODOT will need to consider whether to make a downward, upward or no step 2 adjustment when determining its overall DBE goal.

- A downward step 2 adjustment reflecting current capacity to perform work, would lead to an overall goal of 18.56 percent.
- An upward adjustment that reflects analyses of business ownership rates would lead to a DBE goal of 34.39 percent.
- If ODOT made no adjustment at all, its overall DBE goal would be 23.43 percent.

Figure 32 summarizes the potential adjustments described in this section.

32. Potential DBE goals for FHWA-funded contracts after step 2 adjustments

Source: Keen Independent Research analysis.

⁷³ 49 CFR Section 26.45.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

Projecting the Portion of the Overall DBE Goal to be Met Through Neutral Means

The Federal DBE Program requires state and local transportation agencies to meet the maximum feasible portion of their overall DBE goals using race- and gender-neutral measures.⁷⁴ Race- and gender-neutral measures are initiatives that encourage the participation of all businesses, or all small businesses, and are not specifically limited to MBE/WBEs or DBEs.

Agencies must determine whether they can meet their overall DBE goals solely through neutral means or whether race- and gender-conscious measures — such as DBE contract goals — are also needed.

- If an agency determines that it can meet its overall DBE goal solely through race- and gender-neutral means, then it would propose using only neutral measures as part of its program.
- If an agency determines that a combination of race- and gender-neutral and race- and gender-conscious measures are needed to meet its overall DBE goal, then the agency would propose using a combination of neutral and conscious measures as part of its program.

Based on 49 CFR Part 26 and the resources above, general areas of questions that transportation agencies might ask related to making any projections include the following.

1. Is there evidence of discrimination within the local transportation contracting marketplace for any racial, ethnic or gender groups? The 2022 Disparity Study considered conditions in the local marketplace to address this question. Quantitative and qualitative information is summarized below.

Marketplace conditions. As summarized in the Summary Report, there was quantitative evidence of disparities in outcomes in Oregon marketplace for minority- and woman-owned firms in general and for certain MBE/WBE groups concerning the above issues.

Qualitative information indicated some evidence that discrimination may have been a factor in these outcomes (see Qualitative Analysis section of the Summary Report).

Results of the disparity analysis for FHWA-funded contracts.

Utilization of minority- and woman-owned businesses in FHWA-funded contracts without goals was substantially below what might be expected from the availability analysis. This was true for each DBE group.

When examining state-funded contracts, there was a substantial disparity for MBEs overall and for white woman-owned firms (see Disparity Analysis in this Summary Report).

⁷⁴ 49 CFR Section 26.51.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

Summary. ODOT should review the information about marketplace conditions and the disparity analyses for its contracts reviewed in this Summary Report and discussed in detail in study appendices, as well as other information it may have, when considering the extent to which it can meet its overall DBE goal through neutral measures.

The combined information from the marketplace analyses and the disparity analyses for ODOT contracts indicates evidence of disparities in outcomes for African American-, Asian-Pacific American-, Subcontinent Asian American, Hispanic American and Native American-owned firms as well as white woman-owned businesses.

ODOT should consider this information when determining if all DBEs or only firms owned by some racial, ethnic and gender groups will be eligible for any future race- and gender-conscious programs such as meeting DBE contract goals. If it chose to use a DBE contract goals program and that would not include a DBE group as eligible to participate in that program element, ODOT would need to request a waiver from FHWA.

2. What has been the agency’s past experience in meeting its overall DBE goal? Figure 33 summarizes ODOT’s reported DBE participation based on DBE commitments/awards on FHWA-funded contracts.

As shown, ODOT fell short of its overall DBE goals in two of the past five fiscal years.

33. ODOT overall DBE goal and reported DBE participation on FHWA-funded contracts, FFY2017 through FFY2021

Federal fiscal year	DBE goal	DBE commitments/ awards	Difference from DBE goal
2017	11.60 %	13.69 %	2.09 %
2018	11.60	8.94	-2.66
2019	15.40	18.40	3.00
2020	15.40	17.24	1.84
2021	15.40	12.52	-2.88

Source: ODOT Uniform Reports of DBE Awards or Commitments and Payments.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

3. What has DBE participation been when ODOT has not applied DBE contract goals (or other race-conscious remedies)?

Keen Independent examined three sources of information to assess race-neutral DBE participation:

Race-neutral DBE participation in recent ODOT Uniform Reports.

Per USDOT instructions, ODOT counts as “neutral” participation any prime contracts going to DBEs as well as subcontracts to DBEs beyond what was needed to meet DBE contract goals set for a project or that were otherwise awarded in a race-neutral manner.

ODOT’s Uniform Reports of DBE Awards/Commitments and Payments submitted to FHWA for the five most recent federal fiscal years indicate median race-neutral participation of 6.10 percent. Figure 34 presents these results.

34. ODOT-reported race-neutral and race-conscious DBE participation on FHWA-funded contracts, FFY2017 through FFY2021

Federal fiscal year	DBE commitments/award		
	Total	Race-conscious	Race-neutral
2017	13.69 %	7.59 %	6.10 %
2018	8.94	6.08	2.86
2019	18.40	10.02	8.38
2020	17.24	10.42	6.82
2021	12.52	6.79	5.73

Source: ODOT Uniform Reports of DBE Awards/Commitments and Payments.

DBE participation on contracts without DBE contract goals.

Keen Independent also analyzed DBE participation on ODOT’s FHWA-funded contracts without DBE contract goals. ODOT achieved 3.49 percent DBE participation on these contracts from October 2017 through October 2020.

DBE participation as prime contractors.

Keen Independent examined DBE participation as prime contractors on FHWA-funded contracts. From October 2017 through September 2020, the DBE participation on prime contracts was about 1.3 percent for FHWA-funded contracts.

4. What is the extent and effectiveness of race- and gender-neutral measures that the agency could have in place for the next fiscal year?

When determining the extent to which it could meet its overall DBE goal through the use of neutral measures, ODOT must review the race- and gender-neutral measures that it and other organizations have in place, and those it has planned or could consider for future implementation.

Keen Independent’s analysis of neutral remedies indicates that ODOT has already implemented an extensive set of neutral measures. At this time, it is unclear whether any additional neutral measures would increase race-neutral participation of DBEs in ODOT’s FHWA-funded contracts.

SUMMARY REPORT — Overall DBE goal and projections of neutral participation

If ODOT uses a combination of neutral means and DBE contract goals, how much of the overall DBE goal can ODOT project to be met through neutral means? In 2019, ODOT set an overall DBE goal of 15.37 percent for FHWA-funded contracts for FFY2020 through FFY2022 and projected that 4.73 percentage points of its overall goal would be met through neutral means.

For FFY2023 through FFY2025, ODOT might increase its projection of race-neutral DBE participation to at least 6.10 percentage points of its overall DBE goal for FHWA-funded contracts.

- The median DBE participation through race neutral means was 6.10 percent based on ODOT’s reports for FFY2017 through FFY2021 (presented earlier in this section).
- ODOT’s current neutral initiatives are already considerable and will continue to expand.
- Keen Independent identified additional neutral measures for ODOT consideration in this report, including their estimated impact on total neutral DBE participation (which could exceed 5 percentage points).

The second column of numbers in Figure 35 provides projections using an overall DBE goal of 18.56 percent and a 6.10 percentage point race-neutral projection for FFY2023 through FFY2025. The race-conscious portion of the goal is 12.46 percentage points.

As indicated in the other columns of Figure 35, the race-conscious projection would need to be higher if ODOT selected an overall DBE goal in the range of 23 to 34 percent.

35. ODOT overall DBE goal and projections of race-neutral participation for FHWA-funded contracts for FFY2023–FFY2025

Component of overall DBE goal	FFY2020–FFY2022	FFY2023–FFY2025		
		Downward adjustment - current capacity	Base figure	Upward adjustment - business ownership
Overall goal	15.37 %	18.56 %	23.43 %	34.39 %
Neutral projection	- 4.73	- 6.10	- 6.10	- 6.10
Race-conscious projection	10.64 %	12.46 %	17.33 %	28.29 %

Source: Keen Independent Research analysis.

SUMMARY REPORT — Public Comment Process for the 2022 Disparity Study Report

ODOT published a draft of the disparity study report for public comment in May 2022. The public could make comments on the draft report and ODOT's proposed overall DBE goal through June 20, 2022.

ODOT held six virtual Town Halls concerning the Disparity Study and ODOT's proposed DBE goal.

- State/Agency-wide: Monday, May 23, 2022, from 2:00 to 3:30 pm;
- Region 1: Tuesday, May 24, 2022, from 3:00 to 4:30 pm;
- Region 2: Wednesday, May 25, 2022, from 3:00 to 4:30 pm;
- Region 3: Thursday, May 26, 2022, from 10:00 to 11:30 am;
- Region 4: Tuesday, June 7, 2022, from 1:00 to 2:30 pm; and
- Region 5: Friday, June 10, 2022, from 10:30 am to noon.

Information about the virtual Town Halls was available at www.keenindependent.com/odotdisparitystudy2022/. In addition, the public was able to submit feedback and provide written comments through the following means:

- During Virtual Town Halls;
- Online at the above web address;
- By calling the study telephone hotline (503) 765-6663;
- Via email at ODOTDisparityStudy2022@keenindependent.com; and
- By regular email sent to Annette Humm Keen, Principal Keen Independent Research
701 N. 1st Street, Phoenix AZ 85004

After the release of the draft report and proposed overall DBE goals, 11 individuals provided comments on behalf of themselves or their organizations during the comment period. (See Contract Goals and Other Preferences Programs, Contractor-Subcontractor Relationships, Certification and Transparency and Consistency sections of Appendix J for additional information.) These comments as well as the questions received during the Town Halls were reviewed and incorporated into the final report.

Keen Independent and ODOT then prepared final documents for USDOT concerning overall DBE goals for FHWA-funded contracts. This process follows the approach for public review of the 2016 Disparity Study that Keen Independent prepared for ODOT.

APPENDIX A. Definition of Terms

Appendix A provides explanations and definitions useful to understanding the 2022 ODOT Disparity Study. The following definitions are only relevant in the context of this report.

A&E. “A&E” refers to architecture and engineering (i.e., “A&E contracts”).

Anecdotal evidence. Anecdotal or “qualitative” evidence includes personal accounts and perceptions of incidents, including any incidents of discrimination, told from each individual interviewee’s or participant’s perspective.

Availability analysis. The availability analysis examines the number of minority-, woman- and majority-owned businesses ready, willing and able to perform the specific types of construction, professional services, goods or other services purchased by a government agency.

“Availability” is often expressed as the percentage of contract dollars that might be expected to go to minority- or woman-owned firms based on analysis of the specific type, size and timing of each prime contract and subcontract examined in the disparity study and the relative number of minority- and woman-owned firms available for that work.

Business. A business is a for-profit enterprise, including all its establishments (synonymous with “firm” and “company”).

Business establishment. A business establishment (or simply, “establishment”) is a place of business with an address and working phone number. One business can have many business establishments in different locations.

Business listing. A business listing is a record in the Dun & Bradstreet (D&B) database or other databases of business information. A D&B record is a “listing” until the study team determines it to be an actual business establishment with a working phone number.

Certification Office of Business Inclusion and Diversity (COBID).

The Certification Office of Business Inclusion and Diversity or “COBID” is the state agency responsible for certification of minority- and woman-owned firms, Disadvantaged Business Enterprises (DBE), Airport Concessions Disadvantaged Business Enterprises (ACDBEs) and Emerging Small Businesses (ESBs) in Oregon. COBID also administers a Service Disabled Veteran (SDV) certification.

Certified MBE or WBE. A firm certified as a minority- or woman-owned business. Without the word “certified” in front of “MBE” or “WBE,” Keen Independent is referring to a minority- or woman-owned firm that might or might not be certified as such.

COBID. See Certification Office of Business Inclusion and Diversity.

Code of Federal Regulations or CFR. Code of Federal Regulations (“CFR”) is a codification of the federal agency regulations. An electronic version can be found at www.gpo.gov/fdsys/browse/collectionCfr.action?collectionCode=CFR.

Consultant. A consultant is a business performing professional services contracts.

Contract. A contract is a legally binding agreement between the purchaser and seller of goods or services.

Contract element. As used in this report, a contract element is either a prime contract or subcontract that the study team included in its analyses.

APPENDIX A. Definition of Terms

Contract goals program. A program in which a public agency sets a percentage goal for participation of DBEs, MBE/WBEs, small businesses or another group on a contract. These programs typically require that a bidder either meet the percentage goal with members of the group or show good faith efforts to do so as part of its bid or proposal.

Contractor. A contractor is a business performing construction contracts.

Controlled. Controlled means exercising management and executive authority for a business.

Crosby decision. The U.S. Supreme Court decision that established the new standard that race-conscious contracting programs must satisfy the elements of strict judicial scrutiny. *City of Richmond v. J.A. Crosby Co.*, 488 U.S. 469 (1989).

Disadvantaged Business Enterprise (DBE). A “DBE” is a firm certified as such. A small business that is 51 percent or more owned and controlled by one or more individuals who are both socially and economically disadvantaged according to the guidelines in the Federal DBE Program (49 CFR Part 26) can be certified as a DBE. Members of certain racial and ethnic groups identified under “minority-owned business enterprise” in this appendix may meet the presumption of social and economic disadvantage. Women are also presumed to be socially and economically disadvantaged. Examination of economic disadvantage also includes investigating the three-year average gross revenues and the business owner’s personal net worth (at the time of this report, a maximum of \$1.32 million excluding equity in the business and primary personal residence) (<https://www.transportation.gov/civil-rights/disadvantaged-business-enterprise/definition-disadvantaged-business-enterprise>).

Some minority- and woman-owned businesses do not qualify as DBEs under Part 26 because of gross revenue or net worth limits.

A business owned by a non-minority male may also be certified as a DBE on a case-by-case basis if the enterprise meets its burden to show it is owned and controlled by one or more socially and economically disadvantaged individuals according to the requirements in 49 CFR Part 26.

Some governments use the term “DBE” outside of the USDOT program to describe their minority- and woman-owned business programs.

Disparity. A disparity is an inequality, difference or gap between an actual outcome and a reference point or benchmark. For example, a difference between an outcome for one racial or ethnic group and an outcome for non-minorities may constitute a disparity.

Disparity analysis. Disparity analysis compares actual outcomes with what might be expected based on other data. Analysis of whether there is a “disparity” between the utilization and availability of minority- and woman-owned businesses is one tool used to examine whether there is evidence consistent with discrimination against such businesses.

APPENDIX A. Definition of Terms

Disparity index. A disparity index is a measure of the relative difference between an outcome, such as percentage of contract dollars received by a group, and a corresponding benchmark, such as the percentage of contract dollars that might be expected given the relative availability of that group for those contracts. In this example, it is calculated by dividing percent utilization (numerator) by percent availability (denominator) and then multiplying the result by 100.

A disparity index of 100 indicates “parity” or utilization “on par” with availability. Disparity index figures closer to 0 indicate larger disparities between utilization and availability. For example, the disparity index would be “50” if the utilization of a particular group was 5 percent of contract dollars and its availability was 10 percent.

Dun & Bradstreet (D&B). D&B is the leading global provider of lists of business establishments and other business information (see www.dnb.com). Hoovers is the D&B company that provides these lists. Obtaining a DUNS number, a unique nine-digit identifier for businesses, and being listed by D&B are free to listed companies. Companies are not required to pay to be listed in its database.

eBIDS. Electronic Bidding Information Distribution System, ODOT’s online bidding system for highway construction projects.

Emerging Small Business (ESB). Emerging small businesses (ESBs) are those certified by the State of Oregon as small businesses, with a time limit for participation in the program (hence “emerging”). Certification is limited to for-profit firms, not part of a larger company, with a principal place of business in Oregon. At the time of this report, ESB certification includes two tiers:

- Tier 1 for businesses with 19 or fewer employees that have 3-year average annual gross receipts below \$1,925,197 for construction businesses or \$789,199 for non-construction firms; and
- Tier 2 for businesses with 29 or fewer employees that have 3-year average annual gross receipts less than \$3,945,994 for construction firms or \$1,315,331 for non-construction firms.

Employer firms. Employer firms are firms with paid employees other than the business owner and family members.

Engineering-related services. For purposes of this study, services such as surveying, transportation planning, environmental consulting, construction management and certain related professional services.

Enterprise. An enterprise is an economic unit that is a for-profit business or business establishment, not-for-profit organization or public sector organization.

ESB. See Emerging Small Business.

Establishment. See business establishment.

APPENDIX A. Definition of Terms

Federal Disadvantaged Business Enterprise (DBE) Program. Federal DBE Program refers to the Disadvantaged Business Enterprise Program established by the United States Department of Transportation after enactment of the Transportation Equity Act for the 21st Century (TEA-21) as amended in 1998. The regulations for the Federal DBE Program are set forth in 49 CFR Part 26, which can be found at http://www.ecfr.gov/cgi-bin/text-idx?tpl=/ecfrbrowse/Title49/49cfr26_main_02.tpl.

Federal fiscal year. The federal fiscal year (FFY) is the time period from October 1 through September 30 of the following year. For example, FFY2022 extends from October 1, 2021, through September 30, 2022. ODOT DBE reporting follows the federal fiscal year.

Federal Highway Administration (FHWA). The FHWA is an agency of the United States Department of Transportation that works with state and local governments to construct, preserve and improve the National Highway System, other roads eligible for federal aid and certain roads on federal and tribal lands.

Federally funded contract. A federally funded contract is any contract or project funded in whole or in part (a dollar or more) with U.S. Department of Transportation financial assistance. As used in this study, it is synonymous with a “USDOT-funded contract.”

Firm. See business.

Geographic market area. The geographic market area is the area in which the businesses receiving most of a government agency’s contract dollars are located. The geographic market area is also referred to as the “local marketplace.” Case law related to race- and gender-conscious programs requires disparity analyses to focus on the “geographic market area.” It is calculated by examining the share of dollars going to firms in different locations.

Goals program. See contract goals program.

Good faith efforts. Those efforts undertaken by a bidder or proposer that include all necessary and reasonable steps to achieve a contract goal or other program requirement of which, by their scope, intensity, and appropriateness to the objective, could reasonably be expected to obtain sufficient participation, even if they were not fully successful. See 49 CFR Part 26, Appendix A, Guidance on Good Faith Efforts.

Industry. For the purpose of this study, an industry is a broad classification of businesses that are related based on their primary line of business. For example, “construction” is an industry.

Legal framework. Legal framework is the review of relevant case law used as the basis for study methodology.

Local agency. A local agency is any city, county, town, tribal government, regional transportation commission or other local government receiving money through ODOT.

Majority-owned business. A majority-owned business is a for-profit business that is not owned by minorities or women (see definition of “minorities” below).

Market area. See geographic market area.

MBE. Minority-owned business enterprise. See minority-owned business.

APPENDIX A. Definition of Terms

Minorities. In the Federal DBE Program and many MBE programs, minorities are individuals who belong to one or more of the racial/ethnic groups identified in the federal regulations in 49 CFR Section 26.5:

- Black Americans (or African Americans), which include persons having origins in any of the Black racial groups of Africa.
- Hispanic Americans (Latinos), which include persons of Mexican, Puerto Rican, Cuban, Dominican, Central or South American, or other Spanish or Portuguese culture or origin, regardless of race.
- Native Americans, which include persons who are American Indians, Eskimos, Aleuts or Native Hawaiians.
- Asian-Pacific Americans, which include persons whose origins are from Japan, China, Taiwan, Korea, Burma (Myanmar), Vietnam, Laos, Cambodia (Kampuchea), Thailand, Malaysia, Indonesia, the Philippines, Brunei, Samoa, Guam, the U.S. Trust Territories of the Pacific Islands (Republic of Palau), Republic of the Northern Marianas Islands, Macao, Fiji, Tonga, Kiribati, Tuvalu, Nauru, Federated States of Micronesia or Hong Kong.
- Subcontinent Asian Americans, which include persons whose origins are from India, Pakistan, Bangladesh, Bhutan, the Maldives Islands, Nepal or Sri Lanka.

Not all programs include all these MBE subgroups as eligible for participation.

Minority-owned business (MBE). An MBE, also referred to as a minority-owned business, is a business that is at least 51 percent owned and controlled by one or more individuals that belong to a minority group. Minority groups in this study are those listed in 49 CFR Section 26.5. For purposes of this study, a business need not be certified as such to be counted as a minority-owned business.

Businesses owned by minority women are also counted as MBEs in this study (where that information is available)

MWESB Program. The State of Oregon and several local governments in Oregon operate a Minority, Women and Emerging Small Business (MWESB) program, which encourages utilization of minority- and woman-owned firms and emerging small businesses in public contracting and procurement.

Neutral remedy. Actions that remove barriers, open opportunities and strengthen businesses without regard to race, ethnicity or gender.

Non-DBEs. Non-DBEs are firms that are not certified as DBEs, regardless of the race/ethnicity or gender of the owner.

Non-response bias. Non-response bias occurs when the observed responses to a survey question differ (in a non-random way) from what would have been obtained if all individuals in a population, including non-respondents, had answered the question.

North American Industry Classification System (NAICS) codes. NAICS codes are the detailed industry sector codes adopted by the U.S. Census Bureau. They provide one way to define industries (such as “construction”) when reporting an agency’s utilization of firms and the availability of firms. Codes are established at various levels of detail. See <https://www.census.gov/naics/>.

APPENDIX A. Definition of Terms

Oregon Bureau of Labor and Industries (BOLI). Oregon Bureau of Labor and Industries (BOLI) is the state agency responsible for enforcement of anti-discrimination laws that apply to workplaces, housing and public accommodations; enforcement of state laws related to wages, hours and terms and conditions of employment; education of employers concerning wage, hour and civil rights laws; and workforce development through apprenticeship programs and other efforts. This agency also maintains the List of Contractors Ineligible to Receive Public Works Contracts.

Oregon Department of Transportation (ODOT). ODOT is the steward of the State of Oregon’s transportation system. ODOT is responsible for building, maintaining and operating the state highway system. In addition, ODOT works with various partners to maintain and improve local transportation infrastructure. ODOT provides other transportation services related to Oregon’s roads and bridges, railways, public transportation services, transportation safety, driver and vehicle licensing and motor carrier regulation.

Oregon Office of Minority, Women and Emerging Small Business (OMWESB). The Office of Minority, Women and Emerging Small Business is the certification authority for certification of minority- and woman-owned firms, Disadvantaged Business Enterprises, Airport Concessions Disadvantaged Business Enterprises (ACDBEs) and Emerging Small Businesses (ESBs) in Oregon. Beginning January 1, 2016, OMWESB became the Certification Office of Business Inclusion and Diversity (COBID). (See Certification Office of Business Inclusion and Diversity (COBID) on page 1 of this appendix.)

OregonBuys. State of Oregon agencies use the OregonBuys eProcurement system to disseminate notices of bid opportunities to interested companies. Many local government agencies in Oregon participate in OregonBuys as well.

Owned. Owned indicates at least 51 percent ownership of a company. For example, a “minority-owned” business is at least 51 percent owned by one or more minorities.

People of color. See definitions under minorities.

Potential DBE. A potential DBE is a minority- or woman-owned business that appears that it could be DBE-certified (and is not currently DBE certified) based on revenue requirements specified as part of the Federal DBE Program.

Prime consultant. A prime consultant is a professional services firm that performs a prime contract for a client.

Prime contract. A prime contract is a contract between a prime contractor or a prime consultant and a customer.

Prime contractor. A prime contractor is a firm that performs a prime contract for a customer. This term is typically used in the construction industry but can apply to other industries as well.

Procurement. A direct purchase, consulting agreement, prime contract or other acquisition of construction, professional services, goods or other services. This term is intended to encompass all types of purchasing and contracting. It is synonymous with “contract” in this report.

Professional services. Professional services are fields in the service sector requiring special training. Some professional services require holding professional licenses, such engineering.

Project. A project refers to an ODOT or local agency transportation construction and/or engineering endeavor. A project could include one or multiple prime contracts and corresponding subcontracts.

APPENDIX A. Definition of Terms

Race-and gender-conscious measures. Race- and gender-conscious measures are remedial efforts directed towards MBEs and/or WBEs. An MBE/WBE contract goal is one example of a race- and gender-conscious measure.

Note that the term is a shortened version of “race-, ethnicity-, and gender-conscious measures.” For ease of communication, the study team has truncated the term to “race- and gender-conscious measures.”

Race- and gender-neutral measures. Race- and gender-neutral measures apply to businesses regardless of the race/ethnicity or gender of firm ownership. Race- and gender-neutral measures may include assistance in overcoming bonding and financing obstacles, simplifying bidding procedures, providing technical assistance, establishing programs to assist start-up firms, and other methods open to all businesses or any disadvantaged business regardless of race or gender of ownership. A broader list of examples can be found in 49 CFR Section 26.51(b).

Note that the term is more accurately “race-, ethnicity-, and gender-neutral” measures. For ease of communication, the study team has shortened the term to “race- and gender-neutral measures.”

Racial or ethnic minority group. See minorities.

Relevant geographic market area. See geographic market area.

Remedial measure. A remedial measure, sometimes shortened to “remedy,” is a program designed to address barriers to full participation of minorities, women, or minority- or woman-owned firms.

Remedy. See remedial measure.

SBA. See Small Business Administration.

SBA 8(a). SBA 8(a) is a U.S. Small Business Administration business assistance program for small disadvantaged businesses owned and controlled by at least 51 percent socially and economically disadvantaged individuals.

Small business. A small business is a business with low revenues or employment size relative to other businesses in the industry. “Small business” does not necessarily mean that the business is certified as such.

Small Business Administration (SBA). The SBA refers to the United States Small Business Administration, which is an agency of the United States government that assists small businesses.

Small Business Enterprise (SBE). A firm certified as a small business according to the size criteria of the certifying agency.

Small Contracting Program. ODOT’s Small Contracting Program (SCP) encourages small business participation as prime contractors in its architectural and engineering (and related services) contracts, construction contracts, and other services contracts.

Standard Industrial Classification (SIC Code). An SIC code is a four-digit numerical code system developed by the U.S. government to identify the primary line of business of a business establishment.

State-funded contract. A state-funded contract is any contract or project that is entirely or partially funded with State of Oregon funds (and does not use federal funds). As these contracts do not include federal funds, the Federal DBE Program does not apply.

APPENDIX A. Definition of Terms

Statistically significant difference. A statistically significant difference refers to a quantitative difference for which there is a high probability that random chance can be rejected as an explanation for the difference. This has applications when analyzing differences based on sample data such as most U.S. Census Bureau datasets (could chance in the sampling process for the data explain the difference?), or when simulating an outcome to determine if it can be replicated through chance. Often a 95 percent confidence level is applied as a standard for when chance can reasonably be rejected as a cause for a difference.

Subconsultant. A subconsultant is a professional services firm that performs services for a prime consultant as part of the prime consultant's contract for a client.

Subcontract. A subcontract is a contract between a prime contractor or prime consultant and another business selling goods or services to the prime contractor or prime consultant as part of the prime contractor's contract for a customer.

Subcontract goals program. A program in which a public agency sets a percent goal for participation of DBEs, MBE/WBEs, ESBs or another group on a contract. These programs typically require that a bidder either meet the percentage goal with members of the group or show good faith efforts to do so as part of its bid or proposal. See contract goals program.

Subcontractor. A subcontractor is a firm that performs services for a prime contractor as part of a larger project.

Subindustry. For this study, a specialized component within one a broader economic sector such as construction. Electrical work is a subindustry within the construction industry, for example.

Subrecipient. A subrecipient is a local entity receiving financial assistance passed through another agency. For example, if a local government uses USDOT funds that flow through the Oregon Department of Transportation, that local agency is a subrecipient of those monies.

Substantial disparity. Several courts have held that a "substantial disparity" is one where the disparity index is less than "80," which indicates evidence of discrimination affecting the outcome.

Supplier. A supplier is a firm that sells supplies to a prime contractor as part of a larger project (or in some cases sells supplies directly to an end user or other customer).

United States Department of Transportation (USDOT). USDOT refers to the United States Department of Transportation, which includes the Federal Highway Administration, the Federal Transit Administration and the Federal Aviation Administration.

Utilization. Utilization refers to the percentage of total contracting dollars of a particular type of work going to a specific group of businesses (for example, DBEs).

Vendor. A vendor is a business that is providing goods or services to a customer.

WBE. Woman-owned business enterprise. See woman-owned business.

Woman-owned business (WBE). A WBE is a business that is at least 51 percent owned and controlled by one or more individuals who are non-minority women. A business need not be certified as such to be included as a WBE in this study. For this study, businesses owned and controlled by minority women are counted as minority-owned businesses.

APPENDIX B. ODOT Contract Data — Contract data sources

Keen Independent compiled data about Oregon Department of Transportation transportation-related procurements and the firms used as prime contractors and subcontractors on those contracts. The utilization analysis focused on state- and FHWA-funded construction, professional services, goods and other services contracts during the October 2017 through September 2020 study period.

Keen Independent also collected local agency contracts that used ODOT-administered funds.

From these data, Keen Independent calculated the percentage of contract dollars that went to minority-, woman- and majority-owned businesses. The study team counted certified as well as non-certified minority- and woman-owned businesses when calculating MBE/WBE utilization.

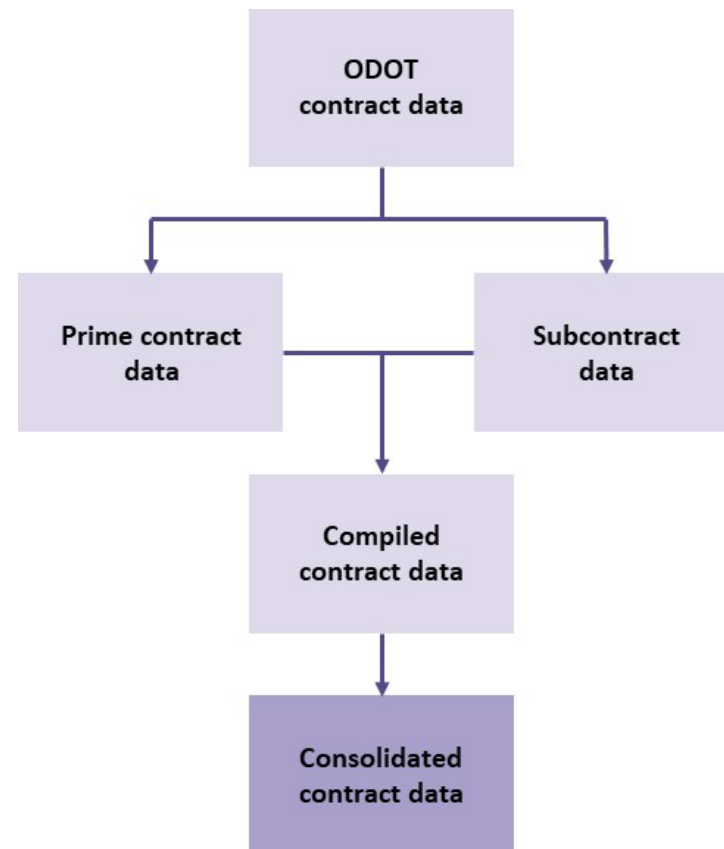

ODOT Office of Civil Rights databases were the primary sources of information for prime contracts and subcontracts. ODOT Office of Civil Rights provided information on the state- and FHWA-funded contracts awarded during the study period and also provided information on the payments to those contracts.

Figure B-1 shows how Keen Independent integrated those data sources into a final contract database for use in this study.

The study team examined all prime contracts over \$10,000 and their subcontracts. This accounted for 99 percent of the total contract dollars during the study period.

ODOT administered a number of engineering-related, other professional services and other services price agreement contracts during the study period. Consultants received work through work order contracts issued under those agreements. Keen Independent analysis focused on work order contracts issued during the study period.

B-1. Methods for compiling ODOT contract data

B. ODOT Contract Data — Contract data sources

Prime Contract Data

ODOT records provided contracts awarded between October 1, 2017, through September 30, 2020. Information in these data included:

- Project number;
- Contract number;
- Contract type;
- Contract description;
- Award date;
- Award amount;
- Current amount;
- ODOT region;
- Federal funding;
- Certified local agency contract;
- Vendor name;
- DBE status; and
- DBE goal.

Subcontract Data

ODOT's subcontract records included the following information:

- Project number;
- Contract number;
- Contract type;
- Subcontractor firm name;
- Subcontractor tier;
- Subcontract committed amount;
- Subcontract current amount;
- Contract work description;
- DBE status; and
- Prime firm name.

B. ODOT Contract Data — Contract data sources

ODOT and Local Agency Contracts

The 2022 study includes ODOT contracts and those for local agencies that use ODOT-administered funds. Through ODOT’s Statewide Programs Unit and the local agency Certification Program, FHWA funds for transportation projects go to cities, counties, regional transportation commissions, other local agencies and tribal entities.

ODOT Regions

Based on ODOT records and contract description, Keen Independent examined geographic location of contracts based on the five ODOT regions shown in Figure B-2. The region for a contract corresponds to the physical location of the project, not the address of the contractor.

Study regions include Portland Metro (Region 1), Willamette Valley and North Coast (Region 2), Southwestern Oregon (Region 3), Central Oregon (Region 4) and Eastern Oregon (Region 5).

Keen Independent coded the location of statewide assignments and work not in a single physical location as “statewide.”

Exclusions

The study team made certain exclusions to the contract data received, including payments to non-businesses and types of purchases that ODOT primarily made from national markets. Exclusions totaled \$13.1 million for the three-year period.

Final Database

In total, Keen Independent examined 1,334 prime contracts and 3,017 subcontracts. The final Keen Independent database of contracts totaled \$1.5 billion for FFY2018–FFY2020 (the three-year study period).

B-2. ODOT regions

ODOT Bid and Proposal Data

Keen Independent analyzed firms bidding on a sample of ODOT construction contracts. Keen Independent obtained bidder information from ODOT Bid and Award information website.

B. ODOT Contract Data — Analysis of primary type of work involved in each contract/subcontract

Coding Types of Work

To perform the availability analysis for this study, Keen Independent needed to identify the type of work involved in each contract and subcontract.

The information that ODOT provided for prime contracts included a contract description. Subcontract data included work description.

Coding systems. Keen Independent applied a numeric code to each contract and subcontract to reflect the subindustry describing that work. Two coding systems were used:

- The federal North American Industry Classification System (NAICS) for most types of work; and
- 8-digit Standard Industrial Classification (SIC) code for specialized types of businesses (e.g., striping or pavement marking or concrete flatwork).

Assigning codes. The study team assigned NAICS or SIC code to each prime and subcontract based on the following actions:

- Keywords from contract descriptions;
- The primary type of work performed by the firm based on previous surveys, past Keen Independent disparity and availability studies and Dun & Bradstreet data; and
- Manual research concerning the type of work performed in a procurement (including all contracts above \$100,000).

Identifying Firm Addresses

As part of the identification of types of contracts and subcontracts, Keen Independent also reviewed the addresses provided in the data.

B. ODOT Contract Data — Ownership of utilized firms

For each firm identified as working on an ODOT contract, Keen Independent attempted to collect business characteristics including the race, ethnicity and gender of the business owner.

Sources of Ownership Information

Sources of information on ownership and whether firms were DBE-certified included those listed in the table to the right.

B-3. Ownership data sources

Ownership data sources

- Certification Office for Business Inclusions and Diversity (COBID) directory
- Washington State DBE directory
- Keen Independent’s availability survey with firm owners and managers
- Keen Independent’s ownership information from previous ODOT disparity studies
- Keen Independent’s ownership information from previous ODA disparity study
- ODOT vendor tables (CRCT)
- Small Business Administration business directory
- Paycheck Protection Program data
- Other review of firm information
 - (e.g., information about ownership on firms’ websites)
- Information from Dun & Bradstreet
- ODOT staff review

B. ODOT Contract Data — Ownership of utilized firms

Differences in Results from ODOT Uniform Reports Concerning DBE Participation

USDOT requires agencies to submit reports about DBE utilization on their USDOT-funded transportation contracts.

Keen Independent’s analysis of MBE/WBE utilization goes beyond what ODOT currently report to FHWA in its Uniform Reports of DBE Commitments/Awards and Payments, as explained below.

- **All MBE/WBEs, not just certified DBEs.** Per USDOT regulations, ODOT Uniform Reports focus exclusively on certified DBEs. Keen Independent’s utilization analyses examine the utilization of minority- and woman-owned firms, including but not limited to certified DBEs. The study team’s analysis includes the utilization of MBE/WBEs that may have once been DBE-certified and graduated (or let their certifications lapse) and the utilization of MBE/WBEs that have never been DBE-certified. (Keen Independent separately reports utilization of MBE/WBEs that were DBE-certified during the study period.)
- **More complete contract information.** Through ODOT’s assistance during the disparity study, the study team may have been able to analyze more complete data than ODOT had in its Uniform Reports. As a result, Keen Independent’s estimates of DBE participation during the study period may differ from the overall DBE participation ODOT reported to FHWA for these years.

ODOT Review

ODOT reviewed Keen Independent contract data and ownership results during several stages of the study process.

The External Stakeholder Group (ESG) for this study also reviewed ownership results.

The study team reviewed and incorporated ESG and ODOT feedback.

Data Limitations

Limitations concerning procurement data collection and analysis include the following.

- Keen Independent coded type of work for prime contracts and subcontracts based on ODOT information available for that work. In some instances, no information was identified, in which case the types of work were coded based on the primary line of work for the firm receiving the prime contract or subcontract. Final work type coding may not perfectly describe the actual work performed on every contract and subcontract.
- Keen Independent determined race, ethnicity and gender ownership based on information from many different sources, including study team research on individual companies. It is possible that some of the ownership data were inaccurate even after these extensive efforts and ODOT review.

It does not appear that these data limitations would materially affect overall results of the disparity analyses.

APPENDIX C. Availability Data Collection — Survey methods

Keen Independent collected information from firms about their availability for ODOT contracts through telephone surveys and other methods. Appendix C further explains this process, including:

- Survey methods;
- Business listings;
- NAICS codes included in the survey;
- Development of the survey instrument;
- Establishments successfully contacted;
- Establishments in the availability database;
- Analysis of potential non-response bias;
- Response reliability;
- Analysis of potential limitations; and
- Survey instrument.

Telephone Surveys

Keen Independent retained Customer Research International (CRI) to conduct surveys with listed businesses.

- **Firms were contacted by telephone.** Up to eight phone calls were made at different times of day and different days of the week to attempt to reach each company.
- **Survey sponsorship.** CRI began by saying that the call was made on behalf of Oregon Department of Transportation to firms interested in providing construction, professional services, goods or other services to the Department or to other cities and counties in Oregon.
- **Survey period.** Surveys began in December 2021 and CRI completed the survey effort in December 2022.

Other Avenues to Complete a Survey

If a company was not able to complete a survey on the telephone, business owners could request a link to complete the survey online or receive a downloadable version of the survey and return it to CRI.

For firms from ODOT sources that had email addresses, ODOT Office of Civil Rights sent an initial request and a follow up reminder that asked firms to complete the online availability survey.

Companies also were able to complete the survey online at the study website.

C. Availability Data Collection — NAICS codes included in the survey

Firms contacted in the transportation-related availability surveys came from two sources:

- Businesses that Dun & Bradstreet (D&B) identified in certain study-related subindustries in Oregon and Clark and Skamania counties.
- Company representatives who had previously identified themselves to ODOT as interested in learning about future work by being on bidding lists.

Dun & Bradstreet

The study team obtained a list of firms from Dun & Bradstreet Hoover's database within relevant types of work that had locations in Oregon and Clark and Skamania counties in Washington. D&B provided phone numbers for these businesses. CRI then contacted them.

D&B's Hoover's affiliate maintains the largest commercially available database of U.S. businesses. The study team used D&B listings to identify firms that might be qualified and interested in doing work for ODOT. The study team excluded any listings that were government agencies or not-for-profit organizations (either before the survey or based on a question in the survey).

The subindustries to be included in the survey were determined after reviewing ODOT prime contract and subcontract dollars for different types of work. D&B classifies types of work by North American Industry Classification System (NAICS) codes.¹ (See the Contract and Subcontract Data section of the Summary Report for more information.)

¹ The study team used 8-digit Standard Industrial Classification codes for specialized types of work.

Interested Firms Lists

OregonBuys. Individual and businesses interested in bidding on Oregon state agency (including ODOT) and many local government opportunities can register as a vendor at OregonBuys. OregonBuys is a database of firms that have indicated they are ready, willing and able to perform work on public agency projects in Oregon. The ODOT Procurement Office provided a list of 2,778 unique firms from OregonBuys.

Construction and A&E interested bidder lists. Keen Independent also used lists of firms that have bid on an ODOT construction or A&E contracts.

Combining Lists Prior to Survey

Keen Independent attempted to consolidate information when a firm had multiple listings across these data sources. After consolidation, the data sources provided 14,746 unique listings for ODOT-related firms.

Keen Independent did not draw a sample of those firms for the availability analysis; rather, the study team attempted to contact each business identified through telephone surveys and other methods. Some courts have referred to similar approaches to gathering availability data as a "custom census."

Figure C-1 on the next page of this appendix identifies the codes the study team determined were the most related to the contracts and subcontracts examined in the study.

C. Availability Data Collection — NAICS codes included in the survey

C-1. NAICS and SIC codes for D&B survey availability list source

Construction and architecture and engineering	
General road construction and widening	
237310	Highway, street, and bidge construction
Bridge and elevated highway construction	
16229901	Bridge construction
16229902	Highway construction, elevated
Electrical work including lighting and signals	
238210	Electric contracting
Structural steel work	
238120	Structural steel and precast concrete contractors
Excavation, site prep, grading and drainage	
238910	Site preparation contractors
Wrecking and demolition	
17959902	Demolition, buildings and other structures
17950000	Wrecking and demolition work
Installation of guardrails, fencing or signs	
238220	Plumbing, heating, and air-conditioning contractors
Asphalt, concrete or other paving	
16110200	Surfacing and paving
Pavement surface treatment (such as sealing)	
16110205	Resurfacing contractor
Pavement milling	
16110205	Pavement milling
Painting for road or bridge projects	
17210302	Bridge painting
Striping or pavement marking	
17210303	Pavement marking contractor
Concrete flatwork (including sidewalk, curb and gutter)	
17710200	Curb and sidewalk contractors
Drilling and foundations	
17719901	Concrete pumping
17719904	Foundation and footing contractor
Concrete repair	
17719902	Concrete repair
Other concrete work	
177190000	Other concrete work
Other heavy and civil engineering construction	
237990	Other heavy and civil engineering construction
Temporary traffic control	
73899921	Flagging service (traffic control)
Trucking and hauling	
484110	General freight trucking, local
Construction remediation and clean-up	
562910	Remediation services
Engineering services	
541330	Engineering services
Inspection and testing	
541380	Testing laboratories

Note: Instead of obtaining all firms with this NAICS code, the study team instead purchased the list of firms with the Standard Industrial Classification (SIC) when a NAICS code found to be unnecessarily broad for the purpose of this study.

C. Availability Data Collection — NAICS codes included in the survey

C-1. NAICS and SIC codes for D&B survey availability list source (cont.)

Architecture, engineering, professional services and goods	Goods and other services

	Other services
	<p>Landscaping and related work including erosion control 561730 Landscaping services</p>

Note: Instead of obtaining all firms with this NAICS code, the study team instead purchased the list of firms with the Standard Industrial Classification (SIC) when a NAICS code found to be unnecessarily broad for the purpose of this study.

C. Availability Data Collection — Development of survey instrument

After developing the survey instrument, Keen Independent reviewed it with ODOT. It is provided at the end of Appendix C.

The study team did not know the race, ethnicity or gender of the business owner when contacting a business establishment. Obtaining that information was a key component of the survey.

Areas of survey questions included:

- **Identification of purpose.** CRI acknowledged ODOT as the survey sponsor and described its purpose as identifying companies interested in doing business with ODOT or with cities and counties in Oregon.
- **Verification of correct business name.** CRI confirmed that the business reached was the business sought out.
- **Contact information.** CRI compiled contact information for the establishment and the individual who completed the survey.
- **Verification of for-profit business status.** CRI confirmed that the entity was a for-profit business.
- **Identification of main lines of business.** CRI asked businesses to describe their main line of business. Respondents then selected from a list of the multiple types of work that their firm performed.
- **Sole location or multiple locations.** CRI asked respondents if their companies had other locations and whether their establishments were affiliates or subsidiaries of other firms. (Keen Independent then merged responses from multiple locations.)
- **Qualifications and interest in future ODOT work.** CRI asked about businesses' qualifications and interest in work with public agencies, and for construction and architecture and engineering firms, asked whether they were interested in prime contracts and/or subcontracts.
- **Geographic areas.** Interviewees were asked whether they could do work in several geographic areas in Oregon: Portland/Hood River region, Willamette Valley and Northwest Oregon region, Southwestern Oregon, Central Oregon and Eastern Oregon.
- **Largest contracts.** CRI asked businesses to identify the dollar range of the largest contract or subcontract on which they had bid or had been awarded during the past five years.
- **Ownership.** Businesses were asked if 51 percent or more of the firm was owned and controlled by women and/or minorities. If businesses indicated that they were minority-owned, they were also asked about the race and ethnicity of owners. For companies which identified race/ethnicity as "other," Keen Independent reviewed and assigned the correct classification.
- **Business background.** CRI asked about the year the firm started, revenue and number of employees.
- **Potential barriers in the marketplace.** CRI asked questions about potential barriers to starting and expanding a business or achieving success in their industry in Oregon. CRI then asked whether interviewees would be willing to participate in an in-depth interview.

C. Availability Data Collection — Establishments successfully contacted

Keen Independent provided CRI a database of 13,112 individual firms for availability surveys (after removing duplicate listings from the data). CRI made up to eight attempts to reach each firm (different times and different days of the week).

CRI attempted to interview a company representative such as the owner, manager or other key official who could provide accurate and detailed responses to the questions included in the survey. Figure C-2 presents the dispositions of the businesses CRI attempted to contact.

- Some listings were non-working or wrong numbers.
- Among the 9,711 firms with working phone numbers, CRI was unable to contact some of them:
 - Some businesses could not be reached after at least eight attempts (see “no answer” in Figure C-2).
 - A responsible staff person could not be reached for the survey after repeated attempts.
 - The study team sent email or fax invitations to those who requested to do the survey via fillable PDF or fax, and then followed up with each of these. Some businesses did not complete and return them.
 - When contacted, some respondents reported that they had already completed a survey but had not.

After taking those unsuccessful attempts into account, the study team was able to successfully contact 4,144 businesses or 43 percent of those with working phone numbers. This response rate is consistent with similar availability surveys Keen Independent has performed in other disparity studies in recent years. The response rate is also very high relative to other types of social science research.

C-2. Disposition of attempts to survey business establishments

	Number of firms	Percent of business listings
Beginning list (unique businesses)	13,112	
Less non-working phone numbers	3,364	
Less wrong number	37	
Firms with working phone numbers	9,711	100 %
Less no answer	5,138	
Less unreturned fax/email	277	
Less could not reach appropriate staff member	141	
Less could not continue in English or Spanish	11	
Firms successfully contacted	4,144	43 %

Note: Study team made at least eight attempts to complete an interview with each establishment.

Source: Keen Independent Research from 2021 Availability Surveys.

C. Availability Data Collection — Establishments in the availability database

Figure C-3 presents the disposition of the 4,144 businesses CRI successfully contacted and how that number resulted in the 724 businesses Keen Independent included in the availability database.

- **Establishments not interested in discussing availability for ODOT work.** Of the businesses that the study team successfully contacted, 3,694 were not interested in discussing their availability for ODOT work, or reported they were not qualified or interested in work with ODOT or other public entities. In Keen Independent’s experience, those types of responses are often firms that do not perform relevant types of work.
- **No location in study area.** There were a few respondents that did not have a firm location in Oregon or the two Washington counties. They were excluded from the final database.

After those final screening steps, the survey effort produced a database of 724 businesses potentially available for ODOT work.

Note that, when there were multiple responses from a single company, Keen Independent combined those responses into a single, summary data record. Each unique business only appears once in the final availability database.

C-3. Disposition of successfully contacted businesses

	Number of firms
Firms successfully contacted	4,144
Less business not interested	3,694
Less firms with no location in the study area	5
Firms included in the availability database	445
Plus firms that completed the online survey	279
Total firms included in availability database	724

Note: Study team made up to eight attempts to complete an interview with each establishment.

Source: Keen Independent Research from 2021 Availability Surveys.

C. Availability Data Collection — Analysis of potential non-response bias

Analysis of non-response bias considers whether businesses that were not successfully surveyed are systematically different from those that were successfully surveyed and included in the final data set. There are opportunities for non-response bias in any survey effort.

The study team considered the potential for non-response bias due to:

- Research sponsorship;
- Calling from a phone number outside Oregon;
- Language barriers;
- Industry differences in reaching respondents; and
- COVID-19.

On the next page of this appendix, Keen Independent compares overall response rates of MBE/WBEs and majority-owned companies.

Research Sponsorship

CRI survey staff introduced themselves by identifying ODOT as the survey sponsor as businesses may be less likely to answer somewhat sensitive business questions if the interviewer was unable to identify the sponsor. This sponsorship a strength of the survey (and CRI could also forward a letter from ODOT explaining the survey if asked).

Calling from Outside Oregon

Telephone calls made by CRI interviewers originated from outside Oregon. It might have been obvious to people in Oregon that the phone calls were placed from outside the state and the interviewers were not from Oregon. This might have reduced the overall response rate. However, there was no indication that minority- and woman-owned firms were less likely to respond to the calls than white male-owned businesses.

C. Availability Data Collection — Analysis of potential non-response bias

Potential Language Barriers

Businesses that only had a Spanish-speaking respondent during an initial call were re-contacted by a Spanish-speaking CRI interviewer. The interviewee was asked if there was anyone available to perform the survey in English. If not, CRI completed a shortened version of the survey with the interviewee. If it appeared that the firm performed work related to ODOT contracts, Keen Independent asked the company if they would like to complete an email or faxed questionnaire (in English). None of the respondents requested a survey. (These additional efforts focused on Spanish-speaking respondents as this was the most common language barrier.)

This approach appeared to eliminate some of the potential language barriers to participating in the availability surveys. Language barriers presented a difficulty in conducting the survey for just 11 companies, about 0.11 percent of the businesses with working phone numbers.

Industry Differences in Reaching Respondents

There might be differences in the success reaching firms in different types of work. However, Keen Independent concludes that any such differences would not lead to lower or higher availability estimates for MBEs and WBEs than if the study team had been able to successfully reach all firms.

Businesses in highly mobile fields, such as landscaping, are more difficult to reach for availability surveys than businesses more likely to work out of fixed offices (e.g., engineering firms).

Work specialization as a potential source of non-response bias is minimized because the dollar-weighted availability analysis examines businesses within particular work fields before determining an availability figure. In other words, the potential for landscaping firms to be less likely to complete a survey is encompassed in the availability calculations account because the number of MBE/WBE landscape firms, for example, is compared with the total number of landscape firms when calculating availability for landscaping work. Landscape firms are not compared with engineering firms in Keen Independent's contract-by-contract availability analysis.

C. Availability Data Collection — Analysis of potential non-response bias

Comparison of Overall Response Rates for MBE/WBEs and Majority-owned Firms

Keen Independent examined whether minority- and woman-owned firms were more difficult to reach in the telephone survey and found no indication that interviewers were less likely to complete telephone surveys with MBE/WBEs than with majority-owned firms. The study team examined response rates based on MBE/WBE versus non-MBE/WBE business ownership data that D&B had for firms in the list purchased from this source.

- MBE/WBEs were slightly more likely to be successfully contacted than majority-owned firms. Based on D&B identification of ownership, MBE/WBE firms were 7 percent of the initial list and 8.6 percent of successfully surveyed firms.
- Note that D&B records under-identify MBE/WBEs and are not the basis for the availability analysis.

Therefore, there is no indication that there were differences in response rates that materially affected the estimates of MBE/WBE availability in this study.

Business owners and managers were asked questions that may be difficult to answer, including questions about revenues and employment.

Keen Independent explored the reliability of survey responses in several ways. For example:

- Keen Independent reviewed data from the availability surveys in light of information from other sources. This includes data on the race/ethnicity and gender of the owners of DBE-certified businesses that was compared with survey responses concerning business ownership.
- Keen Independent compared survey responses about the largest contracts that businesses won during the past five years with actual ODOT contract data.
- Keen Independent reviewed all firms indicating a relatively large bid capacity (indicating contracts bid or awarded of more than \$10 million.)

C. Availability Data Collection — Analysis of other potential limitations

There are limitations to this approach to collecting availability data.

Using D&B Lists

Keen Independent purchased Dun & Bradstreet business listings for Oregon and Clark and Skamania counties in Washington as the starting point for the availability surveys. D&B provides the most comprehensive private database of business listings in the United States. D&B does not require firms to pay a fee to be included — it is completely free (and is separate from its credit rating services). Even so, the database does not include all establishments:

- There can be a lag between formation of a new business and inclusion in D&B listings.
- Because one way for D&B to identify firms is legal filings concerning an entity (such as registering with a Secretary of State or obtaining a business license), any businesses that people operate without being legally registered might not be in D&B's lists.
- Some businesses providing work related to ODOT projects might not be classified in those industries in the D&B data and might not be included in the survey list.

However, there is no other data source available to Keen Independent that is more comprehensive than D&B. There were also other ways firms could complete a survey, including obtaining one from the study website.

Selection of Specific Subindustries

Keen Independent identified specific subindustries primarily using federally defined 6-digit North American Industry Classification System (NAICS) codes and 8-digit Standard Industrial Classification (SIC) to compile business listings from D&B.

Also, Keen Independent focused on the subindustries that represented the largest area of ODOT spending, including subcontracts. Firms in NAICS codes or SIC codes that represent little spending were not included in the ODOT list.

Companies Reporting that They Were Not Interested in Discussing ODOT Work

Many firms contacted in the availability survey indicated that they were not interested in ODOT work. This reflects the fact that the study team was necessarily broad when developing the initial lists.

For example, one cannot know based on the D&B data which electrical firms perform public works projects and which are focused on residential work. Therefore, Keen Independent acquired a general list of electrical firms (NAICS code 238210), and through surveys identified which firms expressed qualifications and interest in performing electrical work on ODOT projects. Some did not.

There were a few companies that had actually performed ODOT contracts but responded in the availability survey that they were not interested in discussing their availability for ODOT work. However, these firms accounted for less about 2 percent of those responses.

C. Availability Data Collection — Analysis of other potential limitations

Not a Count of All Businesses Available for Entity Work

The purpose of the availability surveys was to provide precise, unbiased estimates of the percentage of *all* firms available for ODOT contracts that were MBEs or WBEs. Keen Independent did not attempt to develop a list of *every* firm potentially available for *every* type of ODOT procurement. The research appropriately focused on firms in the geographic market area in subindustries relevant to ODOT work.

- Firms in subindustries that comprised a small portion of ODOT work were not included in the surveys. Because Keen Independent calculates availability benchmarks on a dollar weighted basis, inclusion of these firms is not important in developing overall availability results.
- The study team only purchased D&B data for firms in Oregon and Clark and Skamania counties in Washington as the study focused on types of purchases primarily made from within the local market area, following the court decisions that have considered this issue (see Appendix L).
- Not all firms on the list of businesses completed surveys, even after repeated attempts to contact them.

Therefore, the availability analysis did not provide a comprehensive listing of every business that could be available for all types of ODOT work and should not be used in that way.

Federal courts have approved similar approaches to measuring availability that Keen Independent used in this study. The United States Department of Transportation’s (USDOT’s) “Tips for Goal-Setting in the Disadvantaged Business Enterprise (DBE) Program” also recommends a similar approach to measuring availability for agencies implementing the Federal DBE Program.²

A copy of the survey instrument for construction follows.

² Tips for Goal-Setting in the Disadvantaged Business Enterprise (DBE) Program. Retrieved from <https://www.transportation.gov/osdbu/disadvantaged-business-enterprise/tips-goal-setting-disadvantaged-business-enterprise>

C. Availability Data Collection — Availability survey instrument

Availability Survey for PDF/FAX

The Oregon Department of Transportation (ODOT) is compiling a list of companies interested in providing construction work, professional services, goods or other services to the Department and other cities and counties in Oregon. The information developed in these surveys will add to ODOT's and other agencies' existing data on companies interested in working with public agencies in Oregon.

Survey Instructions

When you have finished the survey, please: 1) Scan completed survey and email to surveys@cri-research.com; or 2) Fax completed survey to 512-353-3696.

If you have any questions, please contact:

**Angela Crain
Oregon Department of Transportation
Phone: (503) 986-4353**

(Do not return completed surveys to Angela Crain. See instructions above.)

C. Availability Data Collection — Availability survey instrument

Z5. What is the name of your business?

Z8. Address of business (if multiple offices, choose a location in Oregon if possible):

STREET ADDRESS

CITY (Required)

STATE (Required)

ZIP

A2. Is your firm a for-profit business (as opposed to a nonprofit organization, a foundation or a government office)?

1=Yes

2=No

98=Don't know

A4. What would you say is the main line of business of your company?

98=(Don't know)

A5. Is this the sole location for your business, or do you have offices in other locations?

1=Sole location

2=Have other locations

98=(Don't know)

A6. Is your company a subsidiary or affiliate of another firm?

1=Independent [SKIP TO B1]

2=Subsidiary or affiliate of another firm

98=(Don't know) [SKIP TO B1]

A7. What is the name of your parent company?

98=(Don't know)

C. Availability Data Collection — Availability survey instrument

B1 [VERSION: Construction]. Which of the following types of work does your firm perform related to construction?—Select all that apply.

- 1=General road construction and widening
- 2=Bridge and elevated highway construction
- 3=Electrical work including lighting and signals
- 4=Structural steel work
- 5=Excavation, site prep, grading and drainage
- 6=Wrecking and demolition
- 7=Landscaping and related work, including erosion control
- 8=Installation of guardrails, fencing or signs (traffic or highway signs)
- 9=Asphalt, concrete or other paving
- 10=Pavement surface treatment (such as sealing)
- 11=Pavement milling
- 12=Painting for road or bridge projects
- 13=Striping or pavement marking
- 14=Concrete flatwork (including sidewalk, curb and gutter)
- 15=Drilling and foundations
- 16=Concrete repair
- 17=Other concrete work
- 18=Other heavy and civil engineering construction

- 19=Temporary traffic control
- 20=Trucking and hauling
- 21=Construction remediation and clean-up
- 32=Inspection and testing
- 33=Construction management
- 36=Surveying and mapping
- 88=Other [Please specify]
- 98=(Don't know)

C3. [VERSION: Construction] Is your company qualified and interested in working with public agencies as prime contractor?

- 1=Yes
- 2=No
- 98=(Don't know)

C4. [VERSION: Construction] Is your company qualified and interested in working with public agencies as a subcontractor?

- 1=Yes
- 2=No
- 98=(Don't know)

C. Availability Data Collection — Availability survey instrument

Geographic areas

My next questions are about the geographic areas in Oregon where your company can perform work or serve customers.

D1. Can your company do work in the Portland/Hood River region?

1=Yes

2=No

98=(Don't know)

D2. Can your company do work in the Willamette [will-AM-it] Valley and Northwest Oregon region, such as Salem, Newport and Eugene?

1=Yes

2=No

98=(Don't know)

D3. Can your company do work in Southwestern Oregon such as Roseburg and Medford?

1=Yes

2=No

98=(Don't know)

D4. Can your company do work in Central Oregon such as Bend and Klamath Falls?

1=Yes

2=No

98=(Don't know)

D5. Can your company do work in Eastern Oregon such as Pendleton, La Grande and Burns?

1=Yes

2=No

98=(Don't know)

C. Availability Data Collection — Availability survey instrument

Contract History

E1. In rough dollar terms, in the past five years what was the largest contract or subcontract your company was awarded, bid on, or submitted quotes for?

1=\$500,000 or less

2=More than \$500,000 up to \$1 million

3=More than \$1 million up to \$5 million

4=More than \$5 million up to \$10 million

5=More than \$10 million up to \$20 million

6=More than \$20 million

97=(Not applicable)

98=(Don't know)

Business Ownership

F1. A business is defined as woman-owned if more than half—that is, 51 percent or more—of the ownership and control is by women. By this definition, is your firm a woman-owned business?

1=Yes

2=No

98=(Don't know)

F2. A business is defined as minority-owned if more than half—that is, 51 percent or more—of the ownership and control is African American, Asian American, Hispanic American, Native American or another minority group. By this definition, is your firm a minority-owned business?

1=Yes

2=No [SKIP TO G1]

98=(Don't know) [SKIP TO G1]

C. Availability Data Collection — Availability survey instrument

F3. Would you say that the minority group ownership is mostly African American, Asian-Pacific American, Hispanic American, Native American or Subcontinent Asian American?

1=African American

(This includes persons having origins in any of the Black racial groups of Africa.)

2=Asian-Pacific American

(This includes persons whose origins are from Japan, China, Taiwan, Korea, Burma (Myanmar), Vietnam, Laos, Cambodia (Kampuchea), Thailand, Malaysia, Indonesia, the Philippines, Brunei, Samoa, Guam, the U.S. Trust Territories of the Pacific Islands (Republic of Palau), the Commonwealth of the Northern Mariana Islands, Macao, Fiji, Tonga, Kiribati, Tuvalu, Nauru, Federated States of Micronesia or Hong Kong.)

3=Hispanic American or Portuguese American

(This includes persons of Mexican, Puerto Rican, Cuban, Dominican, Central or South American, or other Spanish or Portuguese culture or origin, regardless of race.)

4=Native American

(This includes persons who are enrolled members of a federal- or state-recognized Indian tribe, Alaska Natives, or Native Hawaiians.)

5= Subcontinent Asian American

(This includes persons whose origins are from India, Pakistan, Bangladesh, Bhutan, the Maldives Islands, Nepal or Sri Lanka.)

6=Other group (Please specify): _____

98=(Don't know)

C. Availability Data Collection — Availability survey instrument

The next questions are about the background of the business.

G1. About what year was your firm established?

98=(Don't know)

The next questions pertain to annual averages for your company for the past three years.

G3. About how many employees did you have working out of just your location, on average, over the past three years?

(This includes employees who work at your location and those who work from your location.)

98=(Don't know)

G5. Think about the annual gross revenue of your company, considering just your location. Please estimate the annual average for the past three years.

1=Up to \$0.5 million

2=\$0.6 million to \$1 million

3=\$1.1 million to \$3.5 million

4=\$3.6 million to \$8 million

5=\$8.1 million to \$12 million

6=\$12.1 million to \$16.5 million

7=\$16.6 million to \$26.29 million

8=\$26.3 million or more

98=(Don't know)

G6. [SKIP IF YOUR FIRM DOES NOT HAVE OTHER LOCATIONS] About how many employees did you have, on average, for all of your locations over the past three years?

(Number of employees at all locations should not be fewer than at just your location.)

98=(Don't know)

C. Availability Data Collection — Availability survey instrument

G7. [SKIP IF YOUR FIRM DOES NOT HAVE OTHER LOCATIONS] Think about the annual gross revenue of your company, for all your locations. Please estimate the annual average for the past three years.

(Revenue at all locations should not be less than at just your location.)

1=Up to \$0.5 million

2=\$0.6 million to \$1 million

3=\$1.1 million to \$3.5 million

4=\$3.6 million to \$8 million

5=\$8.1 million to \$12 million

6=\$12.1 million to \$16.5 million

7=\$16.6 million to \$26.29 million

8=\$26.3 million or more

98=(Don't know)

Finally, we're interested in whether your company has experienced barriers or difficulties associated with business start-up or expansion, or with obtaining work. Think about your experiences in the past five years in Oregon as you answer these questions.

H1a. Has your company experienced any difficulties in obtaining lines of credit or loans?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1b. [VERSION: Construction] Has your company obtained or tried to obtain a bond for a project or contract?

1=Yes

2=No [SKIP TO H1d]

97=(Does not apply) [SKIP TO H1d]

98=(Don't know) [SKIP TO H1d]

C. Availability Data Collection — Availability survey instrument

H1c. [VERSION: Construction] Has your company had any difficulties obtaining bonds needed for a project or contract?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1d. [VERSION: Construction] Have you had any difficulty in being prequalified for work?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1e. Have any insurance requirements on contracts presented a barrier to bidding?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1f. [VERSION: Construction] Has the large size of projects or contracts presented a barrier to bidding?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1g. [VERSION: Construction] Has your company experienced any difficulties learning about bid opportunities with public entities in Oregon?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1h. [VERSION: Construction] Has your company experienced any difficulties learning about bid opportunities in the private sector in Oregon?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

C. Availability Data Collection — Availability survey instrument

H1i. [VERSION: Construction] Has your company experienced any difficulties learning about subcontracting opportunities with prime contractors in Oregon?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1j. [VERSION: Construction] Has your company experienced any difficulties obtaining final approval on your work from inspectors or prime contractors?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1k. Has your company experienced any difficulties receiving payment from public entities in Oregon in a timely manner?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1l. [VERSION: Construction] Has your company experienced any difficulties receiving payment from prime contractors in a timely manner?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1m. Has your company experienced any difficulties receiving payment from other customers in a timely manner?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1n. [VERSION: Construction] Has your company experienced any difficulties with brand name specifications or other restrictions on bidding?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

C. Availability Data Collection — Availability survey instrument

H1o. [VERSION: Construction] Has your company experienced any difficulties obtaining supply or distributorship relationships?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H1p. [VERSION: Construction] Has your company experienced any competitive disadvantages due to the pricing you get from your suppliers?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

H2. Do any other barriers come to mind about starting and expanding a business or achieving success in your industry in Oregon?

1=Yes [Please provide your thoughts in the box below.]

97=Does not apply

98=(Don't know)

H3. Would you be willing to participate in a follow-up interview about any of these issues?

1=Yes

2=No

97=(Does not apply)

98=(Don't know)

C. Availability Data Collection — Availability survey instrument

I1. Just a few last questions. What is your full name?

I2. What is your position at the firm?

1=President

2=Owner

3=Manager

4=CFO

5=CEO

6=Assistant to Owner/CEO

7=Sales manager

8=Office manager

9=Receptionist

88=Other (Please specify): _____

I4. What mailing address could ODOT use to contact you?

I5P. What phone number could ODOT use to contact you?

I6. What e-mail address could ODOT use to contact you?

Survey instructions

When you have finished the survey, please: 1) Scan completed survey and email to surveys@cri-research.com; or 2) Fax completed survey to 512-353-3696.

Thank you for your time. This is very helpful for ODOT.

APPENDIX D. Additional Utilization and Disparity Analyses for ODOT Contracts

Appendix D provides supporting information to the utilization and disparity analyses presented in the Summary Report.

It includes:

- Additional analyses of MBE/WBE utilization in ODOT contracts;
- Analysis of bids and proposals for ODOT contracts;
- Background on calculating disparity indices; and
- Statistical significance of disparities in ODOT contracts.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Utilization results

Utilization in FFY2018, FFY2019 and FFY2020

Keen Independent analyzed whether overall MBE/WBE participation changed between fiscal years.

As shown in Figure D-1, MBE/WBE participation ranged between 18 and 20 percent in each federal fiscal year. There also was relatively little variation in the portion of overall MBE/WBE utilization from firms certified as DBEs (which was 13.8% to 14.7%).

D-1. MBE/WBE and DBE share of dollars by fiscal year

Note: Dark portion of bar is certified DBE utilization.
Number of FFY2018 contracts and subcontracts analyzed is 1,596.
Number of FFY2019 contracts and subcontracts analyzed is 1,683.
Number of FFY2020 contracts and subcontracts analyzed is 1,072.
Source: Keen Independent Research from ODOT procurement data.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Utilization results

ODOT Contracts and Local Public Agency Contracts

In dollar volume, more than 90 percent of the dollars of FHWA- and state-funded contracts examined were awarded by ODOT. Local agency contracts accounted for \$108 million out of the \$1.5 billion in total contract dollars.

Participation of minority- and woman-owned firms was higher for local public agency (LPA) contracts than for ODOT contracts, as shown in Figure D-2. Of the 47.3 percent MBE/WBE participation, much was from firms certified as DBEs (one DBE firm, in fact). Note that all LPA contracts examined were FHWA-funded, and most of the dollars examined were for contracts that had DBE goals applied.

MBE/WBE participation on ODOT-awarded FHWA- and state-funded contracts was 17 percent.

D-2. MBE/WBE and DBE share of dollars for FHWA- and state-funded ODOT and LPA contracts, FFY2018–FFY2020

Note: Dark portion of bar is certified DBE utilization.

Number of ODOT contracts analyzed is 3,856.

Number of LPA contracts analyzed is 495.

Source: Keen Independent Research from ODOT procurement data.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Utilization results

Construction and Engineering Contracts

Figure D-3 presents MBE/WBE participation for construction contracts and engineering-related contracts. Overall, MBE/WBE participation was higher on construction (20.3%) contracts than engineering-related contracts (13.7%).

The difference in overall MBE/WBE utilization was perhaps due to higher DBE participation on construction contracts (15.6%) engineering-related contracts (9.2%).

D-3. MBE/WBE and DBE share of dollars for construction and engineering contracts, FFY2018–FY2020

Note: Dark portion of bar is certified DBE utilization.

Number of construction contracts analyzed is 3,714.

Number of engineering contracts analyzed is 637.

Source: Keen Independent Research from ODOT procurement data.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Utilization results

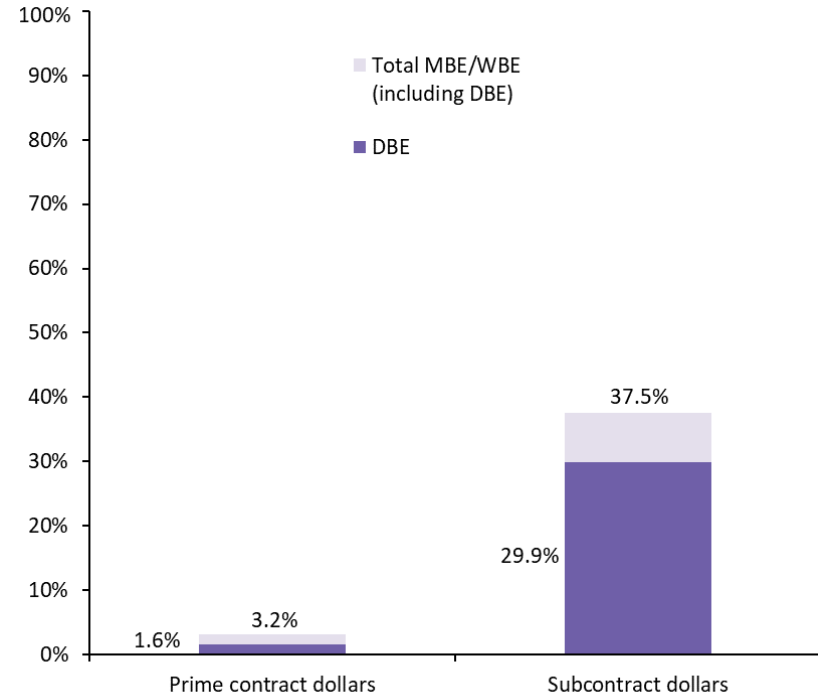

Prime Contracts and Subcontracts

Figure D-4 compares the percentage of prime contract dollars and subcontract dollars going to MBE/WBEs and DBEs.

Subcontracts. MBE/WBEs obtained about 37.5 percent of FHWA-funded subcontract dollars. DBEs accounted for 29.9 percentage points of the overall utilization of MBE/WBEs in FHWA-funded subcontracts.

Prime contracts. The study team also analyzed dollars going to prime contractors based on amounts retained by prime contractors after subtracting the value of subcontracts. MBE/WBEs received 3.2 percent of prime contract dollars. DBEs accounted for 1.6 percent of total prime contract dollars.

D-4. MBE/WBE and DBE share of dollars for FHWA- and state-funded prime and subcontracts, FFY2018–FFY2020

Note: Dark portion of bar is certified DBE utilization.

Number of prime contracts analyzed is 597.

Number of subcontracts analyzed is 2,969.

Source: Keen Independent Research from ODOT procurement data.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Utilization results

Large and Small Prime Contracts

Keen Independent also analyzed MBE/WBE and DBE participation on large and small FHWA- and state-funded prime contracts during the FFY2018–FFY2020 study period. (Utilization is based on dollars awarded to the prime). “Large” contracts were those of \$100,000 or more for construction and \$250,000 or more for engineering, based on the size of contracts ODOT must publicly bid.

- MBE/WBEs received 3 percent of contract dollars on large prime contracts and 18 percent for small prime contracts; and
- DBE participation was about 2 percent for large prime contracts and 7 percent for small prime contracts.

D-5. MBE/WBE and DBE share of dollars for large and small prime contracts, FFY2018–FFY2020

Note: Dark portion of bar is certified DBE utilization.
Number of large prime contracts analyzed is 636.
Number of small prime contracts analyzed is 698.

Source: Keen Independent Research from ODOT procurement data.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Utilization results

State-Funded Contracts

In addition to disparity analyses for FHWA-funded contracts, Keen Independent performed disparity analyses by group for ODOT's state-funded transportation contracts for FFY2018–FFY2020.

The availability benchmarks in Figure D-6 are specific to the types, sizes and locations of ODOT's state-funded transportation contracts, which somewhat differs from its FHWA-funded contracts.

Utilization was below availability for African American-owned firms. Utilization exceeded availability for Subcontinent Asian American-, Hispanic American-, Native American- and white woman-owned firms.

D-6. Disparity analysis for ODOT state-funded contracts, by group, FFY2018–FY2020

	Utilization	Availability	Disparity index
African American-owned	2.26 %	9.31 %	24
Asian-Pacific American-owned	1.24	0.66	187
Subcontinent Asian American-owned	1.05	0.20	200+
Hispanic American-owned	2.61	1.86	140
Native American-owned	2.29	2.06	111
Total MBE	9.45 %	14.08 %	67
WBE (white woman-owned)	10.01	9.38	107
Total MBE/WBE	19.46 %	23.46 %	83
Majority-owned	80.54	76.54	105
Total	100.00 %	100.00 %	

Note: Numbers may not add to totals due to rounding.
Disparity index = 100 x Utilization/Availability.

Source: Keen Independent Research from 2021 availability survey and analysis of ODOT procurements.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Bids and proposals

Analysis of Bids on ODOT Construction Contracts

Keen Independent analyzed bid information for a random sample of 50 ODOT FHWA- and state-funded construction contracts awarded from October 2017 through September 2020 (see Appendix B for a description of this methodology). In total, 178 bids were submitted for these 50 contracts. MBE/WBEs submitted 13 of the 178 bids:

- Four of the bids on these prime contracts (2.2% of all bids) came from minority-owned firms (two different firms); and
- Another nine bids (5.1% of all bids) came from WBEs (three different firms).

The proportion of bids from MBEs was below what would be expected for those construction contracts based on availability of MBEs for those contracts (14.3%). The share of total bids from WBEs was also below the proportion expected from the availability analysis (17.1%).¹

Figure D-7 presents MBE and WBE share of bids submitted (lighter bars) and the proportion of firms available for those prime contracts that were MBEs and WBEs (darker bars).

Although the numbers were too small to be meaningful, the study team also examined the share of the bids from MBEs and WBEs that were the winning bids (none of the four from MBEs and six of the nine from WBEs).

D-7. MBE/WBE bids as a share of total bids submitted on ODOT FHWA- and state-funded construction contracts, Oct. 2017–Sep. 2020

Note: Based on analysis of 178 bids on 50 construction contracts randomly sampled within the October 2017–September 2020 study period.

Source: Keen Independent Research from ODOT procurement data.

¹ Note that this is based on a count of firms identified in the availability analysis that were available for ODOT construction prime contracts; it is not dollar-weighted.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Bids and proposals

Analysis of Proposals on ODOT Engineering Contracts

Keen Independent analyzed the relative number of proposals submitted by MBEs and WBEs for a random sample of 35 FHWA- and state-funded engineering-related contracts during the study period.

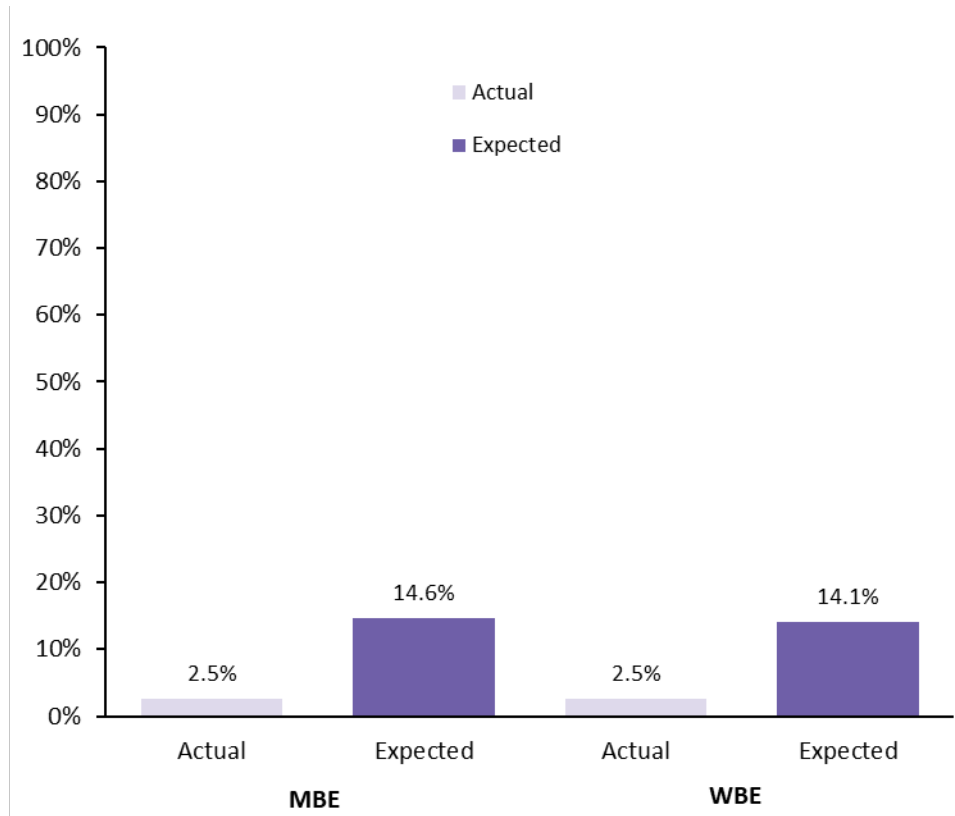

Of the 159 proposals submitted:

- Four (2.5%) were submitted by MBEs; and
- Four (2.5%) were submitted by WBEs.

As with construction bids, the share of proposals coming from MBEs and from WBEs was less than expected based on the availability of MBEs and WBEs for these prime contracts. Figure D-8 shows these comparisons.

Again, Keen Independent analyzed if any of the proposals submitted by MBE/WBEs resulted in contract awards. One of the four proposals submitted by MBEs received the contract award and two of the proposals from WBEs resulted in contract awards. The number of proposals did not allow any interpretation of the success of winning for MBE/WBE proposers.

D-8. MBE/WBE bids as a share of total proposals submitted on FHWA- and state-funded engineering contracts, Oct. 2017–Sep. 2020

Note: Based on analysis of 159 bids on 35 contracts randomly sampled within the October 2017–September 2020 study period.

Source: Keen Independent Research from ODOT contract records.

D. Additional Utilization and Disparity Analyses for ODOT Contracts — Disparity Index

To conduct the disparity analysis, Keen Independent compared the actual utilization of MBE/WBEs on ODOT prime contracts and subcontracts with the percentage of contract dollars that MBE/WBEs might be expected to receive based on their availability for that work.

Keen Independent made those comparisons for individual MBE/WBE groups. The Summary Report explains how the study team developed benchmarks from the availability data.

To make results directly comparable, Keen Independent expressed both utilization and availability as percentages of the total dollars associated with a particular set of contracts (e.g., 5% utilization compared with 4% availability). Keen Independent then calculated a “disparity index” to easily compare utilization and availability results among MBE/WBE groups and across different sets of contracts.

- A disparity index of “100” indicates an exact match between actual utilization and what might be expected based on MBE/WBE availability for a specific set of contracts (often referred to as “parity”).
- A disparity index of less than 100 may indicate a disparity between utilization and availability, and disparities of less than 80 in this report are described as “substantial.”²

Figure D-9 describes how Keen Independent calculated disparity indices.

D-9. Calculation of disparity indices

The disparity index provides a straightforward way of assessing how closely actual utilization of an MBE/WBE group matches what might be expected based on its availability for a specific set of contracts. With the disparity index, one can directly compare results for one group to that of another group, and across different sets of contracts. Disparity indices are calculated using the following formula:

$$\frac{\% \text{ actual utilization} \times 100}{\% \text{ availability}}$$

For example, if actual utilization of WBEs on a set of contracts was 1 percent and the availability of WBEs for those contracts was 2 percent, then the disparity index would be 1 percent divided by 2 percent, which would then be multiplied by 100 to equal 50. In this example, WBEs would have received 50 cents of every dollar that they might be expected to receive based on their availability for the work.

² Some courts deem a disparity index below 80 as being “substantial” and have accepted it as evidence of adverse impacts against MBE/WBEs. For example, see *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation, et al.*, 713 F. 3d 1187, 2013 WL 1607239 (9th Cir. April 16, 2013); *Rothe*

Development Corp v. U.S. Dept of Defense, 545 F.3d 1023, 1041; *Eng’g Contractors Ass’n of South Florida, Inc. v. Metropolitan Dade County*, 122 F.3d at 914, 923 (11th Circuit 1997); *Concrete Works of Colo., Inc. v. City and County of Denver*, 36 F.3d 1513, 1524 (10th Cir. 1994). Also see Appendix B for additional discussion.

D. Disparity analysis for ODOT contracts — Statistical significance of results

Sampling

Testing for statistical significance relates to testing the degree to which a researcher can reject “random chance” as an explanation for any observed differences.

Random chance in data sampling is the factor that researchers consider most in determining the statistical significance of results. The study team attempted to reach each firm in the relevant geographic market area identified as possibly doing business within relevant subindustries, mitigating many of the concerns associated with random chance in data sampling as they may relate to Keen Independent’s availability analysis.

The utilization analysis attempted to represent a complete “population” of contracts.

Therefore, one might consider any disparity identified when comparing overall utilization with availability to be “statistically significant.”

Figure D-10 explains the high level of statistical confidence in the utilization and availability results. As outlined on the next page, the study team also used a sophisticated statistical simulation tool to further examine statistical significance of disparity results.

D-10. Confidence intervals for availability and utilization measures

As discussed in Appendix C, Keen Independent successfully reached 4,144 business establishments in the availability telephone survey — a number of completed surveys that might be considered large enough to be treated as a “population,” not a sample.

However, if the results are treated as a sample, the reported 29.1 percent representation of MBE/WBEs among available firms is accurate within about +/-1.0 percentage points. (This was MBE/WBE availability before dollar-weighting.) By comparison, many survey results for proportions reported in the popular press are accurate within +/- 5 percentage points. (Keen Independent applied a 95 percent confidence level and the finite population correction factor when determining these confidence intervals.)

Keen Independent attempted to collect data for all FHWA- and state-funded ODOT contracts during the study period and no confidence interval calculation applies for the utilization results.

D. Disparity analysis for ODOT contracts — Statistical significance of results

Monte Carlo Analysis

There were many opportunities in the sets of prime contracts and subcontracts for MBE/WBEs to be awarded work. Some contract elements involved large dollar amounts and others involved only a few thousand dollars.

Approach. Monte Carlo analysis was a useful tool for the study team to use for statistical significance testing in the disparity study because there were many individual chances at winning ODOT prime contracts and subcontracts during the study period, each with a different payoff.

Keen Independent used the Monte Carlo simulation to determine whether chance in contract and subcontract awards could explain the disparities observed for African American-, Asian-Pacific American-, Subcontinent Asian-American-, Hispanic American- and Native American-owned firms combined when examining ODOT contracts.

Figure D-11 describes Keen Independent’s use of Monte Carlo analysis.

D-11. Monte Carlo analysis

The study team conducted the Monte Carlo analysis by examining individual contract element. For each element, Keen Independent’s availability database provided information about businesses available to perform that contract element, based on type of work, contractor role and contract size.

The study team assumed that each available firm had an equal chance of “receiving” that contract element. The Monte Carlo simulation then randomly chose a business from the pool of available businesses to “receive” that contract element.

The Monte Carlo simulation repeated the above process for all other elements in a particular set of contracts. The output of a single Monte Carlo simulation for all contract elements in the set represented simulated utilization of MBEs for that set of contract elements.

The entire Monte Carlo simulation was then repeated 10,000 times. The combined output from all 10,000 simulations represented a probability distribution of the overall utilization of MBEs and utilization of WBEs if contracts were awarded randomly based on the availability of businesses working in the ODOT contracting industry.

The output of the Monte Carlo simulations represents the number of runs out of 10,000 that produced a simulated utilization result that was equal or below the observed utilization in the actual data for each MBE/WBE group and for each set of contracts. If that number was less than or equal to 250 (i.e., 2.5% of the total number of runs), then the disparity index is considered statistically significant.

D. Disparity analysis for ODOT contracts — Statistical significance of results

Results. Figure D-12 presents the results from the Monte Carlo analysis for FHWA-funded contracts without DBE goals as they relate to the statistical significance of disparity analysis results for MBEs and WBES.

The Monte Carlo simulations did not replicate the disparity for MBE firms in any of the 10,000 simulation runs. Therefore, the disparity for MBEs is statistically significant, and one can reject chance in contract awards as the explanation of the disparity.

The Monte Carlo simulations replicated the disparity for WBE firms in 3,346 of the 10,000 simulation runs (about 33% of them) in FHWA-funded contracts without DBE goals. Therefore, one cannot reject the possibility that chance in contract awards could explain the observed disparity for white woman-owned businesses in FHWA-funded contracts without DBE goals.

It is important to note that this test may not be necessary to establish statistical significance of results (see discussion in Figure D-10), and it may not be appropriate for very small populations of firms.³

D-12. Monte Carlo results for MBEs and WBEs for FHWA-funded contracts without DBE goals, FFY2018–FFY2020

	MBE	WBE
Disparity index	15	59
Utilization	1.42 %	6.16 %
Number of simulations out of 10,000 less than or equal to observed utilization	0	3,346
Probability of observed disparity due to "chance"	0.00 %	33.46 %
Reject chance as an explanation	Yes	No

Source: Keen Independent Research from availability survey data and data on ODOT contracts.

³ Even if there were zero utilization of a particular group, Monte Carlo simulation might not reject chance in contract awards as an explanation for that result if there were a small number of firms in that group or a small number of contracts and subcontracts

included in the analysis. Results can also be affected by the size distribution of contracts and subcontracts.

D. Disparity analysis for ODOT contracts — Statistical significance of results

Figure D-12 presents the results from the Monte Carlo analysis for state-funded contracts as they relate to the statistical significance of disparity analysis results for MBEs and WBEs.

The Monte Carlo simulations replicated the disparity for MBE firms in 152 of the 10,000 simulation runs (less than 5% of the time). Applying a 95 percent confidence level for “statistical significance,” the disparity for minority-owned firms is statistically significant, and one can reject chance in contract awards as the explanation of the disparity.

The Monte Carlo simulations did not replicate the disparity for WBE firms in any of the 10,000 simulation runs. Therefore, the disparity for WBEs is statistically significant, and one can reject chance in contract awards as the explanation of the disparity.

D-12. Monte Carlo results for MBEs and WBEs for state-funded contracts, FFY2018–FFY2020

	MBE	WBE
Disparity index	66	33
Utilization	11.03 %	3.97 %
Number of simulations out of 10,000 less than or equal to observed utilization	152	0
Probability of observed disparity due to "chance"	1.52 %	0.00 %
Reject chance as an explanation	Yes	Yes

Source: Keen Independent Research from availability survey data and data on ODOT contracts.

APPENDIX E. Entry and Advancement — Introduction

Federal courts have found that Congress “spent decades compiling evidence of race discrimination in government highway contracting, of barriers to the formation of minority-owned construction businesses and of barriers to entry.”¹ Congress found that discrimination had impeded the formation of qualified minority-owned businesses.

In the marketplace analyses for the Oregon Department of Transportation (ODOT) study (described in Appendix E through Appendix I), Keen Independent examines whether some of the barriers to business formation that Congress found for minority- and woman-owned businesses also appear to occur in the Oregon marketplace.

Based on research about where firms obtaining ODOT contracts are located, Keen Independent considers the relevant geographic market area for this study be Oregon and Clark County and Skamania County, Washington. Appendices E through I refer to this geographic area as the “marketplace,” unless otherwise noted. The “study industries” are the construction industry and certain segments of the professional services, goods and other services industries.

These were also the geographic market area and study industries for the 2016 ODOT Availability and Disparity Study. Much of what is presented in Appendices E through H updates or expands on information Keen Independent provided in the 2016 study.

Potential barriers to business formation include barriers associated with entering and advancing as employees in the study industries. Appendix E examines recent data on employment and workplace advancement that may ultimately influence business formation within the ODOT study industries.^{2, 3}

After presenting overall demographic characteristics for the study industries as a whole, Keen Independent separately examines results for each industry as the pathways into these sectors and career ladders for employees differ between industries.

Results based on Census data pertain to conditions before the COVID-19 pandemic, as Census Bureau data for post-pandemic conditions are not yet available.

¹ *Sherbrooke Turf, Inc. v. Minnesota DOT*, 345 F.3d 964 (8th Cir. 2003), citing *Adarand Constructors, Inc. v. Slater*, 228 F.3d (10th Cir. 2000); *Western States Paving Co., Inc. v. Washington State DOT*, 345 F.3d 964 (8th Cir. 2003).

² In Appendix E and other appendices that present information about local marketplace conditions, information for “professional services” refers to engineering, computer systems design and other professional services. References to “goods” pertains to

wholesale and retail trade of building materials and supplies. “Other services” refers to truck transportation and landscaping services.

³ Several other report appendices analyze other quantitative aspects of conditions in the ODOT marketplace. Appendix F explores business ownership. Appendix G presents an examination of access to capital. Appendix H considers the success of businesses. Appendix I presents the data sources that Keen Independent used in those appendices.

E. Entry and Advancement — Introduction

Keen Independent examined whether there were barriers to the formation of businesses owned by minorities and women in the local marketplace. Business ownership typically results from an individual entering an industry as an employee and then advancing within that industry before starting a business in that sector. Within the entry and advancement process, there may be barriers that limit opportunities for some individuals. Figure E-1 presents a model of entry and advancement in the study industries.

Appendix E uses data for 2015–2019 from the U.S. Census Bureau American Community Survey (ACS) to analyze education, employment and workplace advancement — all factors that may influence whether individuals gain the work experience and qualifications to start businesses in the study industries.

Keen Independent began the analysis by examining the representation of people of color and women among business owners and workers in the Oregon marketplace.

E-1. Model for studying entry into study industries in the Washington metro area

Source: Keen Independent Research.

E. Entry and Advancement — Demographic overview of workers and business owners in Oregon

People of Color Among Workers and Business Owners

Figure E-2 shows the demographic distribution of business owners in the study industries, business owners in other industries (excluding the study industries) and workers in the labor force, based on 2015–2019 ACS data. (Demographics of the workforce in individual study industries are presented separately later in Appendix E.)

Analysis of the Oregon marketplace in 2015–2019 indicated that people of color were underrepresented based on the percentage of business owners within the study industries and the representation of groups in the overall workforce. These included:

- African Americans;
- Asian-Pacific Americans;
- Subcontinent Asian Americans;
- Hispanic Americans; and
- Native Americans.

Keen Independent analyzed whether differences between the representation of each group among business owners and the representation of that group in the workforce were statistically significant, which means that sampling in the Census data can be rejected as a cause of the observed differences (noted with asterisks in Figure E-2). Each of the differences described above were statistically significant.

Women Workers and Business Owners

Figure E-2 also examines the percentage of local marketplace business owners and workers who are women. In 2015–2019, women accounted for 21 percent of business owners in the study industries, 26 percentage points below women’s representation in the overall workforce (47%).

E-2. Demographic distribution of business owners and the workforce in the Oregon marketplace, 2015–2019

	Workforce in all industries	Business owners in study industries	Business owners in all other industries
Race/ethnicity			
African American	2.5 %	1.1 % **	1.9 % **
Asian-Pacific American	5.5	3.1 **	5.1
Subcontinent Asian American	0.8	0.3 **	0.5 **
Hispanic American	12.7	9.0 **	7.2 **
Native American	2.4	1.8 *	1.9 **
Total minority	23.8 %	15.2 %	16.5 %
Non-Hispanic white	76.2	84.8 **	83.5 **
Total	100.0 %	100.0 %	100.0 %
Gender			
Female	47.1 %	21.3 % **	51.8 % **
Male	52.9	78.7 **	48.2 **
Total	100.0 %	100.0 %	100.0 %

Note: *, ** Denote that the difference in proportions between workforce in all industries and business owners in the specified industries for the given race/ethnicity/gender group is statistically significant at the 90% and 95% confidence level, respectively.

“All other industries” includes all industries other than the construction, professional services, goods and other services sectors that were the focus of this study.

Native American includes Native Americans and other minorities.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

E. Entry and Advancement — Demographic overview of workers and business owners in Oregon

Some organizations in Oregon are seeking to bridge this gender gap. Oregon Tradeswoman provides a free 192-hours Trades and Apprenticeship Career Class to women to assist them in becoming certified with the Oregon Bureau of Labor and Industries.⁴ Oregon Tradeswomen’s executive director commented that “if we don't provide not only career opportunities for women to work in high-wage jobs – many of which are blue collar — but necessary supports ... we will continue to see women segregated into ‘pink collar’ jobs that perpetuate a cycle of marginalization and economic insecurity.”⁵

E. Entry and Advancement — Demographic overview of workers and business owners in Oregon

Conditions During COVID-19 Pandemic

Nationally, researchers have found that the economic effects of the COVID-19 pandemic have disproportionately affected women and minorities. For example, according to the Bureau of Labor Statistics, in December 2020 the U.S. economy lost 140,000 jobs in the month of December alone. The same analysis by gender, however, revealed that women lost 156,000 jobs while men gained 16,000 jobs. A different Bureau of Labor Statistics survey found that in December 2020, African American women and Hispanic American women lost jobs while the number of jobs held by non-Hispanic white women increased.⁶

Contributing to this disparity in job losses were differences in whether people could work from home. Prior to the pandemic, less than 20 percent of African American and Hispanic Americans in the United States held jobs that allowed a work-from-home option, while 30 percent of white and Asian American workers had that option.⁷

Research also suggests that the national labor force contracted due to the COVID-19 pandemic. This contraction has been attributed to the enhanced federal and state unemployment benefits (which extended to September 2021), workers' deaths from COVID-19⁸ and the lack of consistent childcare and schooling for working parents and caregiving services for working caretakers.

The COVID-19 pandemic has caused more women to drop out of the labor force than men, which some researchers largely attribute to gendered caretaking responsibilities.⁹ As alluded to earlier, one working paper from fall 2020 found a strong relationship between school closures and labor force participation. Analysis found that nationally, nearly 90 percent of the women who dropped out of the labor force were mothers.¹⁰ As a result, the national workforce in February 2021 contained 3.1 percent fewer women (about 2.3 million women workers) than recorded in February 2020. (For comparison, the male labor force during this same period only decreased by 2.2 percent, roughly 1.8 million men.)¹¹ Women in the Oregon area were not immune to these trends.

E. Entry and Advancement — Construction industry employment

The following pages describe employment conditions in each study industry, beginning with construction. Keen Independent examined how education, training, employment and advancement may affect the number of businesses that people of color and women own in the Oregon marketplace construction industry (referred to as the “marketplace” or “local construction industry”).

Education of People Working in the Industry

Formal education beyond high school is not a prerequisite for most construction jobs,¹² and construction often attracts individuals who have relatively less formal education than in other industries.¹³ These workers often receive on-the-job training after they are hired by construction companies to compensate for the initial lack of knowledge.¹⁴ Based on 2015–2019 ACS data, just 16 percent of area construction workers had a four-year college degree or more compared to 37 percent in all other industries combined.

Race/ethnicity. Due to the educational requirements of entry-level jobs and the limited education beyond high school for many minority groups in the marketplace, one would expect a relatively high representation of people of color in the local construction industry, especially in entry-level positions. The following groups represent a large share of workers without a post-secondary education:

- Hispanic Americans (16%);
- Asian-Pacific Americans (5%);
- Native Americans (3%);
- African Americans (3%); and
- Non-Hispanic whites (73%).

In 2015–2019, Asian-Pacific American and Subcontinent Asian American workers age 25 and older in the Oregon marketplace were more likely to have at least a four-year college degree than non-Hispanic whites. One might expect representation of these groups in the construction industry to be lower than in other industries.

E. Entry and Advancement — Construction industry employment

Gender. Nationally, in 2018, women made up only 10 percent of the construction workforce (roughly 1.1 million women). Women largely operate in administrative roles, with most in professional and management occupations (44%), sales and office work (28%) and service positions (21%). Only 7 percent of women in construction are employed in positions related to natural resources, construction and maintenance (1%) or production, transportation and material moving (6%).¹⁵ Low representation of women, and especially women of color, is also found in apprenticeships.¹⁶

According to 2015–2019 ACS data for the local construction industry, 27 percent of female workers and 14 percent of male workers age 25 and older had at least a four-year college degree. This might contribute to lower representation of women among construction workers.

Among people with a college degree, women have been less likely to enroll in construction-related degree programs. Nationally, women have low levels of enrollment in construction management programs, and this may be due to (a) the prevailing notion that construction is an industry dominated by males and is unkind to females and families, and (b) secondary school career counselors' lack of discussion of women's career opportunities in the construction fields, and female students' consequent lack of knowledge of these professions.¹⁷

E. Entry and Advancement — Construction industry employment

Trade schools and apprenticeship programs. Training in the construction industry is largely on-the-job and through trade schools and apprenticeship programs.¹⁸ Entry-level jobs for workers out of high school are often for laborers, helpers or apprentices. More skilled positions may require additional training through a technical or trade school, or through an apprenticeship or other training program. Apprenticeship programs can be developed by employers, trade associations, trade unions or other groups.

Workers can enter apprenticeship programs from high school or trade school. Apprenticeships have traditionally been three- to five-year programs that combine on-the-job training with classroom instruction.¹⁹

However, the availability of these programs fluctuates with demand. For example, due to public health concerns, halted construction projects and the need for social distancing, many apprenticeships throughout the nation were ended or scaled back during the COVID-19 pandemic.²⁰

This also occurred during the Great Recession. In response to limited construction employment opportunities during the recession, apprenticeship programs limited the number of new apprenticeships²¹ as well as access to knowing when and where apprenticeships occur.²² Apprenticeship programs often refer to an “out-of-work list” when contacting apprentices; those who have been on the list the longest are given preference.

Furthermore, some research indicates that apprentices are often hired and laid off several times during their apprenticeship program. Apprentices were more successful if they were able to maintain steady employment, either by remaining with one company and moving to various work sites, or by finding work quickly after being laid off. Apprentices identified mentoring from senior coworkers, such as journey workers, foremen or supervisors, and being assigned tasks that furthered their training as important to their success.²³

E. Entry and Advancement — Construction industry employment

Recent legislation supporting career training and equity. Recent state and federal legislation seeks to improve the success of apprenticeship programs as well as the diversity and equity of the Oregon work force. In 2022, the Oregon Governor signed the “Future Ready Oregon” bill into law.²⁴ This bill provides \$200 million towards job training programs and was written with support from the Governor’s Racial Justice Council. It also reduces or eliminates tuition for community colleges and career training programs and will restructure these programs to be completed in shorter amounts of time. This should allow more people quicker access to jobs.²⁵

E. Entry and Advancement — Construction industry employment

Employment in the Construction Industry

The study team examined employment in the Oregon construction industry. Figure E-3 compares the demographic composition of construction industry workers with the total workforce.

Race/ethnicity. Based on 2015–2019 ACS data, people of color were about 23 percent of those working in the local construction industry. Hispanic Americans were a relatively large share of employees (16.4%). There was underrepresentation of workers in this industry for:

- African Americans;
- Asian-Pacific Americans; and
- Subcontinent Asian Americans.

These differences were statistically significant (see Figure E-3).

The average educational attainment of African Americans is consistent with requirements for construction jobs, so education does not explain the underrepresentation of this group in the local construction industry relative to other industries. Historically, racial discrimination by construction unions in the United States has contributed to the low employment of African Americans in construction trades.²⁶ The role of unions is discussed more thoroughly later in Appendix E (including research that suggests discrimination has been reduced to a degree in unions).

²⁶ Watson, T. (2021). Union construction’s racial equity and inclusion charade. *Stanford Social Innovation Review*. Retrieved from

Gender. There is a large difference between the representation of women in the construction industry workforce (11% of employees) and representation in all other industries (50% of employees).

E-3. Demographics of workers in construction and all other industries in the Oregon marketplace, 2015–2019

	Construction	All other industries
Race/ethnicity		
African American	1.5 % **	2.6 %
Asian-Pacific American	2.2 **	5.7
Subcontinent Asian American	0.1 **	0.8
Hispanic American	16.4 **	12.5
Native American	2.7 *	2.3
Total minority	22.9 %	23.9 %
Non-Hispanic white	77.1	76.1
Total	100.0 %	100.0 %
Gender		
Female	11.2 % **	49.6 %
Male	88.8 **	50.4
Total	100.0 %	100.0 %

Note: *, ** Denote that the difference in proportions between workers in the specified industry and all other industries for the given race (or gender) definition and Census/ACS year is statistically significant at the 90% or 95% confidence level, respectively.

E. Entry and Advancement — Academic research on construction employment

There is substantial academic literature indicating that race- and gender-based discrimination affects opportunities for minorities and women in the construction industry.

Research on the Oregon highway construction industry reports an underrepresentation of minorities and women in apprenticeship programs.²⁷ Kelly et al. identified informal hiring practices that relied on personal relationships and networking. While 76 percent of white men agreed that jobs were fairly assigned during their most recent apprenticeship, only 57 percent of women of color, 58 percent of white women, and 55 percent of men of color agreed. In addition, both construction company staff and apprentices indicated that they believed that women and men of color were more likely to be laid off even if there were other apprentices who were newer to the project or were less effective.²⁸

Burd-Sharps et al. found that almost 68 percent of female apprentices in Oregon’s highway trades experienced some kind of workplace discrimination or harassment in comparison to 28 percent of men, and a higher percentage of women of color reported experiencing

gender-based discrimination “sometimes” or “often” than white female apprentices (66% and 52%, respectively).²⁹

Other literature concerning women in construction trades has identified substantial barriers to entry and advancement due to gender discrimination and sexual harassment.³⁰ One study found that when African American women in construction advance into leadership roles, they often find that others unduly challenge their authority. Participants of this study also reported incidents of harassment, bullying, and the assumption that they are inferior to their male peers; these instances are believed to hinder African American females’ career development and overall success in the construction industry.³¹ Such treatment has been found to lead to stress, decreased psychological health and early exit from the industry.³²

In a separate study, white men were least likely to report challenges related to being assigned low-skill or repetitive tasks that did not enable them to learn new skills. Women and people of color felt that they were disproportionately performing low-skill tasks that negatively impacted the quality of their training experience.³³

E. Entry and Advancement — Academic research on construction employment

Additionally, women encounter practical issues such as difficulty in accessing personal protective equipment that fits them properly (they frequently find such employer-provided equipment to be too large). This sometimes poses a safety hazard, and even more often hinders female workers' productivity, which can impact their relationships with supervisors as well as their opportunities for growth in the industry.³⁴

Research suggests that race and gender inequalities in a workplace are often evidenced through the acceptance of the “good old boys’ club” culture.³⁵ There may also be an attachment to the idea that “working hard” will bring success. However, the quantitative and qualitative evidence indicates that “hard work” alone does not ensure success for women and people of color.³⁶

The temporary nature of construction work results in uncertain job prospects, and the relatively high turnover of laborers presents a disincentive for construction firms to invest in training. Some researchers have concluded that constant turnover has lent itself to informal recruitment practices and nepotism, compelling laborers to tap social networks for training and work. They credit the importance of

social networks with the high degree of ethnic segmentation in the construction industry.³⁷ Unable to integrate themselves into traditionally white social networks, African Americans and other minorities faced long-standing historical barriers to entering the industry.³⁸

There has been some progress in this area. For example, Oregon’s Highway Construction Workforce Development Program has made specific efforts to decrease barriers to women and increase their success of apprenticeship programs. Their efforts have included both monetary support as well as childcare and travel assistance. The current research suggests that these efforts have been successfully in recruiting and retaining more women and people of color.³⁹

E. Entry and Advancement — Unions in the construction industry

Labor researchers characterize construction as a historically volatile industry that is sensitive to business cycles, making the presence of labor unions important for stability and job security within the industry.⁴⁰ According to the Bureau of Labor Statistics, in 2020 union membership among people employed in construction occupations was about 17 percent.⁴¹ Union members comprise a greater share of the construction workforce than found in other industries, as national union membership within all occupations during 2020 was about 11 percent.⁴² The difference in union membership rates demonstrates the importance of unions within the construction industry.

Construction unions aim to provide a reliable source of labor for employers and preserve job opportunities for workers by formalizing the recruitment process, coordinating training and apprenticeships, enforcing standards of work, and mitigating wage competition. The unionized sector of construction would seemingly be a path for African Americans and other underrepresented groups into the industry.

However, some researchers have identified racial discrimination by trade unions that has historically prevented minorities from obtaining employment in skilled trades.⁴³ Some researchers have argued that union discrimination has taken place in a variety of forms, including the following examples:

- Unions have used admissions criteria that adversely affect minorities. In the 1970s, federal courts ruled that standardized testing requirements for unions unfairly disadvantaged minority applicants who had less exposure to testing. In addition, the policies that required new union members to have relatives who were already in the union perpetuated the effects of past discrimination.⁴⁴
- Of those minority individuals who are admitted to unions, a disproportionately low number are admitted into union-coordinated apprenticeship programs. Apprenticeship programs are an important means of producing skilled construction laborers, and the reported exclusion of African Americans from those programs has severely limited their access to skilled occupations in the construction industry.⁴⁵

⁴⁵ Goldberg, D.A. & Griffey, T. (2010). *Black power at work: community control, affirmative action, and the construction industry*. Ithaca, NY: Cornell University Press.

E. Entry and Advancement — Unions in the construction industry

- Although formal training and apprenticeship programs exist within unions, most training of union members takes place informally through social networking. Nepotism characterizes the unionized sector of construction as it does the non-unionized sector, and that practice favors a white-dominated status quo.⁴⁶
- Traditionally, unions have been successful in resisting policies designed to increase African American participation in training programs. The political strength of unions in resisting affirmative action in construction has hindered the advancement of African Americans in the industry.⁴⁷
- Discriminatory practices in employee referral procedures, including apportioning work based on seniority, have precluded minority union members from having the same access to construction work as their white counterparts.⁴⁸
- According to testimony from African American union members, even when unions implement meritocratic mechanisms of apportioning employment to laborers, white workers are often allowed to circumvent procedures and receive preference for construction jobs.⁴⁹

- Some minority workers face overt, aggressive violence that is racialized with the goal of pushing them out of the workplace. Tactics include racial slurs, physical intimidation, placement in dangerous work situations, and intentional “accidents.”⁵⁰

Research suggests that the relationship between people of color and unions has been changing. As a result, historical observations may not be indicative of current dynamics in construction unions. Recent studies focusing on the role of unions in apprenticeship programs have compared minority and female participation and graduation rates for apprenticeships in joint programs (that unions and employers organize together) with rates in employer-only programs.

⁴⁶ Applebaum, H. A. (1999). *Construction workers, U.S.A.* Westport, CT: Greenwood Press. A high percentage of skilled workers reported having a father or relative in the same trade. However, the author suggests this may not be indicative of current trends.

E. Entry and Advancement — Unions in the construction industry

Many of those studies conclude that the impact of union involvement is generally positive or neutral for minorities and women, compared to non-Hispanic white males, as summarized below.

- Glover and Bilginsoy analyzed apprenticeship programs in the U.S. construction industry during 1996 through 2003. Their dataset covered about 65 percent of apprenticeships during that time. The authors found that joint programs had “much higher enrollments and participation of women and ethnic/racial minorities” and exhibited “markedly better performance for all groups on rates of attrition and completion” compared to employer-run programs.⁵¹
- In a similar analysis focusing on female apprentices, Bilginsoy and Berik found that women were most likely to work in highly skilled construction professions as a result of enrollment in joint programs as opposed to employer-run programs. Moreover, the effect of union involvement in apprenticeship training was higher for African American women than for white women.⁵²

- Additional research on the presence of African Americans and Hispanic Americans in apprenticeship programs found that African Americans were 8 percent more likely to be enrolled in a joint program than in an employer-run program. However, Hispanic Americans were less likely to be in a joint program than in an employer-run program.⁵³ Those data suggest that Hispanic Americans may be more likely than African Americans to enter the construction industry without the support of a union.

Union membership data support those findings as well. For example, 2019 Current Population Survey (CPS) asked participants, “Are you a member of a labor union or of an employee association similar to a union?” CPS data showed that union membership was highest among African Americans (11%) and non-Hispanic whites (10%). Hispanic American workers (9%) and Asian American workers (9%) had relatively lower rates of union membership.⁵⁴ Recent research utilizing ACS data puts African American union membership in the construction industry at over 17 percent.⁵⁵

⁵⁵ Bucknor, C. (2016). *Black workers, unions, and inequality*. Washington D.C.: Center for Economic and Policy Research.

E. Entry and Advancement — Unions in the construction industry

According to some research, union apprenticeships appear to have drawn more African Americans into the construction trades in some markets,⁵⁶ and studies have found a high percentage of minority construction apprentices.

In 2010 in New York City, for example, approximately 69 percent of first-year local construction apprentices were African American, Hispanic American, Asian American, or members of other minority groups. In addition, 11 percent of local New York City construction apprentices were women. It should be noted that, though the Building and Construction Trades Council of Greater New York set a goal that women represent 10 percent of local apprentices; the City did not establish a goal for minority participation.⁵⁷

However, this increase in apprenticeships may not necessarily be indicative of improved future prospects for minority workers. A study in Oregon found that, though minority men’s participation in construction apprenticeships was roughly proportional to their representation in the state’s workforce, their representation in skilled trades apprenticeships was lower than might be expected.⁵⁸

Although union membership and union program participation vary based on race and ethnicity, there is no clear picture from the research about the causes of those differences and their effects on construction industry employment. Research is especially limited concerning the impact of unions on African American employment. It is unclear from past studies whether unions presently help or hinder equal opportunity in construction and whether effects in the local marketplace are different from other parts of the country. In addition, current research indicates that the effects of unions on entry into the construction industry may be different for different minority groups. Some unions are actively trying to provide a more inclusive environment for racial minorities and women through “insourcing” and active recruitment into apprenticeship programs.^{59, 60}

To research opportunities for advancement in the local marketplace construction industry, Keen Independent examined the representation of people of color and women in construction occupations (defined by the U.S. Bureau of Labor Statistics⁶¹). Appendix I describes trades with large enough sample sizes in the 2015–2019 ACS for analysis.

E. Entry and Advancement — Advancement in the construction industry

Race/Ethnicity

Figure E-4 present shows workers of color as a share of all workers in select construction occupations in the Oregon marketplace for 2015–2019, including lower-skill occupations (e.g., construction laborers), higher-skill construction trades (e.g., electricians) and supervisory roles.

Based on 2015–2019 ACS data, there are large differences in the racial and ethnic makeup of workers in various construction trades in the local marketplace. The representation of minorities was greater among certain trades such as:

- Construction laborers;
- Structural iron and steel workers; and
- Cement masons, concrete finishers and terrazzo workers.

However, minority representation in the following occupations was substantially lower than in construction overall (see Figure E-4):

- First-line supervisors of construction workers;
- Construction equipment operators;
- Highway maintenance workers;
- Electricians; and
- Drivers.

Some of the occupations where rates of minority representation are low have relatively higher requirements concerning education, training and apprenticeship. This suggests that people of color may face greater barriers in accessing the requisite training and apprenticeships for some high-skill occupations in the local construction industry.

E-4. People of color as a percentage of selected construction occupations in the Oregon marketplace, 2015–2019

Note: African Americans, Asian Americans and other minority groups were combined into a single category due to small sample size for individual occupations.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

E. Entry and Advancement — Advancement in the construction industry

Gender

Keen Independent also analyzed the proportion of women workers in construction-related occupations.

Figure E-5 summarizes the representation of women in select construction-related occupations in the local marketplace for 2015–2019. (Overall, women made up only 11 percent of workers in the industry in 2015–2019.)

In the local marketplace from 2015–2019, women accounted for no more than 6 percent of those working in most of the large construction trades. In the ACS sample data, women comprised less than 1 percent of construction equipment operators and there were no workers in the Census data for workers in welding and cement masonry trades who were women.

Not shown in the graph are office jobs and other occupations not related to construction trades where women account for a greater share of the workforce in the construction industry.

E-5. Women as a percentage of construction workers in selected occupations in the Oregon marketplace, 2015–2019

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

E. Entry and Advancement — Advancement in the construction industry

Percentage of Managers Who Are People of Color

To further assess advancement opportunities in the Oregon construction industry, Keen Independent examined the proportion of construction workers who reported being managers. Figure E-6 presents the percentage of construction employees who reported working as managers in 2015–2019 within the local marketplace by racial/ethnic and gender group.

Relatively fewer African Americans and Hispanic Americans reported working as construction managers than non-Hispanic whites. These differences were statistically significant (see Figure E-6).

Percentage of Managers Who Are Women

In the Oregon construction industry, about 5 percent of women construction workers were managers, significantly lower than the 10 percent of male workers who were managers in 2015–2019.

E-6. Percentage of construction workers who worked as a manager, Oregon marketplace, 2015–2019

2015-2019	
Race/ethnicity	
African American	4.3 % **
Asian American	13.1
Hispanic American	3.5 **
Native American	10.5
Non-Hispanic white	10.7
Gender	
Female	4.5 % **
Male	10.1
All individuals	9.5 %

Note: *, ** Denote that the difference in proportions between the minority and non-Hispanic white groups (or between females and males or persons with disabilities and all others) for the given Census/ACS year is statistically significant at the 90% and the 95% confidence level, respectively. Asian-Pacific Americans and Subcontinent Asian Americans were combined under “Asian American” due to the low number of Subcontinent Asian Americans in the construction industry.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

E. Entry and Advancement — Educational requirements for professional services jobs

As in construction, any underrepresentation in employment in the professional services industry can affect the number of businesses owned by people of color and women.

Education of People Working in the Industry

Many professional services occupations require at least a four-year college degree and some require licensure. According to the 2015–2019 ACS, 67 percent of individuals working in the professional services industry had at least a four-year college degree and 8 percent had a two-year degree.

Barriers to college education can restrict employment opportunities, advancement opportunities and, consequently, business ownership in the professional services industries. Low numbers of business owners in professional services may in part reflect the lack of higher education for particular racial and ethnic groups.⁶² Keen Independent explores this issue below.

Race/ethnicity. Figure E-7 presents the percentage of workers age 25 and older with at least a four-year college degree in the local marketplace (across all industries). Relatively fewer African Americans, Hispanic Americans and Native Americans had college degrees than non-Hispanic whites. This gap in educational achievement affects employment opportunities for those groups in the professional services industry.

Gender. Figure E-7 also presents the results by gender group. According to 2015–2019 data for workers in the local marketplace, 51 percent of women age 25 and older had at least a four-year college degree, higher than the 44 percent found for men.

E-7. Percentage of all workers 25 and older with at least a four-year college degree in Oregon marketplace, 2015–2019

Note: *, ** Denote that the difference in proportions between the minority and non-Hispanic white groups (or between females and males or persons with disabilities and all others) for the given Census/ACS year is statistically significant at the 90% and 95% confidence level, respectively.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

R. (2018). Minority entrepreneurship in twenty-first century America. *Small Business Economics* 50 415-427; Macionis, J. J. (2018). *Sociology* (16th ed.). Harlow, England: Pearson.

E. Entry and Advancement — Professional services industry employment

Employment in the Professional Services Industry

Figure E-8 compares the demographic composition of professional services workers (in subindustries related to ODOT work) to that of workers in all other industries who are 25 years or older and have a college degree. Data are for 2015–2019.

Representation of African Americans, Hispanic Americans and Native Americans in the Oregon professional services industry was lower than their representation among workers of similar education across all other industries (statistically significant differences).

Figure E-8 provides these results.

Women were also underrepresented in the professional services industry (among people with a college degree). This difference is statistically significant.

E-8. Demographic distribution of professional service workers and workers age 25 and older with a four-year college degree in all other industries in the Oregon marketplace, 2015–2019

	Professional services	All other industries
Race/ethnicity		
African American	1.6 %	2.0 %
Asian-Pacific American	7.5 *	6.7
Subcontinent Asian American	4.2 **	1.6
Hispanic American	4.4 **	5.6
Native American	1.1 **	1.6
Total minority	18.8 %	17.4 %
Non-Hispanic white	81.2 *	82.6
Total	100.0 %	100.0 %
Gender		
Female	35.8 % **	51.6 %
Male	64.2 **	48.4
Total	100.0 %	100.0 %

Note: *,** Denote that the difference in proportions between workers in the specified industry and all other industries for the given race definition and Census/ACS year is statistically significant at the 90% or 95% confidence level, respectively.
 “All other industries” includes all industries other than the professional services industries.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

E. Entry and Advancement — Academic research on professional services employment

Many studies have examined the factors that contribute to low minority and female participation in the STEM fields.⁶³ Some factors that may play a role include isolation within work environments,⁶⁴ negative bias toward females in the engineering fields,⁶⁵ the perception that STEM fields are non-communal,⁶⁶ low anticipated power in male-dominated domains such as the STEM fields,⁶⁷ and inadequate secondary-school preparation for college-level STEM courses.⁶⁸

Researchers have also found that some minority groups, including African Americans, Hispanic Americans and Native Americans, continue to have disproportionately low representation among recipients of science and engineering bachelor's and doctorate degrees. The study found that those same groups were also underrepresented among employees in science and engineering occupations.⁶⁹

E. Entry and Advancement — Employment in the goods industry

Keen Independent also examined the demographic composition of the local goods industry workforce (see Figure E-9).

Race/Ethnicity

People of color represented about 17 percent of the workforce in the Oregon goods industry in 2015–2019. Minority representation in the goods industry was below minority representation in all other industries.

Underrepresentation in this industry was statistically significant for Asian-Pacific Americans, Subcontinent Asian Americans and Hispanic Americans.

Gender

About 24 percent of workers in the goods industry were women in 2015–2019, which is less than the representation of women in other industries (47%). This difference was statistically significant.

Figure E-9 presents the demographic composition of workers in the local goods industry and in all other local industries.

E-9. Demographic distribution of workers in the goods industry and all other industries in the Oregon marketplace, 2015–2019

	Goods	All other industries
Race/ethnicity		
African American	1.7 %	2.5 %
Asian-Pacific American	2.4 **	5.5
Subcontinent Asian American	0.2 **	0.8
Hispanic American	9.9 **	12.8
Native American	2.3	2.4
Total minority	16.5 %	23.9 %
Non-Hispanic white	83.5 **	76.1
Total	100.0 %	100.0 %
Gender		
Female	23.9 % **	47.3 %
Male	76.1 **	52.7
Total	100.0 %	100.0 %

Note: ** Denotes that the difference in proportions between workers in the goods industry and all other industries for the given Census/ACS year is statistically significant at 95% confidence level.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

E. Entry and Advancement — Employment in the other services industry

Keen Independent also examined the demographic composition of the local goods industry workforce (see Figure E-10). Keen Independent defined the “other services” industry in this study as landscaping services and trucking and hauling services not related to the construction industry.

Race/Ethnicity

People of color represented 30 percent of the workforce in the local other services industry in 2015–2019. All race/ethnicity groups except for Hispanic Americans were underrepresented in the other services industry relative to representation in all other industries in Oregon.

Underrepresentation in this industry was statistically significant for African Americans, Asian-Pacific Americans and Subcontinent Asian Americans.

Gender

About 14 percent of workers in the other services industry were women in 2015–2019, about 34 percentage points below the representation of women in other industries (47%). This difference was statistically significant.

Figure E-10 presents the demographic composition of workers in the local other services industry and in all other local industries.

E-10. Demographic distribution of workers in the goods industry and all other industries in the Oregon marketplace, 2015–2019

	Other services	All other industries
Race/ethnicity		
African American	1.5 % **	2.5 %
Asian-Pacific American	1.4 **	5.5
Subcontinent Asian American	0.3 **	0.8
Hispanic American	24.5 **	12.5
Native American	2.3	2.4
Total minority	30.0 %	23.7 %
Non-Hispanic white	70.0 **	76.3
Total	100.0 %	100.0 %
Gender		
Female	13.5 % **	47.7 %
Male	86.5 **	52.3
Total	100.0 %	100.0 %

Note: ** Denotes that the difference in proportions between workers in the goods industry and all other industries for the given Census/ACS year is statistically significant at 95% confidence level.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

E. Entry and Advancement — Summary

People of color were 24 percent of the Oregon workforce between 2015 and 2019 and women accounted for about 47 percent of all workers. Analysis of the local workforce in the study industries indicates that there could be barriers to employment for some minority groups and for women in certain industries.

- Among construction workers, African Americans, Asian-Pacific Americans, Subcontinent Asian Americans, and women were underrepresented compared to representation among workers in all other industries. These differences were statistically significant.

In Oregon, representation of people of color in construction trades such as electricians and among construction supervisors was low when compared to representation in the construction industry as a whole. There were two construction trades examined in which there were no women in the Census Bureau sample data for Oregon.

- After controlling for educational attainment, African Americans, Hispanic Americans, Native Americans and women constituted a smaller portion of the Oregon professional services workforce when compared to representation among workers in all other industries. These differences were all statistically significant.

- All race/ethnicity groups and women were underrepresented in the Oregon goods industry. Underrepresentation was statistically significant for Asian-Pacific Americans, Subcontinent Asian Americans, Hispanic Americans and women.
- In the other services industry, all race/ethnicity groups (except for Hispanic Americans) and women represented a smaller portion of workers than would be expected based on representation among workers in all other industries. These differences were statistically significant for African Americans, Asian-Pacific Americans, Subcontinent Asian Americans and women.

Any barriers to entry or advancement in the study industries might affect the relative number of businesses owned by people of color and women in these industries in local area. Appendix F, which follows, examines rates of business ownership among individuals working in the study industries.

APPENDIX F. Business Ownership in the ODOT Study Industries

Approximately one in five construction workers in Oregon was a self-employed business owner in 2015–2019. About one in four of those working in the local professional services industry was a self-employed business owner. While just 5 percent of those working in the Oregon goods industry were self-employed, about one in four working in the other services industry was a business owner.

Focusing on these study industries, Keen Independent examined business ownership for different groups of workers in the Oregon marketplace using Public Use Microdata Samples (PUMS) from the 2015–2019 American Community Survey (ACS). (The Oregon marketplace (also referred to as the “local marketplace”) encompasses the state plus the two Washington State counties within the Portland metro area.)

Keen Independent assessed whether the rates of business ownership within each industry differed for people of color and women compared with other workers in those industries.

Appendix F also provides information on how the COVID-19 pandemic, the Great Recession and other major events have impacted business ownership at the national and regional level.

F. Business Ownership — Business ownership rates in construction industry

Many studies have explored differences between minority and non-minority business ownership at the national level.¹ Although self-employment rates have increased for people of color and women over time, several studies indicate that race, ethnicity and gender continue to affect opportunities for business ownership. The extent to which such individual characteristics may limit business ownership opportunities differs across industries and regions.^{2,3}

Keen Independent classified workers as self-employed if they reported that they worked in their own unincorporated or incorporated business in the ACS data. In 2015–2019, about 22 percent of workers in the local construction industry were self-employed compared with about 10 percent of workers in all other industries in the area.

Figure F-1 shows the following differences in the percentage of workers who were self-employed in the local construction industry across groups. There were statistically significant disparities in business ownership rates for African Americans, Hispanic Americans and women.

F-1. Percentage of workers in the Oregon construction industry who were self-employed, 2015–2019

Demographic group	2015-2019
Race/ethnicity	
African American	10.0 % **
Asian American	21.4
Hispanic American	12.5 **
Native American	19.2
Non-Hispanic white	24.6
Gender	
Female	17.3 % **
Male	22.8
All individuals	22.2 %

Note: ** Denotes that the difference in proportions between the minority and non-Hispanic white groups (or female and male groups) for the given Census/ACS year is statistically significant at the 95% confidence level. “Asian American” includes Asian-Pacific Americans and Subcontinent Asian Americans and “Native American” includes Native Americans and other minorities.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

F. Business Ownership — Business ownership rates in professional services industry

Figure F-2 presents the percentage of workers in the local professional services industry who were self-employed based on ACS data for 2015–2019.

People of color in the Oregon professional services industry were less likely to be self-employed than non-Hispanic whites. Differences in business ownership rates were statistically significant for Asian-Pacific Americans, Subcontinent Asian Americans, Hispanic Americans and Native Americans.

Women working in this industry were more likely than men to be self-employed.

F-2. Percentage of workers in the Oregon professional services industry who were self-employed, 2015–2019

Demographic group	2015-2019
Race/ethnicity	
African American	22.2 %
Asian-Pacific American	18.3 **
Subcontinent Asian American	5.3 **
Hispanic American	20.8 **
Native American	10.4 **
Non-Hispanic white	28.0
Gender	
Female	29.5 % **
Male	23.7
All individuals	25.8 %

Note: *,** Denote that the difference in proportions between the minority and non-Hispanic white groups (or female and male groups) for the given Census/ACS year is statistically significant at the 90% and 95% confidence levels, respectively.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

F. Business Ownership — Business ownership rates in goods industry

Figure F-3 presents the percentage of workers in the Oregon other services industry who were self-employed based on ACS data for 2015–2019.

People of color had relatively lower business ownership rates than non-Hispanic whites. These differences were statistically significant for Hispanic Americans.

F-3. Percentage of workers in the Oregon goods industry who were self-employed, 2015–2019

Demographic group	2015-2019
Race/ethnicity	
Asian American	2.9 %
Hispanic American	1.4 **
Other minority	3.8
Non-Hispanic white	5.0
Gender	
Female	4.9 %
Male	4.4
All individuals	4.5 %

Note: *, ** Denote that the difference in proportions between the minority and non-Hispanic white groups (or female and male groups) for the given Census/ACS year is statistically significant at the 90% and 95% confidence levels, respectively.

“Other minority” includes African Americans, Native Americans and other minorities.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

F. Business Ownership — Business ownership rates in other services industry

Figure F-4 presents the percentage of workers in the Oregon other services industry who were self-employed based on ACS data for 2015–2019.

Hispanic Americans and Native Americans had relatively lower business ownership rates than non-Hispanic whites and women had relatively lower business ownership rates than men. These differences were statistically significant for Hispanic Americans. (Sample size was small for Native American workers, which was why this result was not statistically significant.)

F-4. Percentage of workers in the Oregon other services industry who were self-employed, 2015–2019

Demographic group	2015-2019
Race/ethnicity	
African American	43.4 %
Asian American	28.4
Hispanic American	20.9 **
Native American	17.5
Non-Hispanic white	27.9
Gender	
Female	23.8 %
Male	26.6
All individuals	26.2 %

Note: *, ** Denote that the difference in proportions between the minority and non-Hispanic white groups (or female and male groups) for the given Census/ACS year is statistically significant at the 90% and 95% confidence levels, respectively.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extracts were obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

F. Business Ownership — Research on potential causes of differences in ownership rates

National Context

Nationally, researchers have examined whether racial and gender differences in business ownership rates persist after considering personal characteristics such as education and age. Several studies have found that disparities in business ownership still exist even after accounting for such factors.

- **Financial capital.** Some studies have concluded that access to financial capital is a strong determinant of business ownership. Researchers have consistently found correlation between startup capital and business formation, expansion and survival.⁴ Additionally, studies suggest that housing appreciation has a positive effect on small business formation and employment.⁵

However, unexplained racial and ethnic differences in financial capital remain after statistically controlling for those factors.⁶ Studies have found that minorities (particularly African Americans and Hispanic Americans) experience greater barriers to accessing credit and face further credit constraints at business startup and throughout business ownership than non-Hispanic whites.⁷ Access to capital is discussed in more detail in Appendix G.

- **Education.** Education has a positive effect on the probability of business ownership in most industries. Research confirms a significant relationship between education and ability to obtain startup capital.⁸ However, results of multiple studies indicate that minorities are still less likely to own a business than non-minorities with similar levels of education.⁹

⁴ See, e.g., Fairlie, R. W., Robb, A. M., & Robinson, D.T. (2020). (1996). Ethnic and racial self-employment differences and possible explanations. *The Journal of Human Resources*, 31(4), 757-793.

F. Business Ownership — Research on potential causes of differences in ownership rates

- **Experience.** Both prior self-employment and managerial experience are important indicators of re-entering or entering business ownership, respectively.¹⁰ However, people of color and women have been found to be less likely than white men to hold managerial positions.¹¹ Additionally unexplained differences in self-employment between minorities and non-minorities still exist after accounting for business experience.¹²
- **Intergenerational links.** Intergenerational links affect one's likelihood of self-employment.¹³ In fact, having an entrepreneurial parent can increase the likelihood of their offspring choosing to be self-employed by up to 200 percent.¹⁴ One study found that experience working for a self-employed family member increases the likelihood of business ownership for minorities.¹⁵

Additionally, business owners with personal experience and/or family with managerial experience have been found to accumulate resources that result in greater business success, and thus continuation in the chosen industry.¹⁶ However, research has found that on average, minorities have fewer intergenerational links to business ownership, which can impact the ability to start and operate a firm.¹⁷

F. Business Ownership — Research on potential causes of differences in ownership rates

Impact of COVID-19 on Business Ownership

Major societal events, such as the COVID-19 pandemic and the Great Recession, impacted business ownership across the country. Research has found that COVID-19 resulted in a loss of 3.3 million active business owners (a 22% decrease from 15 million owners). This loss was greater than what occurred during the Great Recession, where 5 percent of businesses closed.¹⁸

In comparison with white business owners (a group whose ownership decreased by 17%), active minority business owners were particularly affected. At the height of the pandemic:

- African American business owners decreased by 41 percent;
- Hispanic American business owners fell by 32 percent;
- Asian American business owners decreased by 26 percent; and
- Woman business owners dropped by 25 percent.¹⁹

Women of color experienced even more hardships in business ownership.²⁰

Major reasons behind such a disproportionate impact on minority-owned businesses include the following:

- Minority-owned businesses were already facing structural and social issues that negatively affected ownership and success, such as discrimination and lack of access to capital. Consequently, these firms were more likely to be at risk prior to the pandemic, particularly African American- and Hispanic American-owned businesses.²¹
- Minority-owned businesses were more heavily concentrated in fields hit heavily by COVID-19, such as the hospitality and service industries.²²
- Minority-owned businesses had limited access to funding during the pandemic, such as the Paycheck Protection Program (PPP), due primarily to a lack of relationship with financial intermediaries (e.g., Small Business Administration lenders).

F. Business Ownership — Research on potential causes of differences in ownership rates

An additional factor that impacted all business ownership, regardless of race, gender or business size, were supply chain disruptions experienced by most industries, which limited access to goods and limited productivity.²³

Intergenerational small businesses were challenged by the COVID-19 pandemic, as well. Deaths of older family members (as well as the fear of death) hastened succession, led some to reevaluate business ownership and led others to consider business sale or closure.²⁴

Some business owners have also faced a risk to their business's success due to a skilled labor shortage. The Construction Industry Resources data firm estimates that there is a shortage of 2 million construction workers nationwide through 2025.²⁵

F. Business Ownership — Construction industry regression analyses

Regression Analyses

As discussed above, race, ethnicity and gender can affect opportunities for business ownership, even when accounting for personal characteristics such as education, age and family status.

To further examine business ownership, Keen Independent developed multivariate regression models for each study industry. Those models estimate the effect of race, ethnicity and gender on the probability of business ownership while statistically controlling for certain personal and family characteristics of the worker.

An extensive body of literature examines whether personal factors such as access to financial capital, education, age and family characteristics (e.g., marital status) help explain differences in business ownership. That subject has also been examined in other disparity studies that have been favorably reviewed in court.²⁶ For example, prior studies in Minnesota and Illinois have used econometric analyses to investigate whether disparities in business ownership for minorities and women working in the construction and architecture and engineering industries persist after statistically controlling for race- and gender-neutral personal characteristics.^{27,28} Those studies developed probit econometric models (a particular type of regression model) based on

Census data, which were included in the materials that agencies submitted to courts in subsequent litigation concerning implementation of the Federal DBE Program.

Keen Independent used similar probit regression models to predict business ownership from multiple independent or “explanatory” variables, such as:

- Personal characteristics that are potentially linked to the likelihood of business ownership — age, age-squared, marital status, disability, number of children in the household, number of elderly people in the household and English-speaking ability;
- Educational attainment;
- Measures and indicators related to personal financial resources and constraints — home ownership, home value, monthly mortgage payment, dividend and interest income, and additional household income from a spouse or unmarried partner; and
- Race, ethnicity and gender.²⁹

²⁶ For example, National Economic Research Associates, Inc. (2012). *The state of minority- and woman-owned business enterprise in construction: Evidence from Houston* (Rep.). Retrieved from City of Houston website: <http://www.houstontx.gov/obo/disparitystudyfinalreport.pdf>; Mason Tillman Associates. (2011). *Illinois Department of Transportation/Illinois Tollway disadvantaged business enterprises disparity study (Vols. 2)* (Rep.). Retrieved from Illinois Department of Transportation website: <http://www.idot.illinois.gov/Assets/uploads/files/Doing-Business/Reports/OBWD/DBE/DBEDisparityStudy.pdf>.

²⁷ National Economic Research Associates, Inc. (2000). *Disadvantaged Business Enterprise availability study* (Rep.). Prepared for the Minnesota Department of Transportation.

²⁸ National Economic Research Associates, Inc. (2004). *Disadvantaged Business Enterprise availability study* (Rep.). Prepared for the Illinois Department of Transportation.

²⁹ Probit models estimate the effects of multiple independent or “predictor” variables in terms of a single, dichotomous dependent or “outcome” variable — in this case, business ownership. The dependent variable is binary, coded as “1” for individuals in a particular industry who are self-employed and “0” for individuals who are not self-employed. The model enables estimation of the probability that workers in each sample are self-employed, based on their individual characteristics. Keen Independent excluded observations where the Census Bureau had imputed values for the dependent variable (business ownership).

F. Business Ownership — Construction industry regression analyses

The effect of an explanatory variable such as race or gender on business ownership can be determined based on the “coefficient” for that variable determined through the multivariate regression analysis.

Figure F-5 presents the coefficients for the probit model for individuals working in the local construction industry in 2015-2019. Several race- and gender-neutral factors were statistically significant in predicting a higher probability of business ownership, including:

- Age;
- Marriage status;
- Number of children in the household;
- Home ownership;
- Home values; and
- Interest and dividend income.

After statistically controlling for these and other factors other than race, ethnicity and gender, there remained statistically significant disparities in business ownership rates for African Americans, Hispanic Americans and white women working in the local construction industry. Compared with non-minorities and men, similarly situated individuals in these groups working in the industry were less likely to own businesses.

F-5. Business ownership model for the Oregon construction industry, 2015-2019

Variable	Coefficient
Constant	-3.0875 **
Age	0.0657 **
Age-squared	-0.0005 **
Married	0.1024 *

F. Business Ownership — Construction industry regression analyses

Actual and Projected Business Ownership Rates

Probit regression modeling allows for further analysis of the disparities identified in business ownership rates for people of color and white women. Keen Independent modeled business ownership rates for these groups as if they had the same probability of business ownership as similarly situated non-Hispanic white males and compared those results with what was observed.

1. Keen Independent performed a probit regression analysis predicting business ownership using only non-Hispanic white male construction workers in the dataset.³⁰
2. After obtaining the results from the non-Hispanic white male regression model, the study team used coefficients from that model along with the mean personal, financial and educational characteristics of African Americans, Asian Americans, Native Americans or other minorities, and non-Hispanic white women working in the local construction industry (i.e., indicators of educational attainment as well as indicators of financial resources and constraints) to estimate the probability of business ownership of each group if they were treated the same as non-Hispanic white men. Similar simulation approaches have been used in other disparity studies that courts have reviewed.

Figure F-6 presents the simulated business ownership rate (i.e., “benchmark” rate) for people of color and for non-Hispanic white women, and compares them to the actual, observed mean probabilities

³⁰ That version of the model excluded the race, ethnicity and gender indicator variables, because the value of all those variables would be the same (i.e., 0).

of business ownership for that group. The disparity index was calculated by dividing the actual business ownership rate for each group (the first column of results in Figure F-6) by that group’s benchmark rate (the second column), and then multiplying the result by 100.³¹ The third column of results in Figure F-6 provides the disparity index for business ownership for African Americans and for non-Hispanic white women working in the local construction industry. An index of “100” indicates parity between actual and simulated rates and an index less than 100 indicates a disparity.

As shown, there were substantial disparities in business ownership rates for African Americans, Hispanic Americans and non-Hispanic white women.

F-6. Comparison of actual business ownership rates to simulated rates for construction workers in the Oregon marketplace, 2015–2019

Demographic group	Self-employment rate		Disparity index (100 = parity)
	Actual	Benchmark	
African American	7.6 %	20.4 %	37
Hispanic American	12.4	18.8	66
White woman	17.7	27.2	65

Note: As the benchmark figure can only be estimated for records with an observed (rather than imputed) dependent variable, comparison is made with only this subset of the sample. For this reason, actual self-employment rates may differ slightly from those in Figure F-1.

Disparity index calculated as actual/benchmark rate, multiplied by 100.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

³¹ Note that the “actual” self-employment rates are derived from the dataset used for these regression analyses and do not always exactly match results from the entire 2015–2019 data.

F. Business Ownership — Professional services industry regression analyses

Regression Analysis

Using the same data source as for the construction industry (2015–2019 ACS data), Keen Independent developed a business ownership regression model for people working in the Oregon professional services industry.

Figure F-7 presents the coefficients for that probit model. For this industry, a higher number of children in a household and higher spousal income were associated with a higher probability of owning a business. These estimates were all statistically significant.

After controlling for certain other personal and family characteristics, business ownership rates in the local professional services industry were lower for Subcontinent Asian Americans.

Non-Hispanic white women were somewhat more likely than non-Hispanic white men to report business ownership in the local professional services industry after controlling for race- and gender-neutral factors.

F-7. Business ownership model for Oregon professional services industry, 2015–2019

Variable	Coefficient
Constant	-1.3874 **
Age	-0.0060
Age-squared	0.0004 **
Married	-0.0321
Disabled	0.0649
Number of children in household	0.0468 *
Number of people over 65 in household	0.0491
Owns home	-0.0358
Monthly mortgage payment (\$1,000s)	-0.0057
Interest and dividend income (\$1,000s)	0.0008
Income of spouse or partner (\$1,000s)	0.0017 **
Four-year degree	-0.0019
Advanced degree	-0.0317
African American	-0.1369
Asian-Pacific American	-0.0871
Subcontinent Asian American	-0.8194 **
Hispanic American	0.0607
Native American	-0.3117
White woman	0.0988 **

Note: *,** Denote statistical significance at the 90% and 95% confidence levels, respectively.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

F. Business Ownership — Professional services industry regression analyses

Actual and Projected Business Ownership Rates

Using the same approach as for the construction industry, Keen Independent simulated business ownership rates for people working in the local professional services industry. These results are presented in Figure F-8.

The actual business ownership rate for Subcontinent Asian Americans in the professional services industry was less than the benchmark rate for this group, indicating a substantial disparity.

In this case, the actual business ownership rate among non-Hispanic white women was higher than the benchmark rate that one would expect. These results indicate no negative outcomes regarding business ownership rates for white women working in the Oregon professional services industry.

F-8. Comparison of actual business ownership rates to simulated rates for professional service workers in the Oregon marketplace, 2015–2019

Demographic group	Self-employment rate		Disparity index (100 = parity)
	Actual	Benchmark	
Subcontinent Asian American	4.9 %	17.7 %	28
White woman	31.6	24.6	129

Note: As the benchmark figure can only be estimated for records with an observed (rather than imputed) dependent variable, comparison is made with only this subset of the sample. For this reason, actual self-employment rates may differ slightly from those in Figure F-2.

Disparity index calculated as actual/benchmark rate, multiplied by 100.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

F. Business Ownership — Goods industry regression analyses

Regression Analysis

Figure F-9 presents the coefficients for the business ownership probit model for people working in the local goods industry.

After controlling for race- and gender-neutral factors, there were statistically significant differences in the rates of business ownership for Asian Americans in the goods industry compared with non-minorities.

F-9. Business ownership model for Oregon goods industry, 2015–2019

Variable	Coefficient
Constant	-2.3093 *
Age	0.0073
Age-squared	0.0001
Married	-0.2836

Hispanic American	-0.1540
Native American	-0.2734
White woman	-0.0635

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

F. Business Ownership — Summary of results

Summary of Results

Keen Independent examined whether there were differences in business ownership rates for workers in the Oregon construction, professional services, goods and other services industries related to race, ethnicity and gender.

- People of color working in the Oregon construction industry were less likely than non-Hispanic whites to own a business. Similarly, women in the local construction industry were less likely than men to be self-employed. Differences in business ownership rates were statistically significant for African Americans, Hispanic Americans and for non-Hispanic white women working in this industry.

Even after statistically controlling for factors including education, age, family status and homeownership, statistically significant disparities in business ownership rates were still found for African Americans, Hispanic Americans and non-Hispanic white women. These disparities were substantial.

- In the Oregon professional services industry, Asian-Pacific Americans, Subcontinent Asian Americans, Hispanic Americans, Native Americans and other minorities were less likely than non-Hispanic whites to own a business.

After controlling for education, age and other personal characteristics, Subcontinent Asian Americans still had a statistically significant disparity in business ownership rates. These disparities were substantial.

³² Keen Independent Research. (2021). *Oregon Statewide DBE Disparity Study*. Oregon Department of Aviation.

- After controlling for personal characteristics including age and education, there was a statistically significant difference for Asian Americans in business ownership rates in the Oregon goods industry. This disparity was substantial.

These disparities suggest that there are fewer African American-, Hispanic American- and white woman-owned construction firms, fewer Subcontinent Asian American-owned professional services firms and fewer Asian American-owned goods firms in the local marketplace than there would be without regard to race, ethnicity or gender.

These results are largely consistent with recent disparity studies in Oregon. A statewide Oregon DBE disparity study (2021) reported lower rates of business ownership in the construction industry for African Americans, Hispanic Americans, Native Americans and women. Minorities and women working in the architecture and engineering industry were also less likely to be business owners.³²

The 2016 ODOT disparity study reported lower rates of business ownership in the construction and engineering industries for people of color and women.³³

³³ Keen Independent Research. (2016). *2016 Availability and Disparity Study*. Oregon Department of Transportation.

APPENDIX G. Access to Capital — Introduction

Access to capital is key to formation and long-term success of businesses. Discrimination in capital markets hinders people of color and women from acquiring the capital necessary to start, operate or expand businesses.¹ Courts have applied such evidence when approving programs to assist minority- and woman-owned businesses.²

The amount of start-up capital can affect business success. MBE/WBEs have, on average, less start-up capital than other businesses.³ According to a 2012 national U.S. Census Bureau survey:

- About 25 percent of white-owned firms indicated that they had start-up capital of \$25,000 or more compared with only 12 percent of African American-owned businesses. There were disparities for other minority groups except Asian Americans.
- About 15 percent of woman-owned businesses reported start-up capital of \$25,000 or more compared with 27 percent of male-owned businesses (not including businesses that were equally owned by men and women).⁴

Black and white: Access to capital among minority-owned startups. *National Bureau of Economic Research, Working Paper (28154)*; Federal Reserve Bank of Atlanta. (2019, December). Report on minority-owned firms: small business credit survey. Retrieved from <https://www.fedsmallbusiness.org/survey/2019/report-on-minority-owned-firms>

² In *Concrete Works v. City and County of Denver*, Denver presented evidence of lending discrimination to support its position that MBE/WBEs in the Denver MSA construction industry face discriminatory barriers to business formation. Denver introduced a disparity study. The study ultimately concluded that “despite the fact that loan applicants of three different racial/ethnic backgrounds in this sample were not appreciably different as businesspeople, they were ultimately treated differently by the lenders on the crucial issue of loan approval or denial.” *Concrete Works*, 321 F.3d at 976, at 977-78. In *Adarand VII*, the Court concluded that this study, among other evidence, “strongly support[ed] an initial showing of discrimination in lending.” *Id.* at 978, quoting, *Adarand VII*, 228 F.3d at 1170, n. 13. The Tenth Circuit in *Concrete Works* concluded that discriminatory motive can be

Racial or gender discrimination affecting the availability of start-up capital can have long-term consequences, as can discrimination in access to business loans after businesses have been formed.⁵

Discrimination in the traditional means of obtaining start-up capital (e.g., the ability to obtain a business loan and having equity in a home and the ability to borrow against that equity) also impacts business survival and success. Lack of access to business credit, housing market discrimination and discrimination in mortgage lending have lasting effects for current or potential business owners.

Appendix G presents information about start-up capital and business credit markets nationally and in the region. It also examines relationship between business success and mortgage lending, as home equity is often a vital source of capital to start and expand businesses.

inferred from the results shown in disparity studies. The Court noted that in *Adarand VII* it took “judicial notice of the obvious causal connection between access to capital and ability to implement public works construction projects.” *Id.* at 978, quoting *Adarand VII*, 228 F.3d at 1170.

W., & Robb, A. (2010). *Race and entrepreneurial success: Black-, Asian-, and white-owned businesses in the United States*. Cambridge, MA: The MIT Press.

G. Access to Capital — Sources of start-up capital

The study team analyzed financing patterns, with a focus on sources of start-up capital, to explore any differences in access to capital for people of color and women.

The most common sources of capital used to start or acquire a business according to the U.S. Census Bureau are:

- Personal or family savings of owner(s);
- Personal or family assets other than savings of owner(s);
- Personal or family home equity loan;
- Personal credit card(s) carrying balances;
- Business credit card(s) carrying balances;
- Business loan from federal, state or local government;
- Government-guaranteed business loan from a bank or financial institution;
- Business loan from a bank or financial institution;
- Business loan or investment from family or friends;
- Investment by venture capitalist(s); and
- Grants.

According to the U.S. Census Bureau’s Annual Business Survey (ABS) and the Federal Reserve Bank’s 2018 Small Business Credit Survey (SBCS), the primary source of capital used to start or acquire a business in 2017 was personal and/or family savings.⁶

Research finds that the amount of personal savings a business owner has accrued is influenced by race, ethnicity and gender. A 2019 Survey of Consumer Finances by the Federal Reserve System found that the median net worth of African American and Hispanic American households was 14 percent and 17 percent that of white households, respectively.⁷

The gap between the median net worth of male- and female-headed households is also substantial. A 2021 study found, on average, a woman-headed household’s net worth is 71 percent that of her male counterpart.⁸

⁶ Federal Reserve Bank of Atlanta. (2019, December). Report on minority-owned firms: small business credit survey. Retrieved from <https://www.fedsmbusiness.org/survey/2019/report-on-minority-owned-firms>; The Annual Business Survey provides economic and demographic data for nonfarm employer businesses that file the 941, 944 or 1120 tax forms by ethnicity, race and gender. This differs from the U.S. Census Bureau’s Survey of Business Owners which collects data on employer businesses and non-employer businesses with receipts of \$1,000 or more. ABS data released in 2018 and referencing 2017 are the most recent data available.

G. Access to Capital — Sources of start-up capital

Use of Personal Savings

ABS has also found that the degree to which personal savings are used differ by race, ethnicity and gender. National patterns among employer businesses (those with paid employees other than the owner) identified in the ABS include the following for 2017:

- African American-, Asian American- and Hispanic American-owned businesses were most likely to use personal/family savings as a source of start-up capital (72%). American Indian- and Alaska Native-owned businesses (69%) were also likely to rely on personal or family savings for start-up capital.
- Non-Hispanic white-owned businesses were less likely to use personal/family savings for start-up capital (66%).
- Woman-owned firms were slightly more likely than male-owned businesses to report using personal and family savings for start-up capital (67% and 65%, respectively).

Use of Personal Credit Cards

Some business owners also use personal credit scores to obtain capital. Similar to personal funds, SBCS findings show that reliance on this method differs by race and ethnicity. African American- (52%) and Hispanic American-owned (51%) businesses were more likely to utilize personal credit scores compared to majority- (45%) and Asian American-owned (43%) firms.

Adding difficulty to African American and Hispanic American business owners' attempts is that on average these two groups have lower credit scores than their white and Asian American counterparts, thus potentially hindering the actual acquirement of capital.⁹

Nationally, businesses owned by non-Hispanic whites, Asian Americans and men in general reported lower reliance on the use of credit cards as a source of start-up capital than other people of color and women. The following ABS results pertain to employer businesses in 2017:

- About 15 percent of African American-owned businesses used personal credit cards as a source of start-up capital, followed by Native Hawaiian and other Pacific Islander-owned firms (14%), American Indian and Alaska Native-owned business (13%) and Hispanic American-owned firms (12%).
- Only 9 percent of Asian American- and non-Hispanic white-owned businesses reported using personal credit cards as a source of start-up capital.
- Woman-owned businesses (10%) were somewhat more likely to use personal credit cards as a source of start-up capital compared with male-owned businesses (8%).

Credit card financing of debt is more expensive than business loans through financial institutions.¹⁰ Reliance on this more expensive method of financing presents additional challenges to business success, which disproportionately affects women and most minority groups.

G. Access to Capital — Start-up capital

Wealth

Since personal and family savings were the most common source of start-up capital used to start or acquire a business, the study team examined data on wealth-holding to further explore implications for people of color and women.

As mentioned earlier, in 2019, white households had, on average, greater income and net worth than minority households, more specifically, eight times as much wealth as African American families and five times as much as Hispanic American households.¹¹ White households were less likely to have zero or negative net worth and had more assets than African American and Hispanic American households.¹² White households also had greater mean net housing wealth than African American and Hispanic American households.¹³ And, white householders were more likely to participate in retirement accounts and plans, behavior that has been found to build wealth and financial security.¹⁴

Figure G-1 provides household financial data by race and ethnicity for 2019, gathered by the Survey of Consumer Finances.

Given the heavy dependence upon personal and family savings of the owner as the main source of start-up capital, lower levels of wealth among African Americans, Hispanic Americans and other people of color may result in greater difficulty acquiring the capital necessary to start, operate or expand businesses.

¹¹ Bhutta, N., Chang, A., Dettling, L., & Hsu, J. (2020). Disparities in wealth by race and ethnicity in the 2019 Survey of Consumer Finances. *Federal Reserve System: FEDS Notes*. G. Access to Capital — Business credit

Many businesses rely on banks for start-up and expansion capital.¹⁵ The study team analyzed data on business loans to identify any differences in business lending to minority-, women- and white male-owned companies.

Successful Acquisition of Business Loans

Data for employer businesses that secured business loans and other financing are found in the Small Business Credit Survey (SBCS).

Although data by race, ethnicity and gender are not reported for individual states, results by race and gender are available at the national level. These data give insight into the larger socio-economic context for firms owned by people of color in Oregon.

Nationally, more than one-half of employer firms applied for a business loan from 2017 to 2018. Of those that applied, minority-owned businesses were less likely than non-Hispanic white-owned firms to report securing a business loan. Figure G-2 displays the national approval rate for business loans by race and ethnicity, according to 2018 SBCS data. These results are consistent with recent research indicating that minority-owned businesses were less likely than white-owned businesses to receive the amount of requested credit from lending institutions.¹⁶

The figure indicates that among applicants, minority-owned businesses were considerably less likely than majority-owned businesses to obtain business loans.

G-2. Business loan application and approval rate, U.S. employer firms, 2017–2018

Race/ethnicity	Applied	Approval rate
African American	64 %	42 %
Hispanic American	55	51
Non-Hispanic white	51	70

Note: The sample size for Native Americans and Asian Americans was too small for publication; “Approval rate” includes businesses that received some or all financing.

G. Access to Capital — Business credit

Lack of access to capital affects business profitability and long-term success. The 2016 ASE indicates that business owners of color were far more likely than non-Hispanic whites and men to cite access to capital as an issue negatively affecting the profitability of their company. Figure G-3 provides national results by race, ethnicity and gender of the business owner (data for employer firms).

In sum, minority- and woman-owned employer businesses were less likely to secure business loans from a bank or financial institution, less likely to apply for additional financing due to fear of denial and more likely to cite the issue of access to financial capital as having a negative impact on profitability. These indicators of credit market conditions demonstrate that some barriers to business success disproportionately affect women and people of color.

The ASE data related to business lending are consistent with the findings of other research. In 2019, the National Community Reinvestment Coalition studied lending practices in seven U.S. cities and found that more significant barriers to accessing capital through the traditional banking market exist for African American and Hispanic American small business owners. For example, African American and Hispanic American applicants for small business loans are asked to provide more documentation and are given less information about the loans than their non-Hispanic white counterparts.¹⁷

G-3. Percentage of U.S. employer businesses that cited access to financial capital as negatively impacting the profitability of their business, 2016

Demographic group	Percent of respondents
Race	
African American	22.3 %
American Indian and Alaska Native	17.0
Asian American	13.3
Native Hawaiian and other Pacific Islander	19.6
White	8.9
Ethnicity	
Hispanic American	15.1 %
Non-Hispanic	9.3
Gender	
Female	10.0 %
Male	9.6
All individuals	9.5 %

G. Access to Capital — Business credit

Pre-COVID-19 trends. Overall trends in small business lending are also important when considering credit market conditions. Even before the COVID-19 pandemic, small business lending was slow to recover from the Great Recession.¹⁸ Among large banks, lending disproportionately went to large businesses, with bank lending to small businesses decreasing by nearly \$100 billion from 2008 to 2016.¹⁹

The decrease in small business lending coupled with greater barriers for people of color and women may have perpetuated an environment where minorities and women have more difficulty acquiring the capital necessary to start, operate or expand businesses.

Impact of COVID-19. Financial conditions of small businesses were negatively impacted by the COVID-19 pandemic. The 2020 SBCS by the Federal Reserve Bank found that in fall 2020, 57 percent of surveyed firms with employees (“employer firms”) reported a “fair” or “poor” fiscal status. An even larger share of firms without employees reported “fair” or “poor” status.²⁰

Among employer firms and firms without employees (“nonemployer firms”), minority-owned firms were disproportionately affected (see Figure G-4).

G. Access to Capital — Business credit

The SBCS also asked firms about financial challenges they experienced in the previous 12 months. Among employer firms, relatively few businesses owned by non-Hispanic whites reported difficulties accessing credit (30%) compared to African American (53%), Asian Americans (40%), Hispanic Americans (37%) and Native Americans (33%).²¹ Similar patterns were seen among nonemployer firms.²²

As a result, over 90 percent of the 2020 SBCS respondents sought out emergency funding, primarily from the Paycheck Protection Program (PPP).²³ Influx of federal funding for the PPP led to an increase in the number of lenders providing SBA business loans (from 1,810 in 2018 to 5,460 in 2020). Despite this growing access to loans, however, the pandemic substantially limited small business access to credit.²⁴ This was true for regional businesses, as well. A 2020 study found that in the District of Columbia, businesses with 5 or fewer employees received only 18 percent of PPP loans, despite making up about 69 percent of all businesses within the city. Businesses with five to 9 employees received about 22 percent of PPP loans provided in the area, and firms 10 to 19 employees in size received 23 percent.²⁵

²³ Ibid.

²⁴ Misera, L. (2020). An uphill battle: COVID-19's outsized toll on minority-owned firms. *Federal Reserve Bank of Cleveland*. Retrieved from https://www.clevelandfed.org/en/newsroom-and-events/publications/community-development-briefs/db-20201008-misera-report.aspx?utm_source=cfd&utm_medium=email&utm_campaign=ClevelandFedDigest

Research finds that despite lower representation within the business owner population, woman- and minority-owned businesses received a larger share of PPP loans than population dictated:²⁶

- Woman-owned businesses accounted for about 6 percent of all businesses in the District of Columbia, however constituted 10 percent of firms that received over \$150,000 in PPP funding; and
- Minority-owned businesses represented about 6 percent of all businesses in the city yet received 12 percent of PPP loans over \$150,000.²⁷

Despite these promising figures, it remains that the vast majority of PPP funds were allocated to male- and majority-owned businesses in the District of Columbia.²⁸

Nationally, one study in spring 2021 found that only 29 percent of the 3.6 million federal PPP loans were granted to minority-owned businesses.²⁹ The Center for Responsible Lending evaluated the lending criteria of the PPP and found that about 95 percent of African American-owned businesses and 91 percent of Hispanic American-owned

G. Access to Capital — Business credit

businesses would not qualify for federal assistance from this program due to a lack of prior relationship with a mainstream lending institution.³⁰

A consequence of limited access to financial help during the COVID-19 pandemic was that pre-COVID-19 economic distress was exacerbated. A 2020 survey of minority businesses by the JPMorgan Chase Institute found almost 80 percent of African American- and Asian American-owned small businesses reported being in “weak” financial shape, compared to 54 percent of white-owned small business.³¹ Supply chain issues further weakened the financial state of these firms.³²

Additionally, research has found that more restricted access to PPP loans affected the ability for firms to hire (or rehire) employees to regain financial footing.³³

2003 Survey of Small Business Finances (SSBF)

Conducted by the U.S. Federal Reserve Board of Governors, the 2003 SSBF remains one of the most comprehensive sources of information to compare lending to minority- and nonminority-owned small businesses. Unlike previous surveys, the 2003 SSBF is unique in that it provides data on firm-level measurement of characteristics such as race, ethnicity, gender and ownership concentration. The 2003 SSBF surveyed 4,240 representative firms that were operating at the end of 2003.³⁴

³⁰ Center for Responsible Lending. (2020, April 6). The Paycheck Protection Program continues to be disadvantageous to smaller businesses, especially businesses owned by people of color and the self-employed. Retrieved July 7, 2020, from https://www.responsiblelending.org/sites/default/files/nodes/files/research-publication/crl-cares-act2-smallbusiness-apr2020.pdf?mod=article_inline

³¹ Cowley, S. (2021, April 4). Minority entrepreneurs struggled to get small-business relief loans. The New York Times. Retrieved from <https://www.nytimes.com/2021/04/04/business/ppp-loans-minority-businesses.html>

The SSBF collected information on businesses and business owners including:

- Information on firm and owner characteristics;
- An inventory of small businesses’ use of financial services and of their financial service suppliers;
- Income and balance sheet information;
- Demographic characteristics for up to three individual owners;
- Information on the use of nonstandard work arrangements; and
- Details on the use of credit and debit card processing.

The SSBF records the geographic location of businesses by Census Division, not by city, county or state. The Pacific Division (or “Pacific region”) includes Alaska, Hawaii, Oregon, Washington and California. The Pacific region is the level of geographic detail most specific to the ODOT area, and 2003 is the most recent information available from the SSBF as the survey was discontinued after that year.

The SSBF collected information about access to capital for businesses including loan denial rates, businesses that did not apply for a loan due to fear of denial, loan values and interest rates. Results from the 2003 SSBF indicate disparities for some minorities and women within these

G. Access to Capital — Business credit

categories. These results are largely consistent with analysis of 2016 ASE data.

Loan denial rates. The 2003 SSBF included information about rates of loan denial. Within the Pacific region, the loan denial rate for minorities and women in 2003 (16%) was more than that of nonminority male-owned businesses (8%). This difference was not statistically significant. Because of a small sample size in the Pacific region, the SSBF did not present data by race/ethnicity.

Nationally, SSBF data indicated that African American-owned businesses (51%) had loan denial rates substantially higher than the rate for non-Hispanic white males (8%). This difference was statistically significant. After statistically controlling for race- and gender-neutral factors including various firm characteristics, the firm's credit and financial health and business owner characteristics, businesses owned by African Americans in the U.S. were more likely to have their loans denied than other businesses.

Businesses owned by Asian Americans (12%), Hispanic Americans (16%), Native Americans (22%) and non-Hispanic white women (11%) all had higher loan denial rates when compared with businesses owned by non-Hispanic white males. These differences were not statistically significant and did not persist after controlling for various race- and gender-neutral factors.

Newer studies have found that these unequal outcomes persist. A 2018 study by the Federal Reserve Bank found that majority-owned

businesses were more likely to receive approval on all lending applications (49%) than Asian American- (39%), Hispanic American- (35%) and African American-owned (31%) firms.³⁵

The 2020 SBCS found that denial of loans, cash advances and lines of credit rose from 17 percent in 2019 to 24 percent in 2020. Successfully finding capital of any sort was more difficult after the start of the pandemic, as well. SBCS data showed that before March 1, 2020, 81 percent of loan applicants were approved for at least partial loans. However, after March 1, 2020, only 70 percent of applicants received at least partial approval. Thus, the pandemic has resulted in more difficulty for all businesses to obtain access to capital.³⁶

Applying for loans. The 2003 SSBF also included a question that gauged whether a business owner did not apply for a loan due to fear of loan denial. In the Pacific region, minority- and woman-owned businesses that reported needing loans (28%) were more likely than nonminority male-owned firms (16%) to report that they did not apply for those loans because of fear of loan denial. This difference was statistically significant. As with loan denial rates, responses for individual race/ethnicity and gender group are not available within the Pacific region due to small sample size.³⁷

Nationwide, businesses owned by African Americans (47%), Asian Americans (19%), Hispanic Americans (29%), Native Americans (30%) and non-Hispanic white women (22%) were more likely to forgo applying for business loans due to fear of loan denial when compared with non-Hispanic white male business owners (14%). Except for

G. Access to Capital — Business credit

Asian American business owners, differences between all other race and gender groups and non-Hispanic white males were statistically significant.

After statistically controlling for various race- and gender-neutral factors for the firm and firm ownership, African American- and woman-owned businesses were more likely than white male-owned businesses to forgo applying for a loan due to fear of denial. These results were statistically significant.

Loan values. SSBF data for the Pacific region indicate that the value of approved business loans secured by minority- and woman-owned firms was \$289,000 on average. Business loans secured by non-Hispanic white male owned firms in the Pacific region averaged \$456,000. This difference was statistically significant. Similar trends were found nationally, with firms owned by non-Hispanic white male receiving significantly larger business loans on average than firms owned by minorities or women (\$375,000 and \$161,000, respectively).

Interest rates. According to national 2003 SSBF data, minority- and woman-owned businesses were issued loans with a higher interest rate on average than majority-owned businesses (7.5% and 6.4%, respectively). This difference was statistically significant.³⁸ After accounting for various race- and gender-neutral business and business owner characteristics, statistically significant disparities persisted among African American- and Hispanic American-owned firms. African American-owned businesses received loans with interest rates approximately 2 percentage points higher than non-Hispanic white male-owned businesses, while businesses owned by Hispanic Americans received loans with interest rates approximately 1 percentage point higher than majority-owned businesses.³⁹

G. Access to Capital — Business credit

Results from 2021 Availability Survey

In the Keen Independent 2021 availability survey, the study team asked respondents a battery of questions regarding potential barriers or difficulties firms might have experienced in the Oregon marketplace.

The series of questions was introduced with the following statement: “Finally, we’re interested in whether your company has experienced barriers or difficulties associated with business start-up or expansion, or with obtaining work. Think about your experiences within the past five years in Oregon. as you answer these questions.” Respondents were then asked about specific potential barriers or difficulties. Responses to questions about access to capital were combined for all industries.

Figure G-6 presents results for questions related to access to capital and bonding. The first question asks, “Has your company experienced any difficulties in obtaining lines of credit or loans?” As shown in Figure G-6, the share of firms indicating difficulties was:

- 35 percent of minority-owned firms;
- 12 percent of white woman-owned firms; and
- 9 percent of majority-owned businesses (“majority-owned” businesses in Figure G-6 are firms not owned by people of color or women).

G-6. Responses to availability survey question concerning loans

Source: Keen Independent Research from 2021 availability survey.

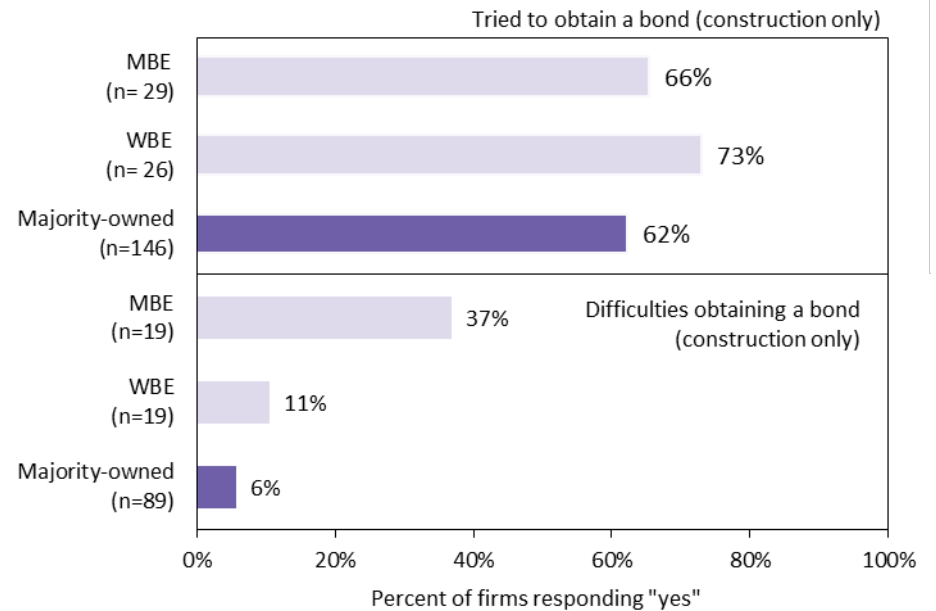

G. Access to Capital — Bonding

The 2021 availability survey asked construction firms if they had tried to obtain bonding for a project or contract. About 66 percent of minority-owned construction firms and 73 percent of white woman-owned firms indicated that they had tried to obtain bonding, in line with the 62 percent of majority-owned construction firms that had done so.

Construction firms that indicated that they had tried to obtain a bond were then asked, “Has your company had any difficulties obtaining bonds needed for a project or contract?” Of those that had tried to obtain a bond, 37 percent of MBEs and 11 percent of WBEs reported difficulties obtaining a bond, compared to 6 percent of majority-owned construction firms.

Figure G-7 presents these results

G-7. Responses to availability survey questions concerning bonding

Source: Keen Independent Research from 2021 availability survey.

G. Access to Capital — Homeownership

The study team also analyzed homeownership and the mortgage lending market to explore differences across race/ethnicity and gender that may lead to disparities in access to capital.

There is a strong relationship between the likelihood of starting a new business and the potential entrepreneur’s home equity.⁴⁰ Wealth created through homeownership can be an important source of capital to start or expand a business.⁴¹ Research has shown:

- Homeownership is a tool for building wealth;⁴²
- More personal wealth provides additional options for financing because higher wealth enables both self-financing and wealth leveraging via borrowing from the equity in one’s home;⁴³
- Business owners tend to use home equity to finance business investments, confirming that home equity is an efficient means of business financing;⁴⁴

⁴⁰ Corradin, S., & Popov, A. (2015). House prices, home equity borrowing, and entrepreneurship. *The Review of Financial Studies*, 28(8), 2399-2428.

⁴¹ The housing and mortgage crisis beginning in late 2006 has substantially impacted the ability of small businesses to secure loans through home equity. Later in Appendix G, Keen Independent discusses the consequences of the housing and mortgage crisis on small businesses and MBE/WBEs.

⁴² McCabe, B. J. (2018). Why buy a home? Race, ethnicity, and homeownership preferences in the United States. *Sociology of Race and Ethnicity*, 4(4), 452-472.

⁴³ Bates, T., Bradford, W., & Jackson, W. E. (2018). Are minority-owned businesses underserved by financial markets? Evidence from the private-equity industry. *Small Business Economics*, (50)3, 445-461.

- Homeownership is associated with an estimated 30 percent reduction in the probability of loan denial for small businesses;⁴⁵
- Race and gender wealth inequality contributes to lower rates of homeownership among women and minorities; and
- The United States has a history of restrictive real estate covenants and property laws that affect the ownership rights of minorities and women.⁴⁶

It is important to note that economic uncertainty and low interest rates during the COVID-19 pandemic resulted in a near-record increase in homebuying. From 2020 to 2021, Pew Research found the number of homeowners nationally increased from 82.8 million to 84.9 million, the largest growth since the 2003-2004 housing boom.⁴⁷ Such interest in property led to inflated home prices.

G. Access to Capital — Homeownership

Partly due to rising costs, certain socioeconomic groups have not seen meaningful increases in homeownership. Nationally, the homeownership rate increased for all households between 2019 and 2020; however, the homeownership rate increase for non-Hispanic white households was statistically significant while the increases for minority households were not.⁴⁸

Barriers to homeownership and creation of home equity for certain groups can impact business opportunities. Similarly, barriers to accessing home equity through home mortgages can also affect available capital for new or expanding businesses. People of color tend to be held back from homeownership by several barriers, including being adequately informed on homeownership and available home stock, as well as other issues, such as redlining, devaluation of minority-owned homes and mortgage discrimination, which will be discussed in this section.^{49, 50}

Research confirms the importance of homeownership on the likelihood of starting a business, even when examined separately from recent work history (this is done by independently examining workers that recently experienced a job loss and those that did not). A study focusing on minorities and women found a strong relationship between increases in home equity and entry into self-employment for both groups.⁵¹

The study team analyzed homeownership rates, home values and the home mortgage market in the state for 2015–2019.

G. Access to Capital — Homeownership

Homeownership Rates

The study team used 2015–2019 American Community Survey (ACS) data to examine homeownership rates in Oregon. (Analyses in this appendix using ACS data include respondents from the study market area, including Oregon as well as Clark County and Skamania County, Washington.) About 66 percent of nonminority heads of households owned homes. As shown in Figure G-8, homeownership rates for all minority groups are lower than for non-Hispanic whites. For example, just 34 percent of African American heads of households in Oregon were homeowners during that time period. Differences found for each minority group compared with non-Hispanic whites were statistically significant.

Lower rates of homeownership may reflect lower incomes and wealth for people of color, as well as lower educational attainment.⁵² That relationship may be self-reinforcing, as low wealth puts individuals at a disadvantage in becoming homeowners, which has historically been a path to building wealth. For example, the probability of homeownership is considerably lower for African Americans than it is for comparable non-Hispanic whites throughout the United States.⁵³

Research shows that while African Americans narrowed the homeownership gap in the 1990s, the first half of the following decade brought little change and the second half of the decade brought significant losses (which included the Great Recession), resulting in a widening of the gap between African Americans and non-Hispanic whites.⁵⁴

G. Access to Capital — Homeownership

Home Values

Research has shown that increases in home equity encourage business ownership.⁵⁵ Using ACS data, the study team compared median home values by race/ethnicity group.⁵⁶

Figure G-9 presents median home values by group in the local area for 2015 to 2019. Hispanic Americans and Native Americans who owned homes had lower median home values than non-Hispanic whites.

The median value of African American, Asian-Pacific American and Subcontinent Asian American homeowners' homes exceeded that of non-Hispanic whites.

It is important to note that these data regarding homeownership are for 2015 through 2019. Home values have grown since then.⁵⁷

G-9. Median home values in Oregon, 2015–2019, thousands

Note: The sample universe is all owner-occupied housing units.

G. Access to Capital — Review of additional research on mortgage lending

People of color may be denied opportunities to own homes, to purchase more expensive homes or to access equity in their homes if they are discriminated against when applying for home mortgages.

Research shows this happens frequently. For example, a study has found persistent racial discrimination in national rates of loan acceptance/denial and mortgage costs from late 1970s to 2016, which has impacted the ability of minority groups to purchase homes.⁵⁸

The best available source of information concerning mortgage lending by region is Home Mortgage Disclosure Act (HMDA) data, which contain information on mortgage loan applications that financial institutions, savings banks, credit unions and some mortgage companies receive.⁵⁹ Those data include information about loans and the race/ethnicity, income and credit characteristics of loan applicants. Data are available for home purchases, loan refinances and home improvement loans. The most recent year of HMDA data available are from 2020.

The study team examined annual HMDA statistics provided by the Federal Financial Institutions Examination Council (FFIEC) for 2016 through 2020. There were 6,762 lending institutions included in the 2018 data, 5,852 in 2017 and 5,683 in 2018.^{60, 61, 62} The number of lending institutions decreased to 5,508 in 2019 and decreased further to 4,475 by 2020.^{63, 64} As HMDA data are reported at the state level, the following analyses using HMDA data apply only to Oregon.

⁵⁸ Quillian, L., Lee, J.J., & Honore, B. Racial discrimination in the U.S. housing and mortgage lending markets: a quantitative review of trends, 1976-2016. *Race and Social Problems* 12 13-18.

⁵⁹ Depository institutions were required to report 2017 HMDA data if they had assets of more than \$44 million on the preceding December 31 (\$42 million for 2013), had a home or branch office in a metropolitan area, and originated at least one home purchase or refinance loan in the reporting calendar year. Non-depository mortgage companies were required to report HMDA if they are for-profit institutions, had home purchase loan originations (including refinancing) either a.) exceeding 10 percent of all loan obligations originations in the past year or b.) exceeding \$25 million, had a home or branch office located in an MSA (or receive applications for, purchase or originated five or more home purchase loans mortgages in an MSA), and either had more than \$10 million in assets or made at least 100 home purchase or refinance loans in the preceding calendar year.

G. Access to Capital — Review of additional research on mortgage lending

Mortgage Denials

The study team examined mortgage denial rates on conventional loan applications made by high-income households. Conventional loans are loans that are not insured by a government program. High-income applicants are those households with 120 percent or more of the U.S. Department of Housing and Urban Development (HUD) area median family income.⁶⁵ Loan denial rates are calculated as the percentage of mortgage loan applications that were denied, excluding applications that the potential borrowers terminated and applications that were closed due to incompleteness.⁶⁶

Figure G-10 presents loan denial rates for high-income households in Oregon from 2016 through 2020.⁶⁷

In this time period, the loan denial rate for high-income households was higher for people of color than for non-Hispanic white applicants. For example, the denial rate for high-income African American applicants was about 9 percent, roughly three percentage points above the denial rate for high-income non-Hispanic white applicants. Differences between minority and non-minority household loan denial rates were statistically significant.

G-10. Denial rates of conventional purchase loans to high-income households in Oregon, 2016–2020

Note: High-income borrowers are those households with 120% or more than the HUD area median family income (MFI).

Source: FFIEC HMDA 2016 through 2020.

⁶⁵ Median family income for the San Diego-Chula Vista-Carlsbad MSA was about \$ 75,000 in 2015 and \$86,000 in 2019. Median family income for the non-metro portion of Georgia was about \$57,000 in 2015 and \$65,000 in 2019. Source: FFIEC Census and FFIEC estimated MSA/MD median family income for the 2015 and 2019 CRA/HMDA reports.

⁶⁶ For this analysis, loan applications are considered to be applications for which a specific property was identified, thus excluding preapproval requests.

⁶⁷ Clark County and Skamania County, Washington, are not included in analyses of HMDA data, as these data are reported at the state level.

G. Access to Capital — Review of additional research on mortgage lending

Subprime Lending

Mortgage lending discrimination can also occur through higher fees and interest rates. Subprime lending provides a unique example of such types of discrimination through fees associated with various loan types.

Subprime lending grew rapidly in the late 1990s and early 2000s and accounted for large growth in the home mortgage industry. In 2006, subprime loans represented about one-fifth of all mortgages in the United States.⁶⁸

With interest rates higher than prime loans, subprime loans were historically marketed to customers with blemished or limited credit histories who would not typically qualify for prime loans. Over time, subprime loans were made available to home buyers without requirements for such as a down payment or proof of income and assets; subprime loans were also made available for home buyers purchasing property at a cost above that for which they would qualify from a prime lender.⁶⁹

⁷¹ Office of Representative Suzanne Bonamici. (2016, June 2). *Bonamici Applauds Action to Crack Down on Predatory Lending* [Press release]. Retrieved from

Because of higher interest rates and additional costs, subprime loans affected homeowners' ability to grow home equity and increased their risks of foreclosure. Fair-lending enforcement mechanisms have historically tended to overlook disparate impact and treatment and shielded some lenders with discriminating practices from investigations.⁷⁰ In 2016, the Consumer Financial Protection Bureau made draft rules to protect consumers in Oregon with more thorough credit checks and limits to loan extensions.⁷¹

The COVID-19 pandemic has further complicated the subprime lending world, as heightened unemployment and financial distress made it difficult for lenders to collect on loans and for lenders to denote who should and should not be deemed “creditworthy.”⁷²

Although there is no standard definition of a subprime loan, there are several commonly used approaches to examining rates of subprime lending. The study team used a “rate-spread method” — in which subprime loans are identified as those loans with substantially above-average interest rates — to measure rates of subprime lending in 2016 to 2020.⁷³ Because lending patterns and borrower motivations differ depending on the type of loan being sought, the study team separately considered home purchase loans and refinance loans.

<https://bonamici.house.gov/press-release/bonamici-applauds-action-crack-down-predatory-lending>

⁷² Li, H. (2021). The influence of COVID-19 on subprime in the U.S. *E3S Web Conferences*, 235.

⁷³ Prior to October 2009, first lien loans were identified as subprime if they had an annual percentage rate (APR) that was 3.0 percentage points or greater than the federal treasury security rate of like maturity. As of October 2009, rate spreads in HMDA data were calculated as the difference between APR and Average Prime Offer Rate, with subprime loans defined as 1.5 percentage points of rate spread or more. The study team identified subprime loans according to those measures in the corresponding time periods.

G. Access to Capital — Review of additional research on mortgage lending

Subprime conventional home purchase loans. Figure G-11 shows the percent of conventional home purchase loans that were subprime in Oregon, based on 2016 through 2020 HMDA data.⁷⁴ A higher percentage of borrowers receiving subprime loans may indicate predatory lending.

- Hispanic American borrowers in this time period were almost twice times as likely to receive subprime home purchase loans when compared to non-Hispanic white borrowers.
- African Americans and other minorities (except Asian Americans) receiving home purchase loans were also more likely to be issued subprime loans than non-Hispanic whites during this period.

G-11. Percent of conventional home purchase loans in Oregon that were subprime, 2016–2020

Note: Subprime rates are calculated as the percentage of originated loans that were subprime.

⁷⁵ Clark County and Skamania County, Washington, are not included in analyses of HMDA data, as these data are reported at the state level.

G. Access to Capital — Review of additional research on mortgage lending

Studies across the country have examined barriers to homeownership for people of color. For example:

- A study of more than two million home sale transactions over the course of 18 years in four major metropolitan areas — Chicago, Baltimore/Maryland, Los Angeles and San Francisco — showed that African American and Hispanic American buyers pay more for the price of their house than their white counterparts in almost every purchase scenario.⁷⁶
- Between 1999 and 2011, socioeconomic and demographic factors could only partially explain the homeownership gap for African Americans homeowners, and that discrimination in the mortgage process was a likely explanation.⁷⁷
- Results of a mystery-shopping field study conducted at several national banks in a major metropolitan U.S. city showed that minority loan applicants were provided less comprehensive information about financing options, required to provide more information to apply for a loan and received less encouragement and assistance compared to white potential loan applicants.⁷⁸
- An analysis of U.S. Survey of Consumer Finance data shows that African American borrowers on average pay about 29 basis points more in interest on mortgage loans than comparable white borrowers.⁷⁹
- A 2021 study showed that appraisals for African American- and Hispanic American-owned homes were more likely to be valued below the home's sale price.⁸⁰

G. Access to Capital — Review of additional research on mortgage lending

There is evidence that some lenders seek out and offer subprime loans to individuals who often are not be able to pay off the loan, a form of “predatory lending.”⁸¹ Other research has found that many recipients of subprime loans could have qualified for prime loans.⁸² Studies of subprime lending suggest that predatory lenders have targeted minorities.⁸³ A national 2018 study found that African American borrowers were 103 percent more likely and Hispanic American borrowers were 78 percent more likely than white borrowers to receive a high-cost loan for home purchases. Disparities were found for low- and high-risk borrowers, regardless of age.⁸⁴

G. Access to Capital — Review of additional research on mortgage lending

Lasting Implications of the Mortgage Lending Crisis During the Great Recession

The ramifications of the mortgage lending crisis in the Great Recession not only continued to substantially impact the ability of homeowners to secure capital through home mortgages to start or expand small businesses but also created a nationwide retreat in dynamism in nearly every measurable respect.⁸⁵ (Dynamism consists of the rate and scale at which the process of reallocating the economy's resources across firms and industries according to their most productive use occurs.)

- On July 19, 2017, Karen Kerrigan, President and CEO of the Small Business and Entrepreneurship (SBE) Council, testified before the U.S. House of Representatives Committee on Small Business that there has been a continuing dearth of entrepreneurial activity and substantial decline over the past ten years due to the financial crises, Great Recession and a weak economic recovery that continued to negatively influence the American psyche.⁸⁶
- According to research conducted by economists for the U.S. Federal Reserve System, loan origination activity remained well below pre-Great Recession levels.⁸⁷

⁸⁵ Economic Innovation Group. (2017). *Dynamism in retreat: Consequences for regions, markets, and workers*. Retrieved from the Economic Innovation Group website: <http://eig.org/wp-content/uploads/2017/07/Dynamism-in-Retreat-A.pdf>

Retrieved from the Board of Governors of the Federal Reserve System website: <https://www.federalreserve.gov/econres/notes/feds-notes/recent-trends-in-small-business-lending-and-the-community-reinvestment-act-20180102.htm>

- Because of the Great Recession, firm deaths exceeded births for the first time in more than 40 years.⁸⁸
- Small firms suffer more during financial crises due to dependence on bank capital to fund growth.⁸⁹
- Major surveys identified access to credit as a problem and top growth concern for small firms during the recovery, including surveys conducted by the National Federation of Independent Businesses (NFIB) and the Federal Reserve.⁹⁰
- Commercial and residential real estate — which represents two-thirds of the assets of small business owners and are frequently used as collateral for loans — were hit hard during the financial crisis, making small business borrowers less creditworthy for many years.⁹¹

The mortgage-lending crisis and the Great Recession have had lasting effects as they limited opportunities for homeowners with little home equity to obtain business capital through home mortgages. Furthermore, the historically higher rates of default and foreclosure for homeowners with subprime loans impacted the ability of those individuals to access to capital. Those consequences have disproportionately impacted people of color.

Impact of COVID-19

It is still unclear if the COVID-19 pandemic will widen these disparities. Immediate data show that homeowners facing financial pressures were given relief from making mortgage payments through federal and state suspensions of foreclosures, payment deferral programs and lowered interest rates (which could be accessed through loan refinance).⁹²

However at the time of the writing of this report, it remains too soon to understand the scope of which homeowners sought out these options, as well as the race, ethnicity and gender of said owners on a national level.

G. Access to Capital — Review of additional research on mortgage lending

Redlining

Historically, redlining referred to mortgage lending discrimination against geographic areas based on racial or ethnic characteristics of a neighborhood.⁹³ Presently, the concept of redlining includes an examination of the availability of and access to credit in predominantly minority neighborhoods, and the credit terms offered within a lender's assessment area.⁹⁴

Studies have found clear evidence of redlining throughout the history of Oregon.⁹⁵

The practice of reverse redlining consists of extending high-cost credit. This discriminatory practice involves charging minority borrowers higher mortgage fee costs compared to white borrowers and was the subject of multiple lawsuits brought by the U.S. Department of Justice from the late 1990s through the early 2000s.⁹⁶ As a result of reverse redlining, some researchers argue that mortgage discrimination has shifted from being an access to credit issue to being a discretionary pricing issue.⁹⁷

As evidenced by settlements in court cases in the past 10 years, redlining continues against minority mortgage applicants.

- In 2015, New York Attorney General Eric Schneiderman settled with Evans Bank for \$0.8 million after learning that Evans Bank erased African American neighborhoods from maps used to determine mortgage lending.⁹⁸
- In 2015, the U.S. Department of Housing and Urban Development reached a \$200 million settlement with Associated Bank for denying mortgage loans to African American and Hispanic American applicants in Chicago and Milwaukee.⁹⁹

G. Access to Capital — Review of additional research on mortgage lending

Steering by Real Estate Agents

The illegal act of steering can be defined as actions by real estate agents that differentially direct customers to certain neighborhoods and away from others based on race or ethnicity.¹⁰⁶ Mortgage loan originators can also engage in steering. Prior to the mortgage loan crisis, mortgage loan originators engaged in steering to generate higher profits for themselves¹⁰⁷ by directing minority loan applicants to less desirable and toxic loan instruments. Such steering can affect minority borrowers' perception of the availability of mortgage loans. Additionally, explicit steering can drive racially/ethnically housing prices and result in segregation.¹⁰⁸

Although it is difficult to pursue cases involving steering; however, several steering cases have been prosecuted by federal and state agencies over the past decade:

- In 2011, the U.S. Department of Justice (DOJ) reached a \$335 million settlement with Countrywide Financial Corporation for steering thousands of African American and Hispanic American borrowers into subprime mortgages when white borrowers with comparable credit received prime loans.¹⁰⁹
- In 2012, the DOJ reached a \$184 million settlement with Wells Fargo for steering African American and Hispanic American borrowers into subprime mortgages and charging higher fees and rates than white borrowers with comparable credit profiles.¹¹⁰
- In 2015, M&T Bank agreed to pay \$485,000 to plaintiffs in a settlement for a case involving racial discrimination and steering.¹¹¹

G. Access to Capital — Review of additional research on mortgage lending

- In 2015, the City of Oakland, California sued Wells Fargo & Co for steering minorities into costly mortgage loans that supposedly led to foreclosures, abandoned properties and blight.¹¹² The City of Philadelphia filed a lawsuit with similar allegations against Wells Fargo & Co in 2017.¹¹³
- In 2017, the U.S. Attorney settled a federal civil rights lawsuit against JP Morgan Chase Bank for \$53 million for steering and discrimination based on race and national origin after it was discovered that African Americans and Hispanic Americans paid higher mortgage loan rates compared with whites with comparable credit profiles.¹¹⁴

G. Access to Capital — Review of additional research on mortgage lending

Historically, lending practices overtly discriminated against women by requiring information on marital and childbearing status. The Equal Credit Opportunity Act in 1973 suspended such discriminatory lending practices. However, certain barriers affecting women have persisted after 1973 in mortgage lending markets.

Studies and lawsuits indicate unequal access to mortgage loans for women. For example, a 2013 study by the Woodstock Institute found that women within the six-county Chicago area were far less likely to be approved for mortgage loans than men, and even male-female joint applications were less likely to be originated if the female applicant was listed first. This disparity persisted for mortgage refinancing.¹¹⁵

Research has confirmed that on average, women are better than men at paying their mortgages; however, women on average pay more for mortgages relative to their risk, and women of color pay the most.¹¹⁶ Although disparities in mortgage interest rates are prevalent between African American and white borrowers, African American women are the most likely to experience this type of mortgage loan discrimination.¹¹⁷

¹¹⁵ Woodstock Institute. (2013). *Unequal opportunity: Disparate mortgage origination patterns for women in the Chicago area* [Fact sheet]. Retrieved from https://woodstockinst.org/wp-content/uploads/2013/05/unequalopportunity_factsheet_march2013_0.pdf

¹¹⁸ Strozniak, P. (2017, October 17). Bellco CU settles alleged discriminatory housing lawsuit. *Credit Union Times*. Retrieved November 3, 2020, from

Lawsuits and studies suggest that gender-based lending discrimination continues:

- In 2017, Bellco Credit Union settled a lawsuit for alleged discrimination against women on maternity leave.¹¹⁸
- In 2014 the U.S. Department of Housing & Urban Development (HUD) settled a lawsuit against Mountain America Credit Union over allegations of discrimination against prospective borrowers on maternity leave.¹¹⁹
- In 2011, HUD engaged in litigation against a company that revoked a pregnant woman's mortgage insurance once the company learned that the woman was on leave from work.¹²⁰
- In 2010, Dr. Budde, an oncologist from Washington State, was initially granted a mortgage loan and later denied once her lender learned she was on maternity leave.¹²¹

G. Access to Capital — Summary

Business start-up and long-term business success depend on access to capital. Discrimination at any link in that chain may produce cascading effects causing disparities in business formation and success. The information presented here indicates that people of color and women continued to face disadvantages in accessing capital that is necessary to start, operate and expand businesses as of 2022.

Capital is required to start companies, so barriers to accessing capital can affect the number of people of color and women who are able to start businesses. In addition, minority and female entrepreneurs start their businesses with less capital (based on national data). Several studies have demonstrated that lower start-up capital adversely affects prospects for those businesses. Key results include:

- Nationally, minority- and woman-owned employer businesses (except Asian American-owned businesses) were more likely to use personal credit cards as a source of start-up capital, which is a more expensive form of debt than business loans from financial institutions.
- Personal and family savings of the owner was the main source of capital for startups among many U.S. businesses, but African American and Hispanic American households had considerably lower amounts of wealth than non-Hispanic white households.
- Among employer firms across the country, woman- and minority-owned companies were less likely than non-Hispanic white male-owned companies to secure business loans from a bank or financial institution as a source of start-up capital.
- Nationally, woman- and minority-owned firms were more likely to not apply for additional financing because firm owners believed that they would not be approved by a lender. These

firms were also more likely to indicate that access to financial capital negatively impacted firm profitability.

- Availability survey results for Oregon businesses indicate that minority-owned companies were more likely than other firms to report difficulties obtaining lines of credit or loans compared to majority-owned firms.
- Among construction firms indicating in the availability survey that they had tried to obtain a bond, MBEs and WBEs were more likely to report difficulties obtaining bonding than majority-owned firms.

Any racial discrimination in the home purchase and home mortgage markets can negatively affect the formation of firms by people of color in Oregon and the success and growth of those companies.

- Home equity is an important source of funds for business start-up and growth. Fewer people of color in Oregon own homes compared with non-Hispanic whites. Hispanic Americans and Native Americans also tended to have lower home values than non-Hispanic white homeowners.
- High-income minority households applying for conventional home mortgages in Oregon were more likely to have their applications denied than high-income non-Hispanic whites. This may indicate discrimination in mortgage lending and may affect access to capital to start and expand businesses.
- People of color (except Asian Americans) in Oregon were more likely to have subprime loans than non-Hispanic whites. This may be evidence of predatory lending practices affecting people of color in the region.

APPENDIX H. Analysis of Business Success — Introduction

The study team examined the success of businesses owned by people of color and women in the Oregon construction, professional services, goods and other services industries (the “study industries”) and assessed whether outcomes for business owned by these individuals differ from business outcomes for other groups. The study team examined outcomes in terms of:

- Business closures, expansions and contractions;
- Business receipts and earnings;
- Bid capacity; and
- Potential barriers to starting or expanding businesses.

Because most of these analyses are based on secondary data, Keen Independent was limited to the business owner characteristics reported in those data. Certain data sources do not provide information for Native American-owned firms or consolidate results for all minority-owned businesses.

Most of the research based on secondary data reflects marketplace outcomes before the COVID-19 pandemic. Some of these data were also examined in the 2016 ODOT Availability and Disparity Study.

H. Business Success — Business closures

The study team used Small Business Administration (SBA) data to examine business outcomes — including closures, expansions and contractions — for minority-owned businesses nationally and statewide. The SBA analyses compare business outcomes for minority-owned businesses (by group) to business outcomes for other businesses.

Overall Rates of Business Closures

A 2010 SBA report investigated business dynamics and whether minority-owned businesses were more likely to close than other businesses. By matching data from business owners who responded to the 2002 U.S. Census Bureau Survey of Business Owners (SBO) to data from the Census Bureau’s 1989–2006 Business Information Tracking Series, the SBA reported on business closure rates between 2002 and 2006 across different sectors of the economy.^{1,2} The SBA report examined patterns in each state. (These are the most recent SBA analyses available at the time of this report.)

Figure H-1 presents those data for African American-, Asian American- and Hispanic American-owned businesses as well as for white-owned businesses. The rate of business closure among minority-owned businesses in Oregon in 2002 exceeded the closure rate of majority-owned businesses by as much as 11 percentage points. About 40 percent of African American-owned businesses operating in 2002 had closed by the end of 2006 compared with 29 percent of businesses owned by whites. The rate of business closure among Hispanic American- and Asian American-owned firms also exceeded that of majority-owned businesses in Oregon.

The COVID-19 pandemic has only exacerbated potential small business closures over the last year, especially for small businesses in Oregon. The effects of the COVID-19 pandemic on businesses are further discussed later in Appendix H.

may also be included in statistics for African Americans, Asian Americans and whites.

H. Business Success — Business closures

Rates of Business Closures by Industry

The SBA report also examined national business closure rates by race/ethnicity for 21 different industry classifications (these data are not reported by state). Figure H-2 compares rates of firm closure for construction; wholesale trade; professional, scientific and technical services; and other services. Figure H-2 also presents closure rates for all industries by race/ethnicity.

- Across different industries, minority-owned businesses that were operating in 2002 had higher rates of closure from 2002 to 2006 relative to white-owned businesses.
- African American-owned businesses had the highest rate of closure among all racial/ethnic groups. For all industries, 39 percent of African American-owned firms in business in 2002 had closed by 2006 compared with 29 percent of business owned by whites.

The study team could not examine whether those differences also existed in Oregon, because the SBA analysis by industry was not available for individual states.

H-2. Rates of business closure, 2002 through 2006, relevant study industries and all industries in the U.S.

Note: Data refer to non-publicly held businesses only.

As sample sizes are not reported, statistical significance of these results cannot be determined; however, statistics are consistent with SBA data quality guidelines.

H. Business Success — Business closures

Unsuccessful Closures

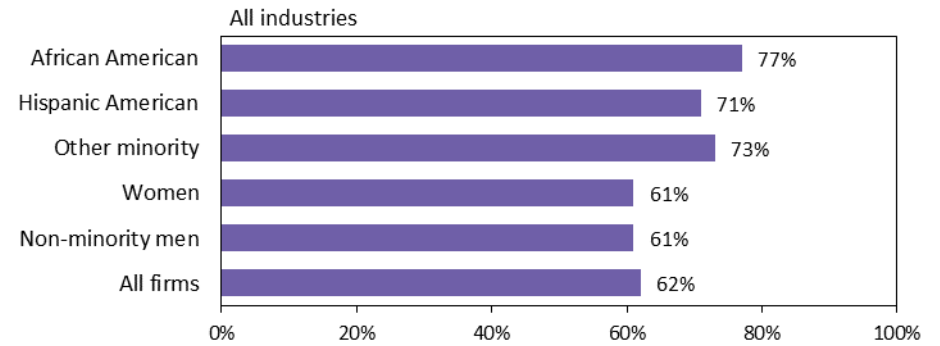

Not all business closures can be interpreted as “unsuccessful closures.” Businesses may close when an owner retires or a more profitable business opportunity emerges, both of which represent “successful closures.” The most recent data on this issue come from the 1992 Characteristics of Business Owners (CBO) Survey³ The 1992 CBO combines data from the 1992 Economic Census and a survey of business owners conducted in 1996. The survey portion of the 1992 CBO asked owners of businesses that had closed between 1992 and 1995, “Which item below describes the status of this business at the time the decision was made to cease operations?” Only the responses “successful” and “unsuccessful” were permitted. A firm that reported being unsuccessful at the time of closure was understood to have failed.

Figure H-3 presents CBO data on the proportion of businesses that closed due to failure between 1992 and 1995.^{4,5} According to CBO data, African American-owned businesses were the most likely to report being “unsuccessful” at the time at which their businesses closed. About 77 percent of African American-owned business closures were reported to be unsuccessful between 1992 and 1995, compared with 61 percent of non-Hispanic white male-owned business closures. Unsuccessful closure rates were also relatively high for Hispanic American-owned businesses and for businesses owned by other minority groups. There were no differences in closure rates for woman-owned firms compared with non-minority male-owned companies.

³ CBO data from the 1997 and 2002 Economic Censuses do not include statistics on successful and unsuccessful business closures. To date, the 1992 CBO is the only U.S. Census dataset that includes such statistics.

⁴ All CBO data should be interpreted with caution as businesses that did not respond to the survey cannot be assumed to have the same characteristics of ones that did. For further explanation, see Holmes, T.J., & Schmitz, J. A. (1996). Nonresponse Bias and Business Turnover Rates: The case of the Characteristics of Business Owners Survey. *Journal of*

H-3. Proportions of closures reported as unsuccessful between 1992 and 1995 in the U.S., all industries

Source: U.S. Census Bureau, 1996 Characteristics of Business Owners Survey (CBO).

Business & Economic Statistics, 14(2), 231–241; Headd, B. (2001). *Business success: Factors leading to surviving and closing successfully* (Working Paper No. 01-01. Center for Economic Studies, U.S. Census Bureau. Retrieved from the U.S. Census Bureau website: <https://www.census.gov/library/working-papers/2001/adrm/ces-wp-01-01.html>

⁵ Data for firms operating in the management of companies and enterprises and administrative, support, waste management and remediation industries were not available in the CBO survey.

H. Business Success — Business closures

The CBO data also provide data on unsuccessful business closures by industry.

- In the construction industry, minority- and woman-owned businesses were more likely to report unsuccessful business closures (82% and 66%, respectively) than non-Hispanic white male-owned businesses (58%).
- Those patterns were similar in the wholesale trade and services industries with one exception — woman-owned businesses in the services industry (52%) were less likely to report unsuccessful closures than non-Hispanic white male-owned businesses (59%).

Figure H-4 presents these results.

H-4. Proportions of closures reported as unsuccessful between 1992 and 1995 in the U.S., by industry

Source: U.S. Census Bureau, 1996 Characteristics of Business Owners Survey (CBO).

H. Business Success — Business expansion

Researchers have offered explanations for higher rates of unsuccessful closures among minority- and woman-owned businesses:

- Regression analyses have identified initial capitalization as a factor in determining firm viability.⁶ Because minority-owned businesses secure smaller amounts of debt equity in the form of loans, they may be more likely to fail.⁷
- Prior work experience in a family member's business or similar experiences are determinants of business viability.⁸ Because minority business owners are much less likely to have such experience, their businesses are less likely to survive.⁹ Similar gaps exist in the likelihood of business survival among woman-owned firms.¹⁰

- An owner's education level is a strong determinant of business survival. Educational attainment explains a substantial portion of the gap in business closure rates between African American-owned and nonminority-owned businesses.¹¹
- Nonminority owners have broader business opportunities, increasing their likelihood of closing successful businesses to pursue more profitable alternatives. Minority owners, especially those who do not speak English, have limited employment options, are less likely to close a successful business and more likely to face low business income.¹²
- Possession of greater initial capital and generally higher levels of education among Asian Americans are related to a higher rate of survival of Asian American-owned businesses compared to other minority-owned businesses.¹³

H. Business Success — Business expansion

Comparing expansion and contraction for firms owned by different groups is also useful in assessing the success of minority-owned businesses. As with closure data, only some data on expansions and contractions for the nation were available at the state level.

The 2010 SBA study of minority business dynamics from 2002 through 2006 examined the number of privately held Oregon businesses that expanded and contracted between 2002 and 2006.

Figure H-5 presents the percentage of all businesses that increased their total employment between 2002 and 2006. In Oregon, relatively fewer Asian American-owned businesses expanded (27%) than white-owned businesses (31%).

H-5. Percentage of businesses that expanded, 2002 through 2006, Oregon and the U.S.

Note: Data refer to non-publicly held businesses only.

As sample sizes are not reported, statistical significance of these results cannot be determined; however, statistics are consistent with SBA data quality guidelines.

Source: Lowrey, Y. (2010) Race/ethnicity and establishment dynamics, 2002–2006 (Rep. No. 369). U.S. Small Business Administration, Office of Advocacy.

H. Business Success — Business expansion

Figure H-6 presents the percentage of businesses that expanded in construction; wholesale trade; professional, scientific and technical services; management of companies and enterprises; other services; administration, support, waste management and remediation and in all industries in the United States. (The SBA study did not report results for businesses in individual industries at the state level.)

In each industry examined, a smaller percentage of African American-owned firms expanded compared to white-owned companies. There was no similar pattern of differences in the percentage of firms expanding for Asian American- or Hispanic American-owned firms compared with nonminority-owned businesses.

H-6. Percentage of businesses that expanded, 2002 through 2006, relevant study industries and all industries in the U.S.

Note: Data refer to non-publicly held businesses only.

As sample sizes are not reported, statistical significance of these results cannot be determined; however, statistics are consistent with SBA data quality guidelines.

Source: Lowrey, Y. (2010) Race/ethnicity and establishment dynamics, 2002–2006 (Rep. No. 369). U.S. Small Business Administration, Office of Advocacy.

H. Business Success — Impact of COVID-19 Pandemic on closure, expansion and contraction

Figure H-7 shows the percentage of privately held businesses operating in 2002 that reduced their employment (i.e., contracted) between 2002 and 2006 in Oregon and in the nation.

- African American- and Hispanic American-owned firms in Oregon were less likely to contract between 2002 and 2006 than nonminority-owned businesses. However, these differences do not offset the higher percentage of African American and Hispanic American firms that closed during this time period (shown in Figure H-1).
- Nationally, relatively fewer businesses owned by individuals in each minority group contracted compared with white-owned companies.

H-7. Percentage of businesses that contracted, 2002 through 2006, Oregon and the U.S.

Note: Data refer to non-publicly held businesses only.

As sample sizes are not reported, statistical significance of these results cannot be determined; however, statistics are consistent with SBA data quality guidelines.

Source: Lowrey, Y. (2010) Race/ethnicity and establishment dynamics, 2002–2006 (Rep. No. 369). U.S. Small Business Administration, Office of Advocacy.

H. Business Success — Impact of COVID-19 Pandemic on closure, expansion and contraction

The SBA study did not report state-specific results relating to contractions in individual industries. Figure H-8 displays the percentage of businesses that contracted in the relevant study industries and in all industries at the national level. Compared to white-owned businesses in the United States, in general, a smaller percentage of minority-owned businesses in the relevant study industries and in all industries contracted between 2002 and 2006 with the exception of Asian American-owned companies providing management of companies and enterprises or administrative, support, waste management and remediation services.

H-8. Percentage of businesses that contracted, 2002 through 2006, relevant study industries and all industries in the U.S

Note: Data refer to non-publicly held businesses only.

As sample sizes are not reported, statistical significance of these results cannot be determined; however, statistics are consistent with SBA data quality guidelines.

Source: Lowrey, Y. (2010). Race/ethnicity and establishment dynamics, 2002–2006 (Rep. No. 369). U.S. Small Business Administration, Office of Advocacy.

H. Business Success – Impact of COVID-19 Pandemic on closure, expansion and contraction

Closure

As of the writing of this report, research suggests that the COVID-19 pandemic has negatively affected business success and that the magnitude of these effects vary by race, ethnicity and gender. To date, most of this research has been national in scope. Studies have found that roughly 200,000 U.S. businesses closed during the first year of the pandemic, about 25 to 30 percent higher than in past years. Most of these closed businesses were small firms.¹⁴

One study performed by the Federal Reserve Bank found that minority-owned small businesses had been disproportionately impacted by the pandemic. Firms owned by Asian Americans and Hispanic Americans had higher rates of closure than non-Hispanic whites, and African Americans faced the highest rate of business closure at more than twice the closure rate of businesses owned by non-Hispanic whites.¹⁵

The 2020 Small Business Credit Survey (SBCS) included questions related to the COVID-19 pandemic's effect on business operations (see Figure H-9). As of fall 2020, the number of businesses that temporarily closed at one point during the pandemic ranged from one in four to more than one in three.

H-9. Effect of the COVID-19 pandemic on U.S. employer firms, fall 2020

Race/ethnicity	Temporarily closed	Reduced operations	Maintained operations*	Expanded operations	No impact
African American	26 %	67 %	39 %	5 %	2 %
Asian American	33	67	43	3	2
Hispanic American	27	63	44	3	3
Native American	36	56	47	5	9
Non-Hispanic white	25	54	49	5	5

Note: "Maintained operations" includes those that maintained operations with modifications; respondents were instructed to select all that apply, therefore the percent of respondents may add to more than 100%.

H. Business Success — Impact of COVID-19 Pandemic on closure, expansion and contraction

Expansion and Contraction

The 2020 SBCS also asked firms if their revenue and employment had increased, decreased or not changed in the prior 12 months. Figure H-10 shows these results.

From fall 2019 to fall 2020, more than 75 percent of U.S. employer firms reported that their revenue decreased and about one-half reported that their employment decreased.

These data also indicate that the COVID-19 pandemic had a disproportionate negative effect on the revenue and employment of African American-, Asian American- and Hispanic American-owned firms. For example, 90 percent of Asian American-owned businesses in 2020 indicated that their revenue had decreased compared with 76 percent of non-Hispanic white-owned companies.

H-10. Percent of firms that reported change in revenue and employment in prior 12 months, U.S. employer firms, 2018 and 2020

Race/ethnicity	2018		2020	
	Revenue	Employment	Revenue	Employment
Increase				
African American	49 %	31 %	10 %	10 %
Asian American	54	35	5	7
Hispanic American	51	34	12	9
Native American	N/A	N/A	12	14
Non-Hispanic white	58	37	15	12
No change				
African American	30 %	51 %	6 %	37 %

H. Business Success — Impact of COVID-19 Pandemic on closure, expansion and contraction

Impact on Woman-Owned Firms

The U.S. Chamber of Commerce found evidence that the pandemic disproportionately affected woman-owned firms. The study surveyed small business owners before the pandemic (January 2020) and in July 2020. Findings are summarized in Figure H-11.

- Between January and July of 2020, the share of woman-owned firms that reported their overall business health as “good” fell from 60 percent to 47 percent, a steeper drop than for male-owned companies.
- The share of woman-owned firms that indicated increasing staffing in the previous calendar year fell from 18 percent in January 2020 to 15 percent in July 2020, while the portion of male-owned firms rose from 17 percent to 25 percent. The share of woman-owned firms that expected to increase size of staff in the coming year fell, while the share of male-owned firms that expected to increase staffing grew.
- The share of woman-owned firms that planned to increase investments was stable, while the share of male-owned firms that planned on increasing investments grew.
- There was little change in the percentage of male-owned firms who expected their revenue to increase in the following year (59% and 57%), while fewer woman-owned firms reported expecting revenue to increase in the following year in July of 2020 (the portion shrunk from 63% to 49%).

The researchers note that some variation may be due to industry makeup; woman-owned businesses were a relatively higher portion of firms in the retail, services and healthcare/professional services industries, which had been more impacted by social distancing guidelines.¹⁶

Although the long-term data are not yet publicly available, evidence suggests that the effect of COVID-19 on business success is greater for minority- and for woman-owned firms.

H-11. Survey responses about business success, before and during the COVID-19 pandemic

Race/ethnicity	Before COVID-19 pandemic		Percentage point change from January to July 2020
	(January of 2020)	July 2020	
Female			
Ranked overall health of business as "good"	60 %	47 %	-13
Increased staffing in previous year	18	15	-3
Expect to increase the size of staff in the coming year	31	24	-7
Plan to increase investments in the coming year	32	32	0
Expect next year's revenue to increase	63	49	-14
Male			
Ranked overall health of business as "good"	67 %	62 %	-5
Increased staffing in previous year	17	25	8
Expect to increase the size of staff in the coming year	30	36	6
Plan to increase investments in the coming year	28	39	11
Expect next year's revenue to increase	59	57	-2

H. Business Success — Business receipts

Annual business receipts and earnings for business owners are also indicators of the success of businesses. The study team examined:

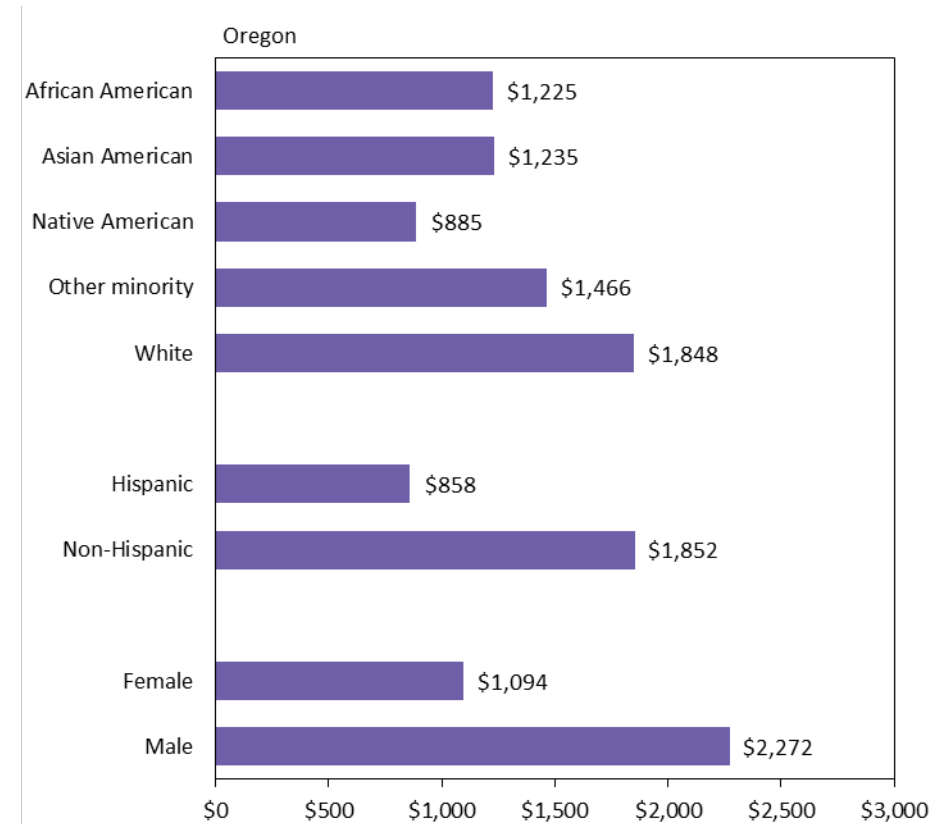

- Business receipts data from the U.S. Census Bureau 2017 Annual Business Survey (ABS);
- Business earnings data for business owners from the 2015–2019 American Community Survey (ACS); and
- Annual revenue data for firms in the study industries located in the ODOT market area that the study team collected as part of the 2021 availability surveys.

Receipts for All Businesses

The study team examined receipts for businesses using data from the 2017 ABS, conducted by the U.S. Census Bureau.

Figure H-12 presents 2017 mean annual receipts for employer and non-employer businesses by race, ethnicity and gender.¹⁷ The ABS data across all industries in Oregon show lower receipts for minority- and woman-owned businesses than for nonminority and male-owned businesses, respectively.

H-12. Mean annual receipts (1,000s) for all businesses, by race/ethnicity and gender of owners, 2017

Note: Includes employer and non-employer businesses. Does not include publicly traded companies or other businesses not classifiable by race/ethnicity and gender.

As sample sizes are not reported, statistical significance of these results cannot be determined.

Source: U.S. Census Bureau's 2017 Annual Business Survey.

¹⁷ Racial categories are not available by both race and ethnicity. As such, the racial categories shown may include Hispanic Americans.

H. Business Success — Business receipts

Receipts by Industry

The study team also analyzed ABS receipts data for businesses in construction, professional services, goods and other services.

Figure H-13 presents mean annual receipts in 2017 for firms in the economic sectors that correspond to the study industries. For most groups for most industries, disparities for minority-owned businesses seen in all industries combined were also found when examining results for individual industries. Also, there were disparities for woman-owned firms in each of the four industries.

H-13. Mean annual receipts (thousands) for all firms in the relevant study industries, by race/ethnicity and gender of owners, 2017, Oregon

	Construction	Professional, scientific and technical services	Wholesale trade	Other services
Race				
African American	\$ 3,072	\$ 426	\$ N/A	\$ 562
Asian American	1,294	705	4,388	236
Native American	687	844	N/A	N/A
Other minority	2,479	N/A	N/A	N/A
White	1,626	786	8,425	628
Ethnicity				
Hispanic	\$ 871	\$ 748	\$ 3,686	\$ 382
Non-Hispanic	1,666	790	8,232	577
Gender				
Female	\$ 1,385	\$ 520	\$ 5,656	\$ 303
Male	1,833	920	9,635	698

Note: Does not include publicly traded companies or other businesses not classifiable by race/ethnicity and gender.

As sample sizes are not reported, statistical significance of these results cannot be determined. "N/A" indicates that estimates were suppressed by the Annual Business Survey because publication standards were not met.

Source: U.S. Census Bureau's 2017 Annual Business Survey.

H. Business Success — Business earnings

To assess the success of self-employed minorities and women in the relevant study industries, the study team examined earnings of business owners using Public Use Microdata Series (PUMS) data from the 2015–2019 ACS. The study team analyzed earnings of incorporated and unincorporated business owners ages 16 and older who reported positive business earnings. All results are presented in 2019 dollars.

Figure H-14 shows mean annual business owner earnings for 2015 through 2019 by race/ethnicity and gender. Due to small sample size, study industries were combined.

Average earnings for minority business owners were less than earnings for non-Hispanic white business owners. Average earnings for female business owners were also less than those of male business owners. These differences were statistically significant (except for African American-owned businesses due to small sample size).

H-14. Mean annual business owner earnings in all study industries, 2015 through 2019, Oregon

Note: ** Denotes statistically significant differences between groups at the 95% confidence level.

The sample universe is business owners age 16 and over who reported positive earnings. All amounts in 2019 dollars.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

H. Business Success — Business earnings

Construction Industry

Business owner earnings were also analyzed for each study industry. Figure H-15 shows mean annual business owner earnings for 2015 through 2019 for the Oregon construction industry. African American, Asian-Pacific American, Subcontinent Asian American and Native American and other minority business owners were combined into a single category due to small sample size.

- On average, earnings for Hispanic American and other minority business owners were less than earnings for non-Hispanic white business owners.
- Average earnings for female business owners were less than those of male business owners.

All of these differences were statistically significant.

H-15. Mean annual business owner earnings in the construction industry, 2015 through 2019, Oregon

Note: ** Denotes statistically significant differences between groups at the 95% confidence level.

The sample universe is business owners age 16 and over who reported positive earnings. All amounts in 2019 dollars.

“Other minority” includes African Americans, Asian Americans, Native Americans and other minorities.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

H. Business Success — Business earnings

Professional Services Industry

Figure H-16 shows mean annual business owner earnings for 2015 through 2019 for the professional services industry in Oregon. African American and Native American and other minority business owners were combined into a single category due to small sample size.

- Average earnings for Hispanic American and female business owners were lower than earnings for non-Hispanic white business owners. These differences were statistically significant.
- Earnings for Asian American and other minority business owners exceeded earnings for non-Hispanic white business owners. This difference was not statistically significant for other minorities.
- Women had lower average earnings than men who owned professional services firms.

H-16. Mean annual business owner earnings in the professional services industry, 2015 through 2019, Oregon

Note: ** Denotes statistically significant differences between groups at the 95% confidence level.

The sample universe is business owners age 16 and over who reported positive earnings. All amounts in 2019 dollars.

Asian-Pacific Americans and Subcontinent Asian Americans were combined under "Asian American" due to low sample size. "Other minority" includes African Americans, Native Americans and other minorities.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

H. Business Success — Business earnings

Other Services Industry

Figure H-17 shows average annual business owner earnings for 2015 through 2019 for Oregon firms in the other services industry. African American, Asian-Pacific American, Subcontinent Asian American, Native American and other minority business owners were combined into a single category due to small sample size.

- In the Oregon other services industry, average earnings for Hispanic American and other minority business owners were lower than earnings for non-Hispanic white business owners. These differences were statistically significant.
- On average, earnings for female business owners (\$13,100) were also less than those of male business owners (\$38,378) in the Oregon other services industry (a statistically significant difference).

H-17. Mean annual business owner earnings in the other services industry, 2015 through 2019, Oregon

Note: ** Denotes statistically significant differences between groups at the 95% confidence level.

The sample universe is business owners age 16 and over who reported positive earnings. All amounts in 2018 dollars.

“Other minority” includes African Americans, Asian-Pacific Americans, Subcontinent Asian Americans, Native Americans and other minorities.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

H. Business Success — Business earnings regression analysis

Differences in business earnings across groups may be at least partially attributable to race- and gender-neutral factors such as age, marital status and educational attainment. The study team created a statistical model through regression analysis to examine whether there were differences in average business earnings between people of color and non-Hispanic whites, and women and men after accounting for certain neutral factors. Data came from the ACS for Oregon between 2015 and 2019. (All analyses in this appendix using ACS data include respondents from Oregon and Clark County and Skamania County, Washington.)

The study team applied an ordinary least squares regression model to the data that was very similar to models reviewed by courts from other disparity studies.¹⁸ The dependent variable in the model was the natural logarithm of business earnings. Business owners that reported zero or negative business earnings were excluded, as were observations for which the U.S. Census Bureau had imputed values of business earnings. Along with variables for the race, ethnicity and gender of business owners, the model also included measures of factors that are likely to affect earnings, including age, marital status, ability to speak English well and educational attainment.

The study team developed a model for business owner earnings in 2015 through 2019 for each Oregon study industry.

Transportation website: <https://dot.ca.gov/-/media/dot-media/documents/2012-caltrans-availability-and-disparity-study-a11y.pdf>

H. Business Success — Business earnings regression analysis

Construction Industry Earnings Regression Analysis

Figure H-18 illustrates the results of the regression model for 2015 through 2019 earnings in the Oregon construction industry. This model included 1,158 observations.

In the Oregon construction industry:

- Older business owners tended to have greater business earnings than younger business owner; however, the oldest individuals had slightly lower earnings;
- Married business owners tended to have higher business earnings;
- In the Oregon construction industry, business owners who were disabled had lower earnings than others; and
- Higher education was associated with lower business earnings.

After accounting for race- and gender-neutral factors, minority and women business owners had lower earnings when compared with non-Hispanic whites and men who owned businesses.

H-18. Model results for mean annual business owner earnings, Oregon construction industry, 2015 through 2019

Variable	Coefficient
Constant	7.2686 **
Age	0.1447 **
Age-squared	-0.0016 **
Married	0.4850 **
Disabled	-0.4701 **
Speaks English well	-0.3805
Less than high school education	0.0425
Some college	-0.3262 **
Four-year degree	-0.4635 **
Advanced degree	-0.3086
Minority	-0.7805 **
White woman	-0.7111 **

Note: *, ** Denote statistically significant differences between groups at the 90% and 95% confidence level, respectively.

The sample universe is business owners age 16 and over who reported positive earnings. All amounts in 2019 dollars.

Regression coefficients are unstandardized.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

H. Business Success — Business earnings regression analysis

Professional Services Industry Earnings Regression Analysis

Figure H-19 includes coefficient estimates for the regression model for the professional services industry in Oregon, which included 1,144 observations for 2015 through 2019.

As in the construction industry, older business owners tended to have greater business earnings than younger owners (however, this relationship reversed for the oldest individuals). Unlike construction, higher educational attainment was associated with greater business earnings.

After accounting for race- and gender-neutral factors, the model indicated statistically significant disparities in earnings for Hispanic American and female business owners. There was little difference in earnings for other minority business owners in this industry.

H-19. Model results for mean annual business owner earnings, Oregon professional services industry, 2015 through 2019

Variable	Coefficient
Constant	6.2232 **
Age	0.1295 **
Age-squared	-0.0012 **
Married	0.0406
Disabled	-0.3093
Speaks English well	-0.1225
Less than high school education	-0.5565
Some college	0.4781 **
Four-year degree	0.8062 **
Advanced degree	0.7613 **
Other minority	-0.1077
Hispanic American	-0.5185 **
White woman	-0.5215 **

Note: *,** Denote statistically significant differences between groups at the 90% and 95% confidence level, respectively.

The sample universe is business owners age 16 and over who reported positive earnings. All amounts in 2018 dollars.

“Other minority” includes African Americans, Asian-Pacific Americans, Subcontinent Asian Americans, Native Americans and other minorities.

Regression coefficients are unstandardized.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

H. Business Success — Business earnings regression analysis

Other Services Industry Earnings Regression Analysis

Figure H-20 includes coefficient estimates for the regression model for the other services industry in Oregon, which included 442 observations.

In the Oregon other services industry:

- Older business owners tended to have greater business earnings than younger business owner; however, the oldest individuals had slightly lower earnings;
- In the Oregon other services industry, married business owners tended to have higher business earnings than unmarried business owners and business owners with disabilities tended to have lower earnings than all others; and
- Business owners who did not complete a high school education tended to have lower earnings than other business owners.

After controlling for various race- and gender-neutral factors, the model indicated lower earnings for female business owners compared to male business owners. This difference was statistically significant.

H-20. Model results for mean annual business owner earnings, Oregon other services industry, 2015 through 2019

Variable	Coefficient
Constant	4.8513 **
Age	0.1767 **
Age-squared	-0.0017 **
Married	0.6519 **
Disabled	-0.8151 **

Less than high school education	-0.5375 *
Some college	0.0703
Four-year degree	-0.0988
Advanced degree	-0.2762
Minority	0.0955
White woman	-1.2019 **

Note: *, ** Denote statistically significant differences between groups at the 90% and 95% confidence level, respectively.

The sample universe is business owners age 16 and over who reported positive earnings. All amounts in 2018 dollars.

Regression coefficients are unstandardized.

Source: Keen Independent Research from 2015–2019 ACS Public Use Microdata samples. The 2015–2019 ACS raw data extract was obtained through the IPUMS program of the MN Population Center: <http://usa.ipums.org/usa/>.

H. Business Success — Gross revenue of firms from availability survey

In the availability telephone surveys the study team conducted in December 2021 through January 2022 (discussed in Appendix C), Oregon firm owners and managers were asked to identify the size range of their average annual gross revenue in the previous five years (2017 through 2021).

The availability survey encompasses firms working in the construction, professional services, goods and other services industries. Note that availability survey results pertain to firms indicating qualifications and interest in public sector work at ODOT.

Figure H-21 presents the reported annual gross revenue for MBE-, WBE- and majority-owned businesses in the ODOT availability interviews.

- Compared with minority- and woman-owned companies, majority-owned construction firms were more likely to report high average annual revenues.
- Relatively few minority- or woman-owned firms reported average revenue of \$3.6 million or more per year (2% and 5%, respectively). About 13 percent of majority-owned firms reported such average revenue.
- Minority-owned firms were much more likely than WBEs or majority-owned firms to have revenue less than \$0.5 million per year.

H-21. Average annual gross revenue of company over previous five years, Oregon study industries

Note: “MBE” represents minority-owned firms, “WBE” represents white woman-owned firms and “Majority-owned” represents non-Hispanic white male-owned firms.

Source: Keen Independent Research from 2021 availability surveys.

H. Business Success — Relative bid capacity

Some legal cases regarding race- and gender-conscious contracting programs have considered the importance of the “relative capacity” of businesses included in an availability analysis.¹⁹ The study team directly measured bid capacity in its availability analysis.²⁰

Through this analysis, Keen Independent was able to distinguish firms based on the largest contracts or subcontracts they had performed or bid on (i.e., “bid capacity” as used in this study). Although additional measures of capacity might be theoretically possible, the bid capacity concept can be articulated and quantified for individual firms for specific time periods.

Data

The availability analysis produced a database of construction, professional services, goods and other services businesses for which bid capacity could be examined.

“Relative bid capacity” for a business is measured as the largest contract or subcontract that the business performed or reported that they had bid on within the six years preceding when the study team interviewed it based on responses to availability survey questions.

Results

For each industry, Figure H-22 shows the percentage of MBEs, WBEs and majority-owned firms reporting that they had been awarded or had bid on contracts or subcontracts of \$500,000 or more. Minority-owned firms were less likely than WBEs and majority-owned firms to report having a bid capacity of \$500,000 or more.

¹⁹ For example, see the decision of the United States Court of appeals for the Federal Circuit in *Rothe Development Corp. v. U.S. Department of Defense, et al.*, 545 F.3d 1023 (Fed. Cir. 2008).

H-22. Percentage of MBEs, WBEs and majority-owned firms in Oregon indicating bid capacity of \$500,000+

Note: “MBE” represents minority-owned firms, “WBE” represents white woman-owned firms and “Majority-owned” represents non-Hispanic white male-owned firms.

Source: Keen Independent Research from 2021 availability surveys.

²⁰ See Appendix C for details about the availability interview process.

H. Business Success — Relative bid capacity

Above Median Bid Capacity

The study team further explored bid capacity on a subindustry level. Subindustries such as bridge and elevated highway construction tend to involve relatively large contracts (or subcontracts). Other subindustries, such as excavation and site prep, typically involve smaller contracts.

Figure H-23 reports the median relative bid capacity among Oregon businesses for each of the 32 subindustries examined in the study. Results categorized companies according to their primary line of business.

H-23. Median relative capacity of Oregon businesses by subindustry

Industry	Median bid capacity
Construction	
Bridge and elevated highway construction	More than \$1 million up to \$5 million
Structural steel work	More than \$1 million up to \$5 million
Other concrete work	More than \$1 million up to \$5 million
Other heavy and civil engineering construction	More than \$1 million up to \$5 million
Concrete repair	\$1 million
Construction remediation and clean-up	\$1 million
General road construction and widening	\$1 million
Electrical work including lighting and signals	More than \$500,000 up to \$1 million
Asphalt, concrete or other paving	More than \$500,000 up to \$1 million
Installation of guardrails, fencing or signs	More than \$500,000 up to \$1 million
Excavation, site prep, grading and drainage	\$500,000 or less
Wrecking and demolition	\$500,000 or less
Landscaping and related work, including erosion control	\$500,000 or less
Pavement surface treatment	\$500,000 or less
Painting for road or bridge projects	\$500,000 or less
Striping or pavement marking	\$500,000 or less
Concrete flatwork	\$500,000 or less
Drilling and foundations	\$500,000 or less
Temporary traffic control	\$500,000 or less
Trucking and hauling	\$500,000 or less
Professional services	
Engineering	More than \$500,000 up to \$1 million
Construction management	More than \$500,000 up to \$1 million
Inspection and testing	\$500,000
Transportation planning	\$500,000
Environmental consulting	\$500,000 or less
Surveying and mapping	\$500,000 or less
Communications and outreach	\$500,000 or less
Custom computer programming services	\$500,000 or less
Goods	
Aggregate materials supply	More than \$1 million up to \$5 million
Asphalt, concrete or other paving materials	More than \$500,000 up to \$1 million
Steel	More than \$500,000 up to \$1 million
Fence or guardrail materials	\$500,000 or less

Source: Keen Independent Research from 2021 availability surveys.

H. Business Success — Relative bid capacity

Comparison of above median bid capacity for firms owned by minorities and women. Based on the median bid capacity figures identified in Figure H-24, the study team classified firms into “above median bid capacity,” “at median bid capacity” and “below median bid capacity” for the subindustry that described their primary line of business.

The share of MBEs, WBEs and majority-owned firms with a bid capacity above the median for their subindustry are presented in Figure H-28. Relatively fewer MBEs (28%) had above median bid capacity for their subindustries than majority-owned firms (31%). WBEs (35%) were more likely than majority-owned firms to have a bid capacity above their subindustry median.

H-24. Percent of firms above median bid capacity for their subindustry, Oregon, 2021

Note: “MBE” represents minority-owned firms, “WBE” represents white woman-owned firms and “Majority-owned” represents non-Hispanic white male-owned firms.

Source: Keen Independent Research from 2021 availability surveys.

H. Business Success — Relative bid capacity

Keen Independent also prepared regression analyses to identify whether these differences in bid capacity for MBEs persisted after controlling for length of time in business (in addition to subindustry). Keen Independent developed a probit regression model of whether a firm had above median bid capacity for its subindustry that included three independent variables: MBE status, WBE status and age of firm. After controlling for both subindustry and length of time in business:

- There was no statistically significant effect on bid capacity from being a minority-owned firm; and
- There was no statistically significant effect on bid capacity from being a woman-owned firm.

H. Business Success — Firms survey responses about potential barriers

In the availability surveys conducted with Oregon businesses, the study team asked firm owners and managers if they had experienced barriers or difficulties associated with starting or expanding a business or with obtaining work. (See Appendix C for additional information.) Results are presented for all study industries. Groups of questions are:

- Prequalification, insurance and project size;
- Learning about bid opportunities; and
- Receiving payment for projects.

Appendix G provides results to the survey question about access to capital and bonding.

Prequalification, Insurance and Project Size

In the availability survey, firms were asked about being prequalified for work and insurance requirements. As shown in Figure H-25, MBEs and WBEs were more likely than other firms to indicate such difficulties.

Compared with majority-owned businesses, minority- and woman-owned companies were more likely to report difficulties due to large size of projects.

H-25. Responses to availability survey questions concerning lines of credit or loans, Oregon firms, all study industries

Note: "MBE" represents minority-owned firms, "WBE" represents white woman-owned firms and "Majority-owned" represents non-Hispanic white male-owned firms.

Source: Keen Independent Research from 2021 availability surveys.

H. Business Success — Firms survey responses about potential barriers

Learning about Bid Opportunities

The survey also asked firms about any difficulties learning about bid opportunities. More MBEs and WBEs than majority-owned firms indicated difficulties learning about bid opportunities with public entities in Oregon, in the private sector and with prime contractors. These results are presented in Figure H-26.

H-26. Responses to availability survey questions concerning learning about bid opportunities, Oregon firms, all study industries

Note: "MBE" represents minority-owned firms, "WBE" represents white woman-owned firms and "Majority-owned" represents non-Hispanic white male-owned firms.

Source: Keen Independent Research from 2021 availability surveys.

H. Business Success — Firms survey responses about potential barriers

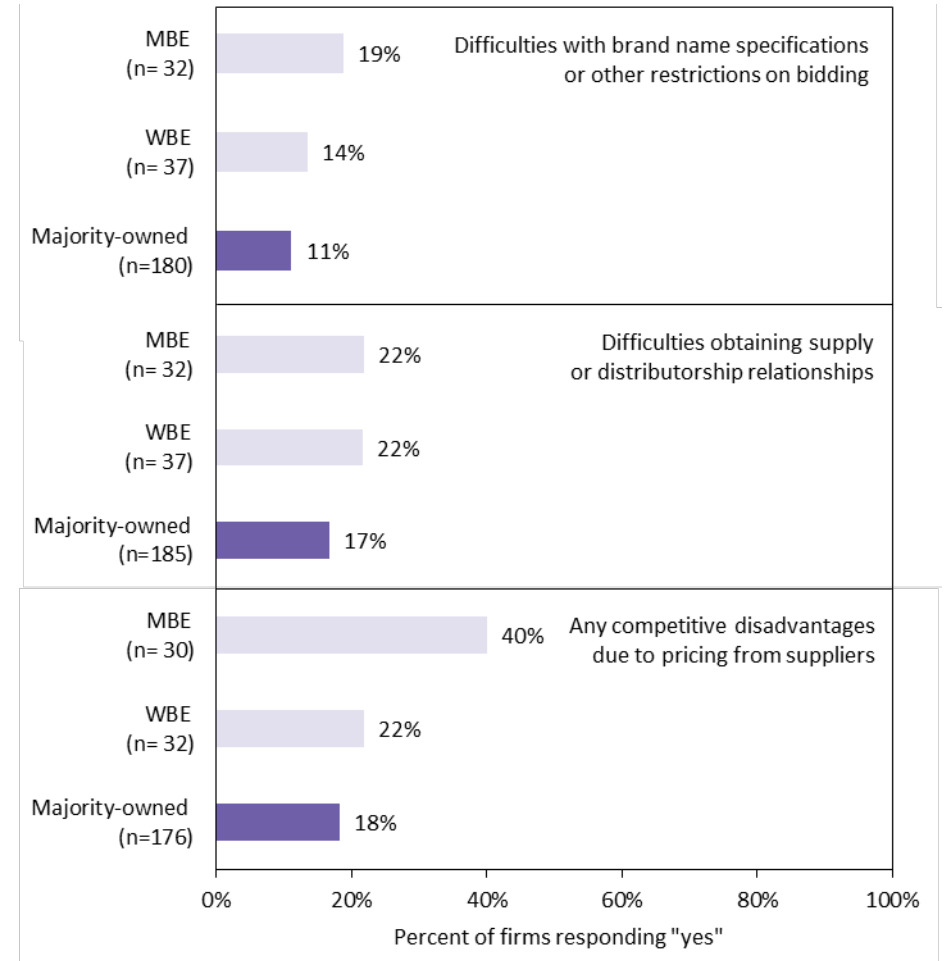

Bid Restrictions

The survey also asked firms about any difficulties with bid restrictions, such as brand name specifications. These results are presented in Figure H-27. Overall, more MBEs and WBEs than majority-owned firms reported have difficulties with the following:

- Brand name specifications;
- Obtaining supply or distributor relationships; and
- Competitive disadvantages due to pricing from suppliers.

The largest differences in responses between groups was for minority-owned companies when asked about competitive disadvantages due to pricing from suppliers. Forty percent of MBEs indicated such difficulties compared with only 18 percent of majority-owned firms.

H-27. Responses to availability survey questions concerning bid restrictions, Oregon firms, all study industries

Note: "MBE" represents minority-owned firms, "WBE" represents white woman-owned firms and "Majority-owned" represents non-Hispanic white male-owned firms.

H. Business Success — Firms survey responses about potential barriers

Payment and Approvals

Figure H-28 examines reported difficulty receiving payments from public entities, prime contractors and other customers in Oregon.

Compared with majority-owned firms, MBEs and WBEs were more likely to indicate difficulties receiving payment from public entities, prime contractors and other customers.

H-28. Responses to availability survey questions concerning receipt of payments and approval of work, Oregon construction firms

Note: "MBE" represents minority-owned firms, "WBE" represents white woman-owned firms and "Majority-owned" represents non-Hispanic white male-owned firms.

Source: Keen Independent Research from 2021 availability surveys.

H. Business Success — Other services firms survey responses about potential barriers

Figure H-29 examines reported difficulty receiving approvals from inspectors or prime contractors.

About 13 percent of MBEs indicated difficulties obtaining approvals from inspectors or prime contractors, 10 percentage points higher than for WBEs and majority-owned firms (3%).

H-29. Responses to availability survey questions concerning receipt of payments and approval of work, Oregon construction firms

Note: "MBE" represents minority-owned firms, "WBE" represents white woman-owned firms and "Majority-owned" represents non-Hispanic white male-owned firms.

H. Business Success — Summary

Keen Independent explored different types of business outcomes in the Oregon marketplace for minority- and woman-owned firms compared with majority-owned companies. In summary, many different data sources and measures suggested disparities in marketplace outcomes for minority- and woman-owned businesses and evidence of greater barriers for people of color and women to start and operate businesses in Oregon construction, professional services, goods and other services industries.

Business Closure, Expansion and Contraction

The study team used the 2010 SBA study of minority business dynamics to examine business closures, expansions and contractions for privately held businesses between 2002 and 2006. The SBA study reported results for each state, including Oregon. Compared with majority-owned firms in Oregon, that study found that:

- Asian American-owned firms were less likely to expand; and
- African American-, Asian American and Hispanic American-owned businesses were more likely to close.

Data regarding the COVID-19 pandemic also indicate that MBEs and WBEs were more likely to close than other firms.

Business Revenue and Earnings

The study team used data from different sources to analyze business receipts and earnings for businesses owned by people of color and women.

- In general, analysis of U.S. Census Bureau data from the 2017 Annual Business Survey showed lower average receipts for businesses owned by people of color and women in Oregon than businesses owned by non-minorities or men. National data indicated that these general patterns persist across the study industries.
- Data from 2015–2019 American Community Survey for Oregon indicated that:
 - Businesses owned by people of color had lower earnings than non-Hispanic white business owners in all study industries combined, with similar results in some individual study industries; and
 - Women business owners had lower earnings than men in each study industry (these differences were also statistically significant).
- Regression analyses using U.S. Census Bureau data for business owner earnings indicated that there were statistically significant negative effects of race and gender on earnings in some study industries, particularly for women.
- Data from availability surveys showed that, across the study industries in Oregon, MBEs and WBEs had lower revenue compared with majority-owned firms.

H. Business Success — Summary

Bid Capacity

From Keen Independent’s availability survey, there was evidence that minority-owned firms had lower bid capacity than majority-owned firms in Oregon study industries. However, there were no statistically significant race and gender differences in bid capacity after accounting for the types of work firms perform and length of time in business.

Difficulties with Prequalification, Insurance and Project Size

Answers to availability survey questions concerning marketplace barriers indicated that relatively more MBEs and WBEs than majority-owned firms face difficulties related to:

- Being prequalified;
- Insurance requirements; and
- Large project size.

For additional information about the types of difficulties companies experience in the local marketplace, see the qualitative information from in-depth interviews in Appendix J.

Difficulties Learning About Bid Opportunities

Survey results also indicate greater barriers for MBEs and for WBEs in learning about work. Relatively more MBEs and WBEs than majority-owned firms reported difficulties learning about bid opportunities with public entities in Oregon, private sector clients and with prime contractors.

Bid Restrictions

Minority- and white woman-owned businesses were more likely than majority-owned firms to report difficulties related to brand name specifications, obtaining supply or distributor relationships and competitive disadvantages due to pricing from suppliers.

Payment and Approvals

Compared to majority-owned firms, minority- and woman-owned firms were more likely to indicate difficulties related to receiving payment from public entities in Oregon, prime contractors and other customers.

Minority-owned businesses were more likely to indicate difficulties obtaining approval from inspectors or prime contractors than majority-owned firms.

APPENDIX I. Description of Data Sources for Marketplace Analyses

To perform the marketplace analyses presented in Appendices E through H, the study team used data from a range of sources, including:

- The 2015–2019 five-year American Community Survey (ACS), conducted by the U.S. Census Bureau;
- The 2012 Survey of Business Owners (SBO), conducted by the U.S. Census Bureau;
- The 2016 Annual Survey of Entrepreneurs (ASE), conducted by the U.S. Census Bureau;
- The 2018 Annual Business Survey (ABS), conducted by the U.S. Census Bureau; and
- Home Mortgage Disclosure Act (HMDA) data provided by the Federal Financial Institutions Examination Council (FFIEC).

The following sections provide further detail on each data source, including how the study team used it in its marketplace analyses. (See Appendix C for a description of the availability survey.)

I. Description of Data Sources for Marketplace Analyses — American Community Survey (ACS)

Focusing on the study industries, Keen Independent used Public Use Microdata Sample (PUMS) data to analyze:

- Demographic characteristics;
- Measures of financial resources; and
- Self-employment (business ownership).

PUMS data offer several features ideal for the analyses reported in this study, including historical cross-sectional data, stratified national and local samples, and large sample sizes that enable many estimates to be made with a high level of statistical confidence, even for subsets of the population (e.g., racial/ethnic and occupational groups).

The study team obtained selected Census and ACS data from the Minnesota Population Center’s Integrated Public Use Microdata Sample (IPUMS). The IPUMS program provides online access to customized, accurate datasets.¹ For the analyses contained in this report, the study team used the 2015–2019 five-year ACS sample.

2015–2019 American Community Survey

The study team examined ACS data obtained through IPUMS. The U.S. Census Bureau conducts the ACS which uses monthly samples to produce annually updated data for the same small areas as the 2000 Census long form.² Since 2005, the Census has conducted monthly surveys based on a random sample of housing units in every county in the U.S. Currently, these surveys cover roughly 1 percent of the population per year. The 2015–2019 ACS five-year estimates represent average characteristics over the five-year period and correspond to roughly 5 percent of the population.

¹ Ruggles, S., Flood, S., Goeken, R., Grover, J., Meyer, E., Pacas, J., and Sobek, M., IPUMS USA: Version 9.0 [dataset]. Minneapolis, MN: IPUMS, 2019. <https://doi.org/10.18128/D010.V9.0>

² U.S. Census Bureau. *Design and Methodology: American Community Survey*. Washington D.C.: U.S. Government Printing, 2009. Available at https://www.census.gov/content/dam/Census/library/publications/2010/acs/acs_design_methodology.pdf

I. Description of Data Sources for Marketplace Analyses — American Community Survey (ACS)

Categorizing individual race/ethnicity. To define race/ethnicity, the study team used the IPUMS race/ethnicity variables — RACED and HISPAN — to categorize individuals into six groups:

- African American;
- Asian-Pacific American;
- Subcontinent Asian American;
- Hispanic American;
- Native American;
- Other minority (unspecified); and
- Non-Hispanic white.

The study team created the race definitions using a rank ordering methodology similar to that used in the 2000 Census data dictionary. An individual was considered “non-Hispanic white” if they did not report Hispanic ethnicity and indicated being white only — not in combination with any other race group. Using the rank ordering methodology, an individual who identified multiple races or ethnicities was placed in the reported category with the highest ranking in the study team’s ordering. African American is first, followed by Native American, and then Asian American. For example, if an individual identified herself as “Korean,” she was placed in the Asian American category. If the individual identified herself as “Korean” in combination with “Black,” the individual was considered African American in these analyses.

- The Asian-Pacific American category included the following race groups: Burmese, Cambodian, Chamorro, Chinese, Fijian, Filipino, Guamanian, Hmong, Indonesian, Japanese, Korean, Laotian, Malaysian, Mongolian, Samoan, Taiwanese, Thai, Tongan and Vietnamese. This category also included other Polynesian, Melanesian and Micronesian races, as well as individuals identified as Pacific Islanders.
- The Subcontinent Asian American category included: Asian Indian (Hindu), Bangladeshi, Bhutanese, Nepalis, Pakistani and Sri Lankan.
- American Indian, Alaska Native, Native Hawaiian and Latin American Indian groups were considered Native American.
- If an individual was identified with any of the above groups and an “other race” group, the individual was categorized into the known category. Individuals identified as “other race,” “Hispanic and other race” or “white and other race” were categorized as “other minority.”

For some analyses — those in which sample sizes were small — the study team combined minority groups.

I. Description of Data Sources for Marketplace Analyses — American Community Survey (ACS)

Education variables. The study team used the variable indicating respondents' highest level of educational attainment (EDUCD) to classify individuals into four categories: less than high school, high school diploma (or equivalent), some college or associate degree, and bachelor's degree or higher.³

Home ownership and home value. Rates of home ownership were analyzed using the RELATED variable to identify heads of household and the OWNERSHPD variable to define tenure. Heads of households living in dwellings owned free and clear, and dwellings owned with a mortgage or loan (OWNERSHPD codes 12 or 13) were considered homeowners. Median home values are estimated using the VALUEH variable, which reports the value of housing units in contemporary dollars. In the 2015–2019 ACS, home value is a continuous variable (rounded to the nearest \$1,000).

Definition of workers. Analyses involving worker class, industry and occupation include workers 16 years of age or older who are employed within the industry or occupation in question. Analyses involving all workers regardless of industry, occupation or class include both employed persons and those who are unemployed but seeking work.

Business ownership. The study team used the Census-detailed “class of worker” variable (CLASSWKD) to determine self-employment. The variable classifies individuals into one of eight categories, shown in Figure I-1. The study team counted individuals who reported being self-employed — either for an incorporated or a non-incorporated business — as business owners.

I-1. Class of worker variable code in the 2015–2019 ACS

Description	2015–2019 ACS CLASSWKRD codes
N/A	0
Self-employed, not incorporated	13
Self-employed, incorporated	14
Wage/salary, private	22
Wage/salary at nonprofit	23
Federal government employee	25
State government employee	27
Local government employee	28
Unpaid family worker	29

Source: Keen Independent Research from the IPUMS program: <http://usa.ipums.org/usa/>.

³ In the 1940–1980 samples, respondents were classified according to the highest year of school completed (HIGRADE). In the years after 1980, that method was used only for individuals who did not complete high school, and all high school graduates were

categorized based on the highest degree earned (EDUC99). The EDUCD variable merges two different schemes for measuring educational attainment by assigning to each degree the typical number of years it takes to earn it.

I. Description of Data Sources for Marketplace Analyses — American Community Survey (ACS)

Business earnings. The study team used the Census “business earnings” variable (INCBUS00) to analyze business income by race/ethnicity and gender. The study team included business owners age 16 and over with positive earnings in the analyses.

Study industries. The marketplace analyses focus on four industries: construction, professional services, goods and other services. The study team used the IND variable to identify individuals as working in one of these industries. That variable includes several hundred industry and sub-industry categories. Figure I-2 identifies the IND codes used to define each study area.

I-2. 2015–2019 Census industry codes used for construction, professional services, goods and other services

Study industry	2015–2019 ACS IND codes	Description
Construction	0770	Construction industry
Professional services	7290–7490	Professional, scientific and technical services
Goods	4070–4590, 4670–5680	Wholesale trade; retail trade
Other services	6190, 6695, 7590–7790, 8770–8870	Administrative and support and waste management services; information; transportation and warehousing; other services, except public administration

Source: Keen Independent Research from the IPUMS program: <http://usa.ipums.org/usa/>

Industry occupations. The study team also examined workers by occupation within the construction industry using the PUMS variable OCC. Figure I-3 summarizes the 2015–2019 ACS OCC codes used in the study team’s analyses.

I. Description of Data Sources for Marketplace Analyses — Survey of Business Owners (SBO)

I-3. 2015–2019 ACS occupation codes used to examine workers in construction

2015–2019 ACS occupational title and code	Job description
Construction managers 2015-19 Code: 220	Plan, direct, or coordinate, usually through subordinate supervisory personnel, activities concerned with the construction and maintenance of structures, facilities, and systems. Participate in the conceptual development of a construction project and oversee its organization, scheduling, budgeting, and implementation. Includes managers in specialized construction fields, such as carpentry or plumbing.
Project management specialists 2015-2019 Code: 705	Analyze and coordinate the schedule, timeline, procurement, staffing, and budget of a product or service on a per project basis. Lead and guide the work of technical staff. May serve as a point of contact for the client or customer.
Civil engineers 2015-2019 Code: 1360	Perform engineering duties in planning, designing, and overseeing construction and maintenance of building structures and facilities, such as roads, railroads, airports, bridges, harbors, channels, dams, irrigation projects, pipelines, power plants, and water and sewage systems. Includes architectural, structural, traffic, and geotechnical engineers.
Crossing guards and flaggers 2015-2019 Code: 3940	Guide or control vehicular or pedestrian traffic at such places as streets, schools, railroad crossings, or construction sites.
First-line supervisors 2015-19 Code: 6200	Directly supervise and coordinate activities of construction or extraction workers.
Carpenters 2015-19 Code: 6230	Construct, erect, install, or repair structures and fixtures made of wood and comparable materials, such as concrete forms. Build frameworks, including partitions, joists, studding, and rafters; and wood stairways, window and door frames, and hardwood floors.
Construction laborers 2015-19 Code: 6260	Perform tasks involving physical labor at construction sites. May operate hand and power tools of all types: air hammers, earth tampers, cement mixers, small mechanical hoists, surveying and measuring equipment, and a variety of other equipment and instruments. May clean and prepare sites, dig trenches, set braces to support the sides of excavations, erect scaffolding, and clean up rubble, debris, and other waste materials.
Construction equipment operators 2015-19 Code: 6305	Operate one or several types of power construction equipment, such as motor graders, bulldozers, scrapers, compressors, pumps, derricks, shovels, tractors, or front-end loaders to excavate, move, and grade earth, erect structures, or pour concrete or other hard surface pavement. May repair and maintain equipment in addition to other duties.

I. Description of Data Sources for Marketplace Analyses — Survey of Business Owners (SBO)

2015–2019 ACS occupational title and code	Job description
Electricians 2015-19 Code: 6355	Install, maintain, and repair electrical wiring, equipment, and fixtures. Ensure that work is in accordance with relevant codes. May install or service street lights, intercom systems or electrical control systems.
Structural iron and steel workers 2015-19 Code: 6530	Raise, place, and unite iron or steel girders, columns, and other structural members to form completed structures or structural frameworks. May erect metal storage tanks and assemble prefabricated metal buildings.
Construction and building inspectors 2015-19 Code: 6660	Inspect structures using engineering skills to determine structural soundness and compliance with specifications, building codes, and other regulations. Inspections may be general in nature or may be limited to a specific area, such as electrical systems or plumbing.
Fence erectors 2015-19 Code: 6710	Erect and repair fences and fence gates, using hand and power tools.
Highway maintenance workers 2015-19 Code: 6730	Maintain highways, municipal and rural roads, airport runways, and rights-of-way. Duties include patching broken or eroded pavement and repairing guard rails, highway markers, and snow fences. May also mow or clear brush from along road, or plow snow from roadway.
Welding, soldering and brazing workers 2015-19 Code: 8140	Use hand-welding, flame-cutting, hand-soldering, or brazing equipment to weld or join metal components or to fill holes, indentations, or seams of fabricated metal products.
Driver/sales workers and truck drivers 2015-19 Code: 9130	Drive truck or other vehicle over established routes or within an established territory and sell or deliver goods, such as food products, including restaurant take-out items, or pick up or deliver items such as commercial laundry.
Crane and tower operators 2015-19 Code: 9510	Operate mechanical boom and cable or tower and cable equipment to lift and move materials, machines, or products in many directions.

I. Description of Data Sources for Marketplace Analyses — Survey of Business Owners (SBO)

The study team used data from the 2012 SBO to analyze mean annual firm receipts. The U.S. Census Bureau conducted the SBO every five years but stopped after 2012. Response to the survey is mandatory, which ensures comprehensive economic and demographic information for business and business owners in the U.S. All tax-filing businesses and nonprofits were eligible to be surveyed, including firms with and without paid employees. In 2012, approximately 1.75 million firms were surveyed. The study team examined SBO data relating to the number of firms, number of firms with paid employees, and total receipts. That information is available by geographic location, industry, gender, race and ethnicity.

The SBO uses the 2002 North American Industry Classification System (NAICS) to classify industries. The study team analyzed data for firms in all industries and for firms in selected industries that corresponded closely to construction, architecture and engineering, and food, beverage and selected retail.

To categorize the business ownership of firms reported in the SBO, the Census Bureau uses standard definitions for woman-owned and minority-owned businesses. A business is defined as woman-owned if more than half of the ownership and control is by women. Firms with joint male/female ownership were tabulated as an independent gender category. A business is defined as minority-owned if more than half of the ownership and control is by African Americans, Asian Americans, Hispanic Americans, Native Americans or by another minority group. Respondents had the option of selecting one or more racial groups when reporting business ownership. Racial categories are not available by both race and ethnicity, so race and ethnicity were analyzed independently.

The study team reported business receipts for the following racial, ethnic and gender groups according to Census Bureau definitions:

- Racial groups — African Americans, Asian Americans, Asian Pacific or Native Hawaiians, Subcontinent Asian American, American Indian or Alaska Native, other minority groups and whites.
- Ethnic groups — Hispanic Americans and non-Hispanics.
- Gender groups — men and women.

I. Description of Data Sources for Marketplace Analyses — Annual Survey of Entrepreneurs (ASE)

Keen Independent analyzed selected economic and demographic characteristics for business owners collected through the Annual Survey of Entrepreneurs (ASE). The ASE includes nonfarm businesses that file tax forms as individual proprietorships, partnerships or any type of corporation, have paid employees, and have receipts of \$1,000 or more. Unlike the SBO, the ASE samples only firms with paid employees (the SBO includes both employer firms and non-employer firms). The 2016 ASE sampled approximately 290,000 businesses that operated at any time during a given year. Response to the survey is mandatory, ensuring comprehensive data for surveyed businesses and business owners.

The ASE collects information on businesses as well as business ownership (defined as having 51 percent or more of the stock or equity in the business). Data regarding demographic characteristics of business owners include gender, ethnicity, race and veteran status. Race, ethnicity and gender categories in the ASE are the same as those used in SBO and Census data. Because ethnicity is reported separately and respondents have the option of selecting one or more racial groups when reporting business ownership, all ASE calculations use non-mutually exclusive race/ethnicity definitions.

Topics within the ASE include some business information covered in the SBO, as well as information relating to the businesses' sources of capital and financing. Keen Independent used ASE data to analyze main sources of capital used to start or acquire a firm, firms that secured business loans from a bank or financial institution, firms that avoided additional financing because they did not think the business would be approved by lender, and firms that cited access to financial capital as negatively impacting the profitability of their business. Analyses included comparisons across race/ethnicity and gender groups.

I. Description of Data Sources for Marketplace Analyses — Annual Business Survey (ABS)

Keen Independent used 2018 ABS data to examine sources of capital used to start or acquire a business. The 2018 Annual Business Survey (ABS) is a recent collaborative effort between the Census Bureau and the National Science Foundation (NSF). The ABS includes a variety of topics, as it replaces both the ASE and SBO, as well as the Business R&D and Innovation for Microbusiness (BRDI-M) and the innovation section of the Business R&D and Innovation Survey (BRDI-S) surveys. However, the marketplace analyses continue to use data from the ASE and SBO because the 2018 ABS data released for public use is limited and does not provide sufficient detail for the analyses.

The 2018 ABS data were collected in 2018 but refer to conditions in 2017. The ABS includes all nonfarm employer businesses filing the 941, 944, or 1120 tax forms. This survey is conducted on a company or firm basis rather than an establishment. The 2018 ABS sampled approximately 300,000 businesses that operated at any time during that year. Response to the survey is mandatory, ensuring comprehensive data for surveyed businesses and business owners.

Like the ASE, the ABS collects business ownership information. Data regarding demographic characteristics of business owners include gender, ethnicity, race and veteran status. Race/ethnicity and gender categories provided in the ABS are the same as those provided in ASE, SBO and Census data.

I. Description of Data Sources for Marketplace Analyses — Home Mortgage Disclosure Act Data

The study team analyzed mortgage lending in Oregon using Home Mortgage Disclosure Act (HMDA) data that the Federal Financial Institutions Examination Council (FFIEC) provides. HMDA data provide information on mortgage loan applications that financial institutions, savings banks, credit unions and some mortgage companies receive. Those data include information about the location, dollar amount and types of loans made, as well as race/ethnicity, income and credit characteristics of loan applicants. Data are available for home purchase, home improvement and refinance loans.

Depository institutions were required to report 2018 HMDA data if they had assets of more than \$45 million on the preceding December 31 (\$44 million for 2017 or \$42 million prior), had a home or branch office in a metropolitan area, and originated at least one home purchase or refinance loan in the reporting calendar year. Non-depository mortgage companies were required to report HMDA if they were for-profit institutions, had home purchase loan originations (including refinancing) either a.) exceeding 10 percent of all loan originations in the past year or b.) exceeding \$25 million, had a home or branch office in an MSA (or received applications for, purchase or originate five or more mortgages in an MSA), and either had more than \$10 million in assets or made at least 100 home purchase or refinance loans in the preceding calendar year.

The study team used those data to examine differences in racial and ethnic groups for loan denial rates and subprime lending rates in 2016 through 2020. Note that the HMDA data represent the entirety of home mortgage loan applications reported by participating financial institutions in each year examined. Those data are not a sample. Appendix G provides a detailed explanation of the methodology that the study team used for measuring loan denial and subprime lending rates.

APPENDIX J. Qualitative Information — Introduction

Appendix J presents qualitative information that Keen Independent collected as part of the 2022 Oregon Department of Transportation (ODOT) Disparity Study. Appendix J is based on input from more than 315 businesses, trade association representatives and other interested individuals.

Appendix J includes 16 parts:

- Introduction;
- Starting a business;
- Dynamic firm size, types of work and markets served;
- Current conditions in the Oregon marketplace;
- Keys to business success;
- Working with ODOT;
- Whether there is a level playing field;
- Challenges not faced by other businesses;
- Access to capital;
- Bonding and insurance;
- Issues with prompt payment;
- Unfair treatment in bidding;
- Stereotyping and double standards;
- “Good ol’ boy” and other closed networks;
- Business assistance programs and certifications; and
- Other insights and recommendations for ODOT.

A summary of study methodology begins on the following page, as well as Keen Independent review of other qualitative information sources.

APPENDIX J. Qualitative Information — Introduction

Study Methodology

From November 2021 through April 2022, the Keen Independent study team conducted in-depth interviews and held public meetings with business owners, trade organization representatives and others and incorporated the results into this Appendix. For anonymity, Keen Independent analyzed and coded comments without identifying any of the participants.¹

Keen Independent provided opportunity for public comments via mail and the designated study telephone hotline, website and email address.² Virtual town hall meetings were also held on May 23–26, 2022, June 7, 2022 and June 10, 2022. Information from these meetings is included in this appendix.

Business owners and representatives reported on experiences working in construction, professional services, goods and other services; experiences working with ODOT; perceptions of certification programs and other supportive services; and input on other relevant topics.

Throughout, Appendix J summarizes examples of comments gathered through these study methods.

¹ In-depth interviewees are identified in Appendix J by #I-01, #I-02 and so on; organizations including chambers and trade and industry associations are coded as #TOs; public meeting participants are coded as #PM-1, #PM-2; town hall attendees are identified as #TH-1 and #TH-2; and availability survey respondents are identified as #AS-01, #AS-02 and so on. Interviewees represented construction, professional services, goods and other services industries. Business owners and representatives interviewed represented a cross-section of certified and non-certified minority- and woman-owned firms and firms owned by white males.

Review of Other Qualitative Information Sources

Keen Independent reviewed results of interviews, focus groups and public meetings that were part of disparity studies conducted for the 2016 ODOT Disparity Study,³ and the 2019 Oregon Department of Aviation Oregon Statewide Airport (ODA) DBE Disparity Study.⁴

Business owners and representatives interviewed were often quite specific in their comments. On occasion, certain statements are reported in more general form for purposes of anonymity.

² The study phone hotline number was 503-765-6663; email address was ODOTDisparityStudy2022@keenindependent.com; and the website was www.keenindependent.com/ODOTDisparityStudy2022.

³ Anecdotal quotes from this disparity study are coded as #ODOT2016-1, #ODOT2016-2 and so on.

⁴ Information from this disparity study is coded as #ODA2019s.

APPENDIX J. Qualitative Information — Starting a Business

Working in the Industry Before Starting a Business

The Keen Independent study team asked interviewees about starting their businesses, beginning with their previous experience. [e.g., #I-4, 56]

Most business owners worked in the industry, or a related industry, before starting their firms. [e.g., #I-2, 3, 7, 8, 9, 15-18, 20, 21, 22a, 24, 25, 26, 29-31, 34-36, 41, 46, 47, 49, 52, 54, #ODA2019-2-4, 8, 9, 15, 19, 20, 22, 28-36, 38, #ODOT2016-5, 6a, 11, 13-16, 18a, 24-28, 30, 33, 36, 37, 41, 42, 44, 48, 50, 51, 54, 55]

Examples of comments are on the right.

My partners and I worked for a different firm. We had different values ... it would make more sense if we started a firm together.

I-13. Asian Pacific American female representative of a professional services firm

I worked ... doing similar work to what [I do] now.

I-40. African American male owner of a DBE professional services firm

I joined a friend of mine who started the business. He ended up leaving and I took over.

I-33. Subcontinent Asian American male owner of a professional services firm

I had been working in the [environmental] industry for about fifteen years. I worked for another consulting firm [and] I ended up realizing I was pretty viable and decided to go out on my own. It was good timing right before the pandemic.

I-11. Asian Pacific American male owner of an MBE professional services firm

I had a mentor who was a principal at another firm ... [and told me], 'I turn away more work than you could ever do.' [Learning from this advice I concluded], 'I think it's time. I'm going to leave my very secure government job and run out and be a business owner ...'

ODA2019-16. White male owner of a professional services firm

I started from scratch. It was in the industry that I have years of experience in and had an opportunity to do work and take on my own projects and give myself more bandwidth of what I can do.

I-39. Hispanic American male owner of a DBE professional services firm

The interviewee indicated that he had experience in the industry before he and his partner started the business.

ODOT2016-46. African American owner of a DBE/MBE specialty services firm

APPENDIX J. Qualitative Information — Starting a Business

Challenges to Starting, Sustaining and Growing a Business in the Industry and Any Barriers to Entry

Most business owners and representatives reported facing challenges at start-up and beyond.

Having to learn the “business” side of running a business. Many people who start businesses are experts in their fields but need to learn the administrative aspects and priorities of operating a business. [e.g., #I-17, 25, 40, 42, #ODA2019-2, 5, 6, 9, 10, 14, 15, 28, 29, 34-36, 39]

Examples of comments are to the right.

[Businesses] really need help just organizing themselves.

TO-10b. White female representative of a business assistance provider

I had to figure out how to run a business. I didn't know what I was doing.

I-20. African American male owner of a DBE specialty services firm

Going into business may not be [business owners'] first choice ... they may need to make a pivot because something happened They have the technical abilities, but don't know how to run a business.

TO-11 White female representative of a business assistance provider

When I started my business, I didn't realize that when you have a contract, it is possible that you don't get paid for some time I suffered initially quite significantly. I tried to go out on my own and then had to go back.

I-58. Hispanic American male owner of an MBE specialty services firm

The primary challenge is the inconsistent permitting regulations in this area. We are in multiple jurisdictions, so there isn't one consistent practice. There is no obvious place to go ask questions. There is no planning or business development department within 30 miles of this area.

TO-16. White male representative of a business assistance provider

This interviewee reported that the success of her company came from her corporate background that gave her a very different cadence, different discipline, different process driven approach.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

APPENDIX J. Qualitative Information — Starting a Business

Marketing a new business and learning about opportunities. Some interviewees discussed the difficulty new business owners encounter when initially marketing their companies and finding opportunities for work. [e.g., #AS-32, 45, 50, 55, 60, 65, 90, #I-11, 22, 35, 36, 41]

Examples of comments follow below and on the right.

[I] struggled with finding clients [and] I didn't know what my market was.

I-21. White female owner of a DBE/WBE/ESB professional services firm

[I was] literally by myself [with] a laptop and a business card Having to start [a business] is a challenge ... I just did a lot of networking, joining chambers [of commerce] ... to network to grow my business.

I-16. Hispanic American male owner of an MBE specialty services firm

The biggest [challenge] is name recognition. We are one of the few locally based [construction-related service firms]. Most of our competitors have been around a lot longer.

I-15. White male representative of a construction-related firm

We needed someone to come in and give a bigger push in marketing.

I-41. White female owner of a professional services firm

Finding out how to get on the consultant list for the State government [is difficult]. There is no way to know when that list will open up again. It was very much geared towards 'you already had to know.' So, I was pretty much shut out of work.

I-49. White female owner of a WBE professional services firm

It was very difficult to get people to understand why [our service] is useful back then and even today. No one understood The biggest challenge was getting the message out there that [we] would be useful.

I-36. Asian-Pacific American male owner of a professional services firm

Name recognition and outsiders' belief in our ability to do the work [are a challenge].

AS-89. African American male owner of a construction-related firm

In 2020 ... [we] really focused on getting a methodical system down for how we do business development, and that included doing a lot of outreach, but it's methodical We ended up joining PTAC — we didn't even know PTAC existed before that — and so now we have ... a planned effort Now, business development is a regular part of our daily work.

I-30. White female owner of a DBE professional services firm

There's all sorts of challenges around market penetration.

I-61. African American male owner of a DBE/MBE/ESB professional services firm

I had to rebrand and reestablish myself, because people tend to move on and ... especially me coming in this industry not knowing much, let alone being a female and a female of color. With my background there was a lot of skepticism between existing employees, customers. I really had to earn the credibility very, very quickly

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

I didn't know how to market.

I-42. White female owner of DBE professional services firm

APPENDIX J. Qualitative Information — Starting a Business

Competition from larger or established businesses. Some interviewees reported that competition with large companies or more established businesses is a challenge for new businesses as well as businesses that are small. [e.g., #AS-10, 122, 123, 129, 138, 144, #I-16, #ODA2019-8, 33, 34, 37]

Competing with larger companies that already have an established working relationship or record [is a challenge].

AS-16. White female owner of a professional services firm

I think there are big companies that can consolidate the market.

TO-14. White female representative of a business assistance provider

Entering the market was difficult. There are a lot of software and players in the industry with a strong name ... we had to build trust.

I-52. White male owner of a professional services firm

We don't have many local homegrown firms [in the marketplace] due to acquisitions.

TO-7. White female representative of a business assistance provider

For companies [similar to] ours ... a lot of other companies are larger and very well-funded They're based in Oregon and they're well-known in Oregon They're seen as friends to the public agencies.

I-61. African American male owner of an MBE/DBE/ESB specialty services firm

The hours put into proposing [by small businesses], that larger companies with marketing departments [ultimately] end up winning, [are a challenge for small businesses trying to be competitive].

AS-133. White female owner of a professional services firm

If you are a smaller company, you don't get the opportunity.

AS-59. African American male owner of a specialty services firm

APPENDIX J. Qualitative Information — Starting a Business

Sources of capital. Some interviewees described different sources of capital used to start businesses. For example, use of personal assets and personally backed loans is common. [e.g., #I-3, 9, 26, 29, 44, #TO-7, #ODA2019-9, 12, 18, 22-24, 28, 30, 31, 36, 37, 39] Related comments were voiced by participants of the 2016 ODOT Disparity Study.

Comments regarding sources of capital follow to the right. (Also find more on access to capital later in this appendix.)

Saved and saved and saved.

I-37. White female owner of a WBE construction-related firm

We had [no start-up capital]. Started from scratch with nothing.

I-36. Asian-Pacific American male owner of a professional services firm

The interviewee reported that he borrowed against his wife's 403(b) to secure start-up capital for the firm. He also commented that he used an old home computer and an old pickup truck, so he did not have to borrow money.

ODA2019-14. White male owner of a professional services firm

I purchased my truck in cash from childhood savings. My dad and grandpa contributed a '0 percent' loan for me.

I-51. White male owner of a construction-related firm

I got one loan from Business Oregon. The rest was all personal finances.

I-11. Asian-Pacific American male owner of MBE professional services firm

I bought [all my equipment] cash. That is how I survived.

I-44. White male owner of a specialty services firm

The interviewee reported that she took out a 401k loan to start the business. Co-owners also provided equipment from other businesses.

I-8. African American female owner of an ESB and MBE construction-related firm

APPENDIX J. Qualitative Information — Starting a Business

Start-up capital and generating cash flow. Business owners also commented on the difficulty obtaining start-up capital and then generating immediate cash flow to be able to launch new companies. [e.g., #AS-19, 33, 38, #I-4] Related comments were voiced by participants of the 2016 ODOT Disparity Study.

Comments regarding securing start-up capital and financing are on the right.

The biggest challenge is getting money.

TO-10b. White female representative of a business assistance provider

Access to capital is a challenge for all businesses.

TO-13. African American female representative of a micro-business assistance provider

Access to resources is more limited in rural [areas].

TO-14. White female representative of a business assistance provider

Trying to build a client base and have cashflow are challenges that have made it unclear if her firm would be successful.

I-19. African American female owner of a DBE professional services firm

Once the SBA [Small Business Association] loan was in place, it was nearly impossible to get additional capital.

I-28. White male owner of a construction-related firm

We were able to secure funding from an angel investor.

I-52. White male owner of a professional services firm

APPENDIX J. Qualitative Information — Dynamic firm size, types of work and markets served

Business Size, Expansion and Contraction

Successful companies need to be able to adapt to changing opportunities and economic climate. The study team asked participants whether their businesses are relatively flexible regarding the size of their firms.

Careful control. Some business owners reported to carefully control the size of their firms. For example:

Our approach has been to scale while maintaining quality and using the scale to improve our quality.

I-61. African American male owner of a DBE/MBE/ESB professional services firm

Slow growth. Some of these businesses said that they tried to grow slowly to ensure financial stability. [e.g., #AS-137, 151, 152, #I-16, 20, #ODOT2016-28, 44] For instance:

Most businesses are on a trajectory that is very natural toward expansion.

TO-2. White male representative of a business assistance provider

Fluctuation based on need. Some described how their firm size is based on workload, interest or seasonal need. This finding is similar to the 2016 ODOT Disparity Study. For example:

It's not one thing. The ideal world is when too much work comes in, and you are forced to [expand]. The tougher decision is when you look at the market, and there is white noise.

I-43. White male owner of a professional services firm

The interviewee reported that the firm's size changes depending on the available work, the season and market conditions. She added that the firm maintains a core group of 12 employees.

ODOT2016-27. White female rep of a Hispanic American-owned DBE/MBE construction related firm

We built this company as a lifestyle business. So, we can expand whenever my husband wants to put more effort into it. We were a niche business, so we had so much work

I-41. White female owner of a professional services firm

The company has grown almost two or three times [since buying it over 5 years ago].

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

APPENDIX J. Qualitative Information — Dynamic firm size, types of work and markets served

Sizes of Contracts

Some interviewees said that their firms bid on a range of small and large contracts. While others pointed out where they were constrained in the size of contracts they bid. [e.g., #I-9, 54, #ODOT2016-2, 11, 13a, 42] (See examples of comments on the right.)

Overall, capital projects range from \$1,000 to \$1 million.

I-3. White male representative of a Native American female-owned professional services firm

Our average contract is around \$50,000.

I-28. White male owner of a construction-related firm

We can support clients who need a small amount of consulting (\$5,000 or less) [and] projects of design ... in excess of \$1 million.

I-38. White male owner of a professional services firm

All sizes ... I have a current contract for \$5,000 ... a big contract for me is \$300,000 ... the typical range is \$50,000 to \$100,000.

I-42. White female owner of DBE professional services firm

It does range quite a bit Our sweet spot is ... \$5 to \$10 million.

I-45. White male owner of a construction related firm

We'll work on any size project, large or small.

I-12. Hispanic American female owner of a DBE professional services firm

We'll take on a project that's no more than \$4 to \$5 million.

I-37. White female owner of a WBE construction-related firm

APPENDIX J. Qualitative Information — Dynamic firm size, types of work and markets served

Changes in Types of Work

The study team also asked interviewees to report the type of work their firm performed, as well as any changes.

Some of the interviewees indicated changes in types of work overtime, largely based on market opportunities. This includes businesses that sought to diversify to provide more financial stability for their company. [e.g., #I-16, #TO-3, 4, 11, #ODA2019-1, 2, 5, 8, 13, 15, 18, 19, 20, 22-24, 27-30, 34-36, 38, #ODOT2016-6-8, 11, 12, 13a, 16, 18a, 22, 24, 37, 43, 44, 50, 52, 56, 59] (See comments on the right.)

[There have] not [been] enough changes. [There are a] few opportunities for [business] growth that weren't there before.

TO-1. Native American male representative of a business assistance provider

Certainly [it changes], and mainly due to the economy [The firm moved from private work to public] when the economy was hit [and] the majority of that work went away.

ODOT2016-12. White male representative of a professional services firm

I started out with [one type of professional service] as the main service I provided. That has changed to be more of a [technical service] for the industry.

I-58. Hispanic American male owner of an MBE professional services firm

[We found that] commercial work is entirely more profitable, prevailing we bid for our employees if we can swing the payroll for the larger paycheck.

I-55. White female representative of a construction-related firm

We've added marketing services. ... We've had to meet client's need[s].

I-14. White female owner of a specialty services firm

APPENDIX J. Qualitative Information — Dynamic firm size, types of work and markets served

Work in Public or Private Sectors, or Both

Business owners and representatives discussed whether their firms conduct work in the public, private or both sectors.

Mostly private sector. A few of the businesses indicated that they mostly do private sector work. [e.g., #I-18, 20, 24, 27, 29, 33, 34, #ODA2019-7, 30-32, #TO-14]

Business owners sometimes cite the paperwork and other difficulties competing for public sector contracts, including their perceived need to be a union contractor. The top right of this page provides examples of interviewee comments.

Mostly public sector. Some companies primarily compete for public sector work. [e.g., #I-2, 9, 15, 25, 30, 41, 43, #ODA2019-2-6, 8, 13, 16, 17, 19, 23, 27, 28, 30, 34, 36, 39] Examples of comments are to the right in the middle of the page.

Both private and public sector work. Some firm owners or managers said that they do both public and private sector work. [e.g., #I-3, 4, 11, 13, 16, 19, 21-23, 31, 35, 37, 49, 53, 55, 63, #ODA2019-1, 14, 18, 24, 29, #TO-1-3, 7] This emphasis on seeking out both public and private sector work was also noted in the 2016 ODOT Disparity Study.

Please see quotes on the bottom right of this page.

I have not been able to tap into the public sector. Everything has been private Getting that experience to say yes, I have done public work has proven to be impossible, and I have given up on it.

I-3. White male representative of a Native American female-owned professional services firm

I have been proposing on some [public contracts] and have made it to some on-call. I am in a pool of contractors, but I haven't done any work for public agencies. I have worked with institutions like education, utilities and private businesses.

I-39. Hispanic American male owner of a DBE professional services firm

We do private mostly. We tried public, but we aren't successful.

I-18. White male owner of a professional services firm

[We are] strictly private. We've had conversations with public [entities] but it's just not suited.

I-52. White male owner of a professional services firm

80 percent of our work is publicly funded.

I-43. White male owner of a professional services firm

[Approximately] 60 percent of what we do is the public sector.

I-1. White male owner of a construction-related firm

I ... say, if it is not 50/50, it is 50 percent public/40 percent private.

I-38. White male owner of a professional services firm

We are a general contractor for highway jobs. For private work we are always a sub.

I-26. White male owner of a construction-related firm

APPENDIX J. Qualitative Information — Dynamic firm size, types of work and markets served

Work as a Prime Contractor, Subcontractor or Both

The study team asked business owners and representatives whether they worked as a prime or subcontractor/subconsultant. Comments varied.

As with working in the private and public sectors, some firms only serve as prime contractors or as subcontractors, but many might be a prime contractor on one project and a subcontractor on another.

Mostly prime contractor. A few of the businesses indicated that they mostly work as prime contractors. [e.g., #I-2, 11, 13, 16, 18, 19, 21, 23-25, 39, #ODA2019-1, 3, 15, 20, 21, 27, 31, 33, #ODOT2016-9, 10, 12, 16, 22, 25, 28, 32, 33, 37, 41, 45, 49, 50, 58, #TO-9]

Mostly subcontractor. Some companies primarily compete for public sector work as a subcontractor. [e.g., #I-1, 12, 15, 17, 20, 28, 30, 33, 34, 37, 55, #ODA2019-2, 24, 32, 39, #ODOT2016-5, 6b, 8, 9, 11, 14, 15, 18a, 19, 27, 28, 33, 35, 36, 39b, 42, 47, 48, 53, 55, 59] Sometimes this is because of the nature of the work. Some types of work on projects are typically performed as a subcontractor. For example:

Primarily the primes reach out to us.

I-12. Hispanic American female owner of a DBE professional services firm

Both prime contractor and subcontractor. Some firm owners or managers said they work as both the prime and as a sub. [e.g., #I-3, 4, 10, 26, 31, 43, 47, 51, 55, 56, 60, 62, 63, #ODA2019-29, #TO-1-3, 8a, 10b]

Geographic Markets Served

Business owners and representatives reported where they conducted business and if over time, they had expanded the geographic locations where they perform work. [e.g., #I-11, 13, 14, 37, 41, #TO-10b] Some businesses had not geographically expanded [e.g., #I-7, 18, 47] While others had geographically expanded and were “all over the place.” [e.g., #I-20, 21, 55, #TO-3] A variety of comments are provided below.

We have tried expanding. We thought about opening an office in NYC. One of the barriers is the capital involved. One of the helpful things is having someone locally rather than in a satellite position. Another barrier is being familiar with the labor and material rates in a different market.

I-15. White male representative of a construction-related firm

[We are in the] Portland metro area. Within a day's drive of Portland.

I-49. White female owner of a WBE professional services firm

[We work in] cities and counties in the metropolitan area.

I-26. White male owner of a construction-related firm

We service all of the Portland metro and Southwest Washington.

I-22. Asian-Pacific American female owner of a DBE/MBE/WBE specialty services firm

We are national. We want to have more local business, and this is what we are trying to push for this year.

I-18. White male owner of a professional services firm

We'll go anywhere in Oregon.

I-45. White male owner of a construction-related firm

J. Qualitative Information — Current conditions in Oregon marketplace

Impact of COVID-19

Interviewees reported on the economic conditions in the local marketplace. Akin to the effects of the Great Recession on the industry described in the 2016 ODOT Disparity Study and 2019 ODA Disparity Study, COVID-19 has had a significant impact on conditions in Oregon, as well as throughout the nation.

Many business owners and trade association representatives reported unfavorable economic conditions due to the COVID-19 pandemic. [e.g., #AS-9, 21, 23, 47, 70, 71, 80, 112, 118, 125, 126, 136, #I-7, 15, 17, 18, 25, 26, #ODA2019-15, 17, 21-23, 28, 29, 31-34, 36, #TO-2, 9] For example:

There have been impacts [that are] more negative than positive. Our clients have been impacted as well, which makes the projects harder.
I-27. White male representative from a construction-related firm

Loss of revenue and business. Some businesses reported losing a significant number of customers, opportunities and revenue. (See comments to the right.)

Things are pretty tough ... we lost 80 percent of business for a year.
I-1. White male owner of a construction-related firm

The evidence points to the majority of people being heavily impacted by COVID Brick and mortar [businesses] are especially [impacted]. A lot of women have to leave their businesses behind.
TO-17. White female representative a business assistance provider

I lost all my clients due to COVID-19.
I-6. White female owner of a professional services firm

When the pandemic first hit, I thought my business was over ... because everything stopped.
I-16. Hispanic American male owner of an MBE specialty services firm

Right now, it is terrible I had one contract, and it got shut down A lot of the type of work that I do just isn't happening [because of COVID-19].
I-49. White female owner of a WBE professional services firm

With COVID, there was very little work coming in, and we had to lay off people. And then [later we] were able to hire more people.
I-22. Asian-Pacific American female owner of a DBE/MBE/WBE specialty services firm

There are always ups and downs During COVID, we slowed down more than usual.
I-33. Subcontinent Asian American male owner of a professional services firm

The pandemic hit right as I was getting started. So much of my work upfront was outreach and networking ... went away overnight.
I-39. Hispanic American male owner of a DBE professional services firm

J. Qualitative Information — Current conditions in Oregon marketplace

Supply chain issues. Several participants noted supply chain issues that impacted operations, and/or have led to an increase in materials cost. (See top right.)

Staffing constraints. Others reported trouble locating qualified employees or other contributing barriers during the pandemic. (See middle right comments.)

Unbeneficial government assistance. One business owner reported that government assistance during the pandemic was not a good fit for her firm. (See bottom right comments.)

We have seen a lot more effect in the supply chain. That has been a big deal. The price on steel and availability of materials was reduced for over a year. The business is slowing down a bit

I-41. White female owner of a professional services firm

[The cost of] materials have gone up exponentially.

I-37. White female owner of a WBE construction-related firm

I-27. White male representative from a construction-related firm

COVID has made it more competitive to get employees.

I-32. White female owner of a construction-related firm

[There is a] shortage of people, shortage of everything.

I-63. White male representative of a majority-owned construction related firm

I-27. White male representative from a construction-related firm

Many government assistance [programs] wanted to see two years of financials, and you don't have it The funny thing is a big portion of State assistance was going to the business assistance programs. I don't need another business plan; I need better loan terms. I need forgiveness on my loans, rather than training. But that is where they put the funds, to provide more training.

I-11. Asian-Pacific American male owner of MBE professional services firm

J. Qualitative Information — Current conditions in Oregon marketplace

Positive Outcomes Related to the Pandemic

Conversely, some reported doing well despite (or perhaps due to) the effects of the COVID-19 pandemic on the marketplace. One, for example, noticed a positive shift in how customers treat her as a working mother:

Before the pandemic, I had to be careful of what clients I told I was a working mother. ... Some clients were like ... 'Oh, you're not 100 percent committed to me all the time.' I have a sense that [after COVID-19] our clients have become a little more humane and understanding ... like when things are scheduled or when you're expected to be available.

I-14. White female owner of a WBE professional services firm

Increase in work. For some, the pandemic resulted in more work or other related benefits. [e.g., #I-9, 13, 29, 40, 60, #ODA2019-13, 14, 16, 18-20, 21, 22, 24, 27, 37, 38, 52 #TO-4]

This cycle was great. It was really busy. It kind of got me out into the general public and I didn't have to do a lot of tribe jobs.

I-7. Native American male owner of a construction-related firm

COVID was very good to IT services. Everyone pivoted to working from home. We were very busy.

I-54. White male owner of a professional services firm

It [is] busier than normal a shock to the economy [benefits us].

I-13. Asian Pacific American female representative of a professional services firm

I am more successful now than I was pre-COVID. Some people were able to pivot, and others couldn't.

I-23. White male owner of a professional services firm

Fantastic. A lot of money seems to go toward transportation, and the more infrastructure projects there are, the more there's a requirement for [our type of work] With the infrastructure bill, I'm sure that's going to be ramped up even further. Business is good.

I-47. White male representative of a professional services firm

It is very good ... business is picking up to where I will hire shortly. Everything has gone from paper to digital services ... it's exploding.

I-58. Hispanic American male owner of an MBE professional services firm

Everybody is really busy [There is] more work than there is capacity with the contractors to build it

I-63. White male representative of a majority-owned construction related firm

[Because of COVID-19] I have less competition.

I-44. White male owner of a specialty services firm

J. Qualitative Information — Current conditions in Oregon marketplace

Paycheck Protection Program (PPP) loans. A few interviewees commented on accessing COVID-19-related funding from the government to assist business operations.

Fortunately, I was ... able to secure a PPP loan, and that was a saving grace — that was just enough to kind of bridge to when things started to turn [around] a little bit.

I-16. Hispanic American male owner of an MBE specialty services firm

We got our PPP loans to keep us afloat and work is starting to pick up again.

I-3. White male representative of a Native American female-owned professional services firm

J. Qualitative Information — Current conditions in Oregon marketplace

Other Comments Related to the Oregon Marketplace

Other issues important to understanding current business conditions are presented here. For example, one business owner stated:

Oregon is an interesting place, because [success] depends on how much money you have and who you know.

TO-13. African American female representative of a micro-business assistance provider

Other comments regarding the marketplace are on the right.

Things that make it hard for companies like mine isn't that there isn't enough work ... there isn't enough support for people with children.

I-14. White female owner of a specialty services firm

A lot of businesses [are] in same industry and they aren't licensed, and [they] offer jobs for much cheaper than what I can do. They offer services way too cheap and it's not a fair competition.

AS-78. Hispanic American male owner of a specialty services firm

I can't handle ... low bid ... [in tribal projects].

I-7. Native American male owner of a construction-related firm

In Eugene, there is a smaller group of companies that are competing [for the same work], versus up in Portland, you have probably twice as many people competing for the same work With a bunch of the federal and State money that's come through, [and] the City [of Eugene] has a bond measure that's been passed twice over the last ten years, there's just been a lot of public money available.

I-63. White male representative of a majority-owned construction related firm

We are feeling that there is a softening of the private market. We haven't had as many leads or projects starting. On the public side, because of the potential [federal] transportation bill, our clients all had a really strong budget for projects going into the year. We really haven't seen any ramp down in work in the past few years.

I-38. White male owner of a professional services firm

I have so much private work I don't know what to do with myself.

I-34. White male owner of a professional services firm

J. Qualitative Information — Keys to business success

Contributing Factors

The study team asked interviewees to describe keys to business success. Responses varied, but relationship building and recruiting and sustaining a qualified workforce rose to the top.

Creating and maintaining customer relationships. Many interviewees described the importance of relationships with customers and others as a key factor for success. Some also cited their reputation as an integral element. [e.g., #I-1,4, 5, 7, 9, 19, 23, 25, 33, 38, 43, #ODA2019-4, 12, 15-17, 22-24, 27, 28, 30, 31, 37, #ODOT2016-1-3, 5-11, 15, 16, 18a, 20, 21, 23, 24, 26, 28-31, 34, 35, 38, 44, 45, 50, 52-57, #TO-7, 9]

Networking has been the number one thing.

I-17. White male owner of a specialty services firm

If I could just stay focused on talking to people [and marketing the firm], I would gain more clients.

I-21. White female owner of a DBE, WBE and ESB professional services firm

Word of mouth is the big marketing ticket. [Firm owners] talk to each other. Our whole industry is relationship-based.

I-11. Asian Pacific American male owner of an MBE professional services firm

So much of it is who you know ‘Oh, you’re [so and so’s son]! Come out and do some work for me.’

I-50. White male owner of a construction related firm

Our lack of [entrenched relationships] have made it difficult Some of our competitors have been able to walk into the field with their own relationships.

I-61. African American male owner of a professional services firm

The key factors are relationships. Strong relationships let us get more work.

I-12. Hispanic American female owner of a DBE professional services firm

You put in the right processes in place, the right people, and you align with the right network and the right folks who guide you through the right things — that helps.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

Since most of what we do is subcontractor work, everything is based on relationships and it’s easier in a place you have been established for a while.

I-15. White male representative of a construction-related firm

I had a lot of business experience ... [and] intellectual property ... but I had no connections here.

I-6. White female owner of a professional services firm

Relationships are big. Technical and subject matter expertise, consulting is very niche stuff.

I-39. Hispanic American male owner of a DBE professional services firm

Delivering good results for our clients is topline. 80 to 90 percent of our work is repeat clients.

I-27. White male representative from a construction-related firm

Being available for our clients pretty much 24/7 [is imperative] So, we are available in all sorts of ways. We understand that good work drives additional work. That’s where most of our growth comes from.

I-13. Asian-Pacific American female owner of a professional services firm

J. Qualitative Information — Keys to business success

Importance of employees to business success. Many participants noted that building and retaining a skilled team of employees was a key factor for success. [e.g., #AS-3, 5, 8, 14, 15, 28-31, 34, 36, 37, 40-44, 53, 58, 59, 69, 73, 76-79, 81, 83, 84, 86, 103, 105, 117, 124, 139, 148, 155, 156, 159, #I-9, 12, 37, 38, 47, #ODA2019-1, 5, 17, 10, 13, 20, 32, 37, 38] Importance of, and difficulties locating qualified and interested employees were also reported in the 2016 ODOT Disparity Study.

Our company is growing so fast that it's holding us back from not having more people available, or even our subs, for them to have more people available So, yeah, that's been a struggle.

I-7. Native American male owner of a construction-related firm

If we can't get enough workers, then that absolutely limits our success Employing excellent workers and staff and having a strong financial base for our company.

I-2. White male representative of a construction-related firm

The availability of qualified staff [is key]. Whether it's hiring people out of college or knowing them. It feels like there is a shortage of professionals in the marketplace to perform the work.

I-38. White male owner of a professional services firm

The hard part now is labor. All of our subcontractors are seeing huge pressure on wages. [Our industry] isn't necessarily a high-paid job, and there are a lot of other jobs that are starting to pay a lot more.

I-11. Asian-Pacific American male owner of an MBE professional services firm

One of the biggest challenges is hiring. We do a great job of retaining the employees we have. But hiring the right fit is pretty challenging.

I-13. Asian-Pacific American female owner of a professional services firm

When you go out on your own, you are viewed by the availability of your work staff There was a steep climb initially.

I-43. White male owner of a professional services firm

Staffing needs and the demand for staff is very challenging.

AS-4. Hispanic American male owner of a professional services firm

We could probably grow faster if we could find good employees. It has been a huge challenge [finding good workers]. It's not specific to the pandemic. It is a problem across all industries. Hard manual labor isn't what people are gravitating to.

I-28. White male owner of a construction-related firm

They're [employees are] like a piece of good equipment; if you don't take care of them, they'll break.

ODOT2016-42. White partner of a WBE/SDVO construction-related firm

We really focus on our people and building their skills and giving the right opportunities at the right time and encouraging our team.

I-31. White female representative of a professional services firm

Having work is the first part [of success for the business]. Number two is having good employees.

I-44. White male owner of a specialty services firm

To carry employees is really expensive and to even find them right now is really hard. And, when you do find them, they want to be paid a ridiculous amount of money. That whole thing is a big struggle in and of itself.

I-7. Native American male owner of a construction-related firm

J. Qualitative Information — Working with ODOT

Work Experiences with ODOT

Business owners and representatives were asked about their experiences seeking opportunities and performing contracts with ODOT.

Positive experiences. Some participants indicated having positive experiences while working with ODOT. [e.g., #I-20, #ODOT2016-9, 15, 29, 34, 47, 57] (See right column.)

ODOT does very well with bringing in minority and disadvantaged contractors.

I-25. White male owner of an ESB construction-related firm

It's been easy to work with [ODOT]. They are in constant communication and do what it takes to get the work done. They make sure you get paid on time.

I-4. African American male owner of a DBE construction-related firm

It's been great [ODOT has been] kind and collaborative ... every step of the way.

I-47. White male representative of a professional services firm

Nobody's perfect — no entity, no individual is perfect. But I think ODOT does a pretty darn good job in the face of a lot of challenges I think ODOT has made some good choices, and I think that they've done some pretty great work.

I-30. White female owner of a DBE professional services firm

We have really good relationships with ODOT, so we've been pretty successful [in the past] few years or so And I think that's really a testament to the people that are on our team really knowing ODOT, what their risks and needs and processes are to be successful. Again, it really comes down to people.

I-31. White female representative of a professional services firm

J. Qualitative Information — Working with ODOT

Negative experiences. However, many participants reported negative experiences while working with ODOT. [e.g., #AS-18, 51, 109, 111, 113, 114, 131, 134, #I-17, 26, 28, 30, 51, #ODOT2016-6b, 11, 12, 16, 18a, 19, 21, 24-26, 28, 31-33, 35, 42, 44, 48, 50] Comments follow below and to the right.

It is just a nightmare. They don't offer new work for new people ... stick with their old contractors We don't have a chance to crack in.

I-44. White male owner of a specialty services firm

Every day is different Some days it's like spreading butter on bread, other days it's like trying to dig up a pile ... of rocks. If you stick around ... sooner or later, you'll find the guy that'll to tell [help].

ODOT2016-46. African American owner of a DBE/MBE specialty services firm

The Oregon Department of Transportation is the worst ... they play favorites If I didn't have to, I wouldn't work with them. A manager at ODOT [trying to defend himself] told me, 'I have a Black friend.'

I-20. African American male owner of a DBE specialty services firm

I have not seen them act in a different way despite year after year after year of disparity reports.

TO-17. White female representative a business assistance provider

We don't bid with them anymore If you go sideways with one person ... you get blacklisted.

I-37. White female owner of a WBE construction-related firm

The interviewee said that when an ODOT job is awarded it does not necessarily mean that the award results in notice to proceed.

AS-18. African American male representative of a construction related firm

The challenge is ... we submit a scope of the budget, and the agency will chop it. So, it's almost like they won't allow the training of people on their job ... everyone should come in as an expert.

I-12. Hispanic American female owner of a DBE professional services firm

We are going to turn down public work. I cannot bankroll them. Prevailing wages have gone up over 40 percent. It takes over 60 days to get paid, and when you are a labor-only company that pays weekly [that is not feasible]. ODOT didn't track their hours correctly and we had to fight for additional [money owed]. We are not the only [transportation-related] company [not being paid] has happened to.

I-55. White female representative of a construction-related firm

Approval of overhead and billing rates ... has presented challenges. Subconsultants have elected to not work on ODOT projects due to not gaining approval of negotiated billing rates or extremely low allowable safe harbor overhead rates.

AS-6. White female representative of a firm

[While ODOT is] fair ... [management and specifications are] not always consistent You always go into a new job not knowing who your [assigned] ODOT group is Some are more difficult than others ... some are really good to work with.

I-63. White male representative of a majority-owned construction related firm

We don't typically pursue ODOT contracts because it's ... a hassle. [There's] so much red tape.

ODOT2016-AS10. Representative of a woman-owned professional service firm

J. Qualitative Information — Working with ODOT

Pursuit of Opportunities with ODOT

Many business owners and representatives discussed the motivations for pursuing or not pursuing opportunities with ODOT, as well as how opportunities are pursued.

Open bid process. Some of participants noted that ODOT's bid processes are relatively open, and that they relied on online bid platforms to seek out work. [e.g., #I-6, 15, 21, 23, 31]

Supporting comments are in the right column.

Most [jobs] are published. There is Bid Locker and OregonBuys. Between those two, I get most of the information. I am not getting any emails, though.

I-4. African American male owner of a DBE construction-related firm

[ODOT has] a website. Lately, they have been making the contract schedules available, which I love. I decide which contracts to bid on based on the completion date and when the work starts.

I-62. Asian-Pacific American female owner of a DBE/MBE/WBE specialty services firm

I get notifications almost daily of whatever opportunities coming up.

I-47. White male representative of a professional services firm

The interviewee reported that his firm is *contacted by ODOT* and that the firm *has their ear on the ground*.

I-1. White male owner of a construction-related firm

J. Qualitative Information — Working with ODOT

Need for improvement. Some interviewees were critical of how or whether ODOT makes bid information available. [e.g., #AS-67, #I-43, 54, 58, #PM1-1, #TO-1, 12]

Examples of these comments are on the right.

I don't know where to go to find job postings.

I-51. White male owner of a construction-related firm

[Small businesses] don't know the systems, and they don't know what's out there.

TO-13. African American female representative of a micro-business assistance provider

I think it is more that the opportunities never come up. Finding out when [RFP's] are available is kind of impossible for us. Every time we did, it was too late.

I-36. Asian-Pacific American male owner of a professional services firm

The interviewee noted that finding out about ODOT opportunities requires a business to be assertive, tech-savvy and attend meetings for information and networking. Though he has been to many events, *[I] haven't seemed to find the right [door] when it comes to ODOT.*

I-16. Hispanic American male owner of an MBE specialty services firm

We do have really solid relationships with many people at ODOT, but it does take work to learn about [opportunities] We've had actually a couple [times] ... where an RFP comes out and it's in our wheelhouse and we are scrambling [and wondering], 'Why didn't we know about it?'

I-31. White female representative of a professional services firm

The little guys don't have the time to check websites all the time.

I-29. White male owner of a construction-related firm

They switched over to this new system OregonBuys It's super confusing having to learn a new system.

I-45. White male owner of an ESB construction-related firm

J. Qualitative Information — Working with ODOT

Challenges While Bidding on ODOT Work

Interviewees discussed whether there were barriers to bidding on ODOT work. Most participants noted significant barriers that prevented bidding on and winning work with ODOT, with one interviewee describing ODOT's processes as "on the higher end of hard" [#I-1]. [e.g., #AS-17, 24, 26, 27, 35, 39, 75, 130, 133, 141, 146, #I-2, 6, 9, 13, 16, 30, 42, 47, 49, 56, #TO-1]

Confusion over bidding and scoring. Several participants described not understanding ODOT's processes of bidding or scoring as well as receiving limited feedback. [e.g., #I-51, #TO-16] (See examples on right).

I am doing all this work, but it feels like I am putting it out into a black hole. I have no visibility of the process Sometimes you get the ranking of where you landed; that is good to a point, but that is not enough feedback.

I-18. White male owner of a professional services firm

[Proposals] took so much time. I was a small company at the time — [proposals took] a month, literally, and then to not know, to not hear about it, not get it That's a lot of time when you're a small business to put into something ... [and] you get very frustrated and disheartened.

I-16. Hispanic American male owner of an MBE specialty services firm

It is a longer process [with ODOT]. You are not sure how the scoring works. You can see who is selected, but it is still a mystery.

I-53. White male representative of a professional services firm

I've had a difficult time navigating the rate-setting process. It is unclear how decisions are made, especially given the context of other rates in the industry.

PM1-7. White female owner of a firm

J. Qualitative Information — Working with ODOT

Restrictive bidding requirements. Other participants described bidding requirements that are difficult for small firms to meet and can appear exclusionary. [e.g., #AS-25, #I-14] For example:

It would be a more fair bidding system [if ODOT] stopped asking questions about the history of public work, but more about the projects you have worked on that [are] relatable.

I-3. White male representative of Native American female-owned professional services firm

They [ODOT] might not take you seriously and think you don't have the technical expertise. We have to try much harder to show what we can actually do.

I-58. Hispanic American male owner of an MBE professional services firm

Examples of additional comments are on the right.

Additional barriers. And other interviewees noted a variety of other barriers, such as competition and firm capacity. [e.g., #I-3, 44] For example:

Bidding sometimes requires the whole team to be there, so I have to go find someone who is going to bid on that and then ask them to be on their team. But [by] then I am already not on their team, because they didn't reach out to me. So, I miss [out] on good [professional services] work.

I-33. Subcontinent Asian American male owner of a professional services firm

Don't have a ... team like other firms to polish RFP responses.

AS-145. White male representative of a Native American owned professional services firm

RFPs with very short turn arounds [are another issue, as well as when] RFPs [are] poorly written [with] not enough detail.

AS-110. White female owner of a professional services firm

[There] is a flurry of unreasonable requirements that don't make a difference to the work we perform. Specifically, our work does not require formal licensure [in our industry,] however we are often in the position of explaining to the agency why that is not needed.

PM1-1. White female owner of a professional services firm

There's a lot of past performance requirements in these contracts, and for small companies and even start-ups past performance is difficult to build.

PM1-6. White male owner of a firm

Jump[ing] through the added burden of insurance and stuff like that ... can be a burden.

TO-9. White male representative of a business assistance provider

[ODOT is] exceptionally hard. Their requirements are so intensive that it's almost not worth our time. What they were requesting and the way they are requesting is unrealistic. You can't give me any information [about the project] and then ask me how it will cost down to a dollar and write a proposal? Why go through that if getting it is almost impossible.

I-36. Asian-Pacific American male owner of a professional services firm

What I don't like is the way they [ODOT] do alternative contracting. The level of specific experience relative to that individual is overrated and a lot of people aren't allowed to participate in those contracts.

I-26. White male owner of a construction-related firm

J. Qualitative Information — Working with ODOT

Contractor-Subcontractor Relationships

Business owners and representatives were asked to comment on their experiences with prime contractor-subcontractor relationships.

Creating and maintaining networking connections. Some interviewees described the need for firms to proactively connect with potential prime contractors and/or subcontractors. Many reported difficulties making these connections. [e.g., #AS-48, 150, #ODA2019-17, 27, 28, 35, 17, 39, #TO-16] For example:

Barriers [working with primes] include lip-service to DEI [diversity, equity and inclusion]. Prime companies aren't interested in working with MWESBs.

AS-87. African American female representative of a WBE/MBE/ESB firm

You can tell small business you need to cultivate a relationship with the primes, but how do you ever compete with [a prime] who says, 'We're greedy and we're going to take it all if we can.' You just can't compete with that.

ODOT2016-PMP12. Owner of a firm

Examples of challenges subs face are on the top right. Comments by primes are on the lower right.

Having conversations with primes who solicitate participation prior to bid time is almost impossible to do.

AS-1. Asian-Pacific American male owner of a construction related firm

Accessing [primes] is challenging ... accessing the opportunities ... and working with the primes and accessing traditionally tough-to- get things ... [like] price agreements [is a challenge] They go to the same people.

TO-17. White female representative a business assistance provider

[Subcontractors can be] hard to find.

TO-7. White female representative of a business assistance provider

In the industry right now ... every agency is requiring a certain level of goal and engagement with DBE firms, and there are only so many [DBEs]. I know that ODOT did a 'Meet the Primes' event [recently] Those sorts of events are really of value for the primes who really need to meet their goals, but also need to identify new and emerging firms in the DBE realm.

But what we're experiencing, particularly with the minority-owned businesses, is they're slammed. There's so much requirement, desire, need, and, I wouldn't say they're struggling to provide the services — they will — but there's just too much [work] to go around, so they're having to strategically make a decision about which teams they're on, which projects they're willing to chase and invest in. So, we had a lot of go-to DBEs that we have great working relationships with.

I-31. White female representative of a professional services firm

J. Qualitative Information — Working with ODOT

Barriers to subcontracting. Similar to the 2016 ODOT Disparity Study, some interviewees reported that certain contractors are reluctant to work with newer or smaller businesses. A number of subs indicated challenges when working with prime contractors. [e.g., #I-15, 17, 23, 31, 47, #ODA2019-3, 10, 32, 37, #PM1-13]

Capability. Some interviewees reported primes considering subs as incapable or ill equipped to perform their jobs.

Examples of comments are to the right. (Also see stereotyping discussed later in this appendix.)

[There are] historical belief systems [among] primes: ‘How do I know [subcontractors are] capable?’

TO-3. White female representative of a trade organization

[There] is a perception of who we are and the size of us. The perception of [larger] size to some [primes] sometimes means quality.

I-43. White male owner of a professional services firm

At times it can feel like they [clients and primes] don’t value you much.

I-37. White female owner of a WBE construction-related firm

In the field, it creates resentment. The bigger companies have their practices, but it doesn’t always pan out [for subcontractors].

I-4. African American male owner of a DBE construction-related firm

Q&A is tricky — a lot of primes don’t want subs to ask questions We are often told to route all questions through a potential prime.

PM1-1. White female owner of a firm

There are a lot of challenging topics that these projects are facing that can be really hard for ... the BIPOC community to interface with. Just having that lived experience and then having to navigate it on a project, we’re seeing it’s hard for people as individuals to not take things personally and have it effect their lives.

We’re all very invested in these projects being successful ... but we’re seeing [that] it’s hard. It’s hard conversations, it’s hard to be a part of [stereotyping and other barriers]. We’re seeing some subs step away from these projects, making a choice because it’s too challenging

I-31. White female representative of a professional services firm

J. Qualitative Information — Working with ODOT

Bait and switch. Some subcontractors reported providing a quote for a job and never hearing back or being engaged by a prime on a job only to be left behind when the job is underway.

Examples of these comments are to the right.

When there is no hard goal, and contractors are just looking to show a good faith effort, they ask [subcontractors] for quotes with no intention of using the DBE from which they requested a quote. As a small DBE sub, this does not help us at all.

PM1-13. Asian-Pacific American female owner of a firm

When I was certified ... [primes] would ask us to write the statement of work and breakdown of costs. And when the market got rough, they would terminate our scope of work. So, we would tell them how to do it and how to budget for it and they would listen to us. And when the times got hard, we didn't get to perform that work.

I-59. White male owner of a professional services firm

Generally, after [the prime] give[s] us the opportunity, they find a reason to stall a job then remove the firm from the job.

I-55. White female representative of a construction-related firm

They [primes] will say they are looking for 8 to 10 percent inclusion on a project. We [subs] will get someone to let us join the team, and they will put us on something like QA/QC, where there is no contact with the owner and [is something that] they can show monetary amount towards the task order, but they never use it. We don't get to do anything. It is a way to check a box.

I-43. White male owner of a professional services firm

We worked with a company [on a public project where the prime was] incredibly hostile to work with. After two weeks my company was asked to leave, and a local company took over. It was pretty clear that the inspectors of our jobs were following our crew. It was clear that they were out to get us.

I-55. White female representative of a construction-related firm

J. Qualitative Information — Whether there is a level playing field

Business owners and representatives reported on whether a level playing field exists and any experiences with or knowledge of unfair treatment in the marketplace.

A few participants commented that there was a “level playing field” for minority- and woman-owned firms or other small businesses. For example:

I feel like it's pretty level. I guess I'm just not aware if there [are businesses that are discriminated against]. It's sad to think that there [are] people discriminated against in these days. I know it still happens, but I didn't think [it occurs] in the professional world.

I-5. White male owner of a construction-related firm

I never experienced anybody being rude to me. I haven't felt anyone has treated me bad because of my gender or race onsite.

I-62. Asian-Pacific American female DBE/MBE/WBE owner of a specialty services firm

However, many more participants discussed experiencing or witnessing inequity in the marketplace based on race, ethnicity or gender. [e.g., #I-9, 13, 14, 24, 31-33, 42, 50, 56, #TO-16] For instance:

I got tired of being a woman of color and having to defend myself.

I-19. African American female owner of a DBE professional services firm

My previous position was as a partner at a [professional service firm] I had a child ... and my business partners forced me out.

I-14. White female owner of a specialty services firm

Such findings are comparable to those from the 2016 ODOT Disparity Study and the 2019 ODA Disparity Study.

The next ten pages cover this topic in greater detail including:

- Challenges for minority- and woman-owned firms or other small businesses not faced by other businesses;
- Access to capital;
- Bonding and insurance;
- Issues with prompt payment;
- Unfair treatment in bidding;
- Stereotyping and double standards; and
- “Good ol’ boy” network and other closed networks.

These pages are followed by qualitative input regarding business assistance programs and certification and other recommendations for ODOT.

J. Qualitative Information — Challenges not faced by other businesses

Many interviewees discussed challenges experienced by minority- and woman-owned firms or other small businesses that are not typically faced by other businesses. For example:

The interviewee noted that highly technical language can discourage minority- and woman-owned businesses from applying. Minority- and woman-owned businesses *may be able to compete and do the work, but the way it is worded is very ‘[white] male’ and can be off-putting.*

I-9. White female owner of a professional services firm

One of the big disparities is how the societal expectation of childrearing overlays being [a professional]. It is extremely difficult in this field to be a female [professional,] to have kids and find your way onto a [career] track. Those who make it onto a [career] track generally don’t have children or aren’t the primary caretakers of their children. That’s a barrier that doesn’t exist mainly for male [professionals].

I-13. Asian-Pacific American female owner of a professional services firm

Limited opportunities for people of color. A number of interviewees reported that minority-owned businesses are often taken advantage of or given less work than other non-minority-owned firms. Past studies support these observations.

Related examples of comments follow on the right.

... If you’ve got a firm that is owned by a person of color ... those folks are going to get less work.

ODA2019-3. White male representative of a professional services firm

I am Muslim. Noticeably, there has been a situation [where] one client has told us they don’t want to work with us.

I-33. Subcontinent Asian American male owner of a professional services firm

They have to make sure that they know and try to recruit minority businesses and minority- and woman-owned businesses, because usually they would have a list that would have all of us on it, but I think they sometimes just don’t even put us in the bid process

They already know who they want to have in it, and they have their special ... friends that they’ll put in there. And, a lot of times they are not minority- or woman-owned businesses.

ODOT2016-8. African American female owner of a DBE/MWESB specialty services firm

J. Qualitative Information — Challenges not faced by other businesses

Language barriers. Several interviewees commented on how language barriers impact some minority business owners. For instance:

[Language is] an equity issue. The systems are used to just operating in English, and we are operating [in English,] but we have to do double the work to explain to the client what we're saying, whereas ... these huge agencies that only do it in English, they don't have to do that, they just do it once ... and so every time [the client changes] it ... it just adds, compiles If you're working in other languages, we have to do that a lot ... That's a burden that a lot of people don't really think about.

I-16. Hispanic American male owner of an MBE specialty services firm

Additional comments on this topic are provided to the right.

[Language is a barrier]. We have connected people with [a Spanish-language assistance firm] and they struggle with translating ODOT documents. People just give up. It is too hard to find stuff online and what is required in the contract is insane.

TO-12. White female representative of a business assistance provider

Language barriers can be a real issue for our clients Oregon is not the most diverse state.

TO-13. African American female representative of a micro-business assistance provider

There seems to be some gaps for Spanish-speaking immigrants We offer our services in Spanish because that's the language that some businesses speak There's a language barrier.

TO-14. White female representative of a business assistance provider

A lot of minority-owned [certified] businesses have a language barrier and have a hard time getting their contracts.

I-59. White male owner of a professional services firm

For Latinos ... language is a barrier. And then, 'If language is a barrier, then probably your writing is a barrier, right?' Ultimately at the end of the day, you're going to have to write something ... That can be problematic if that's your second language.

I-16. Hispanic American male owner of an MBE specialty services firm

J. Qualitative Information — Access to capital

As demonstrated earlier in this appendix, business owners and others reported that access to capital and financing is critical to success and can be a barrier for firms with limited access. [e.g., #AS-4, 5, 20, 45, 46, 49, 54, 57, 61, 62, 66, 72, 74, 82, 85, 88, 120, 121, 127, 128, 142, 157 #I-2, 14, #TO-11] For example:

Lack of access to capital [is an issue]. Women and people of color do not have [the] luck of getting venture financing. Less than 5 percent of capital goes to women, and less than 1 percent goes to people of color out of investment capital. There is a lack of access to the right side of the capital. They also traditionally can't get access to a bank loan. We are talking about major barriers and hurdles.

TO-12. White female representative of a business assistance provider

Limited access to capital and financing. Firm owners and representatives identified barriers to capital in the 2016 ODOT Disparity Study and 2019 ODA Disparity Study, as well.

There is a *systematic bias* in banking. *The system supports those who are already successful.*

TO-2. White male representative of a business assistance provider

See additional comments to the right.

Finances and capital to carry ... projects [the biggest difficulty].

I-4. African American male owner of a DBE construction-related firm

The issue I'm having is getting capital ... the projects I'm trying to get want you to buy material up front.

I-40. African American male owner of a DBE professional services firm

... not having capital to work with [was one challenge]. I've since learned that it costs a lot of money to do things the right way. It caught me off guard how much it costs to do stuff the way the State wants you to do it....

I-7. Native American male owner of a construction-related firm

We really like the work that we do ... but from a large infrastructure project perspective ... we don't have the cash resources to staff up in a healthy way While we're hoping to get a large contract, we just can't risk it. We don't have that kind of cash.

I-30. White female owner of a DBE professional services firm

The biggest issue we had is ... credit That was something that has made it very hard for us to grow and get the things that we need.

I-8. African American female owner of an ESB and MBE construction-related firm

Cash flow ... [is an issue] because they have so much invested in capital, labor and certified payroll. Access to capital has always been an issue, but I don't think agencies understand how much they ask companies to grow. Somebody has to finance that They are being asked to take on the largest contracts they have ever taken. Then they are being asked to take on a larger one the next time. Meanwhile, they have to staff a larger crew, and certified payroll eats up any cash on hand.

I-39. Hispanic American male owner of a DBE professional services firm

J. Qualitative Information — Access to capital

Relationship between access to capital and personal financial history. Some interviewees explained the connection between business lending and one’s personal finances. This link can negatively impact minority and woman business owners who generally have less personal capital due to systemic discrimination than majority groups.

Examples are included to the right.

Low homeownership rates among Native Americans makes it harder to start a business.

TO-1. Native American male representative of a business assistance provider

The interviewee reported she used *money from [her] house* to start her business.

I-21. White female owner of a DBE, WBE and ESB professional services firm

The interviewee commented that she sold her vehicle and invested that money into a small piece of firm equipment and another vehicle to get the firm started.

I-24. White female owner of a construction-related firm

[I need] help getting equipment and funds. [I] can’t get loans, because [I] messed [up my] credit when [I] was younger.

AS-56. Native American male owner of a specialty services firm

An interviewee described how a family member gave him an old truck for his business. *With every job I would try to buy a new tool.*

I-5. White male owner of a construction-related firm

J. Qualitative Information — Bonding and Insurance

A firm's bonding and/or insurance capacity greatly impacts the size of contracts the firm is able to bid on. [e.g., #I-11, #ODOT2016-2, 5, 11, 13, 17, 18a, 23, 28, 31, 34, 35, 46, 47, 59, PMP17-19]

Some minority and female business owners and small business representatives reported difficulty securing bonding and/or covering the cost of insurance, and consequent disparate impacts on their firm. [e.g., #AS-64, #ODOT2016-PMP17] For example:

Bonding is a huge, huge, huge issue As a small company, bonding costs money. We are not the primes, where it can get disbursed or recouped with the large projects It's a barrier to entry; it's a barrier to growth; it's a barrier to everything. [Requiring t]he same levels when my work would come under a couple thousand and [the primes] could be several million. It's a huge issue.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

Barriers caused by bonding and insurance requirements were also discussed in the 2019 ODA Disparity Study.

The cost of the insurance, it puts me in a place where you have to maintain those residual costs.

I-4. African American male owner of a DBE construction-related firm

For the work that I am going into, the only thing that sits in the back of my mind is bonding I don't know want any special treatment. I just want opportunities is all.

I-7. Native American male owner of a construction-related firm

Bonding and insurance can be an issue sometimes. The limits on those can be really high on the projects.

I-33. Subcontinent Asian American male owner of a professional services firm

Insurance and bonding requirements can be very expensive.

AS-63. White male owner of a construction-related firm

We are definitely in a hardening market when it comes to insurance and bonding, and the scrutiny of the insurance and bonding decisions is ... frustrating for me because it seems like they're expanding what they feel is something that's hazard work, or whatever

ODA2019-17. White male owner of a construction-related firm

We really need to reevaluate insurance requirements for small businesses, because you can't treat a professional services firm with five people with the same insurance requirements that you would treat a prime with thousands of people They're totally different scenarios Being able to get [insurance] at a price we can afford is a huge barrier to disadvantaged companies ... because we are small, we don't have ... that kind of cash flow.

I-30. White female owner of a DBE professional services firm

J. Qualitative Information — Issues with prompt payment

Many business owners and representatives reported experiencing issues with prompt payment from public agencies as well as prime contractors. [e.g., #AS-51, #I-2, 3, 16, 17, 19, 28, 30, 58, #TO-3, #ODA2019-1, 10, 13, 22, 23, 31, 33, 37, #ODOT2016-11, 25, 30, 46, 52, 55, 58] For example:

The interviewee noted issues with prompt payment [making work difficult].

I-62. Asian Pacific American female owner of a DBE/MBE/WBE construction related firm

Public agencies are often late in payment.

I-9. White female owner of a professional services firm

There are issues of people not being paid promptly or not at all. We don't have law enforcement Nobody is monitoring this area at all.

TO-16. White male representative of a business assistance provider

Slow payment can be especially damaging for firms that do not have the same access to capital as other companies. Examples of these barriers are on the right.

Currently, we are going to turn down public work ... cannot bankroll them. [It is not feasible].

I-55. White female representative of a construction-related firm

You've got to be prepared to wait for your money sometimes.

I-5. White male owner of a construction-related firm

There's a terrible delay in the payment cycle, and while the agency may say that [they're] following the Federal Prompt Payment Law, that's only to the prime. There's [also] problems with reconciling disputed invoices. The whole payment invoicing issue [creates] significant barriers to minority-owned businesses, because [those] businesses ... often do not have the cash reserves to survive the time of these delays. So, if an invoice is delayed ... that small business has to carry the cost of operations till they get paid. And that's a tremendous burden on them.

I-30. White female owner of a DBE professional services firm

We were in a situation where these big firms owed us so much money, we were seriously considering not working for these [local agencies] because we were going to go under.

I-28. White male owner of a construction-related firm

I will say is that this business is tough, meaning you got to have enough capital, because the payment takes 60, 90 days by the time you work. And if you are running a decent sized operation you got to make sure you have the right capital, because that could really hinder not just being in business but sustaining the business.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

J. Qualitative Information — Unfair treatment in bidding

Denial of Opportunity to Bid

Some participants reported encountering denial of opportunities to bid on public projects in the Oregon marketplace. [e.g., #AS-48, 75, 141, 146, 156, #I-16, #ODA2019-21, 29, 37]

See the example at the top-right of the page.

Unfair Rejection of Bid

Other business owners and representatives reported unfair rejections of bids. [e.g., #I-9, #ODA2019-9, 22]

Bid Shopping and Bid Manipulation

Some business owners and representatives reported that bid shopping and bid manipulation exists in the local marketplace. [e.g., #AS-150, #I-1, 8, 62, #ODA2019-17, 28, 29, 32, #ODOT2016-7, 14, 16, 18a, 26, 47]

See the example at the middle-right of the page.

Lack of Feedback

Many interviewees noted not receiving feedback on public entity bids or proposals, which could result in confusion and misunderstanding about the bidding process.

See the examples on the bottom-right of the page.

I tried to contact the [agency that posted the RFP], and I got a bunch of [unnecessary] questions back. I trust my gut that they wanted [a certain company] to get that bid and they did.

I-18. White male owner of a professional services firm

I believe [bid shopping/manipulation] is always going on, big time, because [some] primes ... are shopping until the last minute and switching papers and doing all kinds of things, even if they have told you they are going to take you [as a sub].

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

There is a lot of bid 'fishing' that goes on. That happens a lot. We have had a general contractor inform us that is happening. That is why it becomes hard to win.

I-60. African American male owner of a DBE/MBE construction related firm

You can respond to a question but there's no way to validate [the information] I went through the process, and I scored 80 and above and I was rescored at 55 ... and I asked to see feedback and [I was told that I didn't have experience that I actually did have].

I-19. African American female owner of a DBE professional services firm

The only feedback we get is being told to go look at the company who won. I would like to receive feedback I would like some way to find out why we are getting these ratings in the RFP's. [Like] a feedback meeting. Even if the vendor is silent, I would happily get on a 'Zoom' call where I am muted just to listen to why we got the rating we got.

I-18. White male owner of a professional services firm

J. Qualitative Information — Stereotyping and double standards

Some participants discussed whether there are stereotypes or double standards that impact a firm’s ability to perform or secure work and noted clear instances of discriminatory and biased behavior.

Gender-Based Stereotyping

A number of business owners and representatives reported negative stereotyping of women as “less fit” than men, as well as gender-based intimidation or harassment.

Examples of comments follow on the top right.

Racial Stereotyping

Some business owners of color and others described incidents of stereotyping people of color as less capable.

One comment on the bottom right provides evidence of racial stereotyping.

The interviewee reported double-standards when working on all-male teams. *There was a lot of second-guessing of our analyses.*

I-9. White female owner of a professional services firm

When overbilled by another firm, *I feel like they saw me as a ‘girl who didn’t know anything,’ and they spoke to me like, ‘Oh, honey, you just let me take care of that’ It infuriates me!*

I-24. White female owner of a construction-related firm

Our society still doesn’t support women who stand up for themselves.

I-42. White female owner of DBE professional services firm

The interviewee reported an experience of physical intimidation and verbal assault at a *hostile work environment. I was uncomfortable and I feared for my safety.*

I-32. White female owner of an ESB professional services firm

Just being a woman in this industry is always ... a challenge.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

There is an opinion that if I get a contract because I am an MBE, that I don’t know what I am doing ... [it’s] a deficit that we have to overcome They have a preconceived notion that we’re only there ... to hit numbers [instead] we needed the opportunity and without [certification], we wouldn’t get the chance We talk [with primes] over the phone ... everything is great ... you show up and people begin to question if you have the skills to do the job based on what they saw when you arrived That has been the toughest thing so far for me to experience.

I-8. African American female owner of an ESB and MBE construction-related firm

J. Qualitative Information — “Good ol’ boy” network and other closed networks

Many business representatives reported that the “good ol’ boy” network or other closed networks persist in the marketplace. [e.g., #AS-11, 13, #I-9, 10, 12, 17, 19, 21, 24, 30, 33, 39, 42, 47, #ODA2019-1-3, 7-10, 18, 20, 22, 23, 29, 35, 36, #TO-1] Comparable findings were uncovered in the 2016 ODOT Disparity Study, as well.

Evidence of Closed Networks in the Marketplace

Many reported that closed networks persist in the Oregon marketplace.

It is relationship based Oregon runs on a ‘good ol’ boy’ system.

I-59. White male owner of a professional services firm

All my peers are southern Oregon white guys.

I-34. White male owner of a professional services firm

Absolutely, yes. [They] happen a lot for our contractors.

TO-13. African American female representative of a micro-business assistance provider

The construction industry happens to be more of a ‘good ol’ boys’ club. There are connections, there is loyalty.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

There is definitely a ‘good ol’ boy’ network The system is probably designed by white males in their 30s and 40s. Their lens is limited.

TO-12. White female representative of a business assistance provider

I feel always like it’s this ‘good ol’ boy’ network — they’re going through this process because they have to, but they already know who they’re going to give [the contract] to.

I-16. Hispanic American male owner of an MBE specialty services firm

I came from working on some of the larger firms [contracts] that were on the original ODOT procurement list. I think there were 12 [firms listed]. Part of the deal was that they never used anyone else outside of those 12 [firms] ... they didn’t want to include anyone new into the fold. That still exists in the small business world.

I-43. White male owner of a professional services firm

I never believed that there was a ‘good ol’ boys’ system, but I do now I had a call with a woman who sought me out and she wanted a mentor [The woman had no industry qualifications] and she told me, ‘I’m so excited. I just landed a contract with [a public agency].’

Now, I can’t tell you how many proposals I’ve sent to [that agency] ... [so] I asked her, ‘How did that happen?’ And she responded, ‘Oh, through connections.’

I-6. White female owner of a professional services firm

Yes. It defines how attorneys find their clerkship ... their first jobs, how they move up the ranks It’s about ‘who you know.’

I-13. Asian-Pacific American female representative of a professional services firm

Yes, definitely I do think there are preferential [relationships]. I think if you have contacts, [which] reduce barriers to getting work We have been cut out because we are the new player. I can see ethnic owners get cut out [as well].

I-18. White male owner of a professional services firm

Certification in general feels like a ‘good ol’ boys’ club, because I have to be judged by a man in order to get in.’

I-32. White female owner of an ESB professional services firm

J. Qualitative Information — “Good ol’ boy” network and other closed networks

Personal Benefits of Exclusive Networks

Some majority participants noted that despite closed networks acting as barriers to minority and woman business owners, they, themselves, benefitted from said networks.

Examples are at the top right.

Comments Indicating Closed Networks Have Weakened

A few people observed that closed networks were still around but had weakened or were now less harmful.

Examples are at the bottom right.

Comments Indicating Closed Networks Do Not Exist or Are Not Harmful

Some interviewees noted that there were no closed networks in the local market area or their industry, or that those networks did not negatively affect them. [e.g., #I-5, 12, 15, 26, 34] For example:

We partner with all sorts of firms. I don't feel like there is any unspoken group. But that is just my perspective.

I-38. White male owner of a professional services firm

'Good ol' boy' networks absolutely have a negative impact on minority- and woman-owned firms. [But] it's softened and opened up It's a 'good ol' boy' network for better or worse, but, hey, that's benefitted me.

I-50. White male owner of a professional services firm

The interviewee reported that her firm benefits from using personal connections and networks, but added *if you are outside that network, it can be hard to bust in.*

I-9. White female owner of a professional services firm

I just think as a nation we are getting a little better around the awareness of that. When [closed networks do] happen, I think equally the customers and the primes are very, very sensitive. Agencies are [too]. So, as hard as it is, we are in a lot better place I think And the issues will always remain there, but I think they are getting better.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

I certainly think that used to be the case. Those guys are long gone. Those guys don't run these agencies. They have either retired or sold their books.

I-53. White male representative of a professional services firm

I feel like we're in a transitional phase in the industry There's a lot of people retiring that are used to doing business one way Things have changed so much in the [time] that I've been working, and I see a lot of change coming

I-31. White female representative of a majority-owned firm

J. Qualitative Information — Business assistance programs and certifications

The study team asked business owners and representatives about their knowledge of and experience with business assistance programs and certification.

Awareness of Available Assistance

A number of business owners and representatives were aware of business assistance programs. For some, such programs were useful and provided value to their firm. [e.g., #I-7, 13, 22, 49]

However, more interviewees noted that they were unaware of or did not take advantage of ODOT's business assistance programs or other available programs.

Examples of related comments are on the top right.

Team members specifically asked interviewees whether they knew of or participating in public agency mentor-protégé programs.

Examples of comments are at the bottom right.

I know they exist. I don't have much familiarity with them myself. We were approached by the Port of Portland to assist and train other COBID companies. But that wasn't assistance for us.

I-15. White male representative of a construction-related firm

When I've talked with [my local] business and development person, they're very sweet, but [they say], 'We just don't really have any of those [assistance programs]' And then when I look at other start-up [assistance], usually they're private entities, they're not government entity tech programs, and either they're super local, [for example], you have to live ... in Portland, or they're competition I haven't really seen anything else besides that related to a woman-owned business.

I-46. White female owner of a DBE professional services firm

We applied to the Port of Portland for their business mentorship program, got through to the interview, and we did not get accepted for the program. That program is known for aligning small businesses with bigger companies and sets them up for work with the Port. It would have given us that public experience.

I-3. White male representative of a Native American female-owned professional services firm

I tried to get into a program in the Port of Portland, but they fill up or don't accept new people.

I-4. African American male owner of a DBE construction-related firm

The interviewee indicated that having a mentorship with a more experienced firm would be helpful in overcoming the challenges that he may run into in the future.

I-7. Native American male owner of a construction-related firm

J. Qualitative Information — Business assistance programs and certifications

Certification

Many firms had comments about the process of becoming certified as a DBE or about other types of certifications. [e.g., #AS-104, 119, 143, 153, 154, #I-5, 33, 54, #ODA2019-32, 34, 38] Firm owners in the Oregon marketplace continue to voice varied comments about such programs, as noted in the 2016 ODOT Disparity Study.

Positive experiences. Some reported on the ease and positive outcomes of the certification process. [e.g., #ODA2019-3, 8, 21, 22, 28, 31, 38] For example:

The DBE Program ... is an amazing program for small businesses. It needs to be backed up by the right organizations who are really looking at it, monitoring it, executing it, supporting small businesses.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

Comments of this nature are to the top right.

Negative experiences. However, far more participants noted negative experiences and outcomes from the certification process. [e.g., #AS-107, #I-8, 16, 22, 33, 41, 55, 56, #ODA2019-16, 21, 23, 24, 36, 39, #TO-16]

Too cumbersome. Many of these firms indicated that the certification process was time consuming or cumbersome. For example:

Just the certification process is ... kind of onerous, honestly ... we help [small] businesses with ... certification with the SBA for federal opportunities, but people say the State certification is harder It takes so much time and energy.

TO-9. White male representative of a business assistance provider

Examples of more comments are on the lower right.

It was fairly easy Probably 50 percent of the jobs we get are encouraged through certifications.

I-4. African American male owner of a DBE construction-related firm

It seems like the MBE/WBE certification goes a long way ... contracts have aspirational goals working with disadvantaged companies.

I-15. White male representative of a construction-related firm

[Being certified] was extremely helpful ... a lot of people ask for it.

I-32. White female owner of an ESB professional services firm

It was a lot of reading and gathering forms.

I-40. African American male owner of a DBE professional services firm

ODOT needs to just fix DBE guidelines ... it is very, very messed up.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

I think it's shifted ... it used to be a really cumbersome process It does disadvantage the entering business owner.

TO-17. White female representative a business assistance provider

Amount of paperwork and documents required took us two-and-a-half weeks. They found a discrepancy ... didn't ... reach out ... we got an automatic denial ... no dollar in my bank ... from being ... certified.

I-3. White male representative of a Native American female-owned professional services firm

It is not easy on the Oregon side [The] Oregon application takes longer than Washington I don't know why they are ... so difficult.

I-22. Asian-Pacific American female owner of a DBE/MBE/WBE specialty services firm

J. Qualitative Information — Business assistance programs and certifications

Limited effects on opportunity, benefitting some over others. Some business owners reported to never have benefited from being certified. (See examples to the top right.)

One representative of a majority-owned construction perceived certification to advantage DBEs that get as much or more work than his firm. (See lower right.)

Alternative Contracting Methods. One business owner perceived that Alternative Contracting Methods limits participation.

The word in minority communities [about the certification process] is, ‘Don’t waste your time’ They don’t think it will help.

I-19. African American female owner of a DBE professional services firm

I don’t know how much the certification is even helping us. We get it because we can, but there haven’t been many opportunities that have come because of it. We almost didn’t renew, because there was a requirement of a whole bunch of information [to do so].

I-11. Asian-Pacific American male owner of MBE professional services firm

It was like going to college [and getting a degree] I can say I have it, but I don’t use it It was a lot of work.

I-21. White female owner of a DBE, WBE and ESB professional services firm

They [ODOT] should probably take another really strong look at the DBE Program It’s doing more to increase the cost of work to the taxpayers and the public A lot of the dependable minority contractors that we have here ... do as much work or more than we do in a year, so it seems kind of odd that they’re still classified as some sort of disadvantaged business when they’re just as big as we are and doing just as much if not more work.

I-63. White male representative of a majority-owned construction related firm

J. Qualitative Information — Business assistance programs and certifications

Contract Goals or Other Preference Programs

Some business owners and representatives supported the need for contract goals programs to level the playing field. With well-monitored compliance, contract goals and other preference programs were perceived as being helpful.

Examples of comments are on the right.

One business owner referenced the state funded ESB Program, as an example of a positive bidding experience for small businesses:

The set-asides help a lot ... [otherwise] you are just bidding against everybody.

I-54. White male owner of a professional services firm

Take the emphasis off of percent [goals] on contracts, because I believe it sends the wrong message to the small businesses The numbers don't seem that impressive when you know they are using the same companies.

I-39. Hispanic American male owner of a DBE professional services firm

Finding and working with companies that take part in working with certified companies has been a problem.

AS-35. African American male owner of a professional services firm

When there are RFP issues or intentions are directly tied to percentages in a contract, it drives companies like ours to pull in partners. It adds challenges for us, but in states where it is actively laid out, you get prime vendors more engaged.

I-27. White male representative from a construction-related firm

Ability to find DBE contractors capable of doing the work and meeting the condition of award goals by agencies [should be improved].

AS-2. White male owner of a construction-related firm

J. Qualitative Information — Business assistance programs and certifications

Other Comments

Several business owners reported not understanding why they do not qualify for DBE certification.

See right column for related examples of comments.

If you look at our firm, it doesn't get much more diverse. We have four employees and out of those four, three are racial minorities. Yet, we aren't certified and under these current rules, we will not be certified.

I-13. Asian-Pacific American female owner of a professional services firm

I'm from [a Middle Eastern country]. It is an Asian subcontinent [country], but in the U.S., it is not considered a minority. Therefore, [I] can't register as a minority-owned business.

AS-153. Subcontinent Asian American male owner of a professional services firm

There isn't a designation for disabled people. I have not seen a certification dedicated to or helpful for the disabled community.

I-23. White male owner of a professional services firm

J. Qualitative Information — Other insights and suggestions for ODOT

Interviewees provided a myriad of comments and insights regarding how to improve ODOT procurement practices and other related topics.

Appendix J concludes with a summary of recommendations gathered via in-depth interviews and other means.

Procurement Process

Some commented on how ODOT may improve the procurement process, particularly RFPs. [e.g., #I-6, 8, 22, #TO-1] (See comments on the right.)

Generally, government doesn't understand private business ... [they request] budget, scope, timelines that are completely unrealistic.

I-17. White male owner of a specialty services firm

They should have a third party deciding the bids.

I-37. White female owner of a WBE construction-related firm

The questions for solicitation lend themselves to firms that have been in business for a long time or firms with many people The challenge is [also] the time involved to complete the RFP.

I-12. Hispanic American female owner of a DBE professional services firm

I would like to see the RFP be set more to the average companies and not just firms with specialties in public work.

I-3. White male representative of a Native American female-owned professional services firm

I don't know why I have to pay [for online bid access] when it is supposed to be free [The website] will only provide five or six free listings ... you have to pay [the] company ... holding them hostage.

I-24. White female owner of a construction-related firm

One of the worst parts is that these agencies rely on you to put in a couple different [NAICS] codes, and they only will send you information if your codes match up with the codes that they've identified for their RFP, even if the codes that they've identified on the RFP are not comprehensive. So, we have to oftentimes hound them ... [and say], 'Hey we match this scope, here's our information.'

I would really like to see that they build in a standard template to their RFPs ... [including] essential[s] to ensure a project's success: quality management expectations ... [and] risk management.

I-30. White female owner of a DBE professional services firm

J. Qualitative Information — Other insights and suggestions for ODOT

Education and Outreach

Many reported on ODOT outreach and engagement with local firms. Some commented that the agency did a thorough job. For example:

The outreach to DBEs is fantastic.

I-10. White female representative of a DBE and MBE professional services firm

However, many more business owners and other interviewees recommended a need for greater ODOT outreach to DBEs and other small businesses. [e.g., #I-6, 12, 19, 24, 30, 39] For example:

I think the most challenging thing is to know who to talk to [in order] to get an understanding of contract opportunities, [such as] where they would be coming up Maybe ... have some periodic conferences that discuss procurement opportunities that are upcoming among certain divisions of ODOT Just be open about what's there and then people can plan accordingly about what they want to pursue. I've seen some other[s] do that. I'm actually attending [an event soon] You get a chance to speak to individual departments.

I-47. White male representative of a professional services firm

Firm owners and representatives from the 2016 ODOT Disparity Study also noted difficulties communicating with the agency and lack of effective outreach.

Additional comment examples are to the right.

If ODOT has a practice of going into communities and offering a workshop, that would be of value in this area.

TO-16. White male representative of a business assistance provider

[ODOT has] to go to the people [they're] trying to target, and their environment, and try to be in that space with them Try to educate them. But it can't just be one time — you have to keep coming back to build the friendship and the relationship and then the trust

I-16. Hispanic American male owner of an MBE specialty services firm

[ODOT is not] really doing outreach or responding to small businesses when the small businesses are reaching out.

I-11. Asian-Pacific American male owner of MBE professional services firm

Having open houses would be beneficial.

I-21. White female owner of a DBE, WBE and ESB professional services firm

ODOT continues to spend time hosting events that yield little results. It should build relationships with MWESBs and show immediate results.

AS-87. African American female representative of a WBE/MBE/ESB firm

Have a dedicated member reaching out to small businesses, so we can apply to things We are a small business so we can only do so much when it comes to understanding the bid process and contracts. [It could] be more user friendly or have a coordinator or advocate to help small businesses to apply.

I-22. Asian-Pacific American female owner of a DBE/MBE/WBE specialty services firm

J. Qualitative Information — Other insights and suggestions for ODOT

Unbundling

Similar to the 2016 ODOT Disparity Study, when offering insights, several interviewees indicated that unbundling large ODOT contracts would be beneficial. [e.g., #I-1, 12, 28, #ODOT2016-3, 11, 14, 16, 19, 21, 23, 25, 27, 30, 31, 33, 34, 36, 37, 38, 44, 45, 47, 50, 51, 56] For example:

Many pursuits tend to be bunched together — two or three medium-sized projects bunched together. The problem is by doing that you elbow businesses like us. I can't [do] ten similar projects. That verbiage completely weeds us out.

I-43. White male owner of a professional services firm

Additional comments are to the right.

The interviewee reported that ODOT already does a fair amount of unbundling and indicated that it has been helpful to small firms.

ODOT2016-7. African American male rep of a DBE/MBE/ESB specialty services firm

Unbundling would be beneficial. Contracts are way too big for small firms to go after.

TO-4. White female representative of a trade organization

Some of these RFPs ... are written to scale [small firms] out when actually in fact they want your expertise, and they should have been designed to put you first and everybody else second.

I-16. Hispanic American male owner of an MBE specialty services firm

Take the bigger contracts and break them down into smaller contracts for smaller firms to pick up.

I-4. African American male owner of a DBE construction-related firm

It's really difficult to take on a multifaceted project.

I-1. White male owner of a construction-related firm

Anything that ODOT can do with smaller projects, do that. The more projects that can be cut down and give more opportunities to the smaller guys [would be good], and you will still have high-quality bids.

I-33. Subcontinent Asian American male owner of a professional services firm

They lump so many services together that a small business can't do [the job].

I-34. White male owner of a professional services firm

J. Qualitative Information — Other insights and suggestions for ODOT

Transparency and Consistency

Several participants stressed the desire for transparency and consistency within ODOT processes. Transparency was also a key issue cited by participants in the 2019 ODA Disparity Study. (See top right.)

Interviewees also mentioned consistency in how firms are treated as being important to leveling the playing field. (See lower right.)

[Provide] more transparency and more availability to the [bid opportunity] information. [Also] the new platform, OregonBuys, is difficult to navigate.

I-24. White female owner of a construction-related firm

Accurately and transparently measure performance against those goals [in a way that doesn't] rely on the 'coyote to watch the henhouse.' One of the biggest mistakes ... that I've seen ... is that oftentimes the agencies rely on the primes to tell the agency whether or not the prime is doing everything well Healthy, effective, well-managed oversight programs are essential for the success of any of these programs.

I-30. White female owner of a DBE professional services firm

Have the process [be] as transparent as possible and give information to people on how to be eligible [to work].

I-49. White female owner of a WBE professional services firm

[ODOT] needs to treat everyone the same and have a level field.

I-20. African American male owner of a DBE specialty services firm

Equal treatment when [minority-owned firms] are awarded work. That we [are given] the same opportunities and experiences as majority firms.

I-60. African American male owner of a DBE/MBE construction-related firm

J. Qualitative Information — Other insights and suggestions for ODOT

Other Insights

Some interviewees provided additional suggestions for improvements for ODOT consideration. [e.g., #I-16, 55, 61]

Encourage relationship building. Both primes and subcontractors suggested strategies for identifying potential partners, for example. (See right column.)

What might be helpful is having a good resource [list of] firms who are historically disadvantaged that have worked with ODOT, so firms like us can find them and partner with them.

I-27. White male representative of a construction-related firm

Develop a comprehensive list of the subs that are qualified ... a lot of times they just don't respond.

I-37. White female owner of a WBE construction-related firm

It would be helpful if more pools could be established, so that when ODOT has contract work, they can connect easily with small businesses to get that work done.

AS-68. White female owner of a professional services firm

Have opportunities or places to advertise your business [and] have more annual bids.

I-44. White male owner of a specialty services firm

If ODOT had a roster where [we] could submit our quals [that would be beneficial].

I-42. White female owner of DBE professional services firm

J. Qualitative Information — Other insights and suggestions for ODOT

Extend time for responses to solicitations. As mentioned earlier, some businesses reported the need for more time to respond to ODOT solicitations. (See top right.)

Look for new ways to innovate. Several interviewees suggested ways for ODOT to innovate its procurement practices through diverse hiring and learning from others.

Having RFPs out that are ready to go early, [and] maybe opening up the window of question time [sooner] [Also] in some agencies, they've limited the questions to only primes, and that seems silly ... From a DBE perspective, or a small business perspective, we have to go find a prime who we may not even have a teaming agreement with yet and try to convince them to raise our questions within the window that's allowed to raise questions on the RFP.

I-30. White female owner of a DBE professional services firm

Hire more women and people of color to work [at ODOT], because they will influence the design of their programs. We hear things like, 'If it's not broken, don't fix it.' [And] 'It wasn't grown here, so we don't want it. We don't need more jobs; we have enough businesses here.' That doesn't breed innovation and acceptance.

TO-12. White female representative of a business assistance provider

[ODOT] should talk to the [procurement] office in Washington and look at the lessons learned, best practices, and how they can take that and make it better And have a true organization who really revisits the DBE guidelines and implements them the right way.

I-56. Subcontinent Asian American female owner of a WBE/MBE/DBE construction-related firm

J. Qualitative Information — Other insights and suggestions for ODOT

Final Comments on the ODOT Disparity Study

The draft report was published for public comment on May 19, 2022, and the study team presented study results to members of the public at six virtual town hall meetings in May and June 2022. Examples of comments include the following:

As far as DBE organization goes, it's [a] three-fold issue: access to capital, access to opportunities and access to training.

TH-13. Subcontinent Asian male town hall participant

There are a number of businesses that are still struggling after the COVID shutdowns, and also [are dealing with] the inability to get capital and employees. So, there are a number of businesses that haven't been able to successfully apply to some of the COVID relief programs The playing field [during COVID] went from this [sizeable gap] to this [huge gap] for a lot of contractors

A lot of work has been going into OregonBuys with the outreach training of contractors. The platform development has been very customer oriented One of the intentions is to be more user friendly, more accessible. Any feedback that [ODOT] gets is gonna be super helpful to the developers of OregonBuys to break down any barriers that got accidentally baked in.

TH-5. White female town hall participant

In the African American business community, trust in ODOT is low Even within the group of marginalized businesses, African Americans are still on the bottom It doesn't seem like the [ODOT DBE] program, the way it exists, is being culturally responsive to the needs of African American people.

With the disparity data that's shown, it seems like groups aren't being fully utilized to be able to have access to this work. It seems like hands are out there, but it doesn't seem like we're using all the hands that are at the table or could be at the table.

TH-31. African American male town hall participant

I know there can be great hesitation from the contracting community to respond to a [phone] number or [procurement] person they don't know and hand over their business information. Especially smaller firms of color.

TH-58. White female town hall participant

APPENDIX K. Business Assistance Programs

Public agencies, not-for-profit organization, trade organizations and other groups provide broad assistance to small businesses and minority- and woman-owned firms in Oregon. Appendix K provides some examples; there are so many initiatives that it would not be possible to prepare an exhaustive list.

Figure K-1 describes the categories of activities discussed in this appendix.

Most of these programs and activities are “race- and gender neutral.” This provides important context for assessing current and potential new business assistance efforts by ODOT.

K-1. Examples of national, state and local business assistance programs

Federal government programs, by type

- Lending and bonding

- Tax incentive programs

- Business training and counseling

- Procurement programs

- Advocacy, research and other assistance

National and state-level nonprofit programs

- National trade organizations,

- State and local government programs

- State and local trade organizations

K. Business Assistance Programs — Federal government program examples

The federal government provides direct assistance and advocacy for small businesses, minority- and woman-owned businesses and firms owned by other groups. Federal programs also include tax incentives to assist certain types of businesses or communities.

Federal Lending and Bonding Programs

Examples of these types of programs are provided to the right.

Empowerment Zone Program. The Empowerment Zone Program is a direct loan program providing funding from \$25,000 to \$50,000 for eligible businesses located in Empowerment Zones. Empowerment Zones were created by HUD to enable residents of the poorest neighborhoods to become self-sufficient and improve the quality of life for that area.

U.S. Small Business Administration (SBA) 7(a) Loan Program. The SBA 7(a) Program provides small businesses access to up to \$5 million in loans to fund startup costs, buy equipment, purchase new land, repair existing capital and expand an existing business. To be considered eligible for the SBA 7(a) Loan Program, businesses must meet SBA's size standards which are dependent on a businesses' annual receipts and number of employees.¹

U.S. Department of Transportation (USDOT) Office of Small and Disadvantaged Business Utilization (OSDBU) programs. The OSDBU offers a range of programs and resources to assist small and disadvantaged businesses. Programs include a mentor-protégé program, a bonding assistance program, the Women and Girls in Transportation Initiative and a short-term lending program. USDOT partners with The Surety and Fidelity Association of America (SFAA) to help small businesses become bond ready. Becoming bondable is a challenge for many targeted businesses and this program aims to help businesses grow and build bonding capacity.²

¹ See <https://www.sba.gov/partners/lenders/7a-loan-program/types-7a-loans>

² See <https://www.transportation.gov/content/office-small-and-disadvantaged-business-utilization>

K. Business Assistance Programs — Federal government program examples

The federal government provides direct assistance and advocacy for small businesses, minority- and woman-owned businesses and firms owned by other groups. Federal programs also include tax incentives to assist certain types of businesses or communities.

Federal Tax Incentive Programs

Examples of these types of programs are provided to the right.

Federal Opportunity Zone Program. The Federal Opportunity Zone Program provides set asides for investment in local businesses, real estate or development projects in exchange for a reduction in tax obligations. Opportunity Zones include the most underserved and disinvested neighborhoods within a community to encourage businesses to consider bringing or keeping their businesses. Unlike the New Market Tax Credit Program (see below) this program is not limited by annual Congressional approval or tax credit allocation. There are 86 Opportunity Zones in Oregon.³

New Markets Tax Credit Program. This program operates within the U.S. Department of the Treasury’s Community Development Financial Institutions (CDFI) Fund and uses federal tax credits to attract private investment in low-income communities.⁴

³ See https://www.oregon.gov/biz/programs/Opportunity_Zones/Pages/default.aspx

⁴ See <https://www.cdfifund.gov/programs-training/programs/new-markets-tax-credit>

K. Business Assistance Programs — Federal government program examples

Federal Business Training and Counseling

The federal government also supports small business and minority- and woman-owned business training and counseling. Examples are provided below.

Minority Business Development Agency (MBDA) programs. Part of the U.S. Department of Commerce, MBDA provides technical assistance and resources related to business financing, access to capital, contract opportunities and new opportunities for minority-owned businesses.⁵

Internal Revenue Service (IRS) Small Business and Self-Employed Tax Center. This program provides resources for taxpayers filing as self-employers or small businesses with assets under \$10 million. The Center provides information on independent contractors; preparing and filing taxes; online learning workshops; and the stages of owning a business.⁶

Procurement Technical Assistance Centers (PTACs). The U.S. Department of Defense partners with state and local agencies to assist small businesses in competing for federal, state and local government contracts. Services are provided through regional centers operated by local organizations. The Government Contract Assistance Program is the State of Oregon's PTAC and provides training, networking, community events, other resources and one-on-one assistance to small businesses. GCAP also offers automated bid matching services at the federal, state and local levels.⁷

Small Business Development Centers (SBDCs). U.S. Small Business Administration financially supports SBDCs across the country that train small business owners and prospective entrepreneurs. There are 19 centers located in Oregon.⁸

U.S. Economic Development Administration (EDA). U.S. EDA works directly with local communities to advance economic development initiatives. The U.S. EDA provides grants to businesses for planning, technical assistance and infrastructure construction.⁹

U.S. Small Business Administration (SBA) 7(j) Management and Technical Assistance Program. The SBA 7(j) Program provides high-quality business assistance to help eligible firms be competitive for federal, state and local government contracts. Business assistance includes training, executive education and one-on-one consulting for a wide range of topics. To be considered eligible for this program, businesses must be located in areas of high unemployment or low income, owned by low-income individuals, and certified as an SBA 8(a) Business Development Program participant, a HUBZone small business and/or an economically disadvantaged woman-owned small business.¹⁰

U.S. Small Business Administration (SBA) Office of Veterans Business Development. U.S. SBA Office of Veterans Business Development provides business training, counseling and assistance. It also oversees federal procurement programs for veteran- and service-disabled veteran-owned small businesses.¹¹

K. Business Assistance Programs — Federal government program examples

Federal Procurement Programs

Several federal agencies operate procurement programs to assist small businesses and/or minority- and woman-owned companies.

U.S. Department of Defense (DoD) programs. The U.S. Department of Defense (DoD) aids small businesses interested in participating in DoD contracts. It also applies incentives for using small businesses, American Indian-owned businesses, woman-owned small businesses and firms located in historically underutilized business zones (HUBzones). Certain prime contracts must establish small business subcontracting programs.

DoD also operates a mentor-protégé program that matches large firms with small disadvantaged businesses, woman-owned small businesses, service-disabled veteran-owned small businesses and. Mentors are reimbursed for mentoring expenses or are provided credit toward their small disadvantaged business subcontracting goals.¹²

U.S. Department of Housing and Urban Development (HUD) programs. HUD administers Community Development Block Grants (CDBG funds), certain federal housing programs and related programs. State and local governments that receive money from HUD must comply with HUD requirements regarding minority- and woman-owned business participation in HUD-funded contracts, as well as participation of project-area residents in those contracts.

U.S. Department of Transportation Federal DBE Program. The U.S. Department of Transportation requires state and local governments that receive funds from the Federal Highway

Administration, Federal Transit Administration and Federal Aviation Administration to implement the Federal DBE Program.

To be certified as a DBE, a firm must be socially and economically disadvantaged. Revenue limits, personal net worth limits and other restrictions apply. Most DBEs are minority- or woman-owned firms, but white male-owned firms that can demonstrate social and economic disadvantage can be certified as DBEs as well.¹³ The Oregon Certification Office of Business Inclusion and Diversity (COBID) certifies firms as DBEs.

Under the Federal DBE Program, some public agencies set DBE goals on USDOT-funded contracts. Prime contractors must either include a level of DBE participation in their bid that meets the goal for the contract or show good faith efforts to do so.

U.S. Department of Veterans Affairs, Office of Small and Disadvantaged Business Utilization (OSDBU). The U.S. Department of Veterans Affairs OSDBU assists veteran-owned businesses through the business verification and procurement assistance program and the VA Small Business Mentor-Protégé Program.¹⁴

U.S. Environmental Protection Agency (EPA) Disadvantaged Business Enterprise (DBE) Program. The EPA has certain requirements for the EPA Disadvantaged Business Enterprise (DBE) Program regarding participation of minority- and woman-owned businesses, small businesses and other targeted businesses in EPA-funded contracts for construction, equipment, services and supplies.¹⁵

K. Business Assistance Programs — Federal government program examples

U.S. Small Business Administration (SBA) 8(a) Business Development Program. The SBA 8(a) Business Development Program is a business assistance program for small disadvantaged businesses. It offers a broad scope of assistance to firms certified under the program (companies that are owned and controlled at least 51 percent by socially and economically disadvantaged individuals).¹⁶ Program participants can compete for set-aside and sole-source federal contracts.

U.S. Small Business Administration (SBA) Office of Veterans Business Development. U.S. SBA Office of Veterans Business Development oversees federal procurement programs for veteran- and service-disabled veteran-owned small businesses.¹⁷

U.S. Small Business Administration (SBA) Historically Underutilized Business Zones (HUBZones). The SBA HUBZone program helps certified small businesses in urban and rural communities gain preferential access to federal procurement opportunities. Firms are eligible for certification if they are a small business according to SBA's size standards, are at least 51 percent owned and controlled by U.S. citizens or a qualified organization, have a principal office located within a Historically Underutilizes Business Zone and have at least 35 percent of employees residing in a HUBZone.¹⁸ Program participants benefit in a few ways, including receiving a 10 percent price evaluation in certain contract competitions.

U.S. Small Business Administration (SBA) Mentor-Protege Program (MPP). The SBA MPP is a program to formalize mentoring relationships between qualified established firms and eligible small businesses. The MPP does not match mentor and protégé firms. Instead, mentor and protégé firms should establish a relationship before applying to the MPP.¹⁹

Woman-Owned Small Business/Economically Disadvantaged Woman-Owned Small Business (WOSB/EDWOSB) Federal Contracting Program. The WOSB/EDWOSB program administered by the U.S. SBA assists small businesses owned and controlled by one or more economically disadvantaged women to participate in federal procurement process within industries where woman-owned small businesses are under-represented. To be a WOSB, a woman-owned small business in selected industries²⁰ must be at least 51 percent owned and controlled by women who are U.S. citizens and be a small business as defined by the U.S. SBA.

To be eligible as an EDWOSB, the business must meet the criteria of the WOSB program and each owner must have less than \$750,000 in personal net worth, \$350,000 or less in adjusted gross income averaged over the previous years, and \$6 million or less in personal assets.²¹

K. Business Assistance Programs — Federal government program examples

Federal Advocacy, Research and Other Assistance

Examples of other types of federal programs are provided to the right.

Minority Business Development Agency (MBDA). Part of the U.S. Department of Commerce, MBDA provides technical assistance and resources related to business financing, access to capital, contract opportunities and new opportunities for minority-owned businesses in the United States.²²

Small Business Innovation Research (SBIR). SBIR program solicitations are issued by eleven Federal agencies, including the Department of Agriculture, Department of Commerce, Department of Defense, Department of Education, Department of Energy, Department of Health and Human Services, Department of Homeland Security, Department of Transportation, Environmental Protection Agency, National Aeronautics and Space Administration, and the National Science Foundation.²³

Small Business Technology Transfer (STTR). STTR is designed to stimulate technological innovation and provide opportunities for small businesses in the field of research and development in partnership with federal agencies. Small businesses collaborate with agencies such as the Department of Defense, the Department of Energy, the Department of Health and Human Services, the National Aeronautics and Space Administration and the National Science Foundation in joint-venture opportunities throughout the nation.²⁴

²² See <https://www.mbda.gov/>

²³ See <https://www.sbir.gov/>

²⁴ See <https://www.sbir.gov/about/about-sttr>

K. Business Assistance Programs — National nonprofit program examples

There are many national not-for-profit organizations that support entrepreneurship, small business development and minority- and woman-owned business development.

Ewing Marion Kauffman Foundation. The Kauffman Foundation conducts research and provides training about entrepreneurship and provides grants to organizations that boost entrepreneurship.²⁵

Operation Hope Small-Business Empowerment Program. The Operation Hope program assists aspiring entrepreneurs in low-wealth neighborhoods. The program combines business training and financial counseling with access to small business financing options. Participants complete a 12-week training program, plus workshops on business financing, credit and money management.²⁶

Service Corps of Retired Executives (SCORE). SCORE is a nonprofit, volunteer-run organization that offers small business supportive services and business mentoring nationwide as a resource partner of the U.S. Small Business Administration (SBA). It provides technical assistance such as help with business plans, marketing and sales and financial forecasting. Numerous SCORE offices are located throughout Oregon.²⁷

²⁵ See <https://www.kauffman.org/>

²⁶ See <https://operationhope.org/small-business-development/>

²⁷ See <https://www.score.org/find-location?state=OR>

K. Business Assistance Programs — National trade organizations, often with regional chapters

There are national trade organizations, typically with local affiliates, serving many of the subindustries examined in this study. Examples are provided here.

American Council of Engineering Companies (ACEC). ACEC is a member-based organization that provides legislative representation, continuing education, networking opportunities, publications, awards, insurance programs and other support. ACEC Oregon serves all of Oregon as well as Clark County, Washington.²⁸

American Institute of Architects (AIA). AIA is a member-based organization that supports architects through networking opportunities, awards, scholarships, advocacy, education, professional development, information about exams, licensure and continuing education and more. AIA also includes committees for certain members such as Women in Architecture (WIA). AIA Oregon includes five different sections to serve its members in different regions of the state.²⁹

Associated Builders and Contractors (ABC). ABC is a member organization comprised of firms performing work in the industrial, commercial and institutional sectors of construction. It provides a variety of services including education and training, business development, safety programs, member discounts, insurance programs, student outreach and more. ABC Pacific Northwest serves Oregon.³⁰

Associated General Contractors of America (AGC). AGC is a trade association that provides members with funding opportunities, apprenticeship programs, bidding information for public and private sector opportunities, labor relations assistance, safety training, construction education and employee development, meetings and events and other assistance. AGC Oregon Columbia Chapter serves Oregon firms.³¹

National Association of Minority Contractors. Regional chapters of NAMC such as National Association of Minority Contractors Oregon support the local minority construction community by providing members with contracting and procurement information, professional training and development, networking, mentor/protégé opportunities and more.³²

National Black Chamber of Commerce (NBCC). The NBCC provides education, training and other resources for African American-owned businesses in the United States and other countries.³³

³⁰ See <https://www.abcpnw.org/>

³¹ See <https://www.agc-oregon.org/>

³² See <https://www.namc-oregon.org/>

³³ See <https://www.nationalbcc.org/>

K. Business Assistance Programs — National trade organizations, often with regional chapters

National Minority Supplier Development Council (NMSDC). NMSDC is a corporate member organization focused on increasing business opportunities for certified minority-owned businesses. It operates the Business Consortium Fund, a nonprofit business development program, which offers financing programs and business advisory services for its members.³⁴ The Northwest Mountain Minority Supplier Development Council is the regional affiliate serving Oregon and other states in the Northwest.³⁵

National Association of Women Business Owners (NAWBO). NAWBO is a national member-based organization that serves women entrepreneurs in all sectors, sizes and stages of development. Membership benefits include webinars, product discounts, online directories and other more. There is an Oregon chapter.³⁶

National Association of Women in Construction (NAWIC). NAWIC is a national member-based organization that serves women entrepreneurs in all sectors, sizes and stages of development. Membership benefits include webinars, product discounts, online directories and other more. There is an Oregon chapter.³⁷

U.S. Chamber Small Business Division. The Small Business Division offers free tools, such as the Small Business Office Playbook, and helps with selecting offices, cost control and choosing suppliers.³⁸

³⁸ See <https://www.uschamber.com/members/small-business>

K. Business Assistance Programs — State and local government program examples

The State of Oregon, as well as many local government entities, provide business assistance through a variety of government-run programs.

Business Retention Services Program. Business Oregon runs this program, which provides consulting services to Oregon companies facing financial difficulty or a business expansion or growth opportunity. The program matches eligible businesses with a consultant, and directly pays those consultants up to \$15,000 for consulting services or up to \$30,000 for a feasibility study.³⁹

Economic development districts. Oregon has 12 economic development districts that support entrepreneurship, small business development and other efforts to strengthen local economies in the state.⁴⁰ For example, the Southern Oregon Regional Economic Development Inc. (SORED) hosts networking events and assists business with financing, including a small business loan fund.⁴¹

Minority, Women and Emerging Small Business Program. The Oregon Certification Office for Business Inclusion and Diversity is the certifying agency for the State of Oregon and provides certification services for Disadvantaged Business Enterprises, Airport Concession Disadvantaged Business Enterprises, Emerging Small Businesses, Minority Business Enterprises, Women Business Enterprises and Service-Disabled Veteran Business Enterprises. The agency includes vendors in its certified business directory.⁴²

Port of Portland Mentor-Protege Program The Port of Portland operates this three-year program with pairs a COBID-certified protégé firm with two mentor firms. The firms work together to develop a strategic plan, and the Port facilitates regular meetings and provides additional technical assistance to the protégé firm, including bookkeeping, marketing, estimating and other services.⁴³

Port of Portland Small Business Enterprise Program. The Port of Portland aims to award at least 20 percent of its contracting dollars to certified small businesses. To be eligible, firms must be certified through the State of Oregon’s Certification Office for Business Inclusion and Diversity or the Washington State Office of Minority & Women’s Business Enterprises.⁴⁴

Prime Contractor Development Program (PCDP). This City of Portland program restricts bidding on certain smaller construction contracts to COBID-certified contractors. It also provides technical assistance and other support.⁴⁵

Prosper Portland. Prosper Portland, the City of Portland’s economic and urban development agency supports small businesses through technical assistance, training and business finance programs. They also operate the Inclusive Business Resource Network, which connects owners with business advisors who specialize in serving minority-, woman- and immigrant-owned businesses.⁴⁶

K. Business Assistance Programs — State and local trade organization and nonprofit examples

In addition to local chapters of national or state groups previously discussed in this appendix, the State of Oregon is served by state and local trade organizations and local nonprofits, including those focusing on minority-owned and woman-owned businesses. Examples are provided here.

Micro Enterprise Services of Oregon (MESO). MESO provides entrepreneurs with one-on-one business consulting services, classes and workshops (including Spanish-language offerings) as well as other fee-based services such as market research. MESO has five offices located across Oregon and also provides short-term and long-term financial assistance including matching IDA funds, credit builder loans, and business loans up to \$250,000.⁴⁷

Oregon Association of Minority Entrepreneurs (OAME). OAME is a member organization assisting minority-owned businesses in Oregon and Southwest Washington. The association provides its members with technical assistance, business counseling, Clearinghouse access, incubator office spaces at low rates and bi-monthly networking meetings. The organization also assists business with access to capital, either through direct microloans via its subsidiary, OAME Credit Corporation, or by assisting small businesses in identifying outside financing sources.⁴⁸

Oregon Business and Industry (OBI). In 2017, Associated Oregon Industries and the Oregon Business Association merged to form this business advocacy group. In addition to legislative advocacy for the Oregon business community, OBI connects Oregon businesses through member events and webinars, free legal consultation, and insurance discounts. The organization also has a Research and Education Foundation that performs a variety of public policy-focused research projects.⁴⁹

Oregon Native American Business Network (ONABEN). ONABEN focuses on developing entrepreneurship and growing business capacity in Native and Indigenous communities. The organization assists business using its proprietary Indianpreneurship suite of products, which offers a curriculum designed specifically for Native American, Alaska Native, and Native Hawaiian entrepreneurs. ONABEN also assists businesses with program development, leadership capacity building, training and technical assistance and more.⁵⁰

Oregon Veterans Mean Business. This program, offered at four Small Business Development Centers across the state, provides one-on-one training and advising for military veteran business owners and managers. Training can include assistance with financial reporting, marketing and sales.⁵¹

K. Business Assistance Programs — State and local trade organization and nonprofit examples

Oregon Women’s Business Center. With financial support from the U.S. Small Business Administration, Oregon Women’s Business Center is hosted by Mercy Corps Northwest and located in Portland. The Center provides one-on-one business counseling, four- to six-week business workshops for startups and other businesses and RISE, an online platform with self-paced courses for entrepreneurs. It also offers loans ranging from \$500 to \$50,000.⁵²

Partners in Diversity (PiD). PiD helps employers build a workforce that reflects the demographics of the Pacific Northwest. The organization offers the Career Center and other educational resources for employers and job seekers. It also hosts networking events aimed at assisting recently relocated professionals of color.⁵³

Rural Development Initiatives (RDI). RDI works in rural communities in the Pacific Northwest to provide leadership programs, civic engagement programs and economic vitality programs, including business retention and expansion. Some leadership and entrepreneur trainings have been developed specifically for rural Latino community members. The organization also holds an annual Regards to Rural conference, featuring keynotes and networking for rural community members and leaders.⁵⁴

K. Business Assistance Programs — State and local business chambers

Local business chambers. There are also many local business chambers serving communities in Oregon. Chambers offer networking, educational events and other assistance to their members. Figure K-2 provides a non-exhaustive list.

K-2. Examples of state and local chambers of commerce

- African American Chamber of Commerce of Oregon and SW Washington (AAC)
- Ashland Chamber of Commerce
- Black American Chamber of Commerce (BACC)
- Hispanic Metropolitan Chamber (HMC)
- Hood River County Chamber of Commerce
- Oregon Native American Chamber (ONAC)
- Oregon State Chamber of Commerce (OSCC)
- Pacific American Chamber of Commerce of Oregon and SW Washington (APACC)
- Philippine American Chamber of Commerce of Oregon (PACCO)
- Salem Area Chamber of Commerce

L. Legal — Introduction

A. Introduction

Keen Independent sought legal advice concerning the legal framework of this disparity study. Appendix L provides a summary of the legal framework that Keen Independent determined relevant to its disparity study analysis.

In this appendix, Holland & Knight LLP analyzes recent cases regarding the Transportation Equity Act for the 21st Century (TEA-21) as amended and reauthorized (“MAP-21,” “SAFETEA” and “SAFETEA-LU”),¹ and the United States Department of Transportation (“USDOT” or “DOT”) regulations promulgated to implement TEA-21 known as the Federal Disadvantaged Business Enterprise (“Federal DBE”) Program,² which DBE Program was continued and reauthorized by the Fixing America’s Surface Transportation Act (FAST Act).³ Most recently, in October 2018, Congress passed the FAA Reauthorization Act.⁴ Congress is currently at the time of this report considering legislation (H.R. 2, Section 1101, Moving Forward Act) again to reauthorize the Federal DBE Program and its implementation by local and state governments.

The appendix also reviews recent cases involving state and local minority and women-owned business enterprise (“MBE/WBE”) programs, which are instructive to the study.

Appendix L begins with a review of the landmark United States Supreme Court decision in *City of Richmond v. J.A. Croson*.⁵ *Croson* sets forth the strict scrutiny constitutional analysis applicable in the legal framework for conducting a disparity study. This section also notes the United States Supreme Court decision in *Adarand Constructors, Inc. v. Peña*,⁶ (“*Adarand I*”), which applied the strict scrutiny analysis set forth in *Croson* to federal programs that provide federal assistance to a recipient of federal funds. The Supreme Court’s decisions in *Adarand I* and *Croson*, and subsequent cases and authorities provide the basis for the legal analysis in connection with the study.

The legal framework analyzes and reviews significant recent court decisions that have followed, interpreted, and applied *Croson* and *Adarand I* to the present and that are applicable to this disparity study, the Federal DBE Program and Federal ACDBE Program (49 CFR Part 23 — Participation of Disadvantaged Business Enterprise in Airport Concessions) and their implementation by state DOTs and state and local government recipients of federal funds, MBE/WBE/DBE programs, and the strict scrutiny analysis. In particular, this analysis reviews in Section E below recent Ninth Circuit Court of Appeals decisions that are instructive to the study, including the recent decisions in *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation (“Caltrans”), et al.*,⁷ *Western States Paving Co. v. Washington State DOT*,⁸ *Orion Insurance Group*, and *Ralph*

¹ Moving Ahead for Progress in the 21st Century Act (“MAP-21”), Pub L. 112-141, H.R. 4348, § 1101(b), July 6, 2012, 126 Stat 405.; preceded by Pub L. 109-59, Title I, § 1101(b), August 10, 2005, 119 Stat. 1156; preceded by Pub L. 105-178, Title I, § 1101(b), June 9, 1998, 112 Stat. 107.

² 49 CFR Part 26 Participation by Disadvantaged Business Enterprises in Department of Transportation Financial Assistance Programs (“Federal DBE Program”).

⁷ *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation, et al.*, 713 F.3d 1187, (9th Cir. 2013).

⁸ *Western States Paving Co. v. Washington State DOT*, 407 F.3d 983 (9th Cir. 2005), cert. denied, 546 U.S. 1170 (2006).

L. Legal — Introduction

G. Taylor v. Washington State Office of Minority and Woman’s Business Enterprises, United States DOT, et al.,⁹ *Mountain West Holding Co. v. Montana, Montana DOT, et al.*,¹⁰ and the District Court decision in *M.K. Weeden Construction v. Montana, Montana DOT, et al.*¹¹

The significant 2005 decision in *Western States Paving v. Washington DOT, US DOT and FHWA* set forth legal standards in the Ninth Circuit Court of Appeals for state DOTs to satisfy the strict scrutiny standard for determining whether there is a compelling governmental interest to have a narrowly tailored race and ethnic conscious DBE program in compliance with the Federal DBE Program, and for cases involving challenges to the Federal DBE Program and its implementation by state DOTs. As discussed in this Executive Summary and in the detailed analysis at Section E below, the *Western States Paving* decision resulted in a specific US DOT Official Guidance for states in the Ninth Circuit, including the Oregon Department of Transportation, to follow. (See Section E below for a detailed summary of the decision.)

In addition, the analysis reviews in Sections F and G below recent federal cases that have considered the validity of the Federal DBE Program and its implementation by state DOTs and local or state government agencies and the validity of local and state DBE programs, including: *Midwest Fence Corp. v. U.S. DOT, FHWA, Illinois DOT, Illinois State Toll Highway Authority, et al.*,¹² *Dunnet Bay Construction Co. v. Illinois DOT*,¹³ *Northern Contracting, Inc. v. Illinois DOT*,¹⁴ *Sherbrooke Turf, Inc. v. Minnesota DOT and Gross Seed v. Nebraska Department of Roads*,¹⁵ *Geyer Signal, Inc. v. Minnesota DOT*,¹⁶ *Adarand Constructors, Inc. v. Slater*¹⁷ (“Adarand VII”), *Geod Corporation v. New Jersey Transit Corporation*,¹⁸ and *South Florida Chapter of the A.G.C. v. L. Legal — Introduction

The analyses of these and other recent cases summarized below are instructive to the disparity study because they are the most recent and significant decisions by federal courts setting forth the legal framework applied to the Federal DBE Program and its implementation by state DOTs, MBE/WBE/DBE Programs and disparity studies, and construing the validity of government programs involving MBE/WBE/DBEs and ACDBEs.

The analyses of the Ninth Circuit decisions in *AGC, SDC v. Cal. DOT*, *Western States Paving*, *Orion Insurance Group*, and *Mountain West Holding, Inc.*, and the District Court decision in *M.K. Weeden*, and these other recent cases from other jurisdictions are instructive to the disparity study because they are the most recent and significant decisions by federal courts setting forth the legal framework applied to the Federal DBE Program and its implementation by state DOTs and recipients of federal financial assistance governed by 49 CFR Part 26. They also are applicable in terms of the preparation of a DBE Program submitted in compliance with the Federal DBE Program regulations.

As stated above and shown in detail below in Section D, the *Western States Paving* decision is a leading case in the Ninth Circuit establishing legal standards for satisfying the strict scrutiny test regarding whether there is the compelling governmental interest in a state's transportation marketplace to have a narrowly tailored race and ethnic conscious DBE program in compliance with the Federal DBE Program, that the state DOT DBE Program is narrowly tailored and properly implements the federal regulations at 49 CFR Part 26 and the Federal DBE Program, and the standard relevant to cases involving challenges to the Federal DBE

Program and its implementation by state DOTs. In *Western States Paving*, the Ninth Circuit upheld the validity of the Federal DBE Program, but the Court held invalid Washington State DOT's DBE Program implementing the DBE Federal Program. The Court held that mere compliance with the Federal DBE Program by state recipients of federal funds, absent independent and sufficient state-specific evidence of discrimination in the state's transportation contracting industry marketplace, did not satisfy the strict scrutiny analysis.

Following *Western States Paving*, the USDOT, in particular for agencies, transportation authorities, airports and other governmental entities implementing the Federal DBE Program in states within the jurisdiction of the Ninth Circuit Court of Appeals, recommended the use of disparity studies by recipients of federal financial assistance to examine whether or not there is evidence of discrimination and its effects, and how remedies might be narrowly tailored in developing their DBE Program to comply with the Federal DBE Program.²⁰ The USDOT suggests consideration of both statistical and anecdotal evidence. The USDOT instructs that recipients should ascertain evidence for discrimination and its effects separately for each group presumed to be disadvantaged in 49 CFR Part 26.²¹ The USDOT's Guidance provides that recipients should consider evidence of discrimination and its effects.²²

²⁰ Questions and Answers Concerning Response to *Western States Paving Company v. Washington State Department of Transportation* (January 2006) [hereinafter USDOT Guidance], available at 71 Fed. Reg. 14,775 and http://www.fhwa.dot.gov/civilrights/dbe_memo_a5.htm; see 49 CFR § 26.9; see, also, 49 CFR Section 26.45.

²² *Id.*

L. Legal — Introduction

The USDOT’s Guidance is recognized by the federal regulations as “valid, and express the official positions and views of the Department of Transportation”²³ for states in the Ninth Circuit.

In *Western States Paving*, the United States intervened to defend the Federal DBE Program’s facial constitutionality, and, according to the Court, stated, “that [the Federal DBE Program’s] race-conscious measures can be constitutionally applied only in those states where the effects of discrimination are present.”²⁴ Accordingly, the USDOT advised federal aid recipients that any use of race-conscious measures must be predicated on evidence that the recipient has concerning discrimination or its effects within the local transportation contracting marketplace.²⁵

In *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation (“Caltrans”), et al., (“AGC, SDC v. Cal. DOT” or “Caltrans”)*, the Ninth Circuit in 2013 upheld the validity of California DOT’s DBE Program implementing the Federal DBE Program, and found that Caltrans followed the standards set forth in the *Western States Paving* case. The Ninth Circuit Court of Appeals and the United States District Court for the Eastern District of California in *AGC, San Diego Chapter, Inc. v. California DOT, et al.* held that Caltrans’ implementation of the Federal DBE Program is constitutional.²⁶ The

Ninth Circuit found that Caltrans’ DBE Program implementing the Federal DBE Program was constitutional and survived strict scrutiny by: (1) having a strong basis in evidence of discrimination within the California transportation contracting industry based in substantial part on the evidence from the Disparity Study conducted for Caltrans; and (2) being “narrowly tailored” to benefit only those groups that have actually suffered discrimination.

The District Court had held that the “Caltrans DBE Program is based on substantial statistical and anecdotal evidence of discrimination in the California contracting industry,” satisfied the strict scrutiny standard, and is “clearly constitutional” and “narrowly tailored” under *Western States Paving* and the Supreme Court cases.²⁷

There have been other recent cases in the Ninth Circuit instructive for the study, as follows:

In *Mountain West Holding Co., Inc. v. The State of Montana, Montana DOT, et al.*,²⁸ the Ninth Circuit and the district court applied the decision in *Western States*,²⁹ and the decision in *AGC, San Diego v. California DOT*,³⁰ as establishing the law to be followed in this case. The district court noted that in *Western States*, the Ninth Circuit held that a state’s

²⁹ 407 F.3d 983 (9th Cir. 2005)

³⁰ 713 F.3d 1187 (9th Cir. 2013)

L. Legal — Introduction

implementation of the Federal DBE Program can be subject to an as-applied constitutional challenge, despite the facial validity of the Federal DBE Program.³¹ The Ninth Circuit and the district court stated the Ninth Circuit has held that whether a state’s implementation of the DBE Program “is narrowly tailored to further Congress’s remedial objective depends upon the presence or absence of discrimination in the State’s transportation contracting industry.”³² The Ninth Circuit in *Mountain West* also pointed out it had held that “even when discrimination is present within a State, a remedial program is only narrowly tailored if its application is limited to those minority groups that have actually suffered discrimination.”³³

Montana, the Court found, bears the burden to justify any racial classifications. *Id.* In an as-applied challenge to a state’s DBE contracting program, “(1) the state must establish the presence of discrimination within its transportation contracting industry, and (2) the remedial program must be ‘limited to those minority groups that have actually suffered discrimination.’”³⁴ Discrimination may be inferred from “a significant statistical disparity between the number of qualified minority contractors willing and able to perform a particular service and the number of such contractors actually engaged by the locality or the locality’s prime contractors.”³⁵

The Ninth Circuit reversed the District Court’s grant of summary judgment to Montana based on issues of fact as to the evidence and remanded the case for trial. The *Mountain West* case was settled and voluntarily dismissed by the parties on remand in 2018.

It is noteworthy that the Ninth Circuit in *Mountain West* stated in its Memorandum Opinion that the case is not appropriate for official publication and is not precedent. The Memorandum order expressly provides: “This disposition is not appropriate for publication and is not precedent except as provided by Ninth Circuit Rule 36-3.” Thus, the decision may not be cited as binding precedential authority in the Ninth Circuit.

The District Court decision in the Ninth Circuit in Montana, *M.K. Weeden*,³⁶ followed the *AGC, SDC v. Caltrans* Ninth Circuit decision, and held as valid and constitutional the Montana Department of Transportation’s implementation of the Federal DBE Program.

L. Legal — Introduction

In addition, another recent case in the Ninth Circuit is *Orion Insurance Group; Ralph G. Taylor, Plaintiffs v. Washington State Office of Minority & Women’s Business Enterprises, United States DOT, et. al.*³⁷ Plaintiffs, Orion Insurance Group (“Orion”) and its owner Ralph Taylor, alleged violations of federal and state law due to the denial of their application for Orion to be considered a DBE under federal law.

Plaintiff Taylor received results from a genetic ancestry test that estimated he was 90 percent European, 6 percent Indigenous American, and 4 percent Sub-Saharan African. Taylor submitted an application to OMWBE seeking to have Orion certified as an MBE under Washington State law. Taylor identified himself as Black. His application was initially rejected, but after Taylor appealed, OMWBE voluntarily reversed their decision and certified Orion as an MBE. Plaintiffs submitted to OMWBE Orion’s application for DBE certification under federal law. Taylor identified himself as Black and Native American in the Affidavit of Certification.

Orion’s DBE application was denied because there was insufficient evidence that: he was a member of a racial group recognized under the regulations; was regarded by the relevant community as either Black or Native American; or that he held himself out as being a member of either group. OMWBE found the presumption of disadvantage was rebutted and the evidence was insufficient to show Taylor was socially and economically disadvantaged.

The District court held OMWBE did not act arbitrarily or capriciously when it found the presumption was rebutted that Taylor was socially and economically disadvantaged because there was insufficient evidence he was either Black or Native American. By requiring individualized determinations of social and economic disadvantage, the court found the Federal DBE Program requires states to extend benefits only to those who are actually disadvantaged.

The District court dismissed the claim that, on its face, the Federal DBE Program violates the Equal Protection Clause, and the claim that the Defendants, in applying the Federal DBE Program to him, violated the Equal Protection Clause. The court found no evidence that the application of the federal regulations was done with an intent to discriminate against mixed-race individuals or with racial animus, or creates a disparate impact on mixed-race individuals. The court held Plaintiffs failed to show that either the State or Federal Defendants had no rational basis for the difference in treatment.

The District court dismissed claims that the definitions of “Black American” and “Native American” in the DBE regulations are impermissibly vague. Plaintiffs’ claims were dismissed against the State Defendants for violation of Title VI because Plaintiffs failed to show the State engaged in intentional racial discrimination. The DBE regulations’ requirement that the State make decisions based on race was held constitutional.

³⁷ 2018 WL 6695345 (9th Cir. December 19, 2018)(Memorandum)(Not for Publication).

L. Legal — Introduction

On appeal, the Ninth Circuit in affirming the District court held it correctly dismissed Taylor’s claims against Acting Director of the USDOT’s Office of Civil Rights, in her individual capacity, Taylor’s discrimination claims under 42 U.S.C. §1983 because the federal defendants did not act “under color or state law,” Taylor’s claims for damages because the United States has not waived its sovereign immunity, and Taylor’s claims for equitable relief under 42 U.S.C. §2000d because the Federal DBE Program does not qualify as a “program or activity” within the meaning of the statute.

The Ninth Circuit held OMWBE did not act in an arbitrary and capricious manner when it determined it had a “well-founded reason” to question Taylor’s membership claims, determined that Taylor did not qualify as a “socially and economically disadvantaged individual,” and when it affirmed the state’s decision was supported by substantial evidence and consistent with federal regulations. The court held the USDOT “articulated a rational connection” between the evidence and the decision to deny Taylor’s application for certification.

It is noteworthy that the Ninth Circuit in *Orion* stated in its Memorandum decision that the case is not appropriate for official publication and is not precedent. Thus, the case may not be cited as controlling precedential authority in the Ninth Circuit.

Also, recently in other jurisdictions the Seventh Circuit Court of Appeals in *Midwest Fence Corp. v. U.S. DOT, FHWA, Illinois DOT, Illinois State Toll*

Highway Authority, et al.,³⁸ and in *Dunnet Bay Construction Co. v. Borggren, Illinois DOT, et al.*,³⁹ upheld the implementation of the Federal DBE Program by the Illinois DOT.⁴⁰ The court held Dunnet Bay lacked standing to challenge the IDOT DBE Program, and that even if it had standing, any other federal claims were foreclosed by the *Northern Contracting v. Illinois DOT, et al.* decision because there was no evidence IDOT exceeded its authority under federal law.⁴¹ The Seventh Circuit in *Midwest Fence* also held the Federal DBE Program is facially constitutional. The court agreed with the Eighth, Ninth, and Tenth Circuits that the Federal DBE Program is narrowly tailored on its face, and thus survives strict scrutiny.⁴²

The appendix also points out recent informative Congressional findings as to discrimination regarding MBE/WBE/DBEs, including relating to the Federal Airport Concessions Disadvantaged Business Enterprise (Federal ACDBE) Program,⁴³ and the Federal DBE Program that was continued and reauthorized by the Fixing America’s Surface Transportation Act (2015 FAST Act); which set forth Congressional findings as to discrimination against minority-women-owned business enterprises and disadvantaged business enterprises, including from disparity studies and other evidence.⁴⁴ Congress is currently at the time of this report considering legislation (H.R. 2, Section 1101, Moving Forward Act) again to reauthorize the Federal DBE Program and its implementation by local and state governments based on findings of continuing discrimination and related barriers posing significant obstacles for MBE/WBE/DBEs.

L. Legal — U.S. Supreme Court cases

B. U.S. Supreme Court Cases

1. *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469 (1989)

In *Croson*, the U.S. Supreme Court struck down the City of Richmond’s “set-aside” program as unconstitutional because it did not satisfy the strict scrutiny analysis applied to “race-based” governmental programs.⁴⁵ J.A. Croson Co. (“Croson”) challenged the City of Richmond’s minority contracting preference plan, which required prime contractors to subcontract at least 30 percent of the dollar amount of contracts to one or more Minority Business Enterprises (“MBE”). In enacting the plan, the City cited past discrimination and an intent to increase minority business participation in construction projects as motivating factors.

The Supreme Court held the City of Richmond’s “set-aside” action plan violated the Equal Protection Clause of the Fourteenth Amendment. The Court applied the “strict scrutiny” standard, generally applicable to any race-based classification, which requires a governmental entity to have a “compelling governmental interest” in remedying past identified discrimination and that any program adopted by a local or state government must be “narrowly tailored” to achieve the goal of remedying the identified discrimination.

The Court determined that the plan neither served a “compelling governmental interest” nor offered a “narrowly tailored” remedy to past discrimination. The Court found no “compelling governmental interest” because the City had not provided “a strong basis in evidence for its conclusion that [race-based] remedial action was necessary.”⁴⁶ The Court held the City presented no direct evidence of any race discrimination on its part in awarding construction contracts or any evidence that the City’s prime contractors had discriminated against minority-owned subcontractors.⁴⁷ The Court also found there were only generalized allegations of societal and industry discrimination coupled with positive legislative motives. The Court concluded that this was insufficient evidence to demonstrate a compelling interest in awarding public contracts on the basis of race.

Similarly, the Court held the City failed to demonstrate that the plan was “narrowly tailored” for several reasons, including because there did not appear to have been any consideration of race-neutral means to increase minority business participation in city contracting, and because of the over inclusiveness of certain minorities in the “preference” program (for example, Aleuts) without any evidence they suffered discrimination in Richmond.⁴⁸

⁴⁵ 488 U.S. 469 (1989).

⁴⁶ 488 U.S. at 500, 510.

⁴⁷ 488 U.S. at 480, 505.

⁴⁸ 488 U.S. at 507-510.

L. Legal — U.S. Supreme Court cases

The Court stated that reliance on the disparity between the number of prime contracts awarded to minority firms and the minority population of the City of Richmond was misplaced. There is no doubt, the Court held, that “[w]here gross statistical disparities can be shown, they alone in a proper case may constitute prima facie proof of a pattern or practice of discrimination” under Title VII.⁴⁹ But it is equally clear that “[w]hen special qualifications are required to fill particular jobs, comparisons to the general population (rather than to the smaller group of individuals who possess the necessary qualifications) may have little probative value.”⁵⁰

The Court concluded that where special qualifications are necessary, the relevant statistical pool for purposes of demonstrating discriminatory exclusion must be the number of minorities qualified to undertake the particular task. The Court noted that “the city does not even know how many MBEs in the relevant market are qualified to undertake prime or subcontracting work in public construction projects.”⁵¹ “Nor does the city know what percentage of total city construction dollars minority firms now receive as subcontractors on prime contracts let by the city.”⁵²

The Supreme Court stated that it did not intend its decision to preclude a state or local government from “taking action to rectify the effects of identified discrimination within its jurisdiction.”⁵³ The Court held that “[w]here there is a significant statistical disparity between the number of qualified minority contractors willing and able to perform a particular service and the number of such contractors actually engaged by the locality or the locality’s prime contractors, an inference of discriminatory exclusion could arise.”⁵⁴

The Court said: “If the City of Richmond had evidence before it that nonminority contractors were systematically excluding minority businesses from subcontracting opportunities it could take action to end the discriminatory exclusion.”⁵⁵ “Under such circumstances, the city could act to dismantle the closed business system by taking appropriate measures against those who discriminate on the basis of race or other illegitimate criteria.” “In the extreme case, some form of narrowly tailored racial preference might be necessary to break down patterns of deliberate exclusion.”⁵⁶

The Court further found “if the City could show that it had essentially become a ‘passive participant’ in a system of racial exclusion practiced by elements of the local construction industry, we think it clear that the City could take affirmative steps to dismantle such a system. It is beyond dispute that any public entity, state or federal, has a compelling interest in assuring that public dollars, drawn from the tax contributions of all citizens, do not serve to finance the evil of private prejudice.”⁵⁷

L. Legal — U.S. Supreme Court cases

2. *Adarand Constructors, Inc. v. Peña* (“*Adarand I*”), 515 U.S. 200 (1995)

In *Adarand I*, the U.S. Supreme Court extended the holding in *Croson* and ruled that all federal government programs that use racial or ethnic criteria as factors in procurement decisions must pass a test of strict scrutiny in order to survive constitutional muster.

The cases interpreting *Croson* and *Adarand I* are the most recent and significant decisions by federal courts setting forth the legal framework for disparity studies as well as the predicate to satisfy the constitutional strict scrutiny standard of review, which applies to the implementation of the Federal DBE Program by recipients of federal funds.

L. Legal — Legal framework applied to Federal DBE Program

C. The Legal Framework Applied to the Federal DBE Program

The following provides an analysis for the legal framework focusing on recent key cases regarding the Federal DBE Program and state and local MBE/WBE/DBE programs, and their implications for a disparity study. The recent decisions involving the Federal DBE Program and MBE/WBE/DBE programs are instructive to the disparity study because they concern the strict scrutiny analysis, the legal framework in this area, challenges to the validity of MBE/WBE/DBE programs, an analysis of disparity studies, and implementation of the Federal DBE and ACDBE Programs by state DOTs and recipients of federal financial assistance (U.S. DOT funds) based on 49 CFR Part 26 and 49 CFR Part 23.

1. The Federal DBE Program (and ACDBE Program)

After the *Adarand* decision, the U.S. Department of Justice in 1996 conducted a study of evidence on the issue of discrimination in government construction procurement contracts, which Congress relied upon as documenting a compelling governmental interest to have a federal program to remedy the effects of current and past discrimination in the transportation contracting industry for federally funded contracts.⁵⁸ Subsequently, in 1998, Congress passed the Transportation Equity Act for the 21st Century (“TEA-21”), which authorized the United States Department of Transportation to expend funds for federal highway programs for 1998–2003. Pub.L. 105-178, Title I, § 1101(b), 112 Stat. 107, 113 (1998). The USDOT promulgated new regulations in 1999 contained at 49 CFR Part 26 to establish the

current Federal DBE Program. The TEA-21 was subsequently extended in 2003, 2005 and 2012. The reauthorization of TEA-21 in 2005 was for a five-year period from 2005 to 2009. Pub.L. 109-59, Title I, § 1101(b), August 10, 2005, 119 Stat. 1153-57 (“SAFETEA”). In July 2012, Congress passed the Moving Ahead for Progress in the 21st Century Act (“MAP-21”).⁵⁹ In December 2015, Congress passed the Fixing America’s Surface Transportation Act (“FAST Act”).⁶⁰ Most recently, in October 2018, Congress passed the FAA Reauthorization Act.⁶¹

The Federal DBE Program as amended changed certain requirements for federal aid recipients and accordingly changed how recipients of federal funds implemented the Federal DBE Program for federally assisted contracts. The federal government determined that there is a compelling governmental interest for race- and gender-based programs at the national level, and that the program is narrowly tailored because of the federal regulations, including the flexibility in implementation provided to individual federal aid recipients by the regulations. State and local governments are not required to implement race- and gender-based measures where they are not necessary to achieve DBE goals and those goals may be achieved by race- and gender-neutral measures.⁶²

⁵⁸ *Appendix-The Compelling Interest for Affirmative Action in Federal Procurement*, 61 Fed. Reg. 26,050, 26,051-63 & nn. 1-136 (May 23, 1996) (hereinafter “The Compelling Interest”); see *Adarand VII*, 228 F.3d at 1167-1176, citing *The Compelling Interest*.

L. Legal — Legal framework applied to Federal DBE Program

The Federal DBE Program and ACDBE Program established responsibility for implementing the DBE and ACDBE Programs to state and local government recipients of federal funds. A recipient of federal financial assistance must set an annual DBE and/or ACDBE goals specific to conditions in the relevant marketplace. Even though an overall annual 10 percent aspirational goal applies at the federal level, it does not affect the goals established by individual state or local governmental recipients. The Federal DBE and ACDBE Programs outline certain steps a state or local government recipient can follow in establishing a goal, and USDOT (FHWA and FAA) considers and must approve the goal and the recipient's DBE and ACDBE programs. The implementation of the Federal DBE and ACDBE Programs are substantially in the hands of the state DOT and state or local government recipient and is set forth in detail in the federal regulations, including 49 CFR § 26.45 and 49 CFR §§23.41-51.

Provided in 49 CFR § 26.45 and 49 CFR §§ 23.41-51 are instructions as to how recipients of federal funds should set the overall goals for their DBE and ACDBE Programs. In summary, the recipient establishes a base figure for relative availability of DBEs and ACDBEs.⁶³ This is accomplished by determining the relative number of ready, willing, and able DBEs and ACDBEs in the recipient's market.⁶⁴ Second, the recipient must determine an appropriate adjustment, if any, to the base figure to arrive at the overall goal.⁶⁵ There are many types of evidence considered when determining if an adjustment is appropriate, according to 49 CFR § 26.45(d) and 49 CFR § 23.51(d). These include, among other types, the current capacity of DBEs and ACDBEs to perform work on the recipient's contracts as measured by the volume of work DBEs and ACDBEs have performed in recent years. If available, recipients consider evidence from related fields that affect the opportunities for DBEs and ACDBEs to form, grow, and compete, such as statistical disparities between the ability of DBEs and ACDBEs to obtain financing, bonding, and insurance, as well as data on employment, education, and training.⁶⁶ This process, based on the federal regulations, aims to establish a goal that reflects a determination of the level of DBE and ACDBE participation one would expect absent the effects of discrimination.⁶⁷

⁶³ 49 CFR § 26.45(a), (b), (c); 49 CFR § 23.51(a), (b), (c).

L. Legal — Legal framework applied to Federal DBE Program

Further, the Federal DBE Program and ACDBE Program require state and local government recipients of federal funds to assess how much of the DBE and ACDBE goal can be met through race- and gender-neutral efforts and what percentage, if any, should be met through race- and gender-based efforts.⁶⁸ A state or local government recipient is responsible for seriously considering and determining race- and gender-neutral measures that can be implemented.⁶⁹

Federal aid recipients are to certify DBEs and ACDBEs according to their race/gender, size, net worth and other factors related to defining an economically and socially disadvantaged business as outlined in 49 CFR §§ 26.61-26.73.⁷⁰

F.A.A. Reauthorization Act of 2018, FAST Act and MAP-21. In October 2018, December 2015 and in July 2012, Congress passed the F.A.A. Reauthorization Act, FAST Act and MAP-21, respectively, which made “Findings” that “discrimination and related barriers continue to pose significant obstacles for minority- and women-owned businesses seeking to do business in airport-related markets,” in “federally assisted surface transportation markets,” and that the continuing barriers “merit the continuation” of the Federal ACDBE Program and the Federal DBE Program.⁷¹ Congress also found in the F.A.A. Reauthorization Act of 2018, the FAST Act and MAP-21 that it received and reviewed testimony and documentation of race and gender discrimination which “provide a

strong basis that there is a compelling need for the continuation of the” Federal ACDBE Program and the Federal DBE Program.⁷²

F.A.A. Reauthorization Act of 2018 (October 5, 2018)

- Extends the FAA DBE and ACDBE programs for five years.
- Contains an additional prompt payment provision.
- Increases in the size cap for highway, street, and bridge construction for construction firms working on airport improvement projects.
- Establishes Congressional findings of discrimination that provides a strong basis there is a compelling need for the continuation of the airport DBE program and the ACDBE program to address race and gender discrimination in airport related business.

L. Legal — Legal framework applied to Federal DBE Program

SEC. 150 DEFINITION OF SMALL BUSINESS CONCERN.

- Section 47113(a)(1) of title 49, United States Code, is amended as follows:

(1) ‘Small business concern’

A. Has the meaning given the term in section 3 of the Small Business Act (15 U.S.C. 632); but in the case of a concern in the construction industry, a concern shall be considered a small business concern if the concern meets the size standard for the NAICS Code 237310, as adjusted by the SBA.

SEC. 157 MINORITY AND DISADVANTAGED BUSINESS PARTICIPATION.

(a) Findings. Congress finds the following:

- (1) While significant progress has occurred due to the establishment of the airport disadvantaged business enterprise program (sections 47107(e) and 47113 of title 49, United States Code), discrimination and related barriers continue to pose significant obstacles for minority- and women-owned businesses seeking to do business in airport-related markets across the nation. These continuing barriers merit the continuation of the airport disadvantaged business enterprise program.

- (2) Congress has received and reviewed testimony and documentation of race and gender discrimination from numerous sources, including congressional hearings and roundtables, scientific reports, reports issued by public and private agencies, news stories, reports of discrimination by organizations and individuals, and discrimination lawsuits. This testimony and documentation show that race- and gender-neutral efforts alone are insufficient to address the problem.
- (3) This testimony and documentation demonstrate that discrimination across the nation poses a barrier to full and fair participation in airport-related businesses of women business owners and minority business owners in the racial groups detailed in 49 C.F.R. Parts 23 and 26, and has impacted firm development and many aspects of airport-related business in the public and private markets.
- (4) This testimony and documentation provide a strong basis that there is a compelling need for the continuation of the airport DBE program and the ACDBE program to address race and gender discrimination in airport related business.

“Fixing America’s Surface Transportation Act” or the “FAST Act” (December 4, 2015)

On December 3, 2015, the Fixing America’s Surface Transportation Act” or the “FAST Act” was passed by Congress, and it was signed by the President on December 4, 2015, as the new five-year surface transportation authorization law. The FAST Act continues the Federal DBE Program and makes the following “Findings” in Section 1101 (b) of the Act:

L. Legal — Legal framework applied to Federal DBE Program

SEC. 1101. AUTHORIZATION OF APPROPRIATIONS.

(b) Disadvantaged Business Enterprises —

(1) FINDINGS- Congress finds that —

- (A) While significant progress has occurred due to the establishment of the disadvantaged business enterprise program, discrimination and related barriers continue to pose significant obstacles for minority- and women-owned businesses seeking to do business in federally assisted surface transportation markets across the United States;
- (B) The continuing barriers described in subparagraph (A) merit the continuation of the disadvantaged business enterprise program;
- (C) Congress has received and reviewed testimony and documentation of race and gender discrimination from numerous sources, including congressional hearings and roundtables, scientific reports, reports issued by public and private agencies, news stories, reports of discrimination by organizations and individuals, and discrimination lawsuits, which show that race- and gender-neutral efforts alone are insufficient to address the problem;

- (D) The testimony and documentation described in subparagraph (C) demonstrate that discrimination across the United States poses a barrier to full and fair participation in surface transportation-related businesses of women business owners and minority business owners and has impacted firm development and many aspects of surface transportation-related business in the public and private markets; and
- (E) The testimony and documentation described in subparagraph (C) provide a strong basis that there is a compelling need for the continuation of the disadvantaged business enterprise program to address race and gender discrimination in surface transportation-related business.

(2) DEFINITIONS — In this subsection, the following definitions apply:

(A) SMALL BUSINESS CONCERN —

- (i) IN GENERAL — The term ‘small business concern’ means a small business concern (as the term is used in section 3 of the Small Business Act (15 U.S.C. 632)).
- (ii) EXCLUSIONS — The term ‘small business concern’ does not include any concern or group of concerns controlled by the same socially and economically disadvantaged individual or individuals that have average annual gross receipts during the preceding three fiscal years in excess of \$23,980,000, as adjusted annually by the Secretary for inflation.⁷³

⁷³ Pub. L. 114-94, H.R. 22, § 1101(b), December 4, 2015, 129 Stat. 1312.

L. Legal — Legal framework applied to Federal DBE Program

Therefore, Congress in the FAST Act passed on December 3, 2015, again found based on testimony, evidence and documentation updated since MAP-21 was adopted in 2012 as follows: (1) discrimination and related barriers continue to pose significant obstacles for minority- and women-owned businesses seeking to do business in federally assisted surface transportation markets across the United States; (2) the continuing barriers described in § 1101(b), subparagraph (A) above merit the continuation of the disadvantaged business enterprise program; and (3) there is a compelling need for the continuation of the disadvantaged business enterprise program to address race and gender discrimination in surface transportation-related business.⁷⁴

US DOT Final Rule, 79 Fed. Reg. 59566 (October 2, 2014)

DBE: Program Implementation Modifications for 49 CFR Part 26 (Effective Nov. 3, 2014).⁷⁵

On September 6, 2012, the Department of Transportation published a Notice of Proposed Rulemaking (“NPRM”) entitled, “Disadvantaged Business Enterprise: Program Implementation Modifications” in the Federal Register.⁷⁶

The USDOT noted the DBE Program was reauthorized in the Moving Ahead for Progress in the 21st Century Act (“MAP-21”), Public Law 112-141 (enacted July 6, 2012), and that the Department believes this reauthorization is intended to maintain the status quo of the DBE Program.⁷⁷

⁷⁴ *Id.*

⁷⁵ 79 F.R. 59566-59122 (October 2, 2014).

⁷⁶ 77 F.R. 54952-55024 (September 6, 2012).

The Final Rule amending the Federal DBE Program at 49 C.F.R. Part 26 provided substantial changes and additions to the implementation and administration of the Federal DBE Program regulations in three primary areas:

- (1) The Rule revised the Uniform Certification Application and reporting forms, establishes a uniform personal net worth form as part of the Uniform Certification Application, and provides for data collection required by the U.S. DOT statutory reauthorization, MAP-21;
- (2) The Rule revised the certification-related program provisions and standards; and
- (3) The Rule amended and modified several program provisions, including: overall goal setting by recipients of federal funds, good faith efforts, guidance and submissions, transit vehicle manufacturers, counting for trucking companies, and program administration.⁷⁸

The new and revised forms included the U.S. DOT personal net worth form, a revised uniform application form and checklist, and a revised uniform report of awards or commitments, and payments. The new provisions included reporting requirements under MAP-21, adding a new provision authorizing summary suspensions of DBEs under certain circumstances, and new record retention requirements.⁷⁹

⁷⁷ 77 F.R. 54952.

⁷⁸ 79 F.R. 59566-59622 (October 2, 2014).

⁷⁹ *Id.*

L. Legal — Legal framework applied to Federal DBE Program

Several of the areas revised included:

- The size standard on statutory gross receipts has been increased for inflation;
- The ownership and control provisions have been amended, including a new rule examining whether there are any agreements or practices that give a non-disadvantaged individual or firm a priority or superior right to a DBE's profits, and setting forth an assumption of control when a non-disadvantaged individual who is a former owner of the firm remains involved in the operation of the firm;
- Certification procedures and grounds for decertification are revised including the areas of prequalification, grounds for removal, summary suspension, and certification appeals;
- The overall goal setting obligations, including methodology and process, data sources to determine the relative availability of DBEs, and any step two adjustments by the recipient of federal funds to the base figure supported by evidence;
- The submission of good faith efforts as a matter of “responsiveness” or as a matter of “responsibility,” including reduction in number of days as to when the information of good faith efforts must be submitted either at the time of bid or after bid opening;

⁸⁰ 79 F.R. 59566-59622.

- Guidance on good faith efforts, including examples of the kinds of actions that recipients may consider when evaluating good faith efforts by bidders and offerors;
- Provisions relating to the replacing of DBEs; and
- Counting of DBE participation, including trucking services and expenditures with DBEs for materials and supplies and related matters.⁸⁰

In terms of forms and data collection, the 2014 Rule attempted to simplify the Uniform Certification Application; established a new U.S. DOT personal net worth form to be used by applicants; established a uniform report of DBE awards or commitments and payments; captured data on minority women-owned DBEs and actual payments to DBEs reporting; and provided for a new submission required by MAP-21 on the percentage of DBEs in the state owned by nonminority women, and men.⁸¹

The 2014 Rule made certain changes in connection with program administration, including: adding to the definitions of “immediate family members” and “spouse” domestic partnerships and civil unions; the retention of all records documenting a DBE's compliance with the eligibility requirements, including the complete application package and subsequent reports; and adding to the provisions relating to the contract clause included in each DOT-assisted contract that obligates the contractor to comply with the DBE Program regulations in the

⁸¹ *Id.*

L. Legal — Legal framework applied to Federal DBE Program

administration of the contract, and specifying that failure to do so may result in termination of the contract or other remedies.⁸²

The Rule also provided changes to the definitions in the federal regulations, including for the following terms: assets, business, business concern, business enterprise, contingent liability, liabilities, primary industry classification, principal place of business, and social and economically disadvantaged individual.⁸³

USDOT Order 4220.1 (February 5, 2014).

USDOT Order 4220.1 is the USDOT's Order on the Coordination and Oversight of the DBE Program. According to the USDOT, this Order clarified the leadership roles and responsibilities of the various offices and Operating Administrations within the USDOT responsible for supporting and overseeing the implementation of the Federal DBE Program. The Order further established a framework for coordination, overall policy development, and program oversight among these offices. The Order provided that the Departmental Office of Civil Rights will act as the lead office in the Office of Secretary for the DBE program. The Operating Administrations will continue to be the first points of contacts regarding, and primarily responsible for overseeing and enforcing, the day-to-day administration of the program by recipients.

The USDOT Order also established a framework for coordination, overall policy development, and program oversight among these offices. The Order provided that these offices will engage in systematic coordination regarding the administration and implementation of the DBE program by DOT recipients.

The Order sets forth specific programmatic responsibilities for the Departmental Office of Civil Rights, the rules and responsibilities of the General Counsel as Chief Legal officer of the USDOT, and the Office of Small and Disadvantaged Business Utilization within the Office of the Secretary. The Order clarified rules and responsibilities for the Operating Administrations in their overseeing of the day-to-day administration of the Federal DBE Program by recipients, providing training and technical assistance, maintaining current and up-to-date DBE websites, and taking appropriate actions to ensure program compliance.

The USDOT Order also established the DBE Oversight and Compliance Council that will facilitate collaboration, communication, and accountability among the DOT components responsible for the DBE program oversight, and assist in the formulation of policy regarding DBE program management and operation. The Order provided that the Office of the General Counsel established DBE Working Group, which generates rules changes and official DOT guidance, will continue to coordinate the development of formal and informal guidance and interpretations, and to ensure consistent and clear communications regarding the application and interpretation of DBE program requirements.

The USDOT Order 4220.1 may be found at:

www.civilrights.dot.gov/disadvantaged-business-enterprise.

L. Legal — Legal framework applied to Federal DBE Program

MAP-21 (July 2012).

In the 2012 Moving Ahead for Progress in the 21st Century Act (MAP-21), Congress provided “Findings” that “discrimination and related barriers” “merit the continuation of the” Federal DBE Program.⁸⁴ In MAP-21, Congress specifically found as follows:

- “(A) While significant progress has occurred due to the establishment of the disadvantaged business enterprise program, discrimination and related barriers continue to pose significant obstacles for minority- and women-owned businesses seeking to do business in federally assisted surface transportation markets across the United States;
- (B) The continuing barriers described in subparagraph (A) merit the continuation of the disadvantaged business enterprise program;
- (C) Congress has received and reviewed testimony and documentation of race and gender discrimination from numerous sources, including congressional hearings and roundtables, scientific reports, reports issued by public and private agencies, news stories, reports of discrimination by organizations and individuals, and discrimination lawsuits, which show that race- and gender-neutral efforts alone are insufficient to address the problem;

- (D) The testimony and documentation described in subparagraph (C) demonstrate that discrimination across the United States poses a barrier to full and fair participation in surface transportation-related businesses of women business owners and minority business owners and has impacted firm development and many aspects of surface transportation-related business in the public and private markets; and
- (E) The testimony and documentation described in subparagraph (C) provide a strong basis that there is a compelling need for the continuation of the disadvantaged business enterprise program to address race and gender discrimination in surface transportation-related business.”⁸⁵

Thus, Congress in MAP-21 determined based on testimony and documentation of race and gender discrimination that there was “a compelling need for the continuation of the” Federal DBE Program.⁸⁶

L. Legal — Legal framework applied to Federal DBE Program

USDOT Final Rule, 76 Fed. Reg. 5083 (January 28, 2011).

The United States Department of Transportation promulgated a Final Rule on January 28, 2011, effective February 28, 2011, 76 Fed. Reg. 5083 (January 28, 2011) (“2011 Final Rule”) amending the Federal DBE Program at 49 CFR Part 26.

The Department stated in the 2011 Final Rule with regard to disparity studies and in calculating goals, that it agrees “it is reasonable, in calculating goals and in doing disparity studies, to consider potential DBEs (e.g., firms apparently owned and controlled by minorities or women that have not been certified under the DBE program) as well as certified DBEs. This is consistent with good practice in the field as well as with DOT guidance.”⁸⁷

The United States DOT in the 2011 Final Rule stated that there was a continuing compelling need for the DBE program.⁸⁸ The DOT concluded that, as court decisions have noted, the DOT’s DBE regulations and the statutes authorizing them, “are supported by a compelling need to address discrimination and its effects.”⁸⁹ The DOT said that the “basis for the program has been established by Congress and applies on a nationwide basis ...” noted that both the House and Senate Federal Aviation Administration (“FAA”) Reauthorization Bills contained findings reaffirming the compelling need for the program, and referenced additional information presented to the House of Representatives in a March 26, 2009 hearing before the Transportation and Infrastructure Committee, and a Department of Justice document entitled “The Compelling Interest for Race- and Gender-Conscious Federal

Contracting Programs: A Decade Later An Update to the May 23, 1996 Review of Barriers for Minority- and Women-Owned Businesses.”⁹⁰ This information, the DOT stated, “confirms the continuing compelling need for race- and gender-conscious programs such as the DOT DBE program.”⁹¹

L. Legal — Legal framework applied to Federal DBE Program

2. Strict scrutiny analysis

A race- and ethnicity-based program implemented by a state or local government is subject to the strict scrutiny constitutional analysis.⁹² The implementation of the Federal DBE Program and ACDBE Program by state DOTs and recipients of federal funds are subject to and must follow the strict scrutiny analysis if they utilize race- and ethnicity-based measures.⁹³ The strict scrutiny analysis is comprised of two prongs:

- The program must serve an established compelling governmental interest; and
- The program must be narrowly tailored to achieve that compelling government interest.⁹⁴

a. The Compelling Governmental Interest Requirement.

The first prong of the strict scrutiny analysis requires a governmental entity to have a “compelling governmental interest” in remedying past identified discrimination in order to implement a race- and ethnicity-based program.⁹⁵ State and local governments cannot rely on national statistics of discrimination in an industry to draw conclusions about the prevailing market conditions in their own regions.⁹⁶ Rather, state and local governments must measure discrimination in their state or local market. However, that is not necessarily confined by the jurisdiction’s boundaries.⁹⁷

L. Legal — Legal framework applied to Federal DBE Program

The federal courts have held that, with respect to the Federal DBE Program, recipients of federal funds do not need to independently satisfy this prong because Congress has satisfied the compelling interest test of the strict scrutiny analysis.⁹⁸ The federal courts also have held that Congress had ample evidence of discrimination in the transportation contracting industry to justify the Federal DBE Program (TEA-21), and the federal regulations implementing the program (49 CFR Part 26).⁹⁹

It is instructive to the study to review the type of evidence utilized by Congress and considered by the courts to support the Federal DBE Program, and its implementation by local and state governments and agencies, which is similar to evidence considered by cases ruling on the validity of MBE/WBE/DBE programs. The federal courts found Congress “spent decades compiling evidence of race discrimination in government highway contracting, of barriers to the formation of minority-owned construction businesses, and of barriers to entry.”¹⁰⁰ The evidence found to satisfy the compelling interest standard included numerous congressional investigations and hearings, and outside studies of statistical and anecdotal evidence (e.g., disparity studies).¹⁰¹

⁹⁹ *Id.* In the case of *Rothe Dev. Corp. v. U.S. Dept. of Defense*, 545 F.3d 1023 (Fed. Cir. 2008), the Federal Circuit Court of Appeals pointed out it had questioned in its earlier decision whether the evidence of discrimination before Congress was in fact so “outdated” so as to provide an insufficient basis in evidence for the Department of Defense program (i.e., whether a compelling interest was satisfied). 413 F.3d 1327 (Fed. Cir. 2005). The Federal Circuit Court of Appeals after its 2005 decision remanded the case to the district court to rule on this issue. *Rothe* considered the validity of race- and gender-conscious Department of Defense (“DOD”) regulations (2006 Reauthorization of the 1207 Program). The decisions in *N. Contracting*, *Sherbrooke Turf*, *Adarand VII*, and *Western States Paving* held the evidence of discrimination nationwide in transportation contracting was sufficient to find the Federal DBE Program on its face was constitutional. On remand, the district court in *Rothe* on August 10, 2007 issued its order denying plaintiff *Rothe’s* Motion for Summary Judgment and granting Defendant United States Department of Defense’s Cross-Motion for Summary Judgment, holding the 2006 Reauthorization of the 1207 DOD Program constitutional. *Rothe Devel. Corp. v. U.S. Dept. of Defense*, 499 F.Supp.2d 775 (W.D. Tex. 2007). The district court found the data contained in the Appendix (The Compelling Interest, 61 Fed. Reg. 26050 (1996)), the Urban Institute Report, and the Benchmark Study — relied upon in part by the courts in *Sherbrooke Turf*, *Adarand VII*, and *Western States Paving* in upholding the constitutionality of the Federal DBE Program — was “stale” as applied to and for

purposes of the 2006 Reauthorization of the 1207 DOD Program. This district court finding was not appealed or considered by the Federal Circuit Court of Appeals. 545 F.3d 1023, 1037. The Federal Circuit Court of Appeals reversed the district court decision in part and held invalid the DOD Section 1207 program as enacted in 2006. 545 F.3d 1023, 1050. See the discussion of the 2008 Federal Circuit Court of Appeals decision below in Section G. *see, also*, the discussion below in Section G of the 2012 district court decision in *DynaLantic Corp. v. U.S. Department of Defense, et al.*, 885 F.Supp.2d 237, (D.D.C.). Recently, in *Rothe Development, Inc. v. U.S. Dept of Defense and U.S. S.B.A.*, 836 F.3d 57, 2016 WL 4719049 (D.C. Cir. Sept. 9, 2016), the United States Court of Appeals, District of Columbia Circuit, upheld the constitutionality of the Section 8(a) Program on its face, finding the Section 8(a) statute was race-neutral. The Court of Appeals affirmed on other grounds the district court decision that had upheld the constitutionality of the Section 8(a) Program. The district court had found the federal government’s evidence of discrimination provided a sufficient basis for the Section 8(a) Program. 107 F.Supp. 3d 183, 2015 WL 3536271 (D. D.C. June 5, 2015). See the discussion of the 2016 and 2015 decisions in *Rothe* in Section G below.

¹⁰¹ *See, e.g.*, *Adarand VII*, 228 F.3d at 1167– 76; *see also Western States Paving*, 407 F.3d at 992 (Congress “explicitly relied upon” the Department of Justice study that “documented the discriminatory hurdles that minorities must overcome to secure federally funded contracts”); *Geyer Signal, Inc.*, 2014 WL 1309092.

L. Legal — Legal framework applied to Federal DBE Program

The evidentiary basis on which Congress relied to support its finding of discrimination includes:

- **Barriers to minority business formation.** Congress found that discrimination by prime contractors, unions, and lenders has woefully impeded the formation of qualified minority business enterprises in the subcontracting market nationwide, noting the existence of “good ol’ boy” networks, from which minority firms have traditionally been excluded, and the race-based denial of access to capital, which affects the formation of minority subcontracting enterprise.¹⁰²
- **Barriers to competition for existing minority enterprises.** Congress found evidence showing systematic exclusion and discrimination by prime contractors, private sector customers, business networks, suppliers, and bonding companies precluding minority enterprises from opportunities to bid. When minority firms are permitted to bid on subcontracts, prime contractors often resist working with them. Congress found evidence of the same prime contractor using a minority business enterprise on a government contract not using that minority business enterprise on a private contract, despite being satisfied with that subcontractor’s work. Congress found that informal, racially exclusionary business networks dominate the subcontracting construction industry.¹⁰³
- **Local disparity studies.** Congress found that local studies throughout the country tend to show a disparity between utilization and availability of minority-owned firms, raising an inference of discrimination.¹⁰⁴
- **Results of removing affirmative action programs.** Congress found evidence that when race-conscious public contracting programs are struck down or discontinued, minority business participation in the relevant market drops sharply or even disappears, which courts have found strongly supports the government’s claim that there are significant barriers to minority competition, raising the specter of discrimination.¹⁰⁵
- **FAST Act and MAP-21.** In December 2015 and in July 2012, Congress passed the FAST Act and MAP-21, respectively (see above), which made “Findings” that “discrimination and related barriers continue to pose significant obstacles for minority- and women-owned businesses seeking to do business in federally assisted surface transportation markets,” and that the continuing barriers “merit the continuation” of the Federal DBE Program.¹⁰⁶ Congress also found in both the FAST Act and MAP-21 that it received and reviewed testimony and documentation of race and gender discrimination which “provide a strong basis that there is a compelling need for the continuation of the” Federal DBE Program.¹⁰⁷

L. Legal — Legal framework applied to Federal DBE Program

Burden of proof. Under the strict scrutiny analysis, and to the extent a state or local governmental entity has implemented a race-ethnic- and gender-conscious program, the governmental entity has the initial burden of showing a strong basis in evidence (including statistical and anecdotal evidence) to support its remedial action.¹⁰⁸ If the government makes its initial showing, the burden shifts to the challenger to rebut that showing.¹⁰⁹ The challenger bears the ultimate burden of showing that the governmental entity's evidence "did not support an inference of prior discrimination."¹¹⁰

In applying the strict scrutiny analysis, the courts hold that the burden is on the government to show both a compelling interest and narrow tailoring.¹¹¹ It is well established that "remedying the effects of past or present racial discrimination" is a compelling interest.¹¹² In addition, the government must also demonstrate "a strong basis in evidence for its conclusion that remedial action [is] necessary."¹¹³

L. Legal — Legal framework applied to Federal DBE Program

Since the decision by the Supreme Court in *Croson*, “numerous courts have recognized that disparity studies provide probative evidence of discrimination.”¹¹⁴ “An inference of discrimination may be made with empirical evidence that demonstrates ‘a significant statistical disparity between a number of qualified minority contractors ... and the number of such contractors actually engaged by the locality or the locality’s prime contractors.’”¹¹⁵ Anecdotal evidence may be used in combination with statistical evidence to establish a compelling governmental interest.¹¹⁶

In addition to providing “hard proof” to support its compelling interest, the government must also show that the challenged program is narrowly tailored.¹¹⁷ Once the governmental entity has shown acceptable proof of a compelling interest and remedying past discrimination and illustrated that its plan is narrowly tailored to achieve this goal, the party challenging the affirmative action plan bears the ultimate burden of proving that the plan is unconstitutional.¹¹⁸ Therefore, notwithstanding the burden of initial production rests with the government, the ultimate burden remains with the party challenging the application of a DBE, ACDBE or MBE/WBE Program to demonstrate the unconstitutionality of an affirmative-action type program.¹¹⁹

L. Legal — Legal framework applied to Federal DBE Program

To successfully rebut the government’s evidence, a challenger must introduce “credible, particularized evidence” of its own that rebuts the government’s showing of a strong basis in evidence.¹²⁰ This rebuttal can be accomplished by providing a neutral explanation for the disparity between MBE/WBE/DBE utilization and availability, showing that the government’s data is flawed, demonstrating that the observed disparities are statistically insignificant, or presenting contrasting statistical data.¹²¹ Conjecture and unsupported criticisms of the government’s methodology are insufficient.¹²² The courts have held that mere speculation the government’s evidence is insufficient or methodologically flawed does not suffice to rebut a government’s showing.¹²³

The courts have stated that “it is insufficient to show that ‘data was susceptible to multiple interpretations,’ instead, plaintiffs must ‘present affirmative evidence that no remedial action was necessary because minority-owned small businesses enjoy non-discriminatory access to and participation in highway contracts.’”¹²⁴ The courts hold that in assessing the evidence offered in support of a finding of discrimination, it considers “both direct and circumstantial evidence, including post-enactment evidence introduced by defendants as well as the evidence in the legislative history itself.”¹²⁵

L. Legal — Legal framework applied to Federal DBE Program

The courts have noted that “there is no ‘precise mathematical formula to assess the quantum of evidence that rises to the *Croson* ‘strong basis in evidence’ benchmark.”¹²⁶ It has been held that a state need not conclusively prove the existence of past or present racial discrimination to establish a strong basis in evidence for concluding that remedial action is necessary.¹²⁷ Instead, the Supreme Court stated that a government may meet its burden by relying on “a significant statistical disparity” between the availability of qualified, willing, and able minority subcontractors and the utilization of such subcontractors by the governmental entity or its prime contractors.¹²⁸ It has been further held that the statistical evidence be “corroborated by significant anecdotal evidence of racial discrimination” or bolstered by anecdotal evidence supporting an inference of discrimination.¹²⁹

The courts have stated the strict scrutiny standard is applicable to justify a race-conscious measure, and that it is a substantial burden but not automatically “fatal in fact.”¹³⁰ In so acting, a governmental entity must demonstrate it had a compelling interest in “remediating the effects of past or present racial discrimination.”¹³¹

Thus, courts have held that to justify a race-conscious measure, a government must identify that discrimination, public or private, with some specificity, and must have a strong basis in evidence for its conclusion that remedial action is necessary.¹³²

L. Legal — Legal framework applied to Federal DBE Program

Statistical evidence. Statistical evidence of discrimination is a primary method used to determine whether or not a strong basis in evidence exists to develop, adopt and support a remedial program (i.e., to prove a compelling governmental interest), or in the case of a state DOT or recipient of U.S. DOT funds complying with the Federal DBE Program or ACDBE Program, to prove narrow tailoring by the state DOT or recipient implementing the Federal DBE Program or ACDBE Program at the state DOT or recipient level.¹³³ “Where gross statistical disparities can be shown, they alone in a proper case may constitute prima facie proof of a pattern or practice of discrimination.”¹³⁴

One form of statistical evidence is the comparison of a government’s utilization of MBE/WBEs compared to the relative availability of qualified, willing and able MBE/WBEs.¹³⁵ The federal courts have held that a significant statistical disparity between the utilization and availability of minority- and women-owned firms may raise an inference of discriminatory exclusion.¹³⁶ However, a small statistical disparity, standing alone, may be insufficient to establish discrimination.¹³⁷

L. Legal — Legal framework applied to Federal DBE Program

Other considerations regarding statistical evidence include:

- **Availability analysis.** A disparity index requires an availability analysis. MBE/WBE and DBE (and ACDBE) availability measures the relative number of MBE/WBEs and DBEs (and ACDBEs) among all firms ready, willing and able to perform a certain type of work within a particular geographic market area.¹³⁸ There is authority that measures of availability may be approached with different levels of specificity and the practicality of various approaches must be considered,¹³⁹ “An analysis is not devoid of probative value simply because it may theoretically be possible to adopt a more refined approach.”¹⁴⁰
- **Utilization analysis.** Courts have accepted measuring utilization based on the proportion of an agency’s contract dollars going to MBE/WBEs and DBEs.¹⁴¹
- **Disparity index.** An important component of statistical evidence is the “disparity index.”¹⁴² A disparity index is defined as the ratio of the percent utilization to the percent availability times 100. A disparity index below 80 has been accepted as evidence of adverse impact. This has been referred to as “The Rule of Thumb” or “The 80 percent Rule.”¹⁴³

L. Legal — Legal framework applied to Federal DBE Program

- **Two standard deviation test.** The standard deviation figure describes the probability that the measured disparity is the result of mere chance. Some courts have held that a statistical disparity corresponding to a standard deviation of less than two is not considered statistically significant.¹⁴⁴

In terms of statistical evidence, Courts have held that a state “need not conclusively prove the existence of past or present racial discrimination to establish a strong basis in evidence,” but rather it may rely on “a significant statistical disparity” between the availability of qualified, willing, and able minority subcontractors and the utilization of such subcontractors by the governmental entity or its prime contractors.¹⁴⁵

Marketplace discrimination and data. The Tenth Circuit in *Concrete Works* held the district court erroneously rejected the evidence the local government presented on marketplace discrimination.¹⁴⁶ The court rejected the district court’s “erroneous” legal conclusion that a municipality may only remedy its own discrimination. The court stated this conclusion is contrary to the holdings in its 1994 decision in *Concrete Works II* and the plurality opinion in *Croson*.¹⁴⁷ The court held it previously recognized in this case that “a municipality has a compelling interest in taking affirmative steps to remedy both public and private discrimination specifically identified in its area.”¹⁴⁸ In *Concrete Works II*, the court stated that “we do not read *Croson* as requiring the municipality to identify an exact linkage between its award of public contracts and private discrimination.”¹⁴⁹

¹⁴⁴ See, e.g., *H.B. Rowe Co. v. NCDOT*, 615 F.3d 233, 243-245; *Eng’g Contractors Ass’n*, 122 F.3d at 914, 917, 923. The Eleventh Circuit found that a disparity greater than two or three standard deviations has been held to be statistically significant and may create a presumption of discriminatory conduct.; *Peightal v. Metropolitan Eng’g Contractors Ass’n*, 26 F.3d 1545, 1556 (11th Cir. 1994). The Seventh Circuit Court of Appeals in *Kadas v. MCI Systemhouse Corp.*, 255 F.3d 359 (7th Cir. 2001), raised questions as to the use of the standard deviation test alone as a controlling factor in determining the admissibility of statistical evidence to show discrimination. Rather, the Court concluded it is for the judge to say, on the basis of the statistical evidence, whether a particular significance level, in the context of a particular study in a particular case, is too low to make the study worth the consideration of judge or jury. 255 F.3d at 363.

L. Legal — Legal framework applied to Federal DBE Program

The court stated that the local government could meet its burden of demonstrating its compelling interest with evidence of private discrimination in the local construction industry coupled with evidence that it has become a passive participant in that discrimination.¹⁵⁰ Thus, the local government was not required to demonstrate that it is “guilty of prohibited discrimination” to meet its initial burden.¹⁵¹

Additionally, the court had previously concluded that the local government’s statistical studies, which compared utilization of MBE/WBEs to availability, supported the inference that “local prime contractors” are engaged in racial and gender discrimination.¹⁵² Thus, the court held the local government’s disparity studies should not have been discounted because they failed to specifically identify those individuals or firms responsible for the discrimination.¹⁵³

The court held the district court, *inter alia*, erroneously concluded that the disparity studies upon which the local government relied were significantly flawed because they measured discrimination in the overall local government MSA construction industry, not discrimination by the municipality itself.¹⁵⁴ The court found that the district court’s conclusion was directly contrary to the holding in *Adarand VII* that evidence of both public and private discrimination in the construction industry is relevant.¹⁵⁵

Consistent with the court’s mandate in *Concrete Works II*, the local government attempted to show at trial that it “indirectly contributed to private discrimination by awarding public contracts to firms that in turn discriminated against MBE and/or WBE subcontractors in other private portions of their business.”¹⁵⁶ The Tenth Circuit ruled that the local government can demonstrate that it is a “‘passive participant’ in a system of racial exclusion practiced by elements of the local construction industry” by compiling evidence of marketplace discrimination and then linking its spending practices to the private discrimination.¹⁵⁷

The court in *Concrete Works* rejected the argument that the lending discrimination studies and business formation studies presented by the local government were irrelevant. In *Adarand VII*, the Tenth Circuit concluded that evidence of discriminatory barriers to the formation of businesses by minorities and women and fair competition between MBE/WBEs and majority-owned construction firms shows a “strong link” between a government’s “disbursements of public funds for construction contracts and the channeling of those funds due to private discrimination.”¹⁵⁸

¹⁵⁰ *Id.* at 973.

¹⁵¹ *Id.*

¹⁵² *Id.* at 974, quoting *Concrete Works II*, 36 F.3d at 1529.

¹⁵³ *Id.*

¹⁵⁴ *Id.* at 974.

¹⁵⁶ *Id.*

¹⁵⁷ *Concrete Works*, 321 F.3d at 976, quoting *Croson*, 488 U.S. at 492.

¹⁵⁸ *Id.* at 977, quoting *Adarand VII*, 228 F.3d at 1167-68.

L. Legal — Legal framework applied to Federal DBE Program

The court found that evidence that private discrimination resulted in barriers to business formation is relevant because it demonstrates that MBE/WBEs are precluded *at the outset* from competing for public construction contracts. The court also found that evidence of barriers to fair competition is relevant because it again demonstrates that *existing* MBE/WBEs are precluded from competing for public contracts. Thus, like the studies measuring disparities in the utilization of MBE/WBEs in the local government MSA construction industry, studies showing that discriminatory barriers to business formation exist in the local government construction industry are relevant to the municipality's showing that it indirectly participates in industry discrimination.¹⁵⁹

The local government also introduced evidence of discriminatory barriers to competition faced by MBE/WBEs in the form of business formation studies. The court held that the district court's conclusion that the business formation studies could not be used to justify the ordinances conflicts with its holding in *Adarand VII*. "[T]he existence of evidence indicating that the number of [MBEs] would be significantly (but unquantifiably) higher but for such barriers is nevertheless relevant to the assessment of whether a disparity is sufficiently significant to give rise to an inference of discriminatory exclusion."¹⁶⁰

Anecdotal evidence. Anecdotal evidence includes personal accounts of incidents, including of discrimination, told from the witness' perspective. Anecdotal evidence of discrimination, standing alone, generally is insufficient to show a systematic pattern of discrimination.¹⁶¹ But, the courts point out, including the Ninth Circuit, that personal accounts of actual discrimination may complement empirical evidence and play an important role in bolstering statistical evidence.¹⁶² It has been held that anecdotal evidence of a local or state government's institutional practices that exacerbate discriminatory market conditions are often particularly probative, and that the combination of anecdotal and statistical evidence is "potent."¹⁶³

Examples of anecdotal evidence may include:

- Testimony of MBE/WBE or DBE (and ACDBE) owners regarding whether they face difficulties or barriers;
- Descriptions of instances in which MBE/WBE or DBE (and ACDBE) owners believe they were treated unfairly or were discriminated against based on their race, ethnicity, or gender or believe they were treated fairly without regard to race, ethnicity, or gender;

L. Legal — Legal framework applied to Federal DBE Program

- Statements regarding whether firms solicit, or fail to solicit, bids or price quotes from MBE/WBEs or DBEs (and ACDBEs) on non-goal projects; and
- Statements regarding whether there are instances of discrimination in bidding on specific contracts and in the financing and insurance markets.¹⁶⁴

Courts have accepted and recognize that anecdotal evidence is the witness' narrative of incidents told from his or her perspective, including the witness' thoughts, feelings, and perceptions, and thus anecdotal evidence need not be verified.¹⁶⁵

b. The Narrow Tailoring Requirement.

The second prong of the strict scrutiny analysis requires that a race- or ethnicity-based program or legislation implemented to remedy past identified discrimination in the relevant market be “narrowly tailored” to reach that objective.

The narrow tailoring requirement has several components and the courts, including the Ninth Circuit Court of Appeals, analyze several criteria or factors in determining whether a program or legislation satisfies this requirement including:

- The necessity for the relief and the efficacy of alternative race-, ethnicity- and gender-neutral remedies;
- The flexibility and duration of the relief, including the availability of waiver provisions;
- The relationship of numerical goals to the relevant labor market; and
- The impact of a race-, ethnicity- or gender-conscious remedy on the rights of third parties.¹⁶⁶

L. Legal — Legal framework applied to Federal DBE Program

To satisfy the narrowly tailored prong of the strict scrutiny analysis in the context of the Federal DBE Program, which is instructive to the study, the federal courts that have evaluated state and local DBE Programs and their implementation of the Federal DBE Program, held the following factors are pertinent:

- Evidence of discrimination or its effects in the state transportation contracting industry;
- Flexibility and duration of a race- or ethnicity-conscious remedy;
- Relationship of any numerical DBE goals to the relevant market;
- Effectiveness of alternative race- and ethnicity-neutral remedies;
- Impact of a race- or ethnicity-conscious remedy on third parties; and
- Application of any race- or ethnicity-conscious program to only those minority groups who have actually suffered discrimination.¹⁶⁷

Implementation of the Federal DBE Program (and ACDBE Program): Narrow tailoring.

The second prong of the strict scrutiny analysis, as discussed above, requires the implementation of the Federal DBE Program (and ACDBE Program) by state DOTs and recipients of federal funds be “narrowly tailored” to remedy identified discrimination in the particular state DOT’s or recipient’s transportation contracting and procurement market.¹⁶⁸

In *Western States Paving*, the Ninth Circuit held the state DOT or recipient of federal funds must have independent evidence of discrimination within the recipient’s own transportation contracting and procurement marketplace in order to determine whether or not there is the need for race-, ethnicity- or gender-conscious remedial action.¹⁶⁹ Thus, the Ninth Circuit held in *Western States Paving* that mere compliance with the Federal DBE Program does not satisfy strict scrutiny.¹⁷⁰

¹⁶⁷ See, e.g., *Midwest Fence*, 840 F.3d 932, 942, 953-954 (7th Cir. 2016); *AGC, SDC v. Caltrans*, 713 F.3d at 1198-1199; *H. B. ¹⁷⁰ *Id.* at 995-1003. The Seventh Circuit Court of Appeals in *Northern Contracting* stated in a footnote that the court in *Western States Paving* “misread” the decision in *Milwaukee County Pavers*. 473 F.3d at 722, n. 5.

L. Legal — Legal framework applied to Federal DBE Program

In *Western States Paving*, and in *AGC, SDC v. Caltrans*, the Court found that even where evidence of discrimination is present in a recipient's market, a narrowly tailored program must apply only to those minority groups who have actually suffered discrimination. Thus, under a race- or ethnicity-conscious program, for each of the minority groups to be included in any race- or ethnicity-conscious elements in a recipient's implementation of the Federal DBE Program, there must be evidence that the minority group suffered discrimination within the recipient's marketplace.¹⁷¹

In *Northern Contracting* decision (2007) the Seventh Circuit Court of Appeals cited its earlier precedent in *Milwaukee County Pavers v. Fielder* to hold "that a state is insulated from [a narrow tailoring] constitutional attack, absent a showing that the state exceeded its federal authority. IDOT [Illinois DOT] here is acting as an instrument of federal policy and Northern Contracting (NCI) cannot collaterally attack the federal regulations through a challenge to IDOT's program."¹⁷² The Seventh Circuit Court of Appeals distinguished both the Ninth Circuit Court of Appeals decision in *Western States Paving* and the Eighth Circuit Court of Appeals decision in *Sherbrooke Turf*, relating to an as-applied narrow tailoring analysis.

The Seventh Circuit Court of Appeals held that the state DOT's [Illinois DOT] application of a federally mandated program is limited to the question of whether the state exceeded its grant of federal authority under the Federal DBE Program.¹⁷³ The Seventh Circuit Court of Appeals analyzed IDOT's compliance with the federal regulations regarding calculation of the availability of DBEs, adjustment of its goal based on local market conditions and its use of race-neutral methods set forth in the federal regulations.¹⁷⁴ The court held NCI failed to demonstrate that IDOT did not satisfy compliance with the federal regulations (49 CFR Part 26).¹⁷⁵ Accordingly, the Seventh Circuit Court of Appeals affirmed the district court's decision upholding the validity of IDOT's DBE program.¹⁷⁶

The 2015 and 2016 Seventh Circuit Court of Appeals decisions in *Dunnet Bay Construction Company v. Borggren, Illinois DOT, et. al.* and *Midwest Fence Corp. v. U.S. DOT, Federal Highway Administration, Illinois DOT* followed the ruling in *Northern Contracting* that a state DOT implementing the Federal DBE Program is insulated from a constitutional challenge absent a showing that the state exceeded its federal authority.¹⁷⁷ The court held the Illinois DOT DBE Program implementing the Federal DBE Program was valid, finding there was not sufficient evidence to show the Illinois DOT exceeded its authority under the federal regulations.¹⁷⁸ The court found Dunnet Bay had not established

L. Legal — Legal framework applied to Federal DBE Program

sufficient evidence that IDOT’s implementation of the Federal DBE Program constituted unlawful discrimination.¹⁷⁹ In addition, the court in *Midwest Fence* upheld the constitutionality of the Federal DBE Program, and upheld the Illinois DOT DBE Program and Illinois State Tollway Highway Authority DBE Program that did not involve federal funds under the Federal DBE Program.¹⁸⁰

Race-, ethnicity- and gender-neutral measures. To the extent a “strong basis in evidence” exists concerning discrimination in a local or state government’s relevant contracting and procurement market, the courts analyze several criteria or factors to determine whether a state’s implementation of a race- or ethnicity-conscious program is necessary and thus narrowly tailored to achieve remedying identified discrimination. One of the key factors discussed above is consideration of race-, ethnicity- and gender-neutral measures.

The courts, including the Ninth Circuit, require that a local or state government seriously consider race-, ethnicity- and gender-neutral efforts to remedy identified discrimination.¹⁸¹ And the courts have held unconstitutional those race- and ethnicity-conscious programs implemented without consideration of race- and ethnicity-neutral alternatives to increase minority business participation in state and local contracting.¹⁸²

In holding the Federal DBE regulations were narrowly tailored, the Eighth Circuit stated those regulations “place strong emphasis on ‘the use of race-neutral means to increase minority business participation in government contracting.’”¹⁸³

The Eleventh Circuit described the “the essence of the ‘narrowly tailored’ inquiry [as] the notion that explicitly racial preferences ... must only be a ‘last resort’ option.”¹⁸⁴ Courts, including the Ninth Circuit, have found that “[w]hile narrow tailoring does not require exhaustion of every conceivable race-neutral alternative, it does require serious, good faith consideration of whether such alternatives could serve the governmental interest at stake.”¹⁸⁵

L. Legal — Legal framework applied to Federal DBE Program

Similarly, the Sixth Circuit Court of Appeals in *Associated Gen. Contractors v. Drabik* (“*Drabik II*”), stated: “*Adarand* teaches that a court called upon to address the question of narrow tailoring must ask, “for example, whether there was ‘any consideration of the use of race-neutral means to increase minority business participation’ in government contracting ... or whether the program was appropriately limited such that it ‘will not last longer than the discriminatory effects it is designed to eliminate.’”¹⁸⁶

The Supreme Court in *Parents Involved in Community Schools v. Seattle School District*¹⁸⁷ also found that race- and ethnicity-based measures should be employed as a last resort. The majority opinion stated: “Narrow tailoring requires ‘serious, good faith consideration of workable race-neutral alternatives,’ and yet in Seattle several alternative assignment plans — many of which would not have used express racial classifications — were rejected with little or no consideration.”¹⁸⁸ The Court found that the District failed to show it seriously considered race-neutral measures.

The “narrowly tailored” analysis is instructive in terms of implementing the Federal DBE and ACDBE Programs, developing any potential legislation or programs that involve MBE/WBE/DBEs, or in connection with determining appropriate remedial measures to achieve legislative objectives.

The Court in *Croson* followed by decisions from federal courts of appeal found that local and state governments have at their disposal a “whole array of race-neutral devices to increase the accessibility of city contracting opportunities to small entrepreneurs of all races.”¹⁸⁹

The federal regulations and the courts require that state DOTs and recipients of federal financial assistance governed by 49 CFR Part 26 and 49 CFR Part 23 implement or seriously consider race-, ethnicity- and gender-neutral remedies prior to the implementation of race-, ethnicity- and gender-conscious remedies.¹⁹⁰ The courts also have found the regulations require a state to meet the maximum feasible portion of its overall goal by using race neutral means.¹⁹¹

¹⁸⁶ *Associated Gen. Contractors of Ohio, Inc. v. Drabik* (“*Drabik II*”), 214 F.3d 730, 738 (6th Cir. 2000).

¹⁸⁸ 551 U.S. 701, 734-37, 127 S.Ct. at 2760-61; see also *Fisher v. University of Texas*, 133 S.Ct. 2411 (2013); *Grutter v. Bollinger*, 539 U.S. 305 (2003).

¹⁸⁹ *Croson*, 488 U.S. at 509-510.

¹⁹⁰ 49 CFR § 26.51(a) requires recipients of federal funds to “meet the maximum feasible portion of your overall goal by using race-neutral means of facilitating DBE participation.” See, 49 CFR § 23.25; see, e.g., *Adarand VII*, 228 F.3d at 1179; *Western States Paving*, 407 F.3d at 993; *Sherbrooke Turf*, 345 F.3d at 972. Additionally, in

September of 2005, the United States Commission on Civil Rights (the “Commission”) issued its report entitled “Federal Procurement After *Adarand*” setting forth its findings pertaining to federal agencies’ compliance with the constitutional standard enunciated in *Adarand*. United States Commission on Civil Rights: Federal Procurement After *Adarand* (Sept. 2005), available at <http://www.usccr.gov>. The Commission found that 10 years after the Court’s *Adarand* decision, federal agencies have largely failed to narrowly tailor their reliance on race-conscious programs and have failed to seriously consider race-neutral measures that would effectively redress discrimination.

¹⁹¹ See, e.g., *Northern Contracting*, 473 F.3d at 723–724; *Western States Paving*, 407 F.3d at 993 (citing 49 CFR § 26.51(a)); see, 49 CFR § 26.51; 49 CFR § 23.25.

L. Legal — Legal framework applied to Federal DBE Program

Examples of race-, ethnicity- and gender-neutral alternatives include, but are not limited to, the following:

- Providing assistance in overcoming bonding and financing obstacles;
- Relaxation of bonding requirements;
- Providing technical, managerial and financial assistance;
- Establishing programs to assist start-up firms;
- Simplification of bidding procedures;
- Training and financial aid for all disadvantaged entrepreneurs;
- Non-discrimination provisions in contracts and in state law;
- Mentor-protégé programs and mentoring;
- Efforts to address prompt payments to smaller businesses;
- Small contract solicitations to make contracts more accessible to smaller businesses;
- Expansion of advertisement of business opportunities;
- Outreach programs and efforts;
- “How to do business” seminars;
- Sponsoring networking sessions throughout the state acquaint small firms with large firms;
- Creation and distribution of MBE/WBE and DBE directories; and
- Streamlining and improving the accessibility of contracts to increase small business participation.¹⁹²

The courts have held that while the narrow tailoring analysis does not require a governmental entity to exhaust every possible race-, ethnicity- and gender-neutral alternative, it does “require serious, good faith consideration of workable race-neutral alternatives.”¹⁹³

¹⁹² See, e.g., *Croson*, 488 U.S. at 509-510; *H. B. Rowe*, 615 F.3d 233, 252-255; *N. Contracting*, 473 F.3d at 724; *Adarand VII*, 228 F.3d 1179; 49 CFR § 26.51(b); see also, *Eng’g Contractors Ass’n*, 122 F.3d at 927-29; *Contractors Ass’n of E. Pa. v. City of Philadelphia*, 91 F.3d at 608-609 (3d. Cir. 1996); *Contractors Ass’n of E. Pa. v. City of Philadelphia*, 6 F.3d at 1008-1009 (3d. Cir. 1993).

Rowe*, 615 F.3d 233, 252-255 (4th Cir. 2010); *Western States Paving*, 407 F.3d at 993; *Sherbrooke Turf*, 345 F.3d at 972; *Eng’g Contractors Ass’n*, 122 F.3d at 927.

L. Legal — Legal framework applied to Federal DBE Program

Additional factors considered under narrow tailoring. In addition to the required consideration of the necessity for the relief and the efficacy of alternative remedies (race- and ethnicity-neutral efforts), the courts require evaluation of additional factors as listed above. For example, to be considered narrowly tailored, courts have held that an MBE/WBE- or DBE-type program should include: (1) built-in flexibility;¹⁹⁴ (2) good faith efforts provisions;¹⁹⁵ (3) waiver provisions;¹⁹⁶ (4) a rational basis for goals;¹⁹⁷ (5) graduation provisions;¹⁹⁸ (6) remedies only for groups for which there were findings of discrimination;¹⁹⁹ (7) sunset provisions;²⁰⁰ and (8) limitation in its geographical scope to the boundaries of the enacting jurisdiction.²⁰¹

Several federal court decisions have upheld the Federal DBE Program and its implementation by state DOTs and recipients of federal funds, including satisfying the narrow tailoring factors.²⁰²

L. Legal — Legal framework applied to Federal DBE Program

3. Intermediate scrutiny analysis

Certain Federal Courts of Appeal, including the Ninth Circuit Court of Appeals, apply intermediate scrutiny to gender-conscious programs.²⁰³

The courts have interpreted this intermediate scrutiny standard to require that gender-based classifications be:

1. Supported by both “sufficient probative” evidence or “exceedingly persuasive justification” in support of the stated rationale for the program; and
2. Substantially related to the achievement of that underlying objective.²⁰⁴

Under the traditional intermediate scrutiny standard, the court reviews a gender-conscious program by analyzing whether the state actor has established a sufficient factual predicate for the claim that female-owned businesses have suffered discrimination, and whether the gender-conscious remedy is an appropriate response to such discrimination. This standard requires the state actor to present “sufficient probative” evidence in support of its stated rationale for the program.²⁰⁵

Intermediate scrutiny, as interpreted by the Ninth Circuit and other federal circuit courts of appeal, requires a direct, substantial relationship between the objective of the gender preference and the means chosen to accomplish the objective.²⁰⁶ The measure of evidence required to satisfy intermediate scrutiny is less than that necessary to satisfy strict scrutiny. Unlike strict scrutiny, it has been held that the intermediate scrutiny standard does not require a showing of government involvement, active or passive, in the discrimination it seeks to remedy.²⁰⁷

²⁰³ See e.g., *AGC, SDC v. Caltrans*, 713 F.3d at 1195 (9th Cir. 2013); *H. B. Rowe*, 615 F.3d 233, 242 (4th Cir. 2010); *Western States Paving*, 407 F.3d at 990 n. 6; *Coral Constr. Co.*, 941 F.2d at 931-932 (9th Cir. 1991); *Equal. Found. v. City of Cincinnati*, 128 F.3d 289 (6th Cir. 1997); *Eng’g Contractors Ass’n*, 122 F.3d at 905, 908, 910; *Ensley Branch N.A.A.C.P. v. L. Legal — Legal framework applied to Federal DBE Program

Certain courts have held that “[w]hen a gender-conscious affirmative action program rests on sufficient evidentiary foundation, the government is not required to implement the program only as a last resort Additionally, under intermediate scrutiny, a gender-conscious program need not closely tie its numerical goals to the proportion of qualified women in the market.”²⁰⁸

The Tenth Circuit in *Concrete Works*, stated with regard evidence as to woman-owned business enterprises as follows:

“We do not have the benefit of relevant authority with which to compare Denver’s disparity indices for WBEs. See *Contractors Ass’n*, 6 F.3d at 1009–11 (reviewing case law and noting that “it is unclear whether statistical evidence as well as anecdotal evidence is required to establish the discrimination necessary to satisfy intermediate scrutiny, and if so, how much statistical evidence is necessary”). Nevertheless, Denver’s data indicates significant WBE underutilization such that the Ordinance’s gender classification arises from “reasoned analysis rather than through the mechanical application of traditional, often inaccurate, assumptions.” *Mississippi Univ. of Women*, 458 U.S. at 726, 102 S.Ct. at 3337 (striking down, under the intermediate scrutiny standard, a state statute that excluded males from enrolling in a state-supported professional nursing school).”

The Fourth Circuit cites with approval the guidance from the Eleventh Circuit that has held “[w]hen a gender-conscious affirmative action program rests on sufficient evidentiary foundation, the government is not required to implement the program only as a last resort Additionally, under intermediate scrutiny, a gender-conscious program need not closely tie its numerical goals to the proportion of qualified women in the market.”²⁰⁹

The Supreme Court has stated that an affirmative action program survives intermediate scrutiny if the proponent can show it was “a product of analysis rather than a stereotyped reaction based on habit.”²¹⁰ The Third Circuit found this standard required the City of Philadelphia to present probative evidence in support of its stated rationale for the gender preference, discrimination against women-owned contractors.²¹¹ The Court in *Contractors Ass’n of E. Pa. (CAEP I)* held the City had not produced enough evidence of discrimination, noting that in its brief, the City relied on statistics in the City Council Finance Committee Report and one affidavit from a woman engaged in the catering business, but the Court found this evidence only reflected the participation of women in City contracting generally, rather than in the construction industry, which was the only cognizable issue in that case.²¹²

²⁰⁸ 122 F.3d at 929 (internal citations omitted.)

²⁰⁹ 615 F.3d 233, 242; 122 F.3d at 929 (internal citations omitted).

²¹⁰ *Contractors Ass’n of E. Pa. (CAEP I)*, 6 F.3d at 1010 (3d. Cir. 1993).

²¹¹ *Contractors Ass’n of E. Pa. (CAEP I)*, 6 F.3d at 1010 (3d. Cir. 1993).

²¹² *Contractors Ass’n of E. Pa. (CAEP I)*, 6 F.3d at 1011 (3d. Cir. 1993).

L. Legal — Legal framework applied to Federal DBE Program

The Third Circuit in *CAEP I* held the evidence offered by the City of Philadelphia regarding women-owned construction businesses was insufficient to create an issue of fact. The study in *CAEP I* contained no disparity index for women-owned construction businesses in City contracting, such as that presented for minority-owned businesses.²¹³ Given the absence of probative statistical evidence, the City, according to the Court, must rely solely on anecdotal evidence to establish gender discrimination necessary to support the Ordinance.²¹⁴ But the record contained only one three-page affidavit alleging gender discrimination in the construction industry.²¹⁵ The only other testimony on this subject, the Court found in *CAEP I*, consisted of a single, conclusory sentence of one witness who appeared at a City Council hearing.²¹⁶ This evidence the Court held was not enough to create a triable issue of fact regarding gender discrimination under the intermediate scrutiny standard.

4. Rational basis analysis

Where a challenge to the constitutionality of a statute or a regulation does not involve a fundamental right or a suspect class, the appropriate level of scrutiny to apply is the rational basis standard.²¹⁷ When applying rational basis review under the Equal Protection Clause of the Fourteenth Amendment of the United States Constitution, a court is required to inquire whether the challenged classification has a legitimate purpose and whether it was reasonable for the legislature to believe that use of the challenged classification would promote that purpose.²¹⁸

²¹³ *Contractors Ass’n of E. Pa. (CAEP I)*, 6 F.3d at 1011 (3d Cir. 1993).

Beaverton*, 202 Or. App. 431, 122 P.3d 137 (Or. App. 2005).

L. Legal — Legal framework applied to Federal DBE Program

Courts in applying the rational basis test generally find that a challenged law is upheld “as long as there could be some rational basis for enacting [it],” that is, that “the law in question is rationally related to a legitimate government purpose.”²¹⁹ So long as a government legislature had a reasonable basis for adopting the classification the law will pass constitutional muster.²²⁰

“[T]he burden is on the one attacking the legislative arrangement to negative every conceivable basis which might support it, whether or not the basis has a foundation in the record.”²²¹ Moreover, “courts are compelled under rational-basis review to accept a legislature’s generalizations even when there is an imperfect fit between means and ends. A classification does not fail rational-basis review because it is not

made with mathematical nicety or because in practice it results in some inequality.”²²²

Under a rational basis review standard, a legislative classification will be upheld “if there is a rational relationship between the disparity of treatment and some legitimate governmental purpose.”²²³ Because all legislation classifies its objects, differential treatment is justified by “any reasonably conceivable state of facts.”²²⁴

²¹⁹ See, e.g., *Kadmas v. Dickinson Public Schools*, 487 U.S. 450, 457-58 (1998); *Crawford v. Antonio B. Won Pat International Airport Authority*, 917 F.3d 1081, 1095-1096 (9th Cir. 2019); *Gallinger v. Becerra*, 898 F.3d 1012, 1016-1018 (9th Cir. 2018); *Price-Cornelison v. Brooks*, 524 F.3d 1103, 1110 (10th Cir. 1996); *White v. Colorado*, 157 F.3d 1226, (10th Cir. 1998) see also *City of Cleburne v. L. Legal — Legal framework applied to Federal DBE Program

Under the federal standard of review a court will presume the “legislation is valid and will sustain it if the classification drawn by the statute is rationally related to a legitimate [government] interest.”²²⁵

A fairly recent federal court decision, which is instructive to the study, involved a challenge to and the application of a small business goal in a pre-bid process for a federal procurement. *Firstline Transportation Security, Inc. v. United States*, is instructive and analogous to some of the issues in a small business program. The case is informative as to the use, estimation and determination of goals (small business goals) in a procurement under the Federal Acquisition Regulations (“FAR”).²²⁶

Firstline involved a solicitation that established a small business subcontracting goal requirement. In *Firstline*, the Transportation Security Administration (“TSA”) issued a solicitation for security screening services at the Kansas City Airport. The solicitation stated that the: “Government anticipates an overall Small Business goal of 40 percent,” and that “[w]ithin that goal, the government anticipates further small business goals of: Small, Disadvantaged business[:] 14.5 percent; Woman Owned[:] 5 percent; HUBZone[:] 3 percent; Service Disabled, Veteran Owned[:] 3 percent.”²²⁷

The court applied the rational basis test in construing the challenge to the establishment by the TSA of a 40 percent small business participation goal as unlawful and irrational.²²⁸ The court stated it “cannot say that the agency’s approach is clearly unlawful, or that the approach lacks a rational basis.”²²⁹

The court found that “an agency may rationally establish aspirational small business subcontracting goals for prospective offerors” Consequently, the Court held one rational method by which the Government may attempt to maximize small business participation is to establish a rough subcontracting goal for a given contract, and then allow potential contractors to compete in designing innovative ways to structure and maximize small business subcontracting within their proposals.²³⁰ The court, in an exercise of judicial restraint, found the “40 percent goal is a rational expression of the Government’s policy of affording small business concerns...the maximum practicable opportunity to participate as subcontractors”²³¹

²²⁵ *Heller v. Doe*, 509 U.S. 312, 320 (1993); *Chance Mgmt., Inc. v. S. Dakota*, 97 F.3d 1107, 1114 (8th Cir. 1996); *Crawford v. Antonio B. Won Pat International Airport Authority*, 917 F.3d 1081, 1095-1096 (9th Cir. 2019); *Gallinger v. Becerra*, 898 F.3d 1012, 1016-1018 (9th Cir. 2018); see also *Lawrence v. Texas*, 539 U.S. 558, 580, 123 S. Ct. 2472, 156 L. Ed. 2d 508 (2003) (“Under our rational basis standard of review, legislation is presumed to be valid and will be sustained if the classification drawn by the statute is rationally related to a legitimate state interest Laws such as economic or tax legislation that are scrutinized under rational basis review normally pass constitutional muster.” (internal citations and quotations omitted)) (O’Connor, J., concurring); *Gallagher v. City of Clayton*, 699 F.3d 1013, 1019 (8th Cir. 2012) (“Under rational basis

review, the classification must only be rationally related to a legitimate government interest.”).

L. Legal — Pending cases and recent instructive cases

D. Pending Cases and Recent Instructive Cases (at the time of this report)

There are pending cases and certain recent decisions of interest in the federal and state courts at the time of this report involving challenges to MBE/WBE/DBE type programs and that may potentially impact and be instructive to the study, and key recent orders from cases that are informative to the study, including the following:

1. *Antonio Vitolo, et al. v. Isabella Guzman, Administrator of the Small Business Administration* 2021 WL 2172181 (6th Cir. May 27, 2021)
2. *Greer’s Ranch Café v. Guzman*, ____ F.Supp.3d ____ (2021), 2021 WL 2092995 (N.D. Tex. 5/18/21).
3. *Faust v. Vilsack*, ____ F.Supp.3d, ____ 2021 WL 2409729, US District Court, E.D. Wisconsin (June 10, 2021)
4. *Wynn v. Vilsack* 2021 WL 2580678, (M.D. Fla. June 23, 2021), Case No. 3:21-cv-514-MMH-JRK, U.S. District Court for the Middle District of Fla.
5. *Mechanical Contractors Association of Memphis, Inc., White Plumbing & Mechanical Contractors, Inc. and Morgan & Thornburg, Inc. v. Shelby County, Tennessee, et al.*, U.S. District Court for the Western District of Tennessee, Western Division, Case 2:19-cv-02407-SHL-tmp, filed on January 17, 2019
6. *Palm Beach County Board of County Commissioners v. Mason Tillman Associates, Ltd.; Florida East Coast Chapter of the AGC of America, Inc.*, Case No. 502018CA010511, In the 15th Judicial Circuit in and for Palm Beach County, Florida
7. *CCI Environmental, Inc., D.W. Mertzke Excavating & Trucking, Inc., Global Environmental, Inc., Premier Demolition, Inc., v. City of St. Louis, St. Louis Airport Authority, et al.*; U.S. District Court for the Eastern District of Missouri, Eastern Division; Case No: 4:19-cv-03099
8. *Ultima Services Corp. v. U.S. Department of Agriculture, U.S. Small Business Administration, et. al.*, U.S. District Court for the Eastern District of Tennessee, 2:20-cv-00041-DCLC-CRW
9. *Pharmacann Ohio, LLC v. Ohio Dept. Commerce Director Jacqueline T. Williams*, In the Court of Common Pleas, Franklin County, Ohio, Case No. 17-CV-10962, November 15, 2018, appealed to the Court of Appeals of Ohio, Tenth Appellate District, Case No. 18-AP-000954
10. *Circle City Broadcasting I, LLC (“Circle City”) and National Association of Black Owned Broadcasters (“NABOB”) (Plaintiffs) v. DISH Network, LLC (“DISH” or “Defendant”)*, U.S. District Court for the Southern District of Indiana, Indianapolis Division, Case NO. 1:20-cv-00750-TWP-TAB
11. *Etienne Hardre, and SDG Murray, LTD et al. v. Colorado Minority Business Office, Governor of Colorado et al.*, U.S. District Court for the District of Colorado, Case 1:20-cv-03594. Complaint filed in December 2020
12. *Infinity Consulting Group, LLC, et al. v. United States Department of the Treasury, et al.*, Case No.: Gjh-20-981, In The United States District Court for the District Of Maryland, Southern Division. Complaint filed in April 2020

The following summarizes the above listed pending cases and informative recent decisions.

L. Legal — Pending cases and recent instructive cases

1. *Antonio Vitolo, et al. v. Isabella Guzman, Administrator of the U.S. SBA*, 2021 WL 2172181 (6th Cir. May 27, 2021)

On appeal to Sixth Circuit Court of Appeals from decision by United States District Court, E.D. Tennessee, Northern Division, 2021 WL 2003552, which District Court issued an Order denying plaintiffs' motion for temporary restraining order on 5/19/21, and Order denying plaintiffs' motion for preliminary injunction on 5/25/21. The appeal was filed in Sixth Circuit Court of Appeals on May 20, 2021. The Plaintiffs applied to the Sixth Circuit for an Emergency Motion for Injunction Pending Appeal and to Expedite Appeal. The Sixth Circuit, two of the three Judges on the three Judge panel, granted the motion to expedite the appeal and then decided and filed its Opinion on May 27, 2021. *Vitolo v. Guzman*, 2021 WL 2172181 (6th Cir. May 27, 2021).

Background and District Court Memorandum Opinion and Order.

On March 27, 2020, § 1102 of the Coronavirus Aid, Relief, and Economic Security Act ("CARES Act") created the Paycheck Protection Program ("PPP"), a \$349 billion federally guaranteed loan program for businesses distressed by the pandemic. On April 24, 2020, the Paycheck Protection Program and Health Care Enhancement Act appropriated an additional \$310 billion to the fund.

The district court in this case said that PPP loans were not administered equally to all kinds of businesses, however. Congressional investigation revealed that minority-owned and women-owned businesses had more difficulty accessing PPP funds relative to other kinds of business (analysis noting that black-owned businesses were more likely to be denied PPP loans than white-owned businesses with similar application profiles due to outright lending discrimination, and that funds were more quickly disbursed to businesses in predominantly white neighborhoods). The court stated from the testimony to Congress that this was due in significant part to the lack of historical relationships

between commercial lenders and minority-owned and women-owned businesses. The historical lack of access to credit, the court noted from the testimony, also meant that minority-owned and women-owned businesses tended to be in more financially precarious situations entering the pandemic, rendering them less able to weather an extended economic contraction of the sort COVID-19 unleashed.

Against this backdrop, on March 11, 2021, the President signed the American Rescue Plan Act of 2021 (the "ARPA"). H.R. 1319, 117th Cong. (2021). As part of the ARPA, Congress appropriated \$28,600,000,000 to a "Restaurant Revitalization Fund" and tasked the Administrator of the Small Business Administration with disbursing funds to restaurants and other eligible entities that suffered COVID-19 pandemic-related revenue losses. See *id.* § 5003. Under the ARPA, the Administrator "shall award grants to eligible entities in the order in which applications are received by the Administrator," except that during the initial 21-day period in which the grants are awarded, the Administrator shall prioritize awarding grants to eligible entities that are small business concerns owned and controlled by women, veterans, or socially and economically disadvantaged small business concerns.

On April 27, 2021, the Small Business Administration announced that it would open the application period for the Restaurant Revitalization Fund on May 3, 2021. The Small Business Administration announcement also stated, consistent with the ARPA, that "[f]or the first 21 days that the program is open, the SBA will prioritize funding applications from businesses owned and controlled by women, veterans, and socially and economically disadvantaged individuals."

L. Legal — Pending cases and recent instructive cases

Antonio Vitolo is a white male who owns and operates Jake’s Bar and Grill, LLC in Harriman, Tennessee. Vitolo applied for a grant from the Restaurant Revitalization Fund through the Small Business Administration on May 3, 2021, the first day of the application period. The Small Business Administration emailed Vitolo and notified him that “[a]pplicants who have submitted a non-priority application will find their application remain in a Review status while priority applications are processed during the first 21 days.”

On May 12, 2021, Vitolo and Jake’s Bar and Grill, LLC initiated the present action against Defendant Isabella Casillas Guzman, the Administrator of the Small Business Administration. In their complaint, Vitolo and Jake’s Bar and Grill assert that the ARPA’s twenty-one-day priority period violates the United States Constitution’s equal protection clause and due process clause because it impermissibly grants benefits and priority consideration based on race and gender classifications.

Based on allegations in the complaint and averments made in Vitolo’s sworn declaration dated May 11, 2021, Vitolo and Jake’s Bar and Grill request that the Court enter: (1) a temporary restraining order prohibiting the Small Business Administration from paying out grants from the Restaurant Revitalization Fund, unless it processes applications in the order they were received without regard to the race or gender of the applicant; (2) a temporary injunction requiring the Small Business Administration to process applications and pay grants in the order received regardless of race or gender; (3) a declaratory judgment that race-and gender-based classifications under § 5003 of the ARPA are unconstitutional; and (4) an order permanently enjoining the Small Business Administration from applying race- and gender-based classifications in determining eligibility and priority for grants under § 5003 of the ARPA.

Strict Scrutiny. The parties agreed that this system is subject to strict scrutiny. Accordingly, the district court found that whether Plaintiffs are likely to succeed on the merits of their race-based equal-protection claims turns on whether Defendant has a compelling government interest in using a race-based classification, and whether that classification is narrowly tailored to that interest. Here, the Government asserts that it has a compelling interest in “remedying the effect of past or present racial discrimination” as related to the formation and stability of minority-owned businesses.

Compelling Interest found by District Court. The court found that over the past year, Congress has gathered myriad evidence suggesting that small businesses owned by minorities (including restaurants, which have a disproportionately high rate of minority ownership) have suffered more severely than other kinds of businesses during the COVID-19 pandemic, and that the Government’s early attempts at general economic stimulus — i.e., the Paycheck Protection Program (“PPP”) — disproportionately failed to help those businesses directly because of historical discrimination patterns. To the extent that Plaintiffs argue that evidence racial disparity or disparate impact alone is not enough to support a compelling government interest, the court noted Congress also heard evidence that racial bias plays a direct role in these disparities.

At this preliminary stage, the court found that the Government has a compelling interest in remediating past racial discrimination against minority-owned restaurants through § 5003 the ARPA and in ensuring public relief funds are not perpetuating the legacy of that discrimination. At the very least, the court stated Congress had evidence before it suggesting that its initial COVID-relief program, the PPP, disproportionately failed to reach minority-owned businesses due (at least in part) to historical lack of relationships between banks and

L. Legal — Pending cases and recent instructive cases

minority-owned businesses, itself a symptom of historical lending discrimination.

The court cited the Supreme Court decision in *Croson*, 488 U.S. at 492 (“It is beyond dispute that any public entity, state or federal, has a compelling interest in assuring that public dollars drawn from the tax contributions of all citizens do not serve to finance the evil of private prejudice.”); and *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147, 1169 (10th Cir. 2000) (“The government’s evidence is particularly striking in the area of the race-based denial of access to capital, without which the formation of minority subcontracting enterprises is stymied.”); *DynaLantic Corp v. U.S. Dep’t of Def.*, 885 F. Supp. 2d 237, 258–262 (D.D.C. 2012) (rejecting facial challenge to the Small Business Administration’s 8(a) program in part because “the government [had] presented significant evidence on race-based denial of access to capital and credit”).

The court said that the PPP — a government-sponsored COVID-19 relief program — was stymied in reaching minority-owned businesses because historical patterns of discrimination are reflected in the present lack of relationships between minority-owned businesses and banks. This, according to the court, caused minority-owned businesses to enter the pandemic with more financial precarity, and therefore to falter at disproportionately higher rates as the pandemic has unfolded. The court found that Congress has a compelling interest in remediating the present effects of historical discrimination on these minority-owned businesses, especially to the extent that the PPP disproportionately failed those businesses because of factors clearly related to that history. Plaintiff, the court held, has not rebutted this initial showing of a compelling interest, and therefore has not shown a likelihood of success on the merits in this respect.

Narrow Tailoring found by District Court. The court then addressed the “narrow tailoring” requirement under the strict scrutiny analysis, concluding that: “Even in the limited circumstance when drawing racial distinctions is permissible to further a compelling state interest, government is still ‘constrained in how it may pursue that end: [T]he means chosen to accomplish the [government’s] asserted purpose must be specifically and narrowly framed to accomplish that purpose.’”

Section 5003 of the ARPA is a one-time grant program with a finite amount of money that prioritizes small restaurants owned by women and socially and economically disadvantaged individuals because Congress, the court concluded, had evidence before it showing that those businesses were inadequately protected by earlier COVID-19 financial relief programs. While individuals from certain racial minorities are rebuttably presumed to be “socially and economically disadvantaged” for purposes of § 5003, the court found Defendant correctly points out that the presumption does not exclude individuals like Vitolo from being prioritized, and that the prioritization does not mean individuals like Vitolo cannot receive relief under this program. Section 5003 is therefore time-limited, fund-limited, not absolutely constrained by race during the priority period, and not constrained to the priority period.

And while Plaintiffs asserted during the TRO hearing that the SBA is using race as an absolute basis for identifying “socially and economically disadvantaged” individuals, the court pointed out that assertion relies essentially on speculation rather than competent evidence about the SBA’s processing system. The court therefore held it cannot conclude on the record before it that Plaintiffs are likely to show that Defendant’s implementation of § 5003 is not narrowly tailored to the compelling interest at hand.

L. Legal — Pending cases and recent instructive cases

In support of Plaintiffs’ motion, they argue that the priority period is not narrowly tailored to achieving a compelling interest because it does not address “any alleged inequities or past discrimination.” However, the court said it has already addressed the inequities that were present in the past relief programs. At the hearing, Plaintiffs argued that a better alternative would have been to prioritize applicants who did not receive PPP funds or applicants who had “a weaker income statement” or “a weaker balance sheet.” But, the court noted, “[n]arrow tailoring does not require exhaustion of every conceivable race-neutral alternative,” only “serious, good faith consideration of workable race-neutral alternatives” to promote the stated interest. The Government received evidence that the race-neutral PPP was tainted by lingering effects of past discrimination and current racial bias.

Accordingly, the court stated the race-neutral approach that the Government found to be tainted did not further its compelling interest in ensuring that public funds were not disbursed in a manner that perpetuated racial discrimination. The court found the Government not only considered but actually used race-neutral alternatives during prior COVID-19 relief attempts. It was precisely the failure of those race-neutral programs to reach all small businesses equitably, that the court said appears to have motivated the priority period at issue here.

Plaintiffs argued that the priority period is simultaneously overinclusive and underinclusive based on the racial, ethnic, and cultural groups that are presumed to be “socially disadvantaged.” However, the court stated the race-based presumption is just that: a presumption. Counsel for the Government explained at the hearing, consistent with other evidence before the court, that any individual who felt they met § 5003’s broader definition of “socially and economically disadvantaged” was free to check that box on the application. (“[E]ssentially all that needs to be done is that you need to self-certify that you fit within that standard on the application ... you check that box.”) For the sake of prioritization, the

court noted there is no distinction between those who were presumptively disadvantaged and those who self-certified as such. Accordingly, the court found the priority period is not underinclusive in a way that defeats narrow tailoring.

Further, according to the court, the priority period is not overinclusive. Prior to enacting the priority period, the Government considered evidence relative to minority-business owners generally as well as data pertaining to specific groups. It is also important to note, the court stated, that the Restaurant Revitalization Fund is a national relief program. As such, the court found it is distinguishable from other regional programs that the Supreme Court found to be overinclusive.

The inclusion in the presumption, the court pointed out for example, of Alaskan and Hawaiian natives is quite logical for a program that offers relief funds to restaurants in Alaska and Hawaii. This is not like the racial classification in *Croson*, the court said, which was premised on the interest of compensating Black contractors for past discrimination in Richmond, Virginia, but would have extended remedial relief to “an Aleut citizen who moves to Richmond tomorrow.” Here, the court found any narrowly tailored racial classification must necessarily account for the national scale of prior and present COVID-19 programs.

The district court noted that the Supreme Court has historically declined to review sex-or gender-based classifications under strict scrutiny. The district court pointed out the Supreme Court held, “[t]o withstand constitutional challenge ... classifications by gender must serve important governmental objective and must be substantially related to achievement of those “[A] gender-based classification favoring one sex can be justified if it intentionally and directly assists members of the sex that is disproportionately burdened.” However, remedying past discrimination cannot serve as an important governmental interest

L. Legal — Pending cases and recent instructive cases

when there is no empirical evidence of discrimination within the field being legislated.

Intermediate Scrutiny applied to women-owned businesses found by District Court. As with the strict-scrutiny analysis, the court found that Congress had before it evidence showing that woman-owned businesses suffered historical discrimination that exposed them to greater risks from an economic shock like COVID-19, and that they received less benefit from earlier federal COVID-19 relief programs. Accordingly, the court held that Defendant has identified an important governmental interest in protecting women-owned businesses from the disproportionately adverse effects of the pandemic and failure of earlier federal relief programs. The district court therefore stated it cannot conclude that Plaintiffs are likely to succeed on their gender-based equal-protection challenge in this respect.

To be constitutional, the court concluded, a particular measure including a gender distinction must also be substantially related to the important interest it purports to advance. “The purpose of requiring that close relationship is to assure that the validity of a classification is determined through reasoned analysis rather than through the mechanical application of traditional, often inaccurate, assumptions about the proper roles of men and women.”

Here, as above, the court found § 5003 of the ARPA is a one-time grant program with a finite amount of money that prioritizes small restaurants owned by veterans, women, and socially and economically disadvantaged individuals because Congress had evidence before it showing that those businesses were disproportionately exposed to harm from the COVID-19 pandemic and inadequately protected by earlier COVID-19 financial relief programs. The prioritization of women-owned businesses under § 5003, the court found, is substantially related to the problem Congress sought to remedy

because it is directly aimed at ameliorating the funding gap between women-owned and man-owned businesses that has caused the former to suffer from the COVID-19 pandemic at disproportionately higher rates. Accordingly, on the record before it, the district court held it cannot conclude that Plaintiffs are likely to succeed on the merits of their gender-based equal-protection claim.

The court stated: [W]hen reviewing a motion for a preliminary injunction, if it is found that a constitutional right is being threatened or impaired, a finding of irreparable injury is mandated.” However, the district court did not conclude that Plaintiffs’ constitutional rights are likely being violated. Therefore, the court held Plaintiffs are likely not suffering any legally impermissible irreparable harm.

The district court said that if it were to enjoin distributions under § 5003 of the ARPA, others would certainly suffer harm, as these COVID-19 relief grants — which are intended to benefit businesses that have suffered disproportionate harm — would be even further delayed. In the constitutional context, the court found that whether an injunction serves the public interest is inextricably intertwined with whether the plaintiff has shown a likelihood of success on the merits. Plaintiff, the court held, has not demonstrated a likelihood of success on the merits.

The district court found that therefore it cannot conclude the public interest would be served by enjoining disbursement of funds under § 5003 of the ARPA.

Denial by District Court of Plaintiffs’ Motion for Preliminary Injunction. Subsequently, the court addressed the Plaintiffs’ motion for a preliminary injunction. The court found its denial of Plaintiffs’ motion for a TRO addresses the same factors that control the preliminary-injunction analysis, and the court incorporated that reasoning by reference to this motion.

L. Legal — Pending cases and recent instructive cases

The court received from the Defendant additional materials from the Congressional record that bear upon whether a compelling interest justifies the race-based priority period at issue and an important interest justifies the gender-based priority period at issue. Defendant's additional materials from the Congressional record the court found strengthen the prior conclusion that Plaintiffs are unlikely to succeed on the merits.

For example, a Congressional committee received the following testimony, which linked historical race and gender discrimination to the early failures of the Paycheck Protection Program (the "PPP"): "As noted by my fellow witnesses, closed financial networks, longstanding financial institutional biases, and underserved markets work against the efforts of women and minority entrepreneurs who need capital to start up, operate, and grow their businesses. While the bipartisan CARES Act got money out the door quickly [through the PPP] and helped many small businesses, the distribution channels of the first tranche of the funding underscored how the traditional financial system leaves many small businesses behind, particularly women- and minority-owned businesses."

There was a written statement noting that "[m]inority and women-owned business owners who lack relationships with banks or other financial institutions participating in PPP lacked early access to the program"; testimony observing that historical lack of access to capital among minority- and women-owned businesses contributed to significantly higher closure rates among those businesses during the COVID-19 pandemic, and that the PPP disproportionately failed to reach those businesses; and evidence that lending discrimination against people of color continues to the present and contemporary wealth distribution is linked to the intergenerational impact of historical disparities in credit access.

The court stated it could not conclude Plaintiffs are likely to succeed on the merits. The court held that the points raised in the parties' briefing on Plaintiff's motion for preliminary injunction have not impacted the court's analysis with respect to the remaining preliminary injunction factors. Accordingly, for the reasons stated in the court's memorandum opinion denying Plaintiff's motion for a temporary restraining order, a preliminary injunction the court held is not warranted and is denied.

Appeal by Plaintiff to Sixth Circuit Court of Appeals. The Plaintiffs appealed the court's decision to the Sixth Circuit Court of Appeals. Vitolo had asked for a temporary restraining order and ultimately a preliminary injunction that would prohibit the government from handing out grants based on the applicants' race or sex. Vitolo asked the district court to enjoin the race and sex preferences until his appeal was decided. The district court denied that motion too. Finally, the district court denied the motion for a preliminary injunction. Vitolo also appealed that order.

Emergency Motion for Injunction Pending Appeal and to Expedite Appeal. The Plaintiffs applied to the Sixth Circuit for an Emergency Motion for Injunction Pending Appeal and to Expedite Appeal. The Sixth Circuit, two of the three Judges on the three Judge panel, granted the motion to expedite the appeal and then decided and filed its Opinion on May 27, 2021. *Vitolo v. Guzman*, 2021 WL 2172181 (6th Cir. May 27, 2021). The Sixth Circuit stated that this case is about whether the government can allocate limited coronavirus relief funds based on the race and sex of the applicants. The Court held that it cannot, and thus enjoined the government from using "these unconstitutional criteria when processing" Vitolio's application.

L. Legal — Pending cases and recent instructive cases

Standing and Mootness. The Sixth Circuit agreed with the district court that Plaintiffs had standing. The Court rejected the Defendant Government’s argument that the Plaintiffs’ claims were moot because the 21-day priority phase of the grant program ended.

Preliminary Injunction. Application of Strict Scrutiny by Sixth Circuit. Vitolo challenges the Small Business Administration’s use of race and sex preferences when distributing Restaurant Revitalization Funds. The government concedes that it uses race and sex to prioritize applications, but it contends that its policy is still constitutional. The Court focused its strict scrutiny analysis under the factors in determining whether a preliminary injunction should issue on the first factor the is typically dispositive: the factor of Plaintiffs’ likelihood of success on the merits.

Compelling Interest rejected by Sixth Circuit. The Court states that government has a compelling interest in remedying past discrimination only when three criteria are met: First, the policy must target a specific episode of past discrimination. It cannot rest on a “generalized assertion that there has been past discrimination in an entire industry.” Second, there must be evidence of intentional discrimination in the past. Third, the government must have had a hand in the past discrimination it now seeks to remedy. The Court said that if the government “show[s] that it had essentially become a ‘passive participant’ in a system of racial exclusion practiced by elements of [a] local ... industry,” then the government can act to undo the discrimination. But, the Court notes, if the government cannot show that it actively or passively participated in this past discrimination, race-based remedial measures violate equal-protection principles.

The government’s asserted compelling interest, the Court found, meets none of these requirements. First, the government points generally to societal discrimination against minority business owners. But it does not identify specific incidents of past discrimination. And , the Court said, since “an effort to alleviate the effects of societal discrimination is not a compelling interest,” the government’s policy is not permissible.

Second, the government offers little evidence of past intentional discrimination against the many groups to whom it grants preferences. Indeed, the schedule of racial preferences detailed in the government’s regulation — preferences for Pakistanis but not Afghans; Japanese but not Iraqis; Hispanics but not Middle Easterners — is not supported by any record evidence at all.

When the government promulgates race-based policies, it must operate with a scalpel. And its cuts must be informed by data that suggest intentional discrimination. The broad statistical disparities cited by the government, according to the Court, are not nearly enough. But when it comes to general social disparities, the Court stated, there are too many variables to support inferences of intentional discrimination.

Third, the Court found the government has not shown that it participated in the discrimination it seeks to remedy. When opposing the plaintiffs’ motions at the district court, the government identified statements by members of Congress as evidence that race- and sex-based grant funding would remedy past discrimination. But rather than telling the court what Congress learned and how that supports its remedial policy, the Court stated it said only that Congress identified a “theme” that “minority-and women-owned businesses” needed targeted relief from the pandemic because Congress’s “prior relief programs had failed to reach” them. A vague reference to a “theme” of governmental discrimination, the Court said is not enough.

L. Legal — Pending cases and recent instructive cases

To satisfy equal protection, the Court said, government must identify “prior discrimination by the governmental unit involved” or “passive participa[tion] in a system of racial exclusion.” An observation that prior, race-neutral relief efforts failed to reach minorities, the Court pointed out is no evidence at all that the government enacted or administered those policies in a discriminatory way. For these reasons, the Court concluded that the government lacks a compelling interest in awarding Restaurant Revitalization Funds based on the race of the applicants. And as a result, the policy’s use of race violates equal protection.

Narrow Tailoring rejected by Sixth Circuit. Even if the government had shown a compelling state interest in remedying some specific episode of discrimination, the discriminatory disbursement of Restaurant Revitalization Funds is not narrowly tailored to further that interest. For a policy to survive narrow-tailoring analysis, the government must show “serious, good faith consideration of workable race-neutral alternatives.” This requires the government to engage in a genuine effort to determine whether alternative policies could address the alleged harm. And, in turn, a court must not uphold a race-conscious policy unless it is “satisfied that no workable race-neutral alternative” would achieve the compelling interest. In addition, a policy is not narrowly tailored if it is either overbroad or underinclusive in its use of racial classifications.

Here, the Court found that the government could have used any number of alternative, nondiscriminatory policies, but it failed to do so. For example, the court noted the government contends that minority-owned businesses disproportionately struggled to obtain capital and credit during the pandemic. But, the Court stated an “obvious” race-neutral alternative exists: The government could grant priority consideration to all business owners who were unable to obtain needed capital or credit during the pandemic.

Or, the Court said, consider another of the government’s arguments. It contends that earlier coronavirus relief programs “disproportionately failed to reach minority-owned businesses.” But, the Court found a simple race-neutral alternative exists again: The government could simply grant priority consideration to all small business owners who have not yet received coronavirus relief funds.

Because these race-neutral alternatives exist, the Court held the government’s use of race is unconstitutional. Aside from the existence of race-neutral alternatives, the government’s use of racial preferences, according to the Court, is both overbroad and underinclusive. The Court held this is also fatal to the policy.

The government argues its program is not underinclusive because people of all colors can count as suffering “social disadvantage.” But, the Court pointed out, there is a critical difference between the designated races and the non-designated races. The designated races get a presumption that others do not. The government argues its program is not underinclusive because people of all colors can count as suffering “social disadvantage.” But, the Court said, there is a critical difference between the designated races and the non-designated races. The designated races get a presumption that others do not.

The government’s policy, the Court found, is “plagued” with other forms of underinclusivity. The Court considered the requirement that a business must be at least 51 percent owned by women or minorities. How, the Court asked, does that help remedy past discrimination? Black investors may have small shares in lots of restaurants, none greater than 51 percent. But does that mean those owners did not suffer economic harms from racial discrimination? The Court noted that the restaurant at issue, Jake’s Bar, is 50 percent owned by a Hispanic female. It is far from obvious, the Court stated, why that 1 percent

L. Legal — Pending cases and recent instructive cases

difference in ownership is relevant, and the government failed to explain why that cutoff relates to its stated remedial purpose.

The dispositive presumption enjoyed by designated minorities, the Court found, bears strikingly little relation to the asserted problem the government is trying to fix. For example, the Court pointed out the government attempts to defend its policy by citing a study showing it was harder for black business owners to obtain loans from Washington, D.C., banks. Rather than designating those owners as the harmed group, the Court noted, the government relied on the Small Business Administration’s 2016 regulation granting racial preferences to vast swaths of the population. For example, individuals who trace their ancestry to Pakistan and India qualify for special treatment. But those from Afghanistan, Iran, and Iraq do not. Those from China, Japan, and Hong Kong all qualify. But those from Tunisia, Libya, and Morocco do not. The Court held this “scattershot approach” does not conform to the narrow tailoring strict scrutiny requires.

Women-Owned Businesses. Intermediate Scrutiny applied by Sixth Circuit. The plaintiffs also challenge the government’s prioritization of women-owned restaurants. Like racial classifications, sex-based discrimination is presumptively invalid. Government policies that discriminate based on sex cannot stand unless the government provides an “exceedingly persuasive justification.” Government policies that discriminate based on sex cannot stand unless the government provides an “exceedingly persuasive justification.” To meet this burden, the government must prove that (1) a sex-based classification serves “important governmental objectives,” and (2) the classification is “substantially and directly related” to the government’s objectives. The government, the Court held, fails to satisfy either prong. The Court found it failed to show that prioritizing women-owned restaurants serves an important governmental interest. The government claims an interest in “assisting with the economic recovery of women-owned

businesses, which were ‘disproportionately affected’ by the COVID-19 pandemic.” But, the Court stated, while remedying specific instances of past sex discrimination can serve as a valid governmental objective, general claims of societal discrimination are not enough.

Instead, the Court said, to have a legitimate interest in remedying sex discrimination, the government first needs proof that discrimination occurred. Thus, the government must show that the sex being favored “actually suffer[ed] a disadvantage” as a result of discrimination in a specific industry or field. Without proof of intentional discrimination against women, the Court held, a policy that discriminates on the basis of sex cannot serve a valid governmental objective.

Additionally, the Court found, the government’s prioritization system is not “substantially related to” its purported remedial objective. The priority system is designed to fast-track applicants hardest hit by the pandemic. Yet under the Act, the Court said, all women-owned restaurants are prioritized — even if they are not “economically disadvantaged.” For example, the Court noted, that whether a given restaurant did better or worse than a male-owned restaurant next door is of no matter — as long as the restaurant is at least 51 percent women-owned and otherwise meets the statutory criteria, it receives priority status. Because the government made no effort to tailor its priority system, the Court concluded it cannot find that the sex-based distinction is “substantially related” to the objective of helping restaurants disproportionately affected by the pandemic.

Ruling by Sixth Circuit. The plaintiffs are entitled to an injunction pending appeal. Since the government failed to justify its discriminatory policy, the plaintiffs will win on the merits of their constitutional claim. And like in most constitutional cases, that is dispositive here.

L. Legal — Pending cases and recent instructive cases

The Court ordered the government to fund the Plaintiffs' grant application, if approved, before all later-filed applications, without regard to processing time or the applicants' race or sex. The government, however, may continue to give veteran-owned restaurants priority in accordance with the law. The Court held the preliminary injunction shall remain in place until this case is resolved on the merits and all appeals are exhausted. Dissenting Opinion. One of the three Judges filed a dissenting opinion.

Amended Complaint and Second Emergency Motion for a Temporary Restraining Order and Preliminary Injunction. The Plaintiffs on June 1, 2021, filed an Amended Complaint in the district court adding Additional Plaintiffs. Additional Plaintiffs' who were not involved in the initial Motion for Temporary Restraining Order, on June 2, 2021, filed a Second Emergency Motion For a Temporary Restraining Order and Preliminary Injunction. The court in its Order issued on June 10, 2021, found based on evidence submitted by Defendants that the allegedly wrongful behavior harming the Additional Plaintiffs cannot reasonably be expected to recur, and therefore the Additional Plaintiffs' claims are moot.

The court thus denied the Additional Plaintiffs' motion for temporary restraining order and preliminary injunction. The court also ordered the Defendant Government to file a notice with the court if and/or when Additional Plaintiffs' applications have been funded, and SBA decides to resume processing of priority applications.

The Sixth Circuit issued a briefing schedule on June 4, 2021 to the parties that requires briefs on the merits of the appeal to be filed in July and August 2021. Subsequently on July 14, 2021, the Plaintiffs-Appellants filed a Motion to Dismiss the appeal voluntarily that was supported and jointly agreed to by the Defendant-Appellee stating that Plaintiffs-Appellants have received their grant from Defendant-Appellee. The Court granted the Motion and dismissed the appeal terminating the case.

L. Legal — Pending cases and recent instructive cases

2. *Greer’s Ranch Café v. Guzman, Administration of the U.S. SBA*, ____ F.Supp.3d ____ (2021), 2021 WL 2092995 (N.D. Tex. 5/18/21)

Plaintiff Philip Greer (“Greer”) owns and operates Plaintiff Greer’s Ranch Café — a restaurant which lost nearly \$100,000 in gross revenue during the COVID-19 pandemic (collectively, “Plaintiffs”). Greer sought monetary relief under the \$28.6 billion Restaurant Revitalization Fund (“RRF”) created by the American Rescue Plan Act of 2021 (“ARPA”) and administered by the Small Business Administration (“SBA”). See American Rescue Plan Act of 2021, Pub. L. No. 117-2 § 5003.

Background. Greer prepared an application on behalf of his restaurant, is eligible for a grant from the RRF, but has not applied because he is barred from consideration altogether during the program’s first twenty-one days from May 3 to May 24, 2021.

During that window, ARPA directed SBA to “take such steps as necessary” to prioritize eligible restaurants “owned and controlled” by “women,” by “veterans,” and by those “socially and economically disadvantaged.” ARPA incorporates the definitions for these prioritized small business concerns from prior-issued statutes and SBA regulations.

To effectuate the prioritization scheme, SBA announced that, during the program’s first twenty-one days, it “will accept applications from all eligible applicants, but only process and fund priority group applications” — namely, applications from those priority-group applicants listed in ARPA. Priority-group “[a]pplicants must self-certify on the application that they meet [priority-group] eligibility requirements” as “an eligible small business concern owned and controlled by one or more women, veterans, and/or socially and economically disadvantaged individuals.

Plaintiffs sued Defendants SBA and Isabella Casillas Guzman, in her official capacity as administrator of SBA. Shortly thereafter, Plaintiffs moved for a TRO, enjoining the use of race and sex preferences in the distribution of the Fund.

Substantial Likelihood of Success on the Merits. Standing. Equal Protection Claims. The court first held that the Plaintiffs had standing to proceed, and then addressed the likelihood of success on the merits of their equal protection claims. As to race-based classifications, Plaintiffs challenged SBA’s implementation of the “socially disadvantaged group” and “socially disadvantaged individual” race-based presumption and definition from SBA’s Section 8(a) government-contract-procurement scheme into the RRF-distribution-priority scheme as violative of the Equal Protection Clause. Defendants argued the race-conscious rules serve a compelling interest and are narrowly tailored, satisfying strict scrutiny.

Strict scrutiny applied. The parties agreed strict scrutiny applies where government imposes racial classifications, like here where the RRF prioritization scheme incorporates explicit racial categories from Section 8(a). Under strict scrutiny, the court stated, government must prove a racial classification is “narrowly tailored” and “furthers compelling governmental interests.”

Compelling governmental interest. Defendants propose as the government’s compelling interest “remedying the effects of past and present discrimination” by “supporting small businesses owned by socially and economically disadvantaged small business owners ... who have borne an outsized burden of economic harms of [the] COVID-19 pandemic.” To proceed based on this interest, the court said, Defendants must provide a “strong basis in evidence for its conclusion that remedial action was necessary.”

L. Legal — Pending cases and recent instructive cases

As its strong basis in evidence, Defendants point to the factual findings supporting the implementation of Section 8(a) itself in removing obstacles to government contract procurement for minority-owned businesses, including House Reports in the 1970s and 1980s and a D.C. District Court case discussing barriers for minority business formation in the 1990s and 2000s. The court recognized the “well-established principle about the industry-specific inquiry required to effectuate Section 8(a)’s standards.” Thus, the court looked to Defendants’ industry specific evidence to determine whether the government has a “strong basis in evidence to support its conclusion that remedial action was necessary.”

According to Defendants, “Congress has heard a parade of evidence offering support for the priority period prescribed by ARPA.” The Defendants evidence was summarized by the court as follows:

- A House Report specifically recognized that “underlying racial, wealth, social, and gender disparities are exacerbated by the pandemic,” that “[w]omen –especially mothers and women of color — are exiting the workforce at alarming rates,” and that “eight out of ten minority-owned businesses are on the brink of closure.”
- Expert testimony describing how “[b]usinesses headed by people of color are less likely to have employees, have fewer employees when they do, and have less revenue compared to white-owned businesses” because of “structural inequities resulting from less wealth compared to whites who were able to accumulate wealth with the support of public policies,” and that having fewer employees or lower revenue made COVID-related loans to those businesses less lucrative for lenders.
- Expert testimony explaining that “businesses with existing conventional lending relationships were more likely to access PPP funds quickly and efficiently,” and that minorities are less likely to have such relationships with lenders due to “pre-existing disparities in access to capital.”
- House Committee on Small Business Chairwoman Velázquez’s evidence offered into the record showing that “[t]he COVID-19 public health and economic crisis has disproportionately affected Black, Hispanic, and Asian-owned businesses, in addition to women-owned businesses” and that “minority-owned and women-owned businesses were particularly vulnerable to COVID-19, given their concentration in personal services firms, lower cash reserves, and less access to credit.”
- Witness testimony that emphasized the “[u]nderrepresentation by women and minorities in both funds and in small businesses accessing capital” and noted that “[t]he amount of startup capital that a Black entrepreneur has versus a White entrepreneur is about 1/36th.”
- Other expert testimony noting that in many cases, minority-owned businesses struggled to access earlier COVID relief funding, such as PPP loans, “due to the heavy reliance on large banks, with whom they have had historically poor relationships.”
- Evidence presented at other hearing showing that minority and women-owned business lack access to capital and credit generally, and specifically suffered from inability to access earlier COVID-19 relief funds and also describing “long-standing structural racial disparities in small business ownership and performance.”

L. Legal — Pending cases and recent instructive cases

- A statement of the Center for Responsible Lending describing present-day “overtly discriminatory practices by lenders” and “facially neutral practices with disparate effects” that deprive minority-owned businesses of access to capital.

This evidence, the court found, “largely falters for the same reasoning outlined above — it lacks the industry-specific inquiry needed to support a compelling interest for a government-imposed racial classification.” The court, quoting the *Croson* decision, stated that while it is mindful of these statistical disparities and expert conclusions based on those disparities, “[d]efining these sorts of injuries as ‘identified discrimination’ would give ... governments license to create a patchwork of racial preferences based on statistical generalizations about any particular field of endeavor.”

Thus, the court concluded that the government failed to prove that it likely has a compelling interest in “remedying the effects of past and present discrimination” in the restaurant industry during the COVID-19 pandemic. For the same reason, the court found that Defendants have failed to show an “important governmental objective” or exceedingly persuasive justification necessary to support a sex-based classification.

Having concluded Defendants lack a compelling interest or persuasive justification for their racial and gender preferences, the court stated it need not address whether the RRF is related to those particular interests. Accordingly, the Court held that Plaintiffs are likely to succeed on the merits of their claim that Defendants’ use of race-based and sex-based preferences in the administration of the RRF violates the Equal Protection Clause of the Constitution.

Conclusion. The court granted Plaintiffs’ motion for temporary restraining order, and enjoins Defendants to process Plaintiffs’ application for an RRF grant.

Subsequently, the Plaintiffs filed a Notice of Dismissal without prejudice on May 19, 2021.

L. Legal — Pending cases and recent instructive cases

3. *Faust v. Vilsack, Secretary of U.S. Dep’t of Agriculture*, ___ F.Supp.3d ___, 2021 WL 2409729, US District Court, E.D. Wisconsin (June 10, 2021)

This is a federal district court decision that on June 10, 2021 granted Plaintiffs’ motion for a temporary restraining order holding the federal government’s use of racial classifications in awarding funds under the loan-forgiveness program violated the Equal Protection Clause of the US Constitution.

Background. Twelve white farmers, who resided in nine different states, including Wisconsin, brought this action against Secretary of Agriculture and Administrator of Farm Service Agency (FSA) seeking to enjoin United States Department of Agriculture (USDA) officials from implementing loan-forgiveness program for farmers and ranchers under Section 1005 of the American Rescue Plan Act of 2021 (ARPA) by asserting eligibility to participate in program based solely on racial classifications violated equal protection. Plaintiffs/Farmers filed a motion for temporary restraining order.

The district court granted the motion, and at the time of this report is considering the Plaintiffs’ Motion for a Preliminary Injunction.

The USDA describes how the loan-forgiveness plan will be administered on its website. It explains, “Eligible Direct Loan borrowers will begin receiving debt relief letters from FSA in the mail on a rolling basis, beginning the week of May 24. After reviewing closely, eligible borrowers should sign the letter when they receive it and return to FSA.” It advises that, in June 2021, the FSA will begin to process signed letters for payments, and “about three weeks after a signed letter is received, socially disadvantaged borrowers who qualify will have their eligible loan balances paid and receive a payment of 20 percent of their total qualified debt by direct deposit, which may be used for tax liabilities and other fees associated with payment of the debt.”

Application of strict scrutiny standard. The court noted Defendants assert that the government has a compelling interest in remedying its own past and present discrimination and in assuring that public dollars drawn from the tax contributions of all citizens do not serve to finance the evil of private prejudice. “The government has a compelling interest in remedying past discrimination only when three criteria are met.” (Citing, *Vitolo*, — F.3d at —, 2021 WL 2172181, at *4; see also *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469, 109 S.Ct. 706, 102 L.Ed.2d 854 (1989) (plurality opinion).

The court stated the Sixth Circuit recently summarized the three requirements as follows:

“First, the policy must target a specific episode of past discrimination. It cannot rest on a “generalized assertion that there has been past discrimination in an entire industry.” *J.A. Croson Co.*, 488 U.S. at 498, 109.

“Second, there must be evidence of intentional discrimination in the past. *J.A. Croson Co.*, 488 U.S. at 503, 109 S.Ct. 706. Statistical disparities don’t cut it, although they may be used as evidence to establish intentional discrimination”

“Third, the government must have had a hand in the past discrimination it now seeks to remedy. So if the government “shows that it had essentially become a ‘passive participant’ in a system of racial exclusion practiced by elements of a local industry,” then the government can act to undo the discrimination. *J.A. Croson Co.*, 488 U.S. at 492, 109 S.Ct. 706. But if the government cannot show that it actively or passively participated in this past discrimination, race-based remedial measures violate equal protection principles.”

L. Legal — Pending cases and recent instructive cases

The court found that “Defendants have not established that the loan-forgiveness program targets a specific episode of past or present discrimination. Defendants point to statistical and anecdotal evidence of a history of discrimination within the agricultural industry.... But Defendants cannot rely on a ‘generalized assertion that there has been past discrimination in an entire industry’ to establish a compelling interest.” *Citing, J.A. Croson Co., 488 U.S. at 498, ; see also Parents Involved, 551 U.S. at 731, (plurality opinion) (“remedying past societal discrimination does not justify race-conscious government action”)*. The court pointed out “Defendants’ evidence of more recent discrimination includes assertions that the vast majority of funding from more recent agriculture subsidies and pandemic relief efforts did not reach minority farmers and statistical disparities.”

The court concluded that: “Aside from a summary of statistical disparities, Defendants have no evidence of intentional discrimination by the USDA in the implementation of the recent agriculture subsidies and pandemic relief efforts.” “An observation that prior, race-neutral relief efforts failed to reach minorities is no evidence at all that the government enacted or administered those policies in a discriminatory way.” *Citing, Vitolo, — F.3d at —, 2021 WL 2172181, at *5*. The court held “Defendants have failed to establish that it has a compelling interest in remedying the effects of past and present discrimination through the distribution of benefits on the basis of racial classifications.”

In addition, the court found “Defendants have not established that the remedy is narrowly tailored. To do so, the government must show “serious, good faith consideration of workable race-neutral alternatives.” *Citing, Grutter v. Bollinger, 539 U.S. 306, 339, (2003)*. Defendants contend that Congress has unsuccessfully implemented race-neutral alternatives for decades, but the court concluded, “they have not shown that Congress engaged “in a genuine effort to determine whether alternative policies could address the alleged harm” here. *Citing, Vitolo, — F.3d at —, 2021 WL 2172181, at *6*.

The court stated: “The obvious response to a government agency that claims it continues to discriminate against farmers because of their race or national origin is to direct it to stop: it is not to direct it to intentionally discriminate against others on the basis of their race and national origin.”

The court found “Congress can implement race-neutral programs to help farmers and ranchers in need of financial assistance, such as requiring individual determinations of disadvantaged status or giving priority to loans of farmers and ranchers that were left out of the previous pandemic relief funding. It can also provide better outreach, education, and other resources. But it cannot discriminate on the basis of race.” On this record, the court held, “Defendants have not established that the loan forgiveness program under Section 1005 is narrowly tailored and furthers compelling government interests.”

L. Legal — Pending cases and recent instructive cases

Conclusion. The court found a nationwide injunction is appropriate in this case. “To ensure that Plaintiffs receive complete relief and that similarly-situated nonparties are protected, a universal temporary restraining order in this case is proper.”

This case remains pending at the time of this report. The court on July 6, 2021, issued an Order that stayed the Plaintiffs’ motion for a preliminary injunction, holding that the District Court in *Wynn v. Vilsack* (M.D. Fla. June 23, 2021), 2021 WL 2580678, Case No. 3:21-cv-514-MMH-JRK, U.S. District Court, Middle District of Fla. (see below), granted the Plaintiffs a nationwide injunction, which thus rendered the need for an injunction in this case as not necessary; but the court left open the possibility of reconsidering the motion depending on the results of the Wynn case. For the same reason, the court dissolved the temporary restraining order and stayed the motion for a preliminary injunction.

Subsequently, the Defendants filed a Motion to Stay Proceedings, and the court granted the motion on August 20, 2021, requiring the Defendants to file a status report every six months on the progress of the *Miller v. Vilsack*, 4:21-cv-595 (N.D. Tex.) case, which is a class action.

L. Legal — Pending cases and recent instructive cases

4. *Wynn v. Vilsack, Secretary of U.S. Dep't of Agriculture, Wynn v. Vilsack* (M.D. Fla. June 23, 2021), 2021 WL 2580678, Case No. 3:21-cv-514-MMH-JRK, U.S. District Court, Middle District of Fla.

Wynn v. Vilsack (M.D. Fla. June 23, 2021), 2021 WL 2580678, Case No. 3:21-cv-514-MMH-JRK, U.S. District Court, Middle District of Fla., is virtually the same case as the *Faust v. Vilsack*, 2021 WL 2409729 (N.D. Wis. June 10, (2021) case pending in district court in Wisconsin. The court in *Faust* granted the Plaintiffs' Motion for Temporary Restraining Order and the court in *Wynn* granted the Plaintiff's Motion for Preliminary Injunction holding: "Defendants Thomas J. Vilsack, in his official capacity as U.S. Secretary of Agriculture and Zach Ducheneaux, in his official capacity as Administrator, Farm Service Agency, their agents, employees and all others acting in concert with them, who receive actual notice of this Order by personal service or otherwise, are immediately enjoined from issuing any payments, loan assistance, or debt relief pursuant to Section 1005(a)(2) of the American Rescue Plan Act of 2021 until further order from the Court."

Background. In this action, Plaintiff challenges Section 1005 of the American Rescue Plan Act of 2021 (ARPA), which provides debt relief to "socially disadvantaged farmers and ranchers" (SDFRs). Specifically, Section 1005(a)(2) authorizes the Secretary of Agriculture to pay up to 120 percent of the indebtedness, as of January 1, 2021, of an SDFR's direct Farm Service Agency (FSA) loans and any farm loan guaranteed by the Secretary (collectively, farm loans). Section 1005 incorporates 7 U.S.C. § 2279's definition of an SDFR as "a farmer or rancher who is a member of a socially disadvantaged group." 7 U.S.C. § 2279(a)(5). A "socially disadvantaged group" is defined as "a group whose members have been subjected to racial or ethnic prejudice because of their identity as members of a group without regard to their individual qualities." 7 U.S.C. § 2279(a)(6). Racial or ethnic groups that categorically qualify as socially disadvantaged are "Black, American

Indian/Alaskan Native, Hispanic, Asian, and Pacific Islander." See also U.S. Dep't of Agric., American Rescue Plan Debt Payments, <https://www.farmers.gov/americanrescueplan>. White or Caucasian farmers and ranchers do not.

Plaintiff is a white farmer in Jennings, Florida who has qualifying farm loans but is ineligible for debt relief under Section 1005 solely because of his race. He sues Thomas J. Vilsack, the current Secretary of Agriculture, and Zach Ducheneaux, the administrator of the United States Department of Agriculture (USDA) and head of the FSA, in their official capacities. In his two-count Complaint, Plaintiff alleges Section 1005 violates the equal protection component of the Fifth Amendment's Due Process Clause (Count I) and, by extension, is not in accordance with the law such that its implementation should be prohibited by the Administrative Procedure Act (APA) (Count II). Plaintiff seeks (1) a declaratory judgment that Section 1005's provision limiting debt relief to SDFRs violates the law, (2) a preliminary and permanent injunction prohibiting the enforcement of Section 1005, either in whole or in part, (3) nominal damages, and (4) attorneys' fees and costs.

Application of strict scrutiny test. Compelling Interest. The court, similar to the court in *Faust*, applied the strict scrutiny test and held that on the record presented, the court expresses serious concerns over whether the Government will be able to establish a strong basis in evidence warranting the implementation of Section 1005's race-based remedial action. The statistical and anecdotal evidence presented, the court said, appears less substantial than that deemed insufficient in *Eng'g Contractors v. Metro-Dade County* case (11th Cir. 1997), which included detailed statistics regarding the governmental entity's hiring of minority-owned businesses for government construction projects; marketplace data on the financial performance of minority and nonminority contractors; and two studies by experts.

L. Legal — Pending cases and recent instructive cases

The Government states that its “compelling interest in relieving debt of [SDFRs] is two-fold: to remedy the well-documented history of discrimination against minority farmers in USDA loan (and other) programs and prevent public funds from being allocated in a way that perpetuates the effects of discrimination.” In cases applying strict scrutiny, the court notes the Eleventh Circuit has instructed: “In practice, the interest that is alleged in support of racial preferences is almost always the same — remedying past or present discrimination. That interest is widely accepted as compelling. As a result, the true test of an affirmative action program is usually not the nature of the government’s interest, but rather the adequacy of the evidence of discrimination offered to show that interest.” *Citing, Ensley Branch, N.A.A.C.P. v. Seibels*, 31 F.3d 1548, 1564 (11th Cir. 1994).

Thus, to survive strict scrutiny, the Government must show a strong basis in evidence for its conclusion that past racial discrimination warrants a race-based remedy. *Id.* at 1565. The law on how a governmental entity can establish the requisite need for a race-based remedial program has evolved over time. In *Eng’g Contractors Ass’n of S. Fla. v. Metro. Dade Cnty.*, the Eleventh Circuit summarized the kinds of evidence that would and would not be indicative of a need for remedial action in the local construction industry. 122 F.3d 895, 906-07 (11th Cir. 1997). The court explained:

“A strong basis in evidence cannot rest on an amorphous claim of societal discrimination, on simple legislative assurances of good intention, or on congressional findings of discrimination in the national economy. However, a governmental entity can justify affirmative action by demonstrating gross statistical disparities between the proportion of minorities hired and the proportion of minorities willing and able to do the work. Anecdotal evidence may also be used to document discrimination, especially if buttressed by relevant statistical evidence.” Here, to establish the requisite evidence of discrimination, the court

said the Government relies on substantial legislative history, testimony given by experts at various congressional committee meetings, reports prepared at Congress’ request regarding discrimination in USDA programs, and floor statements made by supporters of Section 1005 in Congress. This evidence consists of substantial evidence of historical discrimination that predates remedial efforts made by Congress and, to a lesser extent, evidence the Government contends shows continued discrimination that permeates USDA programs.

The court pointed out that to the extent remedial action is warranted based on the current evidentiary showing, it would likely be directed to the need to address the barriers identified in the GAO Reports such as providing incentives or guarantees to commercial lenders to make loans to SDFRs, increasing outreach to SDFRs regarding the availability of USDA programs, ensuring SDFRs have equal access to the same financial tools as nonminority farmers, and efforts to standardize the way USDA services SDFR loans so that it comports with the level of service provided to White farmers.

The court decided that nevertheless, “at this stage of the proceedings, the Court need not determine whether the Government ultimately will be able to establish a compelling need for this broad, race-based remedial legislation. This is because, assuming the Government’s evidence establishes the existence of a compelling governmental interest warranting some form of race-based relief, Plaintiff has convincingly shown that the relief provided by Section 1005 is not narrowly tailored to serve that interest.”

L. Legal — Pending cases and recent instructive cases

Narrow Tailoring. Even if the Government establishes a compelling governmental interest to enact Section 1005, the court holds that Plaintiff has shown a substantial likelihood of success on his claim that, as written, the law violates his right to equal protection because it is not narrowly tailored to serve that interest. The narrow tailoring requirement ensures that “the means chosen ‘fit’ th[e] compelling goal so closely that there is little or no possibility that the motive for the classification was illegitimate racial prejudice or stereotype.” *Croson*, 488 U.S. at 493 (plurality opinion). “The essence of the ‘narrowly tailored’ inquiry is the notion that explicitly racial preferences ... must be only a ‘last resort’ option.” *Eng’g Contractors*, 122 F.3d at 926.

In determining whether a race-conscious remedy is appropriate, the Supreme Court instructs courts to examine several factors, including the necessity for the relief and the efficacy of alternative remedies; the flexibility and duration of the relief, including the availability of waiver provisions; the relationship of the numerical goals to the relevant labor market; and the impact of the relief on the rights of third parties.” *U.S. v. Paradise*, 480 U.S. 149, 171 (1987).

Here, the court found, “little if anything about Section 1005 suggests that it is narrowly tailored.” As an initial matter the court notes that the necessity for the specific relief provided in Section 1005 — debt relief for all SDFRs with outstanding qualifying farm loans as of January 1, 2021 — is unclear at best. The court states that as written, “Section 1005 is tailored to benefit only those SDFRs who succeeded in receiving qualifying farm loans from USDA, but the evidence of discrimination provided by the Government says little regarding how this particular group of SDFRs has been the subject of past or ongoing discrimination. ... Thus, the necessity of debt relief to the group targeted by Section 1005, as opposed to a remedial program that more narrowly addresses the discrimination that has been documented by the Government, is anything but evident.”

More importantly, the court found, “Section 1005’s rigid, categorical, race-based qualification for relief is the antithesis of flexibility. The debt relief provision applies strictly on racial grounds irrespective of any other factor. Every person who identifies him or herself as falling within a socially disadvantaged group¹¹ who has a qualifying farm loan with an outstanding balance as of January 1, 2021, receives up to 120 percent debt relief — and no one else receives any debt relief.” Although the Government argues that Section 1005 is narrowly tailored to reach small farmers or farmers on the brink of foreclosure, the court finds it is not. “Regardless of farm size, an SDFR receives up to 120 percent debt relief. And regardless of whether an SDFR is having the most profitable year ever and not remotely in danger of foreclosure, that SDFR receives up to 120 percent debt relief. Yet a small White farmer who is on the brink of foreclosure can do nothing to qualify for debt relief. Race or ethnicity is the sole, inflexible factor that determines the availability of relief provided by the Government under Section 1005.”

The Government cited the Eleventh Circuit decision in *Cone Corp. v. Hillsborough Cnty.*, 908 F.2d 908, 910 (11th Cir. 1990). The court in *Cone Corp.* pointed to several critical factors that distinguished the county’s MBE program in that case from that rejected in *Croson*:

“(1) the county had tried to implement a less restrictive MBE program for six years without success; (2) the MBE participation goals were flexible in part because they took into account project-specific data when setting goals; (3) the program was also flexible because it provided race-neutral means by which a low bidder who failed to meet a program goal could obtain a waiver; and (4) unlike the program rejected in *Croson*, the county’s program did not benefit “groups against whom there may have been no discrimination,” instead its MBE program “target[ed] its benefits to those MBEs most likely to have been discriminated against” *Id.* at 916-17.

L. Legal — Pending cases and recent instructive cases

The court found that “Section 1005’s inflexible, automatic award of up to 120 percent debt relief only to SDFRs stands in stark contrast to the flexible, project by project *Cone Corp.* MBE program.” The court noted that in *Cone Corp.*, although the MBE program included a minority participation goal, the county “would grant a waiver if qualified minority businesses were uninterested, unavailable, or significantly more expensive than nonminority businesses.” In this way the Court in *Cone Corp.* observed the county’s MBE program “had been carefully crafted to minimize the burden on innocent third parties.” (citing *Cone Corp.*, 908 F.2d at 911).

The court concluded the “120 percent debt relief program is untethered to an attempt to remedy any specific instance of past discrimination. And unlike the *Cone Corp.* MBE program, Section 1005 is absolutely rigid in the relief it awards and the recipients of that relief and provides no waiver or exception by which an individual who is not a member of a socially disadvantaged group can qualify. In this way, Section 1005 is far more similar to the remedial schemes found not to be narrowly tailored in *Croson* and other similar cases.”

Additionally, on this record, the court found it appears that Section 1005 simultaneously manages to be both overinclusive and underinclusive. “It appears to be overinclusive in that it will provide debt relief to SDFRs who may never have been discriminated against or faced any pandemic-related hardship.” The court found “Section 1005 also appears to be underinclusive in that, as mentioned above, it fails to provide any relief to those who suffered the brunt of the discrimination identified by the Government. It provides no remedy at all for an SDFR who was unable to obtain a farm loan due to discriminatory practices or who no longer has qualifying farm loans as a result of prior discrimination.”

Finally, the Court concluded there is little evidence that the Government gave serious consideration to, or tried, race-neutral alternatives to Section 1005. “The Government recounts the remedial programs Congress previously implemented that allegedly have failed to remedy USDA’s discrimination against SDFRs.... However, almost all of the programs identified by the Government were not race-neutral programs; they were race-based programs that targeted things like SDFR outreach efforts, improving SDFR representation on local USDA committees, and providing class-wide relief to SDFRs who were victims of discrimination. The main relevant race-neutral program the Government referenced was the first round of pandemic relief, which did go disproportionately to White farmers.” However, the court stated, “the underlying cause of the statistical discrepancy may be disparities in farm size or crops grown, rather than race.”

Thus, on the current record, the court held, in addition to showing that Section 1005 is inflexible and both overinclusive and underinclusive, Plaintiff is likely to show that Congress “failed to give serious good faith consideration to the use of race and ethnicity-neutral measures” to achieve the compelling interest supporting Section 1005. *Ensley Branch*, 122 F.3d at 927. Congress does not appear to have turned to the race-based remedy in Section 1005 as a “last resort,” but instead appears to have chosen it as an expedient and overly simplistic, but not narrowly tailored, approach to addressing prior and ongoing discrimination at USDA.

Having considered all of the pertinent factors associated with the narrow tailoring analysis and the record presented by the parties, the court is not persuaded that the Government will be able to establish that Section 1005 is narrowly tailored to serve its compelling governmental interest.

L. Legal — Pending cases and recent instructive cases

The court holds “it appears to create an inflexible, race-based discriminatory program that is not tailored to make the individuals who experienced discrimination whole, increase participation among SDFRs in USDA programs, or irradiate the evils of discrimination that remain following Congress’ prior efforts to remedy the same.” Therefore, the court holds that Plaintiff has established a strong likelihood of showing that Section 1005 violates his right to equal protection under the law because it is not narrowly tailored to remedy a compelling governmental interest.

Conclusion. Defendants Thomas J. Vilsack, in his official capacity as U.S. Secretary of Agriculture and Zach Ducheneaux, in his official capacity as Administrator, Farm Service Agency, their agents, employees and all others acting in concert with them, who receive actual notice of this Order by personal service or otherwise, are immediately enjoined from issuing any payments, loan assistance, or debt relief pursuant to Section 1005(a)(2) of the American Rescue Plan Act of 2021 until further order from the Court.

The case is pending in the district court. The Defendants filed a Motion to Stay Proceedings and a Motion to Stay Administratively Timely Deadlines. The court on August 2, 2021, denied the Motion to Stay Proceedings.

L. Legal — Pending cases and recent instructive cases

5. *Mechanical Contractors Association of Memphis, Inc., et al., v. Shelby County, Tennessee, et al.*

This is a challenge to the Shelby County, Tennessee “MWBE” Program. In *Mechanical Contractors Association of Memphis, Inc., White Plumbing & Mechanical Contractors, Inc. and Morgan & Thornburg, Inc. v. Shelby County, Tennessee, et al.*, the Plaintiffs are suing Shelby County for damages and to enjoin the County from the alleged unconstitutional and unlawful use of race-based preferences in awarding government construction contracts. The Plaintiffs assert violations of the Fourteenth Amendment to the United States Constitution, 42 U.S.C. Sections 1981, 1983, and 2000(d), and Tenn. Code Ann. § 5-14-108 that requires competitive bidding.

The Plaintiffs claim the County MWBE Program is unconstitutional and unlawful for both prime and subcontractors. Plaintiffs ask the Court to declare it as such, and to enjoin the County from further implementing or operating under it with respect to awarding government construction contracts.

The court has ruled on certain motions to dismiss filed by the Defendants, including granting dismissal as to individual Defendants sued in their official capacity and denied the motions to dismiss as to the individual Defendants sued in their individual capacity.

In addition, Plaintiffs on February 17, 2020 filed with the District Court in Tennessee a Motion to Exclude Proof from Mason Tillman Associates (MTA), the disparity study consultant to the County. A federal District Court in California (Northern District) issued an Order granting a Motion to Compel against Mason Tillman Associates on February 17, 2020, compelling production of documents pursuant to a subpoena served on it by the Plaintiffs. MTA appealed the Order to the Ninth Circuit Court of Appeals.

The Ninth Circuit Court of Appeals has recently dismissed the appeal by MTA, and sent the case back to the federal district court in California. The federal district court in Tennessee issued an Order on April 9, 2020 in which it denied without prejudice the Motion to Exclude Proof based on the lack of authority to limit the County’s ability to present proof at trial due to the non-party MTA’s failure to meet its discovery obligations, that nothing in the record attributes MTA’s failure to meet its discovery obligations to the County, and that MTA’s efforts to avoid disclosure is coming to an end based on the recent dismissal of MTA’s appeal to the Ninth Circuit.. The district court in Tennessee stated in a footnote: “Now that the Ninth Circuit has dismissed MTA’s appeal, Plaintiff is free to again ask the California district court to compel MTA (or sanction it for failing) to produce any documents which it is obligated to disclose.”

On August 17, 2020, the district court in California entered an Order of Conditional Dismissal of that case in California dealing only with the subpoena served on MTA for documents, which is pending the approval of a settlement by the parties in September.

The parties filed on September 25, 2020 with the federal court in Tennessee a Notice of Pending Settlement, subject to the final approval of the Shelby County Commission. The County Commission voted on the settlement on November 4, 2020. The County approved the settlement, including paying \$332,000 to Plaintiffs and agreeing to not enforce the MWBE program. The parties submitted a proposed Order of Settlement to the court to conclude the matter.

The parties filed a Stipulation of Dismissal with Prejudice with the court on January 4, 2021. The federal court in Tennessee on January 4, 2021 issued an order and Judgment approving the settlement and dismissing the case.

L. Legal — Pending cases and recent instructive cases

6. *Palm Beach County Board of County Commissioners v. Mason Tillman Associates, Ltd.* Case No. 502018CA010511; In the 15th Judicial Circuit in and for Palm Beach County, Florida

In this case, the County sued Mason Tillman Associates (MTA) to turn over background documents from disparity studies it conducted for the Solid Waste Authority and for the county as a whole. Those documents include the names of women and minority business owners who, after MTA promised them anonymity, described discrimination they say they faced trying to get county contracts. Those documents were sought initially as part of a records request by the Associated General Contractors of America (AGC).

The County filed suit after its alleged unsuccessful efforts to get MTA to provide documents needed to satisfy a public records request from AGC. The Florida ECC of AGC (AGC) also requested information related to the disparity study that MTA prepared for the County.

The AGC requests documents from the County and MTA related to its study and its findings and conclusions. AGC requests documents including the availability database, underlying data, anecdotal interview identities, transcripts and findings, and documents supporting the findings of discrimination.

MTA filed a Motion to Dismiss. The Court issued an order to defer the Motion to Dismiss and directing MTA to deliver the records to the court for in-camera inspection. The Court also has denied a motion by AGC to be elevated to party status and to conduct discovery. The court held a Case Management Conference on August 17, 2020, and ordered that MTA's Motion to Dismiss shall be scheduled for a hearing at a date mutually agreeable to the parties.

MTA had filed a Motion to Dismiss the Second Amended Complaint. The court on September 10, 2020, issued an Order denying the Motion to Dismiss, ordering MTA to file its answer and defenses to Palm Beach County within 10 days, and that the court will hold a hearing and make preliminary findings as to whether the documents at issue that have been provided by MTA to the court for in-camera inspection are exempted from the Public Records Act.

On February 1, 2021, the court issued a final order finding that the records of MTA sought by the County fell within the trade secret exemption of the state of Florida Public Records Act. The court thus held the County's Complaint for breach of contract and specific performance were dismissed as moot.

7. *CCI Environmental, Inc., D.W. Mertzke Excavating & Trucking, Inc., et al., v. City of St. Louis, St. Louis Airport Authority, et al.*; U.S. District Court for the Eastern District of Missouri, Eastern Division; Case No: 4:19-cv-03099 (Complaint filed on November 14, 2019)

Plaintiffs allege this case arises from Defendant’s MWBE Program Certification and Compliance Rules that require Native Americans to show at least one-quarter descent from a tribe recognized by the Federal Bureau of Indian Affairs. Plaintiffs claim that African Americans, Hispanic Americans, and Asian Americans are only required to “have origins” in any groups or peoples from certain parts of the world. This action alleges violations of Title VI of the Civil Rights Act of 1964, and the denial of equal protection of the laws under the Fourteenth Amendment to the U.S. Constitution based on these definitions constituting per se discrimination. Plaintiffs seek injunctive relief and damages.

Plaintiffs are businesses that are certified as MBEs through the City of St. Louis. Plaintiffs allege they are a Minority Group Members because their owners are members of the American Indian tribe known as Northern Cherokee Nation. Plaintiffs allege the City defines Minority Group Members differently depending on one’s racial classification. The City’s rules allow African Americans, Hispanic Americans and Asian Americans to meet the definition of a Minority Group Member by simply having “origins” within a group of peoples, whereas Native Americans are restricted to those persons who have cultural identification and can demonstrate membership in a tribe recognized by the Federal Bureau of Indian Affairs.

In 2019 Plaintiffs sought to renew their MBE certification with the City, which was denied. Plaintiffs allege the City decided to decertify the MBE status for each Plaintiff because their membership in the Northern Cherokee Nation disqualifies each company from Minority Group Membership because the Northern Cherokee Nation is not a federally recognized tribe by the Bureau of Indian Affairs. The Plaintiffs filed an administrative appeal, and the Administrative Review Officer upheld the decision to decertify Plaintiffs firms.

Plaintiffs allege the City’s policy, on its face, treats Native Americans differently than African Americans, Hispanic Americans and Asian Americans on the basis of race because it allows those groups to simply claim an origin from one of those groups of people to qualify as a Minority Group Member, but does not allow Native Americans to qualify in the same way. Plaintiffs claim this is per se intentional discrimination by the City in violation of Title VI and the Fourteenth Amendment.

Plaintiffs also allege that Defendants subjected Plaintiffs to violations of their rights as other minority contractors in the determination of their minority status by using a different standard to determine whether they should qualify as a Minority Group Member under the City’s MBE Certification Rules. Plaintiffs claim the City’s policy and practice constitute disparate treatment of Native Americans.

Plaintiffs request judgment against the City and other Defendants for compensatory damages for business losses, loss of standing in their community, and damage to their reputation. Plaintiffs also seek punitive damages and injunctive relief requiring the City to strike its definition of a Minority Group Member and rewrite it in a non-discriminatory manner, reinstate the MBE certification of each Plaintiff, and for attorney fees under Title VI and 42 U.S.C. Section 1988.

L. Legal — Pending cases and recent instructive cases

The Complaint was filed on November 14, 2019, followed by a First Amended Complaint. Plaintiffs filed on February 11, 2020, a Motion for Preliminary Injunction seeking to have a hearing on their Complaint, and to order the City to reinstate the application or MBE certification of the Plaintiffs.

The court issued a Memorandum and Order, dated July 27, 2020, which provides that the Motion for Preliminary Injunction is denied as withdrawn by the Plaintiff and the Joint Motion to Amend a Case Management Order is Granted.

The parties filed cross-motions for summary judgment in August 2020 and reply briefs are due in September 2020. Plaintiffs and Defendants filed their Motions for Summary Judgment on August 5, 2020. The court on September 14, 2020 issued an order over the opposition of the parties referring the case to mediation “immediately,” with mediation to be concluded by January 11, 2021. The court also held that the pending cross-motions for summary judgment will be denied without prejudice to being refiled only upon conclusion of mediation if the case has not settled.

The court in April 2021 issued an Order dismissing this case based on a settlement and consent judgment. The City adopted new rules pertaining to MBE/WBE certification. The City also agreed for this case only to a rebuttable presumption that the plaintiffs in the case are members of a tribe that are Native Americans and socially and economically disadvantaged subject to the City reserving the right to rebut the presumption.

In addition, the City agreed that it will pay plaintiffs \$15,000 in attorney’s fees, and related orders. The City agreed that it will use best efforts to process Plaintiffs’ certification applications and will provide a decision on each application by August 2, 2021. If the Plaintiffs were not certified as an MBE under the revised October 2020 rules, Plaintiffs reserved their right to pursue all claims relating to the decision.

L. Legal — Pending cases and recent instructive cases

8. *Ultima Services Corp. v. U.S. Department of Agriculture, U.S. Small Business Administration, et. al.*

Plaintiff, a small business contractor, recently filed this Complaint in federal district court in Tennessee against the US Dep't of Agriculture (USDA), US SBA, et. al. challenging the federal Section 8(a) program, and it appears as applied to a particular industry that provide administrative and/or technical support to USDA offices that implement the Natural Resources Conservation Service (NRCS), an agency of the USDA.

Plaintiff, a non-qualified Section 8(a) Program contractor, alleges the contracts it used to bid on have been set aside for a Section 8(a) contractor. Plaintiff thus claims it is not able to compete for contracts that it could in the past.

Plaintiff alleges that neither the SBA or the USDA has evidence that any racial or ethnic group is underrepresented in the administrative and/or technical support service industry in which it competes., and there is no evidence that any underrepresentation was a consequence of discrimination by the federal government or that the government was a passive participant in discrimination.

Plaintiff claims that the Section 8(a) Program discriminates on the basis of race, and that the SBA and USDA do not have a compelling governmental interest to support the discrimination in the operation of the Section 8(a) Program. In addition, Plaintiff asserts that even if defendants had a compelling governmental interest, the Section 8(a) Program as operated by defendants is not narrowly tailored to meet any such interest.

Thus, Plaintiffs allege defendants' race discrimination in the Section 8(a) Program violates the Fifth Amendment to the U.S. Constitution. Plaintiff seeks a declaratory judgment that defendants are violating the Fifth Amendment, 42 U.S.C. Section 1981, injunctive relief precluding defendants from reserving certain NRCS contracts for the Section 8(a) Program, monetary damages, and other relief.

The defendants filed a Motion to Dismiss asserting inter alia that the court does not have jurisdiction. Plaintiff has filed written discovery, which was stayed pending the outcome of the Motion to Dismiss.

The court on March 31, 2021 issued a Memorandum Opinion and Order granting in part and denying in part the Motion to Dismiss. The court held that plaintiffs had standing to challenge the constitutionality of the Section 8(a) Program as violating the Fifth Amendment, and held plaintiff's claim that the Section 8(a) Program is unconstitutional because it discriminates on the basis of race is sufficient to state a claim. The court also granted in part defendants' Motion to Dismiss holding that plaintiff's 42 U.S.C. Section 1981 claims are dismissed as that section does not apply to federal agencies. Thus, the case proceeds on the merits of the constitutionality of the Section 8 (a) Program.

The court on April 9, 2021 entered a Scheduling Order providing that defendants file an Answer by April 28, 2021 and set a Bench Trial for 10/11/2022 with Dispositive Motions due by 6/6/2022. Defendants filed their Answer to the Complaint on April 28, 2021. Plaintiffs on May 20, 2021 filed a Motion to Amend/Revise Complaint, Defendants filed their Response to Motion to Amend on June 4, 2021 and Plaintiffs filed on June 8, 2021 their Reply to the Response. The Motion is pending at this time.

L. Legal — Pending cases and recent instructive cases

9. *Pharmacann Ohio, LLC v. Ohio Dept. Commerce, et al.*, In the Court of Common Pleas, Franklin County, Ohio, Case No. 17-CV-10962, November 15, 2018, appeal filed and voluntarily dismissed, pending, in the Court of Appeals of Ohio, Tenth Appellate District, Case No. 18-AP-000954

This is a state court case that is instructive to the study as it discusses and analyzes the evidence presented by the state government to justify its legislation providing a preference to MBEs, and applies the strict scrutiny test to determine if the state had sufficient evidence to establish a race conscious preference program to MBEs.

In 2016, the Ohio legislature codified R.C. Chapter 3796, legalizing medical marijuana. The legislature instructed Defendant Ohio Department of Commerce to issue certain licenses to medical marijuana cultivators, processors, and testing laboratories. The Department was instructed to award 15 percent of said licenses to economically disadvantaged groups, defined as African Americans, American Indians, Hispanics, and Asians.

Plaintiff Greenleaf Gardens, LLC received a final score that would have otherwise qualified it to receive one of the twelve provisional licenses. Plaintiff was denied a provisional license, while Defendants Harvest Grows, LLC, and Parma Wellness Center, LLC were awarded provisional licenses due to the control of the defendant companies by one or more members of an economically disadvantaged group.

In 2018, Plaintiff filed its intervening complaint, seeking equal protection under the law pursuant to 42 U.S.C. §1983 and Article I, Section 2 of the Ohio Constitution. Plaintiff moved for summary judgment on counts one, two, and four of its complaint. On counts one and four of the complaint. Plaintiff seeks declaratory judgment that R.C. §3796.09(C) is unconditional on its face pursuant to 42 U.S.C. §1983 and Article I, Section 2 of the Ohio Constitution. Count two asserts a similar

claim under the Fourteenth Amendment and the Ohio Constitution, but on an as applied basis.

R.C. §3796.09(C) is subject to strict scrutiny. The court held that strict scrutiny presumes the unconstitutionality of the classification absent a compelling governmental justification. Therefore, §3796.09(C) is presumed unconstitutional, absent sufficient evidence of a compelling governmental interest.

Defendants assert the State had a compelling government interest in redressing past and present effects of racial discrimination within its jurisdiction where the State itself was involved. In support, Defendants put forth evidence of prior discrimination in bidding for Ohio government contracts, other states' marijuana licensing related programs, marijuana related arrests, and evidence of the legislature's desire to include a provision in R.C. §3796.09 similar to Ohio's MBE program.

Some of the evidence Defendants provide, the court found may not have been considered by the legislature during their discussion of R.C. §3796.09. In support of its inclusion, Defendants cite law upholding the use of "post-enactment" evidence. Courts have reached differing conclusions as to whether post-enactment evidence may be used in a court's analysis; but the court found persuasive courts that have held "post-enactment evidence may not be used to demonstrate that the government's interest in remedying prior discrimination was compelling."

L. Legal — Pending cases and recent instructive cases

The only evidence clearly considered by the legislature *prior* to the passage of R.C. §3796.09(C), the court stated, is marijuana related arrests. There is evidence that legislators may have considered MBE history and specifically requested the inclusion of a provision similar to the MBE program. However, the only evidence provided are a few emails seeking a provision like the MBE program. There was no testimony showing any statistical or other evidence was considered from the previous studies conducted for the MBE program.

Defendants included evidence of statistical studies in 2013, showing the legislature considered evidence of racial disparities for African Americans and Latinos regarding arrest rates related to marijuana. The court did not find this to be evidence supporting a set-aside for economically disadvantaged groups who are not referenced in either the statistical evidence or the anecdotal evidence on arrest rates. Evidence of increased arrest rates for African Americans and Latinos for marijuana generally, the court found, is not evidence supporting a finding of discrimination within the medical marijuana industry for African Americans, Hispanics, American Indians, and Asians.

The Defendants assert the legislators considered the history of R.C. §125.081, Ohio's MBE program. The last studies Defendants reference to support the legislature's conclusion that remedial action is necessary in the industry of government procurement contracts were conducted in 2001, leading to the creation of the Encouraging Diversity Growth and Equity Program in 2003. Since then, various cities have conducted independent studies of their governments and the utilization of MBEs in procurement practices. Although Defendants reference these materials, these studies were not reviewed by the legislature for R.C. §3796.09(C).

The only evidence referenced in the materials provided by the Defendants to show the General Assembly considered Ohio's MBE and EDGE history are three emails between a congressional staff member and an employee of the Legislative Service Commission requesting a set-aside like the one included in R.C. §125.081 and R.C. §123.125. There is no reference to the legislative history and evidence from the original review in between 1978 and 1980. The legislators who reviewed the evidence in 1980 clearly were not members of the legislature in 2016 when R.C. §2796.09(C) passed. Even if a few legislators might have seen the MBE evidence, the court stated it cannot find it was considered by the General Assembly as evidence supporting remedial action.

Additionally, even if the court could have found this evidence was considered by the legislature in support of R.C. §3796.09(C), the materials from R.C. §125.081 pertain to *government procurement contracts* only. The court held the law requires that evidence considered by the legislature must be directly related to discrimination in that particular industry. Defendants argued the fact that the medical marijuana industry is new, but the court said such newness necessarily demonstrates there is no history of discrimination in this particular industry, i.e., legal cultivation of medical marijuana.

Finally, Defendants' remaining evidence, the court said, is post-enactment. The court stated it would be given a lesser weight than that of pre-enactment evidence. Considering all the evidence put forth, the court found there is not a strong basis in evidence supporting the legislature's conclusion that remedial action is necessary to correct discrimination within the medical marijuana industry. Accordingly, it held a compelling government interest does not exist.

L. Legal — Pending cases and recent instructive cases

The court also found R.C. §3796.09(C) is not narrowly tailored to the legislature’s alleged compelling interest. Under Ohio law, the legislature must engage in an analysis of alternative remedies and prior efforts *before* enacting race-conscious remedies. Neither party directed the court to sufficient evidence of alternative remedies proposed or analyzed by the legislature during their review of R.C. §3796.09(C). The evidence of prior alternative remedies pertains to the government contracting market. Neither of the studies Defendant cites relate to the medical marijuana industry. The Defendants did not show evidence of any alternative remedies considered by the legislature before enacting R.C. §3796.09(C).

The court believed alternative remedies could have been available to the legislature to alleviate the discrimination the legislature stated it sought to correct. If the legislature sought to rectify the elevated arrest rates for African Americans and Latinos/Hispanics possessing marijuana, the correction should have been giving preference to those companies owned by former arrestees and convicts, not a range of economically disadvantaged individuals, including preferences for unrelated races like Native Americans and Asians.

R.C. §3796.09(C) appears to be somewhat flexible, the court stated, in that it includes a waiver provision. The court found the entire statute itself is not flexible, being that it is a strict percentage, unrelated to the particular industry it is intended for, medical marijuana. R.C. §3796.09(C) requires 15 percent of cultivator licenses are issued to economically disadvantaged group members. This is not an estimated goal, but a specific requirement. Additionally, R.C. §3796.09(C) does not include a proposed duration. Accordingly, the court found R.C. §3796.09(C) is not flexible.

Defendants admitted that the 15 percent stated within R.C. §3796.09(C) was lifted from R.C. §125.081 without any additional research or review by the legislature regarding the relevant labor market described in R.C. §3796.09(C), the medical marijuana industry. Defendants argued that the numbers as associated with the contracting market are directly applicable to the newly created medical marijuana industry because of a disparity study conducted by Maryland. The Maryland study was not reviewed by the legislature before enacting R.C. §3796.09(C), and is a review of markets and disparity in Maryland, not Ohio. Accordingly, the court found this one study the Defendants use to try to connect two very different industries (government contracting market and a newly created medical marijuana industry) has little weight, if any.

Regarding the statistics the legislature did not review prior to enacting R.C. §3796.09(C), the cited statistics pertaining to the arrest rates of minorities, the court found, are not directly related to the values listed within the statute. Much of the statistics referenced are based on general rates throughout the United States, or findings on discrimination pertaining to all drug related arrests. But these other statistics do not demonstrate the racial disparities pertaining to specifically marijuana throughout the state of Ohio. The statistics cited in the materials, the court said, is not reflected in the amount chosen to remediate the discrimination R.C. §3796.09(C), 15 percent. This percentage is not based on the evidence demonstrating racial discrimination in marijuana related arrest in Ohio. Therefore, the court concluded the numerical value was selected at random by the legislature, and not based on the evidence provided.

L. Legal — Pending cases and recent instructive cases

Defendants argued third parties are minimally impacted. R.C. §3796:2-1-01 allots twelve licenses to be issued to the most qualified applicants. By allowing a 15 percent set-aside, the court concluded licenses are given to lower qualified applicants solely on the basis of race. The court found the 15 percent set-aside is not insignificant and the burden is excessive for a newly created industry with limited participants.

Finally, the Defendants assert R.C. §3796.09(C) is a continual focus of the legislature which leads to reassessment and reevaluation of the program. As the statute does not include instructions for the legislature to assess and evaluate the program on a reoccurring basis, the court concluded that this factor is not fulfilled.

Upon review of all factors together, the court found failure of the legislature to evaluate or employ race-neutral alternative remedies; plus, the inflexible and unlimited nature of the statute; combined with the lack of relationship between the numerical goals and the relevant labor market; and the large impact of the relief on the rights of third parties, shows the legislature failed to narrowly-tailor R.C. §3796.09(C).

As the ultimate burden remains with Plaintiff to demonstrate the unconstitutionality of R.C. §3796.09(C), the court found Plaintiff met its burden by showing the legislature failed to compile and review enough evidence related to the medical marijuana industry to support the finding of a strong basis in evidence for a compelling government interest to exist. Additionally, the legislature did not narrowly tailor R.C. §3796.09(C). Therefore, the Court finds R.C. §3796.09(C) is unconstitutional on its face pursuant to 42 U.S.C. §1983 and Article I, Section 2 of the Ohio Constitution.

The case was appealed in the Court of Appeals of the Ohio Tenth Appellate District, Case No. 18-AP-000954. The appeal was voluntarily dismissed in March, 2021.

In the Court of Common Pleas, on March 11, 2021 the parties filed a Joint Motion to Dismiss Remaining Claims and Counterclaims Without Prejudice, and the Court of Common Pleas Ordered the dismissal of the remaining Counts of the Complaint and Counterclaim without prejudice.

L. Legal — Pending cases and recent instructive cases

10. *Circle City Broadcasting I, LLC and National Association of Black Owned Broadcasters v. DISH Network, LLC*, U.S. District Court, Southern District of Indiana, Indianapolis Division, Case NO. 1:20-cv-00750-TWP-TAB

This case involves allegations of racial discrimination in contracting by DISH against Plaintiff Circle City. Plaintiffs allege DISH refuses to contract in a nondiscriminatory manner with Circle City in violation of 42 U.S.C. § 1981. Circle City is a small, minority-owned and historically disadvantaged business providing local television broadcasting with television stations located in and serving Indianapolis, Indiana and the surrounding areas.

NABOB is a nonprofit corporation. The Amended Complaint alleges that NABOB represents 167 radio stations owned by 59 different radio broadcasting companies and 21 television stations owned by 10 different television broadcasting companies. The Amended Complaint alleges NABOB is a trade association representing the interests of the African American owned commercial radio and television stations across the country. Plaintiffs allege that as the voice of the African American broadcast industry for the past 42 years, NABOB has been instrumental in shaping national government and industry policies to improve the opportunities for success in broadcasting for African Americans and other minorities.

Plaintiffs claim that DISH insists on maintaining the industry's policies and practices of discriminating against minority-owned broadcasters and disadvantaged business by paying the nonminority broadcasters significant fees to rebroadcast their stations and channels while offering practically no fees to the historically disadvantaged broadcaster or programmer for the same or superior programming.

Plaintiffs assert that DISH's policies discount the contribution minorities can make in a market by refusing to contract with them on a fair and equal basis, and this policy highlights discrimination against minority businesses.

Plaintiffs allege that DISH refuses to negotiate a television retransmission contract in good faith with a minority owned business, Circle City.

Circle City sues for retransmission fees at a fair market rate, actual and punitive damages, interest, attorneys' fees and costs resulting from allegations of intentional misconduct by DISH in its alleged disingenuous "negotiations" with Circle City. NABOB also seeks injunctive relief to enjoin the alleged unlawful acts.

The court issued an Order on May 18, 2021, regarding discovery and noted that it does not appear that settlement would be productive at this time; thus, the case will proceed with discovery. Circle City and NABOB and DISH on July 29, 2021 filed a Stipulation of Facts and Dismissal of NABOB dismissing with prejudice the claims made by NABOB against DISH. Circle City and DISH consented to NABOB withdrawing from the action via a dismissal. The court has set a pretrial conference in February 2022, and the case is pending at the time of this report.

L. Legal — Pending cases and recent instructive cases

11. *Etienne Hardre, and SDG Murray, LTD et al. v. Colorado Minority Business Office, Governor of Colorado et al.*, U.S. District Court for District, District of Colorado, Case 1:20-cv-03594. Complaint filed in December 2020

This Complaint concerns Senate Bill 20B-001 (“SB1”) signed into law by the Governor of Colorado on December 7, 2020. The Complaint claims unconstitutional race-based classifications in SB1, including those in Section 8 providing economic relief and stimulus only to minority-owned businesses; provisions will be codified at Colo. Rev. Stat. §24-49.5-106. SB1 appropriates \$4 million for COVID-19 relief payments for “minority-owned businesses.”

Plaintiffs allege Caucasian businesses are excluded from participating in these relief payments based on the racial identities of the business owners. The appropriation of \$4 million for use by the Colorado Minority Business Office is to provide “relief payments, grants and loans to minority-owned businesses.”

SB1 directs the Colorado Minority Business Office to use a portion of the funds “to provide technical assistance and consulting support to minority-owned businesses across the state.” SB1 provides three primary forms of economic relief exclusively to minority-owned businesses: direct relief payments, grants and loans for startup capital, and funds to provide minority-owned business leaders with professional development and networking opportunities.

SBE directs Director of CMBO to establish a process for minority-owned businesses to apply for economic stimulus benefits, with a threshold requirement to applying is that the business be “minority owned” as defined by SB1.

Plaintiffs allege SB1’s provision limiting certain economic stimulus payments to minority-owned businesses violates the Equal Protection Clause of the Fourteenth Amendment by unconstitutionally making facial racial classifications.

The plaintiffs filed a Motion for Preliminary Injunction and defendants filed a Motion to Dismiss. The court on April 19, 2021, granted defendants’ Motion to Dismiss, ordered plaintiffs’ claim for relief is dismissed without prejudice, holding that plaintiffs do not have standing and based on the case not being constitutionally ripe for decision. The court also held that even if plaintiffs could demonstrate both standing and constitutional ripeness, it is inappropriate to exercise jurisdiction for prudential reasons. The court thus denied the plaintiffs’ Motion for Preliminary Injunction.

L. Legal — Pending cases and recent instructive cases

12. *Infinity Consulting Group, LLC, et al. v. United States Department of the Treasury, et al.*, Case No.: Gjh-20-981, In The United States District Court For The District Of Maryland, Southern Division. Complaint filed in April 2020

This case involved a complaint filed in response to the distribution of PPP funds that “resulted in a disproportionate number of minority-owned and female-owned business owners unfairly left without relief.”

Plaintiffs, two owners of Maryland small businesses, sued Defendants U.S. Department of the Treasury, the U.S. Small Business Administration (“SBA”) regarding the guidelines governing the first round of funding for the Paycheck Protection Program (“PPP”) in April 2020.

Plaintiffs alleged Defendants knowingly and intentionally discriminated against MBE/WBEs by prohibiting businesses without employees from applying for funding until a week after businesses with employees could apply, leaving only a short period before the funds were depleted. In anticipation of legislation authorizing a second round of funding for the PPP, Plaintiffs moved for a temporary restraining order and preliminary injunction halting the entire PPP from proceeding until Defendants took steps to guarantee more equitable distribution of PPP funds before they were exhausted a second time.

Plaintiffs’ asserted claims under the Fifth Amendment of the U.S. Constitution and the Administrative Procedure Act, 5 U.S.C. §706(2). Court on April 26, 2020 held Plaintiffs’ Emergency Motion for a Temporary Restraining Order and Preliminary Injunction was denied.

Court found Plaintiffs did not demonstrate a likelihood of success on their claims or that their remedy would be in the overall interest of the greater public. Court held Plaintiffs did not show Defendants’ knowingly and intentionally discriminated against MBE/WBEs with no employees, and thus did not prove violation of the equal protection component of the Fifth Amendment’s Due Process Clause. Plaintiffs did not show that an “invidious discriminatory purpose was a motivating factor” behind the Defendants’ decision making in administering the PPP.

Court pointed out that while “a showing of disparate impact on a protected group and the foreseeability of this impact is relevant to prove that the decision maker acted with a forbidden purpose, ‘impact alone is not determinative, and the Court must look to other evidence.’”

After the denial of the Temporary Restraining Order and Preliminary Injunction, Motions to Dismiss were filed by Defendants mainly asserting lack of jurisdiction and failure to state a claim. Plaintiffs and Defendants subsequently entered into a Stipulation of Dismissal with prejudice on October 27, 2020.

This list of pending cases is not exhaustive, but in addition to the cases cited previously and discussed *infra* may potentially have an impact on the study and implementation of MBE/WBE/DBE Programs, related legislation, implementation of the Federal DBE Program by state and local governments and public authorities and agencies, and other types of programs impacting participation of MBE/WBE/DBEs.

L. Legal — Pending cases and recent instructive cases

Tex.), and separate lawsuits seeking to enjoin United States Department of Agriculture (USDA) officials from implementing loan-forgiveness program for farmers and ranchers under Section 1005 of the American Rescue Plan Act of 2021 (ARPA) by asserting eligibility to participate in program based solely on racial classifications violated equal protection. *Carpenter v. Vilsack*, 21-cv-103-F (D. Wyo.); *Holman v. Vilsack*, 1:21-cv-1085 (W.D. Tenn.); *Kent v. Vilsack*, 3:21-cv-540 (S.D. Ill.); *McKinney v. Vilsack*, 2:21-cv-212 (E.D. Tex.); *Joyner v. Vilsack*, 1:21-cv-1089 (W.D. Tenn.); *Dunlap v. Vilsack*, 2:21-cv-942 (D. Or.); *Rogers v. Vilsack*, 1:21-cv-1779 (D. Colo.); *Tiegs v. Vilsack*, 3:21-cv-147 (D.N.D.); *Nuest v. Vilsack*, 21-cv-1572 (D. Minn.)

Of particular interest in Oregon, in *Dunlap v. Vilsack*, 2:21-cv-942 (D. Or.), the federal district court in Oregon on September 21, 2021, granted the federal Defendants Motion to Stay pending resolution of the class challenge to Section 1005 of the American Rescue Plan Act of 2021 in the *Miller v. Vilsack*, 4:21-cv-595 (N.D. Tex.) class action litigation.

Ongoing review. The above represents a summary of the legal framework pertinent to the study and implementation of DBE/MBE/WBE, or race-, ethnicity- or gender-neutral programs, the Federal DBE and ACDBE Programs, and the implementation of the Federal DBE and ACDBE Programs by state and local government recipients of federal funds. Because this is a dynamic area of the law, the framework is subject to ongoing review as the law continues to evolve. The following provides more detailed summaries of key recent decisions.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

E. Recent Decisions Involving the Federal DBE Program and State or Local Government MBE/WBE/DBE Programs in the Ninth Circuit Court of Appeals

1. *Orion Insurance Group, a Washington Corporation; Ralph G. Taylor, an individual, Plaintiffs, v. Washington State Office Of Minority & Women’s Business Enterprises, United States DOT, et. al.*, 2018 WL 6695345 (9th Cir. December 19, 2018), Memorandum opinion (not for publication), Petition for Rehearing denied, February 2019. Petition for Writ of Certiorari filed with the U.S. Supreme Court denied (June 24, 2019)

Plaintiffs, Orion Insurance Group (“Orion”) and its owner Ralph Taylor, filed this case alleging violations of federal and state law due to the denial of their application for Orion to be considered a DBE under federal law. The USDOT and Washington State Office of Minority & Women’s Business Enterprises (“OMWBE”), moved for a summary dismissal of all the claims.

Plaintiff Taylor received results from a genetic ancestry test that estimated he was 90 percent European, 6 percent Indigenous American, and 4 percent Sub-Saharan African. Taylor submitted an application to OMWBE seeking to have Orion certified as an MBE under Washington State law. Taylor identified himself as Black. His application was initially rejected, but after Taylor appealed, OMWBE voluntarily reversed their decision and certified Orion as an MBE.

Plaintiffs submitted to OMWBE Orion’s application for DBE certification under federal law. Taylor identified himself as Black American and Native American in the Affidavit of Certification. Orion’s DBE application was denied because there was insufficient evidence that he was a member of a racial group recognized under the regulations, was regarded by the relevant community as either Black or Native American, or that he held himself out as being a member of either group.

OMWBE found the presumption of disadvantage was rebutted and the evidence was insufficient to show Taylor was socially and economically disadvantaged.

District Court decision. The district court held OMWBE did not act arbitrarily or capriciously when it found the presumption that Taylor was socially and economically disadvantaged was rebutted because of insufficient evidence he was either Black or Native American. By requiring individualized determinations of social and economic disadvantage, the court held the Federal DBE Program requires states to extend benefits only to those who are actually disadvantaged.

Therefore, the district court dismissed the claim that, on its face, the Federal DBE Program violates the Equal Protection Clause. The district court also dismissed the claim that the Defendants, in applying the Federal DBE Program to him, violated the Equal Protection Clause.

The district court found there was no evidence that the application of the federal regulations was done with an intent to discriminate against mixed-race individuals or with racial animus, or creates a disparate impact on mixed-race individuals. The district court held the Plaintiffs failed to show that either the State or Federal Defendants had no rational basis for the difference in treatment.

Void for vagueness claim. Plaintiffs asserted that the regulatory definitions of “Black American” and “Native American” are void for vagueness. The district court dismissed’ the claims that the definitions of “Black American” and “Native American” in the DBE regulations are impermissibly vague.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Claims for violations of 42 U.S.C. § 2000d (Title VI) against the State. Plaintiffs' claims were dismissed against the State Defendants for violation of Title VI. The district court found plaintiffs failed to show the state engaged in intentional racial discrimination. The DBE regulations' requirement that the state make decisions based on race, the district court held were constitutional.

The Ninth Circuit on appeal affirmed the District Court. The Ninth Circuit held the district court correctly dismissed Taylor's claims against Acting Director of the USDOT's Office of Civil Rights, in her individual capacity. The Ninth Circuit also held the district court correctly dismissed Taylor's discrimination claims under 42 U.S.C. § 1983 because the federal defendants did not act "under color or state law" as required by the statute.

In addition, the Ninth Circuit concluded the district court correctly dismissed Taylor's claims for damages because the United States has not waived its sovereign immunity on those claims. The Ninth Circuit found the district court correctly dismissed Taylor's claims for equitable relief refund under 42 U.S.C. § 2000d because the Federal DBE Program does not qualify as a "program or activity" within the meaning of the statute.

Claims under the Administrative Procedure Act. The Ninth Circuit stated the OMWBE did not act in an arbitrary and capricious manner when it determined it had a "well-founded reason" to question Taylor's membership claims, and that Taylor did not qualify as a "socially and economically disadvantaged individual." Also, the court found OMWBE did not act in an arbitrary and capricious manner when it did not provide an in-person hearing under 49 C.F.R. §§ 26.67(b)(2) and 26.87(d) because Taylor was not entitled to a hearing under the regulations.

The Ninth Circuit held the USDOT did not act in an arbitrary and capricious manner when it affirmed the state's decision because the decision was supported by substantial evidence and consistent with federal regulations. The USDOT "articulated a rational connection" between the evidence and the decision to deny Taylor's application for certification.

Claims under the Equal Protection Clause and 42 U.S.C. §§ 1983 and 2000d. The Ninth Circuit held the district court correctly granted summary judgment to the federal and state Defendants on Taylor's equal protection claims because Defendants did not discriminate against Taylor, and did not treat Taylor differently from others similarly situated. In addition, the court found the district court properly granted summary judgment to the state defendants on Taylor's discrimination claims under 42 U.S.C. §§ 1983 and 2000d because neither statute applies to Taylor's claims.

Having granted summary judgment on Taylor's claims under federal law, the Ninth Circuit concluded the district court properly declined to exercise jurisdiction over Taylor's state law claims.

Petition for Writ of Certiorari. Plaintiffs/Appellants filed a Petition for Writ of Certiorari with the U.S. Supreme Court on April 22, 2019, which was denied on June 24, 2019.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

2. *Mountain West Holding Co., Inc. v. The State of Montana, Montana DOT, et al.*, 2017 WL 2179120 (9th Cir. May 16, 2017), Memorandum opinion, (not for publication) United States Court of Appeals for the Ninth Circuit, May 16, 2017, Docket Nos. 14-26097 and 15-35003, dismissing in part, reversing in part and remanding the U.S. District Court decision at 2014 WL 6686734 (D. Mont. Nov. 26, 2014)

Note: The Ninth Circuit Court of Appeals Memorandum provides: “This disposition is not appropriate for publication and is not precedent except as provided by Ninth Circuit Rule 36-3.”

Introduction. Mountain West Holding Company installs signs, guardrails, and concrete barriers on highways in Montana. It competes to win subcontracts from prime contractors who have contracted with the State. It is not owned and controlled by women or minorities. Some of its competitors are disadvantaged business enterprises (DBEs) owned by women or minorities. In this case it claims that Montana’s DBE goal-setting program unconstitutionally required prime contractors to give preference to these minority or female-owned competitors, which Mountain West Holdings Company argues is a violation of the Equal Protection Clause, 42 U.S.C. § 1983 and Title VI of the Civil Rights Act of 1964, 42 U.S.C. § 2000d, *et seq.*

Factual and procedural background. *In Mountain West Holding Co., Inc. v. The State of Montana, Montana DOT, et al.*, 2014 WL 6686734 (D. Mont. Nov. 26, 2014); Case No. 1:13-CV-00049-DLC, United States District Court for the District of Montana, Billings Division, plaintiff Mountain West Holding Co., Inc. (“Mountain West”), alleged it is a contractor that provides construction-specific traffic planning and staffing for construction projects as well as the installation of signs, guardrails, and concrete barriers. Mountain West sued the Montana Department of Transportation (“MDT”) and the State of Montana, challenging their implementation of

the Federal DBE Program. Mountain West brought this action alleging violation of the Equal Protection Clause of the Fourteenth Amendment of the United States Constitution, Title VI of the Civil Rights Act, 42 USC § 2000(d)(7), and 42 USC § 1983.

Following the Ninth Circuit’s 2005 decision in *Western States Paving v. Washington DOT, et al.*, MDT commissioned a disparity study which was completed in 2009. MDT utilized the results of the disparity study to establish its overall DBE goal. MDT determined that to meet its overall goal, it would need to implement race-conscious contract specific goals. Based upon the disparity study, Mountain West alleges the State of Montana utilized race, national origin, and gender-conscious goals in highway construction contracts. Mountain West claims the State did not have a strong basis in evidence to show there was past discrimination in the highway construction industry in Montana and that the implementation of race, gender, and national origin preferences were necessary or appropriate. Mountain West also alleges that Montana has instituted policies and practices which exceed the United States Department of Transportation DBE requirements.

Mountain West asserts that the 2009 study concluded all “relevant” minority groups were underutilized in “professional services” and Asian-Pacific Americans and Hispanic Americans were underutilized in “business categories combined,” but it also concluded that all “relevant” minority groups were significantly overutilized in construction. Mountain West thus alleges that although the disparity study demonstrates that DBE groups are “significantly overrepresented” in the highway construction field, MDT has established preferences for DBE construction subcontractor firms over non-DBE construction subcontractor firms in the award of contracts.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Mountain West also asserts that the Montana DBE Program does not have a valid statistical basis for the establishment or inclusion of race, national origin, and gender conscious goals, that MDT inappropriately relies upon the 2009 study as the basis for its DBE Program, and that the study is flawed. Mountain West claims the Montana DBE Program is not narrowly tailored because it disregards large differences in DBE firm utilization in MDT contracts as among three different categories of subcontractors: business categories combined, construction, and professional services; the MDT DBE certification process does not require the applicant to specify any specific racial or ethnic prejudice or cultural bias that had a negative impact upon his or her business success; and the certification process does not require the applicant to certify that he or she was discriminated against in the State of Montana in highway construction.

Mountain West and the State of Montana and the MDT filed cross Motions for Summary Judgment. Mountain West asserts that there was no evidence that all relevant minority groups had suffered discrimination in Montana’s transportation contracting industry because, while the study had determined there were substantial disparities in the utilization of all minority groups in professional services contracts, there was no disparity in the utilization of minority groups in construction contracts.

AGC, San Diego v. California DOT and Western States Paving Co. v. Washington DOT. The Ninth Circuit and the district court in Mountain West applied the decision in *Western States*, 407 F.3d 983 (9th Cir. 2005), and the decision in *AGC, San Diego v. California DOT*, 713 F.3d 1187 (9th Cir. 2013) as establishing the law to be followed in this case. The district court noted that in *Western States*, the Ninth Circuit held that a state’s implementation of the Federal DBE Program can be subject to an as-applied constitutional challenge, despite the facial validity of the Federal DBE Program. 2014 WL 6686734 at *2 (D. Mont. November 26, 2014). The

Ninth Circuit and the district court stated the Ninth Circuit has held that whether a state’s implementation of the DBE Program “is narrowly tailored to further Congress’s remedial objective depends upon the presence or absence of discrimination in the State’s transportation contracting industry.” *Mountain West*, 2014 WL 6686734 at *2, quoting *Western States*, at 997-998, and *Mountain West*, 2017 WL 2179120 at *2 (9th Cir. May 16, 2017) Memorandum, May 16, 2017, at 5-6, quoting *AGC, San Diego v. California DOT*, 713 F.3d 1187, 1196. The Ninth Circuit in *Mountain West* also pointed out it had held that “even when discrimination is present within a State, a remedial program is only narrowly tailored if its application is limited to those minority groups that have actually suffered discrimination.” *Mountain West*, 2017 WL 2179120 at *2, Memorandum, May 16, 2017, at 6, and 2014 WL 6686734 at *2, quoting *Western States*, 407 F.3d at 997-999.

MDT study. MDT obtained a firm to conduct a disparity study that was completed in 2009. The district court in *Mountain West* stated that the results of the study indicated significant underutilization of DBEs in all minority groups in “professional services” contracts, significant underutilization of Asian-Pacific Americans and Hispanic Americans in “business categories combined,” slight underutilization of nonminority women in “business categories combined,” and overutilization of all groups in subcontractor “construction” contracts. *Mountain West*, 2014 WL 6686734 at *2.

In addition to the statistical evidence, the 2009 disparity study gathered anecdotal evidence through surveys and other means. The district court stated the anecdotal evidence suggested various forms of discrimination existed within Montana’s transportation contracting industry, including evidence of an exclusive “good ole boy network” that made it difficult for DBEs to break into the market. *Id.* at *3. The district court said that despite these findings, the consulting firm recommended that MDT continue to monitor DBE utilization while employing only

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

race-neutral means to meet its overall goal. *Id.* The consulting firm recommended that MDT consider the use of race-conscious measures if DBE utilization decreased or did not improve.

Montana followed the recommendations provided in the study, and continued using only race-neutral means in its effort to accomplish its overall goal for DBE utilization. *Id.* Based on the statistical analysis provided in the study, Montana established an overall DBE utilization goal of 5.83 percent. *Id.*

Montana's DBE utilization after ceasing the use of contract goals.

The district court found that in 2006, Montana achieved a DBE utilization rate of 13.1 percent, however, after Montana ceased using contract goals to achieve its overall goal, the rate of DBE utilization declined sharply. 2014 WL 6686734 at *3. The utilization rate dropped, according to the district court, to 5 percent in 2007, 3 percent in 2008, 2.5 percent in 2009, 0.8 percent in 2010, and in 2011, it was 2.8 percent *Id.* In response to this decline, for fiscal years 2011-2014, the district court said MDT employed contract goals on certain USDOT contracts in order to achieve 3.27 percentage points of Montana's overall goal of 5.83 percent DBE utilization.

MDT then conducted and prepared a new Goal Methodology for DBE utilization for federal fiscal years 2014-2016. *Id.* US DOT approved the new and current goal methodology for MDT, which does not provide for the use of contract goals to meet the overall goal. *Id.* Thus, the new overall goal is to be made entirely through the use of race-neutral means. *Id.*

Mountain West's claims for relief. Mountain West sought declaratory and injunctive relief, including prospective relief, against the individual defendants, and sought monetary damages against the State of Montana and the MDT for alleged violation of Title VI. 2014 WL 6686734 at *3. Mountain West's claim for monetary damages is based on its claim that on three occasions it was a low-quoting subcontractor to a prime contractor submitting a bid to the MDT on a project that utilized contract goals, and that despite being a low-quoting bidder, Mountain West was not awarded the contract. *Id.* Mountain West brings an as-applied challenge to Montana's DBE program. *Id.*

The two-prong test to demonstrate that a DBE program is narrowly tailored. The Court, citing *AGC, San Diego v. California DOT*, 713 F.3d 1187, 1196, stated that under the two-prong test established in *Western States*, in order to demonstrate that its DBE program is narrowly tailored, (1) the state must establish the presence of discrimination within its transportation contracting industry, and (2) the remedial program must be limited to those minority groups that have actually suffered discrimination. *Mountain West*, 2017 WL 2179120 at *2, Memorandum, May 16, 2017, at 6-7.

District Court Holding in 2014 and the Appeal. The district court granted summary judgment to the State, and Mountain West appealed. *See Mountain West Holding Co., Inc. v. The State of Montana, Montana DOT, et al.* 2014 WL 6686734 (D. Mont. Nov. 26, 2014), *dismissed in part, reversed in part, and remanded*, U.S. Court of Appeals, Ninth Circuit, Docket Nos. 14-36097 and 15-35003, Memorandum 2017 WL 2179120 at **1-4 (9th Cir. May 16, 2017). Montana also appealed the district court's threshold determination that Mountain West had a private right of action under Title VI, and it appealed the district court's denial of the State's motion to strike an expert report submitted in support of Mountain West's motion.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Ninth Circuit Holding. The Ninth Circuit Court of Appeals in its Memorandum opinion dismissed Mountain West’s appeal as moot to the extent Mountain West pursues equitable remedies, affirmed the district court’s determination that Mountain West has a private right to enforce Title VI, affirmed the district court’s decision to consider the disputed expert report by Mountain West’s expert witness, and reversed the order granting summary judgment to the State. 2017 WL 2179120 at **1-4 (9th Cir. May 16, 2017), U.S. Court of Appeals, Ninth Circuit, Docket Nos. 14-36097 and 15-35003, Memorandum, at 3, 5, 11.

Mootness. The Ninth Circuit found that Montana does not currently employ gender- or race-conscious goals, and the data it relied upon as justification for its previous goals are now several years old. The Court thus held that Mountain West’s claims for injunctive and declaratory relief are therefore moot. *Mountain West*, 2017 WL 2179120 at *2 (9th Cir.), Memorandum, May 16, 2017, at 4.

The Court also held, however, that Mountain West’s Title VI claim for damages is not moot. 2017 WL 2179120 at **1-2. The Court stated that a plaintiff may seek damages to remedy violations of Title VI, *see* 42 U.S.C. § 2000d-7(a)(1)-(2); and Mountain West has sought damages. Claims for damages, according to the Court, do not become moot even if changes to a challenged program make claims for prospective relief moot. *Id.*

The appeal, the Ninth Circuit held, is therefore dismissed with respect to Mountain West’s claims for injunctive and declaratory relief; and only the claim for damages under Title VI remains in the case. *Mountain West*, 2017 WL 2179120 at **1 (9th Cir.), Memorandum, May 16, 2017, at 4.

Private Right of Action and Discrimination under Title VI. The Court concluded for the reasons found in the district court’s order that Mountain West may state a private claim for damages against Montana

under Title VI. *Id.* at *2. The district court had granted summary judgment to Montana on Mountain West’s claims for discrimination under Title VI.

Montana does not dispute that its program took race into account. The Ninth Circuit held that classifications based on race are permissible “only if they are narrowly tailored measures that further compelling governmental interests.” *Mountain West*, 2017 WL 2179120 (9th Cir.) at *2, Memorandum, May 16, 2017, at 6-7. *W. States Paving*, 407 F.3d at 990 (quoting *Adarand Constructors, Inc. v. Peña*, 515 U.S. 200, 227 (1995)). As in *Western States Paving*, the Court applied the same test to claims of unconstitutional discrimination and discrimination in violation of Title VI. *Mountain West*, 2017 WL 2179120 at *2, n.2, Memorandum, May 16, 2017, at 6, n. 2; *see*, 407 F.3d at 987.

Montana, the Court found bears the burden to justify any racial classifications. *Id.* In an as-applied challenge to a state’s DBE contracting program, “(1) the state must establish the presence of discrimination within its transportation contracting industry, and (2) the remedial program must be ‘limited to those minority groups that have actually suffered discrimination.’” *Mountain West*, 2017 WL 2179120 at *2 (9th Cir.), Memorandum, May 16, 2017, at 6-7, quoting *Assoc. Gen. Contractors of Am. v. Cal. Dep’t of Transp.*, 713 F.3d 1187, 1196 (9th Cir. 2013) (quoting *W. States Paving*, 407 F.3d at 997-99). Discrimination may be inferred from “a significant statistical disparity between the number of qualified minority contractors willing and able to perform a particular service and the number of such contractors actually engaged by the locality or the locality’s prime contractors.” *Mountain West*, 2017 WL 2179120 at *2 (9th Cir.), Memorandum, May 16, 2017, at 6-7, quoting *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469, 509 (1989).

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Here, the district court held that Montana had satisfied its burden. In reaching this conclusion, the district court relied on three types of evidence offered by Montana. First, it cited a study, which reported disparities in professional services contract awards in Montana. Second, the district court noted that participation by DBEs declined after Montana abandoned race-conscious goals in the years following the decision in *Western States Paving*, 407 F.3d 983. Third, the district court cited anecdotes of a “good ol’ boys” network within the State’s contracting industry. *Mountain West*, 2017 WL 2179120 at *3 (9th Cir.), Memorandum, May 16, 2017, at 7.

The Ninth Circuit reversed the district court and held that summary judgment was improper in light of genuine disputes of material fact as to the study’s analysis, and because the second two categories of evidence were insufficient to prove a history of discrimination. *Mountain West*, 2017 WL 2179120 at *3 (9th Cir.), Memorandum, May 16, 2017, at 7.

Disputes of fact as to study. Mountain West’s expert testified that the study relied on several questionable assumptions and an opaque methodology to conclude that professional services contracts were awarded on a discriminatory basis. *Id.* at *3. The Ninth Circuit pointed out a few examples that it found illustrated the areas in which there are disputes of fact as to whether the study sufficiently supported Montana’s actions:

1. Ninth Circuit stated that its cases require states to ascertain whether lower-than-expected DBE participation is attributable to factors other than race or gender. *W. States Paving*, 407 F.3d at 1000-01. Mountain West argues that the study did not explain whether or how it accounted for a given firm’s size, age, geography, or other similar factors. The report’s authors were unable to explain their analysis in depositions for this

case. Indeed, the Court noted, even Montana appears to have questioned the validity of the study’s statistical results *Mountain West*, 2017 WL 2179120 at *3 (9th Cir.), Memorandum, May 16, 2017, at 8.

2. The study relied on a telephone survey of a sample of Montana contractors. Mountain West argued that (a) it is unclear how the study selected that sample, (b) only a small percentage of surveyed contractors responded to questions, and (c) it is unclear whether responsive contractors were representative of nonresponsive contractors. 2017 WL 2179120 at *3 (9th Cir. May 16, 2017), Memorandum at 8-9.
3. The study relied on very small sample sizes but did no tests for statistical significance, and the study consultant admitted that “some of the population samples were very small and the result may not be significant statistically.” 2017 WL 2179120 at *3 (9th Cir. May 16, 2017), Memorandum at 8-9.
4. Mountain West argued that the study gave equal weight to professional services contracts and construction contracts, but professional services contracts composed less than 10 percent of total contract volume in the State’s transportation contracting industry. 2017 WL 2179120 at *3 (9th Cir. May 16, 2017), Memorandum at 9.
5. Mountain West argued that Montana incorrectly compared the proportion of available subcontractors to the proportion of prime contract dollars awarded. The district court did not address this criticism or explain why the study’s comparison was appropriate. 2017 WL 2179120 at *3 (9th Cir. May 16, 2017), Memorandum at 9.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The post-2005 decline in participation by DBEs. The Ninth Circuit was unable to affirm the district court’s order in reliance on the decrease in DBE participation after 2005. In *Western States Paving*, it was held that a decline in DBE participation after race- and gender-based preferences are halted is not necessarily evidence of discrimination against DBEs. *Mountain West*, 2017 WL 2179120 at *3 (9th Cir.), Memorandum, May 16, 2017, at 9, quoting *Western States*, 407 F.3d at 999 (“If [minority groups have not suffered from discrimination], then the DBE program provides minorities who have not encountered discriminatory barriers with an unconstitutional competitive advantage at the expense of both nonminorities and any minority groups that have actually been targeted for discrimination.”); *id.* at 1001 (“The disparity between the proportion of DBE performance on contracts that include affirmative action components and on those without such provisions does not provide any evidence of discrimination against DBEs.”). *Id.*

The Ninth Circuit also cited to the U.S. DOT statement made to the Court in *Western States*. *Mountain West*, 2017 WL 2179120 at *3 (9th Cir.), Memorandum, May 16, 2017, at 10, quoting, U.S. Dep’t of Transp., *Western States Paving Co. Case Q&A* (Dec. 16, 2014) (“In calculating availability of DBEs, [a state’s] study should not rely on numbers that may have been inflated by race-conscious programs that may not have been narrowly tailored.”).

Anecdotal evidence of discrimination. The Ninth Circuit said that without a statistical basis, the State cannot rely on anecdotal evidence alone. *Mountain West*, 2017 WL 2179120 at *3 (9th Cir.), Memorandum, May 16, 2017, at 10, quoting, *Coral Const. Co. v. King Cty.*, 941 F.2d 910, 919 (9th Cir. 1991) (“While anecdotal evidence may suffice to prove individual claims of discrimination, rarely, if ever, can such evidence show a systemic pattern of discrimination necessary for the adoption of an affirmative action plan.”); and quoting, *Crosby*, 488 U.S. at 509

(“[E]vidence of a pattern of individual discriminatory acts can, if supported by appropriate statistical proof, lend support to a local government’s determination that broader remedial relief is justified.”). *Id.*

In sum, the Ninth Circuit found that because it must view the record in the light most favorable to *Mountain West*’s case, it concluded that the record provides an inadequate basis for summary judgment in *Mountain West*’s favor. 2017 WL 2179120 at *3.

Conclusion. The Ninth Circuit thus reversed and remanded for the district court to conduct whatever further proceedings it considers most appropriate, including trial or the resumption of pretrial litigation. Thus, the case was dismissed in part, reversed in part, and remanded to the district court. *Mountain West*, 2017 WL 2179120 at *4 (9th Cir.), Memorandum, May 16, 2017, at 11.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

3. *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation, et al.*, 713 F.3d 1187 (9th Cir. 2013)

The Associated General Contractors of America, Inc., San Diego Chapter, Inc., (“AGC”) sought declaratory and injunctive relief against the California Department of Transportation (“Caltrans”) and its officers on the grounds that Caltrans’ Disadvantaged Business Enterprise (“DBE”) program unconstitutionally provided race- and sex-based preferences to African American, Native American-, Asian-Pacific American-, and women-owned firms on certain transportation contracts. The federal district court upheld the constitutionality of Caltrans’ DBE program implementing the Federal DBE Program and granted summary judgment to Caltrans. The district court held that Caltrans’ DBE program implementing the Federal DBE Program satisfied strict scrutiny because Caltrans had a strong basis in evidence of discrimination in the California transportation contracting industry, and the program was narrowly tailored to those groups that actually suffered discrimination. The district court held that Caltrans’ substantial statistical and anecdotal evidence from a disparity study conducted by BBC Research and Consulting, provided a strong basis in evidence of discrimination against the four named groups, and that the program was narrowly tailored to benefit only those groups. 713 F.3d at 1190.

The AGC appealed the decision to the Ninth Circuit Court of Appeals. The Ninth Circuit initially held that because the AGC did not identify any of the members who have suffered or will suffer harm as a result of Caltrans’ program, the AGC did not establish that it had associational standing to bring the lawsuit. *Id.* Most significantly, the Ninth Circuit held that even if the AGC could establish standing, its appeal failed because the Court found Caltrans’ DBE program implementing the Federal DBE Program is constitutional and satisfied the applicable level

of strict scrutiny required by the Equal Protection Clause of the United States Constitution. *Id.* at 1194-1200.

Court Applies *Western States Paving Co. v. Washington State DOT* decision. In 2005 the Ninth Circuit Court of Appeal decided *Western States Paving Co. v. Washington State Department of Transportation*, 407 F.3d 983 (9th Cir. 2005), which involved a facial challenge to the constitutional validity of the federal law authorizing the United States Department of Transportation to distribute funds to States for transportation-related projects. *Id.* at 1191. The challenge in the *Western States Paving* case also included an as-applied challenge to the Washington DOT program implementing the federal mandate. *Id.* Applying strict scrutiny, the Ninth Circuit upheld the constitutionality of the federal statute and the federal regulations (the Federal DBE Program), but struck down Washington DOT’s program because it was not narrowly tailored. *Id.*, citing *Western States Paving Co.*, 407 F.3d at 990-995, 999-1002.

In *Western States Paving*, the Ninth Circuit announced a two-pronged test for “narrow tailoring”:

“(1) the state must establish the presence of discrimination within its transportation contracting industry, and (2) the remedial program must be limited to those minority groups that have actually suffered discrimination.” Id. 1191, citing Western States Paving Co., 407 F.3d at 997-998.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Evidence gathering and the 2007 Disparity Study. On May 1, 2006, Caltrans ceased to use race- and gender-conscious measures in implementing their DBE program on federally assisted contracts while it gathered evidence in an effort to comply with the *Western States Paving* decision. *Id.* at 1191. Caltrans commissioned a disparity study by BBC Research and Consulting to determine whether there was evidence of discrimination in California’s transportation contracting industry. *Id.* The Court noted that disparity analysis involves making a comparison between the availability of minority- and women-owned businesses and their actual utilization, producing a number called a “disparity index.” *Id.* An index of 100 represents statistical parity between availability and utilization, and a number below 100 indicates underutilization. *Id.* An index below 80 is considered a substantial disparity that supports an inference of discrimination. *Id.*

The Court found the research firm and the disparity study gathered extensive data to calculate disadvantaged business availability in the California transportation contracting industry. *Id.* at 1191. The Court stated: “Based on review of public records, interviews, assessments as to whether a firm could be considered available, for Caltrans contracts, as well as numerous other adjustments, the firm concluded that minority- and women-owned businesses should be expected to receive 13.5 percent of contact dollars from Caltrans administered federally assisted contracts.” *Id.* at 1191-1192.

The Court said the research firm “examined over 10,000 transportation-related contracts administered by Caltrans between 2002 and 2006 to determine actual DBE utilization. The firm assessed disparities across a variety of contracts, separately assessing contracts based on funding source (state or federal), type of contract (prime or subcontract), and type of project (engineering or construction).” *Id.* at 1192.

The Court pointed out a key difference between federally funded and state funded contracts is that race-conscious goals were in place for the federally funded contracts during the 2002–2006 period, but not for the state funded contracts. *Id.* at 1192. Thus, the Court stated: “state funded contracts functioned as a control group to help determine whether previous affirmative action programs skewed the data.” *Id.*

Moreover, the Court found the research firm measured disparities in all twelve of Caltrans’ administrative districts, and computed aggregate disparities based on statewide data. *Id.* at 1192. The firm evaluated statistical disparities by race and gender. The Court stated that within and across many categories of contracts, the research firm found substantial statistical disparities for African American, Asian-Pacific, and Native American firms. *Id.* However, the research firm found that there were not substantial disparities for these minorities in *every* subcategory of contract. *Id.* The Court noted that the disparity study also found substantial disparities in utilization of women-owned firms for some categories of contracts. *Id.* After publication of the disparity study, the Court pointed out the research firm calculated disparity indices for all women-owned firms, including female minorities, showing substantial disparities in the utilization of all women-owned firms similar to those measured for white women. *Id.*

The Court found that the disparity study and Caltrans also developed extensive anecdotal evidence, by (1) conducting twelve public hearings to receive comments on the firm’s findings; (2) receiving letters from business owners and trade associations; and (3) interviewing representatives from twelve trade associations and 79 owners/managers of transportation firms. *Id.* at 1192. The Court stated that some of the anecdotal evidence indicated discrimination based on race or gender. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Caltrans' DBE Program. Caltrans concluded that the evidence from the disparity study supported an inference of discrimination in the California transportation contracting industry. *Id.* at 1192-1193. Caltrans concluded that it had sufficient evidence to make race- and gender-conscious goals for African American-, Asian-Pacific American-, Native American-, and women-owned firms. *Id.* The Court stated that Caltrans adopted the recommendations of the disparity report and set an overall goal of 13.5 percent for disadvantaged business participation. Caltrans expected to meet one-half of the 13.5 percent goal using race-neutral measures. *Id.*

Caltrans submitted its proposed DBE program to the USDOT for approval, including a request for a waiver to implement the program only for the four identified groups. *Id.* at 1193. The Caltrans' DBE program included 66 race-neutral measures that Caltrans already operated or planned to implement, and subsequent proposals increased the number of race-neutral measures to 150. *Id.* The USDOT granted the waiver, but initially did not approve Caltrans' DBE program until in 2009, the DOT approved Caltrans' DBE program for fiscal year 2009.

District Court proceedings. AGC then filed a complaint alleging that Caltrans' implementation of the Federal DBE Program violated the Fourteenth Amendment of the U.S. Constitution, Title VI of the Civil Rights Act, and other laws. Ultimately, the AGC only argued an as-applied challenge to Caltrans' DBE program. The district court on motions of summary judgment held that Caltrans' program was "clearly constitutional," as it "was supported by a strong basis in evidence of discrimination in the California contracting industry and was narrowly tailored to those groups which had actually suffered discrimination. *Id.* at 1193.

Subsequent Caltrans study and program. While the appeal by the AGC was pending, Caltrans commissioned a new disparity study from BBC to update its DBE program as required by the federal regulations. *Id.* at 1193.

In August 2012, BBC published its second disparity report, and Caltrans concluded that the updated study provided evidence of continuing discrimination in the California transportation contracting industry against the same four groups and Hispanic Americans. *Id.* Caltrans submitted a modified DBE program that is nearly identical to the program approved in 2009, except that it now includes Hispanic Americans and sets an overall goal of 12.5 percent, of which 9.5 percent will be achieved through race- and gender-conscious measures. *Id.* The USDOT approved Caltrans' updated program in November 2012. *Id.*

Jurisdiction issue. Initially, the Ninth Circuit Court of Appeals considered whether it had jurisdiction over the AGC's appeal based on the doctrines of mootness and standing. The Court held that the appeal is not moot because Caltrans' new DBE program is substantially similar to the prior program and is alleged to disadvantage AGC's members "in the same fundamental way" as the previous program. *Id.* at 1194.

The Court, however, held that the AGC did not establish associational standing. *Id.* at 1194-1195: The Court found that the AGC did not identify any affected members by name nor has it submitted declarations by any of its members attesting to harm they have suffered or will suffer under Caltrans' program. *Id.* at 1194-1195. Because AGC failed to establish standing, the Court held it must dismiss the appeal due to lack of jurisdiction. *Id.* at 1195.

Caltrans' DBE Program held constitutional on the merits. The Court then held that even if AGC could establish standing, its appeal would fail. *Id.* at 1194-1195. The Court held that Caltrans' DBE program is constitutional because it survives the applicable level of scrutiny required by the Equal Protection Clause and jurisprudence. *Id.* at 1195-1200.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The Court stated that race-conscious remedial programs must satisfy strict scrutiny and that although strict scrutiny is stringent, it is not “fatal in fact.” *Id.* at 1194-1195 (quoting *Adarand Constructors, Inc. v. Peña*, 515 U.S. 200, 237 (1995) (*Adarand III*)). The Court quoted *Adarand III*: “The unhappy persistence of both the practice and the lingering effects of racial discrimination against minority groups in this country is an unfortunate reality, and government is not disqualified from acting in response to it.” *Id.* (quoting *Adarand III*, 515 U.S. at 237.)

The Court pointed out that gender-conscious programs must satisfy intermediate scrutiny which requires that gender-conscious programs be supported by an ‘exceedingly persuasive justification’ and be substantially related to the achievement of that underlying objective. *Id.* at 1195 (citing *Western States Paving*, 407 F.3d at 990 n. 6.).

The Court held that Caltrans’ DBE program contains both race- and gender-conscious measures, and that the “entire program passes strict scrutiny.” *Id.* at 1195.

Application of strict scrutiny standard articulated in *Western States Paving*. The Court held that the framework for AGC’s as-applied challenge to Caltrans’ DBE program is governed by *Western States Paving*. The Ninth Circuit in *Western States Paving* devised a two-pronged test for narrow tailoring: (1) the state must establish the presence of discrimination within its transportation contracting industry, and (2) the remedial program must be “limited to those minority groups that have actually suffered discrimination.” *Id.* at 1195-1196 (quoting *Western States Paving*, 407 F.3d at 997–99).

Evidence of discrimination in California contracting industry. The Court held that in Equal Protection cases, courts consider statistical and anecdotal evidence to identify the existence of discrimination. *Id.* at 1196. The U.S. Supreme Court has suggested that a “significant statistical disparity” could be sufficient to justify race-conscious remedial programs.

Id. at *7 (citing *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469, 509 (1989)). The Court stated that although generally not sufficient, anecdotal evidence complements statistical evidence because of its ability to bring “the cold numbers convincingly to life.” *Id.* (quoting *Int’l Bhd. of Teamsters v. United States*, 431 U.S. 324, 339 (1977)).

The Court pointed out that Washington DOT’s DBE program in the *Western States Paving* case was held invalid because Washington DOT had performed no statistical studies and it offered no anecdotal evidence. *Id.* at 1196. The Court also stated that the Washington DOT used an oversimplified methodology resulting in little weight being given by the Court to the purported disparity because Washington’s data “did not account for the relative capacity of disadvantaged businesses to perform work, nor did it control for the fact that existing affirmative action programs skewed the prior utilization of minority businesses in the state.” *Id.* (quoting *Western States Paving*, 407 F.3d at 999-1001). The Court said that it struck down Washington’s program after determining that the record was devoid of any evidence suggesting that minorities currently suffer — or have ever suffered — discrimination in the Washington transportation contracting industry.” *Id.*

Significantly, the Court held in this case as follows: “In contrast, Caltrans’ affirmative action program is supported by substantial statistical and anecdotal evidence of discrimination in the California transportation contracting industry.” *Id.* at 1196. The Court noted that the disparity study documented disparities in many categories of transportation firms and the utilization of certain minority- and women-owned firms. *Id.* The Court found the disparity study “accounted for the factors mentioned in *Western States Paving* as well as others, adjusting availability data based on capacity to perform work and controlling for previously administered affirmative action programs.” *Id.* (citing *Western States*, 407 F.3d at 1000).

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The Court also held: “Moreover, the statistical evidence from the disparity study is bolstered by anecdotal evidence supporting an inference of discrimination. The substantial statistical disparities alone would give rise to an inference of discrimination, *see Croson*, 488 U.S. at 509, and certainly Caltrans’ statistical evidence combined with anecdotal evidence passes constitutional muster.” *Id.* at 1196.

The Court specifically rejected the argument by AGC that strict scrutiny requires Caltrans to provide evidence of “specific acts” of “deliberate” discrimination by Caltrans employees or prime contractors. *Id.* at 1196-1197. The Court found that the Supreme Court in *Croson* explicitly states that “[t]he degree of specificity required in the findings of discrimination ... may vary.” *Id.* at 1197 (quoting *Croson*, 488 U.S. at 489). The Court concluded that a rule requiring a state to show specific acts of deliberate discrimination by identified individuals would run contrary to the statement in *Croson* that statistical disparities alone could be sufficient to support race-conscious remedial programs. *Id.* (citing *Croson*, 488 U.S. at 509). The Court rejected AGC’s argument that Caltrans’ program does not survive strict scrutiny because the disparity study does not identify individual acts of deliberate discrimination. *Id.*

The Court rejected a second argument by AGC that this study showed inconsistent results for utilization of minority businesses depending on the type and nature of the contract, and thus cannot support an inference of discrimination in the entire transportation contracting industry. *Id.* at 1197. AGC argued that each of these subcategories of contracts must be viewed in isolation when considering whether an inference of discrimination arises, which the Court rejected. *Id.* The Court found that AGC’s argument overlooks the rationale underpinning the constitutional justification for remedial race-conscious programs: they are designed to root out “patterns of discrimination.” *Id.* quoting *Croson*, 488 U.S. at 504.

The Court stated that the issue is not whether Caltrans can show underutilization of disadvantaged businesses in *every* measured category of contract. But rather, the issue is whether Caltrans can meet the evidentiary standard required by *Western States Paving* if, looking at the evidence in its entirety, the data show substantial disparities in utilization of minority firms suggesting that public dollars are being poured into “a system of racial exclusion practiced by elements of the local construction industry.” *Id.* at 1197 quoting *Croson* 488 U.S. at 492.

The Court concluded that the disparity study and anecdotal evidence document a pattern of disparities for the four groups, and that the study found substantial underutilization of these groups in numerous categories of California transportation contracts, which the anecdotal evidence confirms. *Id.* at 1197. The Court held this is sufficient to enable Caltrans to infer that these groups are systematically discriminated against in publicly-funded contracts. *Id.*

Third, the Court considered and rejected AGC’s argument that the anecdotal evidence has little or no probative value in identifying discrimination because it is not verified. *Id.* at *9. The Court noted that the Fourth and Tenth Circuits have rejected the need to verify anecdotal evidence, and the Court stated the AGC made no persuasive argument that the Ninth Circuit should hold otherwise. *Id.*

The Court pointed out that AGC attempted to discount the anecdotal evidence because some accounts ascribe minority underutilization to factors other than overt discrimination, such as difficulties with obtaining bonding and breaking into the “good ol boy” network of contractors. *Id.* at 1197-1198. The Court held, however, that the federal courts and regulations have identified precisely these factors as barriers that disadvantage minority firms because of the lingering effects of discrimination. *Id.* at 1198, citing *Western States Paving*, 407 and *AGCC II*, 950 F.2d at 1414.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The Court found that AGC ignores the many incidents of racial and gender discrimination presented in the anecdotal evidence. *Id.* at 1198. The Court said that Caltrans does not claim, and the anecdotal evidence does not need to prove, that every minority-owned business is discriminated against. *Id.* The Court concluded: “It is enough that the anecdotal evidence supports Caltrans’ statistical data showing a pervasive pattern of discrimination.” *Id.* The individual accounts of discrimination offered by Caltrans, according to the Court, met this burden. *Id.*

Fourth, the Court rejected AGC’s contention that Caltrans’ evidence does not support an inference of discrimination against all women because gender-based disparities in the study are limited to white women. *Id.* at 1198. AGC, the Court said, misunderstands the statistical techniques used in the disparity study, and that the study correctly isolates the effect of gender by limiting its data pool to white women, ensuring that statistical results for gender-based discrimination are not skewed by discrimination against minority women on account of their race. *Id.*

In addition, after AGC’s early incorrect objections to the methodology, the research firm conducted a follow-up analysis of all women-owned firms that produced a disparity index of 59. *Id.* at 1198. The Court held that this index is evidence of a substantial disparity that raises an inference of discrimination and is sufficient to support Caltrans’ decision to include all women in its DBE program. *Id.* at 1195.

Program tailored to groups who actually suffered discrimination. The Court pointed out that the second prong of the test articulated in *Western States Paving* requires that a DBE program be limited to those groups that actually suffered discrimination in the state’s contracting industry. *Id.* at 1198. The Court found Caltrans’ DBE program is limited to those minority groups that have actually suffered discrimination. *Id.* The Court held that

the 2007 disparity study showed systematic and substantial underutilization of African American-, Native American-, Asian-Pacific American-, and women-owned firms across a range of contract categories. *Id.* at 1198-1199. *Id.* These disparities, according to the Court, support an inference of discrimination against those groups. *Id.*

Caltrans concluded that the statistical evidence did not support an inference of a pattern of discrimination against Hispanic or Subcontinent Asian Americans. *Id.* at 1199. California applied for and received a waiver from the USDOT in order to limit its 2009 program to African American, Native American, Asian-Pacific American, and women-owned firms. *Id.* The Court held that Caltrans’ program “adheres precisely to the narrow tailoring requirements of *Western States.*” *Id.*

The Court rejected the AGC contention that the DBE program is not narrowly tailored because it creates race-based preferences for all transportation-related contracts, rather than distinguishing between construction and engineering contracts. *Id.* at 1199. The Court stated that AGC cited no case that requires a state preference program to provide separate goals for disadvantaged business participation on construction and engineering contracts. *Id.* The Court noted that to the contrary, the federal guidelines for implementing the federal program instruct states *not* to separate different types of contracts. *Id.* The Court found there are “sound policy reasons to not require such parsing, including the fact that there is substantial overlap in firms competing for construction and engineering contracts, as prime *and* subcontractors.” *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Consideration of race-neutral alternatives. The Court rejected the AGC assertion that Caltrans’ program is not narrowly tailored because it failed to evaluate race-neutral measures before implementing the system of racial preferences, and stated the law imposes no such requirement. *Id.* at 1199. The Court held that *Western States Paving* does not require states to independently meet this aspect of narrow tailoring, and instead focuses on whether the federal statute sufficiently considered race-neutral alternatives. *Id.*

Second, the Court found that even if this requirement does apply to Caltrans’ program, narrow tailoring only requires “serious, good faith consideration of workable race-neutral alternatives.” *Id.* at 1199, citing *Grutter v. Bollinger*, 539 U.S. 306, 339 (2003). The Court found that the Caltrans program has considered an increasing number of race-neutral alternatives, and it rejected AGC’s claim that Caltrans’ program does not sufficiently consider race-neutral alternatives. *Id.* at 1199.

Certification affidavits for Disadvantaged Business Enterprises. The Court rejected the AGC argument that Caltrans’ program is not narrowly tailored because affidavits that applicants must submit to obtain certification as DBEs do not require applicants to assert they have suffered discrimination *in California*. *Id.* at 1199-1200. The Court held the certification process employed by Caltrans follows the process detailed in the federal regulations, and that this is an impermissible collateral attack on the facial validity of the Congressional Act authorizing the Federal DBE Program and the federal regulations promulgated by the USDOT (The Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users, Pub.L.No. 109-59, § 1101(b), 119 Sect. 1144 (2005)). *Id.* at 1200.

Application of program to mixed state- and federally funded contracts. The Court also rejected AGC’s challenge that Caltrans applies its program to transportation contracts funded by both federal and state money. *Id.* at 1200. The Court held that this is another impermissible collateral attack on the federal program, which explicitly requires goals to be set for mix-funded contracts. *Id.*

Conclusion. The Court concluded that the AGC did not have standing, and that further, Caltrans’ DBE program survives strict scrutiny by: 1) having a strong basis in evidence of discrimination within the California transportation contracting industry, and 2) being narrowly tailored to benefit only those groups that have actually suffered discrimination. *Id.* at 1200. The Court then dismissed the appeal. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

4. *Orion Insurance Group, a Washington Corporation; Ralph G. Taylor, an individual, Plaintiffs, v. Washington State Office Of Minority & Women’s Business Enterprises, United States DOT, et. al., 2017 WL 3387344 (W.D. Wash. 2017)*

Plaintiffs, Orion Insurance Group (“Orion”), a Washington corporation, and its owner, Ralph Taylor, filed this case alleging violations of federal and state law due to the denial of their application for Orion to be considered a disadvantaged business enterprise (“DBE”) under federal law. 2017 WL 3387344. Plaintiffs moved the Court for an order that summarily declared that the Defendants violated the Administrative Procedure Act (APA), declared that the denial of the DBE certification for Orion was unlawful, and reversed the decision that Orion is not a DBE. *Id.* at *1. The United States Department of Transportation (“USDOT”) and the Acting Director of USDOT, (collectively the “Federal Defendants”) move for a summary dismissal of all the claims asserted against them. *Id.* The Washington State Office of Minority & Women’s Business Enterprises (“OMWBE”), (collectively the “State Defendants”) moved for summary dismissal of all claims asserted against them. *Id.*

The court held Plaintiffs’ motion for partial summary judgment was denied, in part, and stricken, in part, the Federal Defendants’ motion for summary judgment was granted, and the State Defendants’ motion for summary judgment was granted, in part, and stricken, in part. *Id.*

Factual and procedural history. In 2010, Plaintiff Ralph Taylor received results from a genetic ancestry test that estimated that he was 90 percent European, 6 percent Indigenous American, and 4 percent Sub-Saharan African. Mr. Taylor acknowledged that he grew up thinking of himself as Caucasian, but asserted that in his late 40s, when he realized he had Black ancestry, he “embraced his Black culture.” *Id.* at *2.

In 2013, Mr. Taylor submitted an application to OMWBE, seeking to have Orion, his insurance business, certified as an MBE under Washington State law. *Id.* at *2. In the application, Mr. Taylor identified himself as Black, but not Native American. *Id.* His application was initially rejected, but after Mr. Taylor appealed the decision, OMWBE voluntarily reversed their decision and certified Orion as an MBE under the Washington Administrative Code and other Washington law. *Id.* at *2.

In 2014, Plaintiffs submitted, to OMWBE, Orion’s application for DBE certification under federal law. *Id.* at *2. His application indicated that Mr. Taylor identified himself as Black American and Native American in the Affidavit of Certification submitted with the federal application. *Id.* Considered with his initial submittal were the results from the 2010 genetic ancestry test that estimated that he was 90 percent European, 6 percent Indigenous American, and 4 percent Sub-Saharan African. *Id.* Mr. Taylor submitted the results of his father’s genetic results, which estimated that he was 44 percent European, 44 percent Sub-Saharan African, and 12 percent East Asian. *Id.* Mr. Taylor included a 1916 death certificate for a woman from Virginia, Eliza Ray, identified as a “Negro,” who was around 86 years old, with no other supporting documentation to indicate she was an ancestor of Mr. Taylor. *Id.* at *2.

In 2014, Orion’s DBE application was denied because there was insufficient evidence that he was a member of a racial group recognized under the regulations, was regarded by the relevant community as either Black or Native American, or that he held himself out as being a member of either group over a long period of time prior to his application. *Id.* at *3. OMWBE also found that even if there was sufficient evidence to find that Mr. Taylor was a member of either of these racial groups, “the presumption of disadvantage has been rebutted,” and the evidence Mr. Taylor submitted was insufficient to show that he was socially and economically disadvantaged. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Mr. Taylor appealed the denial of the DBE certification to the USDOT. Plaintiffs voluntarily dismissed this case after the USDOT issued its decision. *Id.* at **3-4. *Orion Insurance Group v. Washington State Office of Minority & Women’s Business Enterprises, et al.*, U.S. District Court for the Western District of Washington case number 15-5267 BHS. In 2015, the USDOT affirmed the denial of Orion’s DBE certification, concluding that there was substantial evidence in the administrative record to support OMWBE’s decision. *Id.* at *4.

This case was filed in 2016. *Id.* at *4. Plaintiffs assert claims for (A) violation of the Administrative Procedures Act, 5 U.S.C. § 706, (B) “Discrimination under 42 U.S.C. § 1983” (reference is made to Equal Protection), (C) “Discrimination under 42 U.S.C. § 2000d,” (D) violation of Equal Protection under the United States Constitution, (E) violation of the Washington Law Against Discrimination and Article 1, Sec. 12 of the Washington State Constitution, and (F) assert that the definitions in 49 C.F.R. § 26.5 are void for vagueness. *Id.* Plaintiffs seek damages, injunctive relief: (“[r]eversing the decisions of the USDOT, Ms. Jones and OMWBE, and OMWBE’s representatives ... and issuing an injunction and/or declaratory relief requiring Orion to be certified as a DBE,” and a declaration the “definitions of ‘Black American’ and ‘Native American’ in 49 C.F.R. § 26.5 to be void as impermissibly vague,”) and attorneys’ fees, and costs. *Id.*

OMWBE did not act arbitrarily or capriciously in denying certification. The court examined the evidence submitted by Mr. Taylor and by the State Defendants. *Id.* at **7-12. The court held that OMWBE did not act arbitrarily or capriciously when it found that the presumption that Mr. Taylor was socially and economically disadvantaged was rebutted because there was insufficient evidence that he was a member of either the Black or Native American groups. *Id.* at *8. Nor did it act arbitrarily and capriciously when it found that Mr. Taylor failed to demonstrate, by a preponderance of the evidence, that

Mr. Taylor was socially and economically disadvantaged. *Id.* at *9. Under 49 C.F.R. § 26.63(b)(1), after OMWBE determined that Mr. Taylor was not a “member of a designated disadvantaged group,” the court stated Mr. Taylor “must demonstrate social and economic disadvantage on an individual basis.” *Id.* Accordingly, pursuant to 49 C.F.R. § 26.61(d), Plaintiffs had the burden to prove, by a preponderance of the evidence, that Mr. Taylor was socially and economically disadvantaged. *Id.*

In making these decisions, the court found OMWBE considered the relevant evidence and “articulated a rational connection between the facts found and the choices made.” *Id.* at *10. By requiring individualized determinations of social and economic disadvantage, the Federal DBE “program requires states to extend benefits only to those who are actually disadvantaged.” *Id.*, citing, *Midwest Fence Corp. v. United States Dep’t of Transp.*, 840 F.3d 932, 946 (7th Cir. 2016). OMWBE did not act arbitrary or capriciously when it found that Mr. Taylor failed to show he was “actually disadvantaged” or when it denied Plaintiff’s application. *Id.*

The U.S. DOT affirmed the decision of the state OMWBE to deny DBE status to Orion. *Id.* at **10-11.

Claims for violation of equal protection. To the extent that Plaintiffs assert a claim that, on its face, the Federal DBE Program violates the Equal Protection Clause of the U.S. Constitution, the court held the claim should be dismissed. *Id.* at **12-13. The Ninth Circuit has held that the Federal DBE Program, including its implementing regulations, does not, on its face, violate the Equal Protection Clause of the U.S. Constitution. *Western States Paving Co. v. Washington State Department of Transportation*, 407 F.3d 983 (9th Cir. 2005). *Id.* The Western States Court held that Congress had evidence of discrimination against women and minorities in the national transportation contracting industry and the Federal DBE Program was a narrowly tailored means of

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

remediating that sex and raced based discrimination. *Id.* Accordingly, the court found race-based determinations under the program have been determined to be constitutional. *Id.* The court noted that several other circuits, including the Seventh, Eighth, and Tenth have held the same. *Id.* at *12, citing, *Midwest Fence Corp. v. United States Dep’t of Transp.*, 840 F.3d 932, 936 (7th Cir. 2016); *Sherbrooke Turf, Inc. v. Minnesota Dep’t of Transportation*, 345 F.3d 964, 973 (8th Cir. 2003); *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147, 1155 (10th Cir. 2000).

To the extent that Plaintiffs assert that the Defendants, in applying the Federal DBE Program to him, violated the Equal Protection Clause of the U.S. Constitution, the court held the claim should be dismissed. *Id.* at *12. Plaintiffs argue that, as applied to them, the regulations “weigh adversely and disproportionately upon” mixed-race individuals, like Mr. Taylor. *Id.* This claim should be dismissed, according to the court, as the Equal Protection Clause prohibits only intentional discrimination. *Id.* Even considering materials filed outside the administrative record, the court found Plaintiffs point to no evidence that the application of the regulations here was done with an intent to discriminate against mixed-race individuals, or that it was done with racial animus. *Id.* Further, the court said Plaintiffs offer no evidence that application of the regulations creates a disparate impact on mixed-race individuals. *Id.* Plaintiffs’ remaining arguments relate to the facial validity of the DBE program, and the court held they also should be dismissed. *Id.*

The court concluded that to the extent that Plaintiffs base their equal protection claim on an assertion that they were treated differently than others similarly situated, their “class of one” equal protection claim should be dismissed. *Id.* at *13. For a class of one equal protection claim, the court stated Plaintiffs must show they have been intentionally treated differently from others similarly situated and that there is no rational basis for the difference in treatment. *Id.*

Plaintiffs, the court found, have failed to show that Mr. Taylor was intentionally treated differently than others similarly situated. *Id.* at *13. Plaintiffs pointed to no evidence of intentional differential treatment by the Defendants. *Id.* Plaintiffs failed to show that others that were similarly situated were treated differently. *Id.*

Further, the court held Plaintiffs failed to show that either the State or Federal Defendants had no rational basis for the difference in treatment. *Id.* at *13. Both the State and Federal Defendants according to the court, offered rational explanations for the denial of the application. *Id.* Plaintiffs’ Equal Protection claims, asserted against all Defendants, the court held, should be denied. *Id.*

Void for vagueness claim. Plaintiffs assert that the regulatory definitions of “Black American” and both the definition of “Native American” that was applied to Plaintiffs and a new definition of “Native American” are void for vagueness, presumably contrary to the Fifth and Fourteenth Amendments’ due process clauses. *Id.* at *13.

The court pointed out that although it can be applied in the civil context, the Seventh Circuit Court of Appeals has noted that in relation to the DBE regulations, the void for vagueness “doctrine is a poor fit.” *Id.* at *14, citing, *Midwest Fence Corp. v. United States Dep’t of Transp.*, 840 F.3d 932, 947–48 (7th Cir. 2016). Unlike criminal or civil statutes that prohibit certain conduct, the Seventh Circuit noted that the DBE regulations do not threaten parties with punishment, but, at worst, cause lost opportunities for contracts. *Id.* In any event, the court held Plaintiffs’ claims that the definitions of “Black American” and of “Native American” in the DBE regulations are impermissibly vague should be dismissed. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The court found the regulations require that to show membership, an applicant must submit a statement, and then if the reviewer has a “well founded” question regarding group membership, the reviewer must ask for additional evidence. 49 C.F.R. § 26.63 (a)(1). *Id.* at *14. Considering the purpose of the law, the court stated the regulations clearly explain to a person of ordinary intelligence what is required to qualify for this governmental benefit. *Id.*

The definition of “socially and economically disadvantaged individual” as a “citizen ... who has been subjected to racial or ethnic prejudice or cultural bias within American society because of his or her identity as a member of groups and without regard to their individual qualities,” the court determined, gives further meaning to the definitions of “Black American” and “Native American” here. *Id.* at *14. “Otherwise imprecise terms may avoid vagueness problems when used in combination with terms that provide sufficient clarity.” *Id.* at *14, quoting, *Gammoh v. City of La Habra*, 395 F.3d 1114, 1120 (9th Cir. 2005).

The court held plaintiffs also fail to show that these terms, when considered within the statutory framework, are so vague that they lend themselves to “arbitrary” decisions. *Id.* at *14. Moreover, even if the court did have jurisdiction to consider whether the revised definition of “Native American” was void for vagueness, the court found a simple review of the statutory language leads to the conclusion that it is not. *Id.* The revised definition of “Native Americans” now “includes persons who are enrolled members of a federally or State recognized Indian tribe, Alaska Natives, or Native Hawaiian.” *Id.*, citing, 49 C.F.R. § 26.5. This definition, the court said, provides an objective criterion based on the decisions of the tribes, and does not leave the reviewer with any discretion. *Id.* The court thus held that Plaintiffs’ void for vagueness challenges were dismissed. *Id.*

Claims for violations of 42 U.S.C. §2000d against the State Defendants. Plaintiffs’ claims against the State Defendants for violation of Title VI (42 U.S.C. § 2000d), the court also held, should be dismissed. *Id.* at *16. Plaintiffs failed to show that the State Defendants engaged in intentional impermissible racial discrimination. *Id.* The court stated that “Title VI must be held to proscribe only those racial classifications that would violate the Equal Protection Clause or the Fifth Amendment.” *Id.* The court pointed out the DBE regulations’ requirement that the State make decisions based on race has already been held to pass constitutional muster in the Ninth Circuit. *Id.* at *16, citing, *Western States Paving Co. v. Washington State Department of Transportation*, 407 F.3d 983 (9th Cir. 2005). Plaintiffs made no showing that the State Defendants violated their Equal Protection or other constitutional rights. *Id.* Moreover, Plaintiffs, the court found, failed to show that the State Defendants intentionally acted with discriminatory animus. *Id.*

The court held to the extent the Plaintiffs assert claims that are based on disparate impact, those claims are unavailable because “Title VI itself prohibits only intentional discrimination.” *Id.* at *17, quoting, *Jackson v. Birmingham Bd. of Educ.*, 544 U.S. 167, 178 (2005). The court therefore held this claim should be dismissed. *Id.* at *17.

Holding. Therefore, the court ordered that Plaintiffs’ Motion for Partial Summary Judgment was: Denied as to the federal claims; and Stricken as to the state law claims asserted against the State Defendants for violations of the Washington Constitution and WLAD.

In addition, the Federal Defendants’ Motion for Summary Judgment on the Administrative Procedure Act, Equal Protection, and Void for Vagueness Claims was Granted; and the claims asserted against the Federal Defendants were Dismissed.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The State Defendants' Cross Motion for Summary Judgment was Granted as to Plaintiffs claims against the State Defendants for violations of the APA, Equal Protection, Void for Vagueness, 42 U.S.C. § 1983, and 42 U.S.C. § 2000d, and those claims were Dismissed. *Id.* Also, the court held the State Defendants' Cross Motion for Summary Judgment was Stricken as to the state law claims asserted against the State Defendants for violations of the Washington Constitution and WLAD. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

5. *M.K. Weeden Construction v. State of Montana, Montana Department of Transportation, et al.*, 2013 WL 4774517 (D. Mont.) (2013)

This case involved a challenge by a prime contractor, M.K. Weeden Construction, Inc. (“Weeden”) against the State of Montana, Montana Department of Transportation and others, to the DBE Program adopted by MDT implementing the Federal DBE Program at 49 CFR Part 26. Weeden sought an application for Temporary Restraining Order and Preliminary Injunction against the State of Montana and the MDT.

Factual background and claims. Weeden was the low dollar bidder with a bid of \$14,770,163.01 on the Arrow Creek Slide Project. The project received federal funding, and as such, was required to comply with the USDOT’s DBE Program. 2013 WL 4774517 at *1. MDT had established an overall goal of 5.83 percent DBE participation in Montana’s highway construction projects. On the Arrow Creek Slide Project, MDT established a DBE goal of 2 percent. *Id.*

Plaintiff Weeden, although it submitted the low dollar bid, did not meet the 2 percent DBE requirement. 2013 WL 4774517 at *1. Weeden claimed that its bid relied upon only 1.87 percent DBE subcontractors (although the court points out that Weeden’s bid actually identified only 81 percent DBE subcontractors). Weeden was the only bidder out of the six bidders who did not meet the 2 percent DBE goal. The other five bidders exceeded the 2 percent goal, with bids ranging from 2.19 percent DBE participation to 6.98 percent DBE participation. *Id.* at *2.

Weeden attempted to utilize a good faith exception to the DBE requirement under the Federal DBE Program and Montana’s DBE Program. MDT’s DBE Participation Review Committee considered Weeden’s good faith documentation and found that Weeden’s bid was non-compliant as to the DBE requirement, and that Weeden failed to demonstrate good faith efforts to solicit DBE subcontractor participation in the contract. 2013 WL 4774517 at *2. Weeden appealed that decision to the MDT DBE Review Board and appeared before the Board at a hearing. The DBE Review Board affirmed the Committee decision finding that Weeden’s bid was not in compliance with the contract DBE goal and that Weeden had failed to make a good faith effort to comply with the goal. *Id.* at *2. The DBE Review Board found that Weeden had received a DBE bid for traffic control, but Weeden decided to perform that work itself in order to lower its bid amount. *Id.* at *2. Additionally, the DBE Review Board found that Weeden’s mass email to 158 DBE subcontractors without any follow up was a *pro forma* effort not credited by the Review Board as an active and aggressive effort to obtain DBE participation. *Id.*

Plaintiff Weeden sought an injunction in federal district court against MDT to prevent it from letting the contract to another bidder. Weeden claimed that MDT’s DBE Program violated the Equal Protection Clause of the U.S. Constitution and the Montana Constitution, asserting that there was no supporting evidence of discrimination in the Montana highway construction industry, and therefore, there was no government interest that would justify favoring DBE entities. 2013 WL 4774517 at *2. Weeden also claimed that its right to Due Process under the U.S. Constitution and Montana Constitution had been violated. Specifically, Weeden claimed that MDT did not provide reasonable notice of the good faith effort requirements. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

No proof of irreparable harm and balance of equities favor MDT.

First, the Court found that Weeden did not prove for a certainty that it would suffer irreparable harm based on the Court's conclusion that in the past four years, Weeden had obtained six state highway construction contracts valued at approximately \$26 million, and that MDT had \$50 million more in highway construction projects to be let during the remainder of 2013 alone. 2013 WL 4774517 at *3. Thus, the Court concluded that as demonstrated by its past performance, Weeden has the capacity to obtain other highway construction contracts and thus there is little risk of irreparable injury in the event MDT awards the Project to another bidder. *Id.*

Second, the Court found the balance of the equities did not tip in Weeden's favor. 2013 WL 4774517 at *3. Weeden had asserted that MDT and USDOT rules regarding good faith efforts to obtain DBE subcontractor participation are confusing, non-specific and contradictory. *Id.* The Court held that it is obvious the other five bidders were able to meet and exceed the 2 percent DBE requirement without any difficulty whatsoever. *Id.* The Court found that Weeden's bid is not responsive to the requirements, therefore is not and cannot be the lowest responsible bid. *Id.* The balance of the equities, according to the Court, do not tilt in favor of Weeden, who did not meet the requirements of the contract, especially when numerous other bidders ably demonstrated an ability to meet those requirements. *Id.*

No standing. The Court also questioned whether Weeden raised any serious issues on the merits of its equal protection claim because Weeden is a prime contractor and not a subcontractor. Since Weeden is a prime contractor, the Court held it is clear that Weeden lacks Article III standing to assert its equal protection claim. *Id.* at *3. The Court held that a prime contractor, such as Weeden, is not permitted to challenge MDT's DBE Project as if it were a non-DBE subcontractor because Weeden cannot show that it was subjected to a racial or gender-based barrier in its

competition for the prime contract. *Id.* at *3. Because Weeden was not deprived of the ability to compete on equal footing with the other bidders, the Court found Weeden suffered no equal protection injury and lacks standing to assert an equal protection claim as it were a non-DBE subcontractor. *Id.*

Court applies AGC v. California DOT case; evidence supports narrowly tailored DBE program. Significantly, the Court found that even if Weeden had standing to present an equal protection claim, MDT presented significant evidence of underutilization of DBE's generally, evidence that supports a narrowly tailored race and gender preference program. 2013 WL 4774517 at *4. Moreover, the Court noted that although Weeden points out that some business categories in Montana's highway construction industry do not have a history of discrimination (namely, the category of construction businesses in contrast to the category of professional businesses), the Ninth Circuit "has recently rejected a similar argument requiring the evidence of discrimination in every single segment of the highway construction industry before a preference program can be implemented." *Id.*, citing *Associated General Contractors v. California Dept. of Transportation*, 713 F.3d 1187 (9th Cir. 2013)(holding that Caltrans' DBE program survived strict scrutiny, was narrowly tailored, did not violate equal protection, and was supported by substantial statistical and anecdotal evidence of discrimination).

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The Court stated that particularly relevant in this case, “the Ninth Circuit held that California’s DBE program need not isolate construction from engineering contracts or prime from subcontracts to determine whether the evidence in each and every category gives rise to an inference of discrimination.” *Id.* at 4, citing *Associated General Contractors v. California DOT*, 713 F.3d at 1197. Instead, according to the Court, California — and, by extension, Montana — “is entitled to look at the evidence ‘in its entirety’ to determine whether there are ‘substantial disparities in utilization of minority firms’ practiced by some elements of the construction industry.” 2013 WL 4774517 at *4, quoting *AGC v. California DOT*, 713 F.3d at 1197. The Court, also quoting the decision in *AGC v. California DOT*, said: “It is enough that the anecdotal evidence supports Caltrans’ statistical data showing a pervasive pattern of discrimination.” *Id.* at *4, quoting *AGC v. California DOT*, 713 F.3d at 1197.

The Court pointed out that there is no allegation that MDT has exceeded any federal requirement or done other than complied with USDOT regulations. 2013 WL 4774517 at *4. Therefore, the Court concluded that given the similarities between Weeden’s claim and AGC’s equal protection claim against California DOT in the *AGC v. California DOT* case, it does not appear likely that Weeden will succeed on the merits of its equal protection claim. *Id.* at *4.

Due Process claim. The Court also rejected Weeden’s bald assertion that it has a protected property right in the contract that has not been awarded to it where the government agency retains discretion to determine the responsiveness of the bid. The Court found that Montana law requires that an award of a public contract for construction must be made to the lowest *responsible* bidder and that the applicable Montana statute confers upon the government agency broad discretion in the award of a public works contract. Thus, a lower bidder such as Weeden requires no vested property right in a contract until the contract has been awarded, which here obviously had not yet occurred. 2013 WL 4774517 at *5. In any event, the Court noted that Weeden was granted notice, hearing and appeal for MDT’s decision denying the good faith exception to the DBE contract requirement, and therefore it does not appear likely that Weeden would succeed on its due process claim. *Id.* at *5.

Holding and Voluntary Dismissal. The Court denied plaintiff Weeden’s application for Temporary Restraining Order and Preliminary Injunction. Subsequently, Weeden filed a Notice of Voluntary Dismissal Without Prejudice on September 10, 2013.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

6. *Braunstein v. Arizona DOT*, 683 F.3d 1177 (9th Cir. 2012)

Braunstein is an engineering contractor that provided subsurface utility location services for ADOT. Braunstein sued the Arizona DOT and others seeking damages under the Civil Rights Act, pursuant to §§ 1981 and 1983, and challenging the use of Arizona’s former affirmative action program, or race- and gender- conscious DBE program implementing the Federal DBE Program, alleging violation of the equal protection clause.

Factual background. ADOT solicited bids for a new engineering and design contract. Six firms bid on the prime contract, but Braunstein did not bid because he could not satisfy a requirement that prime contractors complete 50 percent of the contract work themselves. Instead, Braunstein contacted the bidding firms to ask about subcontracting for the utility location work. 683 F.3d at 1181. All six firms rejected Braunstein’s overtures, and Braunstein did not submit a quote or subcontracting bid to any of them. *Id.*

As part of the bid, the prime contractors were required to comply with federal regulations that provide states receiving federal highway funds maintain a DBE program. 683 F.3d at 1182. Under this contract, the prime contractor would receive a maximum of 5 points for DBE participation. *Id. at 1182.* All six firms that bid on the prime contract received the maximum 5 points for DBE participation. All six firms committed to hiring DBE subcontractors to perform at least 6 percent of the work. Only one of the six bidding firms selected a DBE as its desired utility location subcontractor. Three of the bidding firms selected another company other than Braunstein to perform the utility location work. *Id.* DMJM won the bid for the 2005 contract using Aztec to perform the utility location work. Aztec was not a DBE. *Id. at 1182.*

District Court rulings. Braunstein brought this suit in federal court against ADOT and employees of the DOT alleging that ADOT violated his right to equal protection by using race and gender preferences in its solicitation and award of the 2005 contract. The district court dismissed as moot Braunstein’s claims for injunctive and declaratory relief because ADOT had suspended its DBE program in 2006 following the Ninth Circuit decision in *Western States Paving Co. v. Washington State DOT*, 407 F.3d 9882 (9th Cir. 2005). This left only Braunstein’s damages claims against the State and ADOT under §2000d, and against the named individual defendants in their individual capacities under §§ 1981 and 1983. *Id.* at 1183.

The district court concluded that Braunstein lacked Article III standing to pursue his remaining claims because he had failed to show that ADOT’s DBE program had affected him personally. The court noted that “Braunstein was afforded the opportunity to bid on subcontracting work, and the DBE goal did not serve as a barrier to doing so, nor was it an impediment to his securing a subcontract.” *Id.* at 1183. The district court found that Braunstein’s inability to secure utility location work stemmed from his past unsatisfactory performance, not his status as a non-DBE. *Id.*

Lack of standing. The Ninth Circuit Court of Appeals held that Braunstein lacked Article III standing and affirmed the entry of summary judgment in favor of ADOT and the individual employees of ADOT. The Court found that Braunstein had not provided any evidence showing that ADOT’s DBE program affected him personally or that it impeded his ability to compete for utility location work on an equal basis. *Id. at 1185.* The Court noted that Braunstein did not submit a quote or a bid to any of the prime contractors bidding on the government contract. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The Court also pointed out that Braunstein did not seek prospective relief against the government “affirmative action” program, noting the district court dismissed as moot his claims for declaratory and injunctive relief since ADOT had suspended its DBE program before he brought the suit. *Id. at 1186*. Thus, Braunstein’s surviving claims were for damages based on the contract at issue rather than prospective relief to enjoy the DBE Program. *Id.* Accordingly, the Court held he must show more than that he is “able and ready” to seek subcontracting work. *Id.*

The Court found Braunstein presented no evidence to demonstrate that he was in a position to compete equally with the other subcontractors, no evidence comparing himself with the other subcontractors in terms of price or other criteria, and no evidence explaining why the six prospective prime contractors rejected him as a subcontractor. *Id. at 1186*. The Court stated that there was nothing in the record indicating the ADOT DBE program posed a barrier that impeded Braunstein’s ability to compete for work as a subcontractor. *Id. at 1187*. The Court held that the existence of a racial or gender barrier is not enough to establish standing, without a plaintiff’s showing that he has been subjected to such a barrier. *Id. at 1186*.

The Court noted Braunstein had explicitly acknowledged previously that the winning bidder on the contract would not hire him as a subcontractor for reasons unrelated to the DBE program. *Id. at 1186*. At the summary judgment stage, the Court stated that Braunstein was required to set forth specific facts demonstrating the DBE program impeded his ability to compete for the subcontracting work on an equal basis. *Id. at 1187*.

Summary judgment granted to ADOT. The Court concluded that Braunstein was unable to point to any evidence to demonstrate how the ADOT DBE program adversely affected him personally or impeded his ability to compete for subcontracting work. *Id.* The Court thus held that Braunstein lacked Article III standing and affirmed the entry of summary judgment in favor of ADOT.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

7. *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation, et al.*, U.S.D.C., E.D. Cal. Civil Action No. S-09-1622, Slip Opinion (E.D. Cal. April 20, 2011), appeal dismissed based on standing, on other grounds Ninth Circuit held Caltrans’ DBE Program constitutional, *Associated General Contractors of America, San Diego Chapter, Inc. v. California Department of Transportation, et al.*, 713 F.3d 1187 (9th Cir. 2013)

This case involved a challenge by the Associated General Contractors of America, San Diego Chapter, Inc. (“AGC”) against the California Department of Transportation (“Caltrans”), to the DBE program adopted by Caltrans implementing the Federal DBE Program at 49 CFR Part 26. The AGC sought an injunction against Caltrans enjoining its use of the DBE program and declaratory relief from the court declaring the Caltrans DBE program to be unconstitutional.

Caltrans’ DBE program set a 13.5 percent DBE goal for its federally funded contracts. The 13.5 percent goal, as implemented by Caltrans, included utilizing half race-neutral means and half race-conscious means to achieve the goal. Slip Opinion Transcript at 42. Caltrans did not include all minorities in the race-conscious component of its goal, excluding Hispanic males and Subcontinent Asian American males. *Id.* at 42. Accordingly, the race-conscious component of the Caltrans DBE program applied only to African Americans, Native Americans, Asian-Pacific Americans, and white women. *Id.*

Caltrans established this goal and its DBE program following a disparity study conducted by BBC Research & Consulting, which included gathering statistical and anecdotal evidence of race and gender disparities in the California construction industry. Slip Opinion Transcript at 42.

The parties filed motions for summary judgment. The district court issued its ruling at the hearing on the motions for summary judgment granting Caltrans’ motion for summary judgment in support of its DBE program and denying the motion for summary judgment filed by the plaintiffs. Slip Opinion Transcript at 54. The court held Caltrans’ DBE program applying and implementing the provisions of the Federal DBE Program is valid and constitutional. *Id.* at 56.

The district court analyzed Caltrans’ implementation of the DBE program under the strict scrutiny doctrine and found the burden of justifying different treatment by ethnicity or gender is on the government. The district court applied the Ninth Circuit Court of Appeals ruling in *Western States Paving Company v. Washington State DOT*, 407 F.3d 983 (9th Cir. 2005). The court stated that the federal government has a compelling interest “in ensuring that its funding is not distributed in a manner that perpetuates the effects of either public or private discrimination within the transportation contracting industry.” Slip Opinion Transcript at 43, quoting *Western States Paving*, 407 F.3d at 991, citing *City of Richmond v. J.A. Croson Company*, 488 U.S. 469 (1989).

The district court pointed out that the Ninth Circuit in *Western States Paving* and the Tenth Circuit Court of Appeals and the Eighth Circuit Court of Appeals have upheld the facial validity of the Federal DBE Program.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The district court stated that based on *Western States Paving*, the court is required to look at the Caltrans DBE program itself to see if there is a strong basis in evidence to show that Caltrans is acting for a proper purpose and if the program itself has been narrowly tailored. Slip Opinion Transcript at 45. The court concluded that narrow tailoring “does not require exhaustion of every conceivable race-neutral alternative, but it does require serious, good-faith consideration of workable race-neutral alternatives.” Slip Opinion Transcript at 45.

The district court identified the issues as whether Caltrans has established a compelling interest supported by a strong basis in evidence for its program, and does Caltrans’ race-conscious program meet the strict scrutiny required. Slip Opinion Transcript at 51-52. The court also phrased the issue as whether the Caltrans DBE program, “which does give preference based on race and sex, whether that program is narrowly tailored to remedy the effects of identified discrimination ...” and whether Caltrans has complied with the Ninth Circuit’s guidance in *Western States Paving*. Slip Opinion Transcript at 52.

The district court held “that Caltrans has done what the Ninth Circuit has required it to do, what the federal government has required it to do, and that it clearly has implemented a program which is supported by a strong basis in evidence that gives rise to a compelling interest, and that its race-conscious program, the aspect of the program that does implement race-conscious alternatives, it does under a strict-scrutiny standard meet the requirement that it be narrowly tailored as set forth in the case law.” Slip Opinion Transcript at 52.

The court rejected the plaintiff’s arguments that anecdotal evidence failed to identify specific acts of discrimination, finding “there are numerous instances of specific discrimination.” Slip Opinion Transcript at 52. The district court found that after the *Western States Paving* case, Caltrans went to a racially neutral program, and the evidence showed that the program would not meet the goals of the federally funded program, and the federal government became concerned about what was going on with Caltrans’ program applying only race-neutral alternatives. *Id.* at 52-53. The court then pointed out that Caltrans engaged in an “extensive disparity study, anecdotal evidence, both of which is what was missing” in the *Western States Paving* case. *Id.* at 53.

The court concluded that Caltrans “did exactly what the Ninth Circuit required” and that Caltrans has gone “as far as is required.” Slip Opinion Transcript at 53.

The court held that as a matter of law, the Caltrans DBE program is, under *Western States Paving* and the Supreme Court cases, “clearly constitutional,” and “narrowly tailored.” Slip Opinion Transcript at 56. The court found there are significant differences between Caltrans’ program and the program in the *Western States Paving* case. *Id.* at 54-55. In *Western States Paving*, the court said there were no statistical studies performed to try and establish the discrimination in the highway contracting industry, and that Washington simply compared the proportion of DBE firms in the state with the percentage of contracting funds awarded to DBEs on race-neutral contracts to calculate a disparity. *Id.* at 55.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The district court stated that the Ninth Circuit in *Western States Paving* found this to be oversimplified and entitled to little weight “because it did not take into account factors that may affect the relative capacity of DBEs to undertake contracting work.” Slip Opinion Transcript at 55. Whereas, the district court held the “disparity study used by Caltrans was much more comprehensive and accounted for this and other factors.” *Id.* at 55. The district noted that the State of Washington did not introduce any anecdotal information. The difference in this case, the district court found, “is that the disparity study includes both extensive statistical evidence, as well as anecdotal evidence gathered through surveys and public hearings, which support the statistical findings of the underutilization faced by DBEs without the DBE program. Add to that the anecdotal evidence submitted in support of the summary judgment motion as well. And this evidence before the Court clearly supports a finding that this program is constitutional.” *Id.* at 56.

The court held that because “Caltrans’ DBE program is based on substantial statistical and anecdotal evidence of discrimination in the California contracting industry and because the Court finds that it is narrowly tailored, the Court upholds the program as constitutional.” Slip Opinion Transcript at 56.

The decision of the district court was appealed to the Ninth Circuit Court of Appeals. The Ninth Circuit dismissed the appeal based on lack of standing by the AGC, San Diego Chapter, but ruled on the merits on alternative grounds holding constitutional Caltrans’ DBE Program. *See discussion above of AGC, SDC v. Cal. DOT.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

8. *Western States Paving Co. v. Washington State DOT*, 407 F.3d 983 (9th Cir. 2005), cert. denied, 546 U.S. 1170 (2006)

This case out of the Ninth Circuit struck down a state’s implementation of the Federal DBE Program for failure to pass constitutional muster. In *Western States Paving*, the Ninth Circuit held that the State of Washington’s implementation of the Federal DBE Program was unconstitutional because it did not satisfy the narrow tailoring element of the constitutional test. The Ninth Circuit held that the State must present its own evidence of past discrimination within its own boundaries in order to survive constitutional muster and could not merely rely upon data supplied by Congress. The United States Supreme Court denied certiorari. The analysis in the decision also is instructive in particular as to the application of the narrowly tailored prong of the strict scrutiny test.

Plaintiff Western States Paving Co. (“plaintiff”) was a white male-owned asphalt and paving company. 407 F.3d 983, 987 (9th Cir. 2005). In July of 2000, plaintiff submitted a bid for a project for the City of Vancouver; the project was financed with federal funds provided to the Washington State DOT (“WSDOT”) under the Transportation Equity Act for the 21st Century (“TEA-21”). *Id.*

Congress enacted TEA-21 in 1991 and after multiple renewals, it was set to expire on May 31, 2004. *Id.* at 988. TEA-21 established minimum minority-owned business participation requirements (10%) for certain federally funded projects. *Id.* The regulations require each state accepting federal transportation funds to implement a DBE program that comports with the TEA-21. *Id.* TEA-21 indicates the 10 percent DBE utilization requirement is “aspirational,” and the statutory goal “does not authorize or require recipients to set overall or contract goals at the 10 percent level, or any other particular level, or to take any special administrative steps if their goals are above or below 10 percent.” *Id.*

TEA-21 sets forth a two-step process for a state to determine its own DBE utilization goal: (1) the state must calculate the relative availability of DBEs in its local transportation contracting industry (one way to do this is to divide the number of ready, willing and able DBEs in a state by the total number of ready, willing and able firms); and (2) the state is required to “adjust this base figure upward or downward to reflect the proven capacity of DBEs to perform work (as measured by the volume of work allocated to DBEs in recent years) and evidence of discrimination against DBEs obtained from statistical disparity studies.” *Id.* at 989 (citing regulation). A state is also permitted to consider discrimination in the bonding and financing industries and the present effects of past discrimination. *Id.* (citing regulation). TEA-21 requires a generalized, “undifferentiated” minority goal and a state is prohibited from apportioning their DBE utilization goal among different minority groups (*e.g.*, between Hispanics, blacks, and women). *Id.* at 990 (citing regulation).

“A state must meet the maximum feasible portion of this goal through race- [and gender-] neutral means, including informational and instructional programs targeted toward all small businesses.” *Id.* (citing regulation). Race- and gender-conscious contract goals must be used to achieve any portion of the contract goals not achievable through race- and gender-neutral measures. *Id.* (citing regulation). However, TEA-21 does not require that DBE participation goals be used on every contract or at the same level on every contract in which they are used; rather, the overall effect must be to “obtain that portion of the requisite DBE participation that cannot be achieved through race- [and gender-] neutral means.” *Id.* (citing regulation).

A prime contractor must use “good faith efforts” to satisfy a contract’s DBE utilization goal. *Id.* (citing regulation). However, a state is prohibited from enacting rigid quotas that do not contemplate such good faith efforts. *Id.* (citing regulation).

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

Under the TEA-21 minority utilization requirements, the City set a goal of 14 percent minority participation on the first project plaintiff bid on; the prime contractor thus rejected plaintiff's bid in favor of a higher bidding minority-owned subcontracting firm. *Id.* at 987. In September of 2000, plaintiff again submitted a bid on a project financed with TEA-21 funds and was again rejected in favor of a higher bidding minority-owned subcontracting firm. *Id.* The prime contractor expressly stated that he rejected plaintiff's bid due to the minority utilization requirement. *Id.*

Plaintiff filed suit against the WSDOT, Clark County, and the City, challenging the minority preference requirements of TEA-21 as unconstitutional both facially and as applied. *Id.* The district court rejected both of plaintiff's challenges. The district court held the program was facially constitutional because it found that Congress had identified significant evidence of discrimination in the transportation contracting industry and the TEA-21 was narrowly tailored to remedy such discrimination. *Id.* at 988. The district court rejected the as-applied challenge concluding that Washington's implementation of the program comported with the federal requirements and the state was not required to demonstrate that its minority preference program independently satisfied strict scrutiny. *Id.* Plaintiff appealed to the Ninth Circuit Court of Appeals. *Id.*

The Ninth Circuit considered whether the TEA-21, which authorizes the use of race- and gender-based preferences in federally funded transportation contracts, violated equal protection, either on its face or as applied by the State of Washington.

The court applied a strict scrutiny analysis to both the facial and as-applied challenges to TEA-21. *Id.* at 990-91. The court did not apply a separate intermediate scrutiny analysis to the gender-based

classifications because it determined that it "would not yield a different result." *Id.* at 990, n. 6.

Facial challenge (Federal Government). The court first noted that the federal government has a compelling interest in "ensuring that its funding is not distributed in a manner that perpetuates the effects of either public or private discrimination within the transportation contracting industry." *Id.* at 991, citing *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469, 492 (1989) and *Adarand Constructors, Inc. v. Slater* ("Adarand VII"), 228 F.3d 1147, 1176 (10th Cir. 2000). The court found that "[b]oth statistical and anecdotal evidence are relevant in identifying the existence of discrimination." *Id.* at 991. The court found that although Congress did not have evidence of discrimination against minorities in every state, such evidence was unnecessary for the enactment of nationwide legislation. *Id.* However, citing both the Eighth and Tenth Circuits, the court found that Congress had ample evidence of discrimination in the transportation contracting industry to justify TEA-21. *Id.* The court also found that because TEA-21 set forth flexible race-conscious measures to be used only when race-neutral efforts were unsuccessful, the program was narrowly tailored and thus satisfied strict scrutiny. *Id.* at 992-93. The court accordingly rejected plaintiff's facial challenge. *Id.*

As-applied challenge (State of Washington). Plaintiff alleged TEA-21 was unconstitutional as-applied because there was no evidence of discrimination in Washington's transportation contracting industry. *Id.* at 995. The State alleged that it was not required to independently demonstrate that its application of TEA-21 satisfied strict scrutiny. *Id.* The United States intervened to defend TEA-21's facial constitutionality, and "unambiguously conceded that TEA-21's race conscious measures can be constitutionally applied only in those states where the effects of discrimination are present." *Id.* at 996; see also Br. for the United States at 28 (April 19, 2004) ("DOT's regulations ... are designed to assist States in ensuring that race-conscious remedies are limited to only those

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

jurisdictions where discrimination or its effects are a problem and only as a last resort when race-neutral relief is insufficient.” (emphasis in original)).

The court found that the Eighth Circuit was the only other court to consider an as-applied challenge to TEA-21 in *Sherbrooke Turf, Inc. v. Minnesota DOT*, 345 F.3d 964 (8th Cir. 2003), *cert. denied* 124 S. Ct. 2158 (2004). *Id.* at 996. The Eighth Circuit did not require Minnesota and Nebraska to identify a compelling purpose for their programs independent of Congress’s nationwide remedial objective. *Id.* However, the Eighth Circuit did consider whether the states’ implementation of TEA-21 was narrowly tailored to achieve Congress’s remedial objective. *Id.* The Eighth Circuit thus looked to the states’ independent evidence of discrimination because “to be narrowly tailored, a *national* program must be limited to those parts of the country where its race-based measures are demonstrably needed.” *Id.* (internal citations omitted). The Eighth Circuit relied on the states’ statistical analyses of the availability and capacity of DBEs in their local markets conducted by outside consulting firms to conclude that the states satisfied the narrow tailoring requirement. *Id.* at 997.

The court concurred with the Eighth Circuit and found that Washington did not need to demonstrate a compelling interest for its DBE program, independent from the compelling nationwide interest identified by Congress. *Id.* However, the court determined that the district court erred in holding that mere compliance with the federal program satisfied strict scrutiny. *Id.* Rather, the court held that whether Washington’s DBE program was narrowly tailored was dependent on the presence or absence of discrimination in Washington’s transportation contracting industry. *Id.* at 997-98. “If no such discrimination is present in Washington, then the State’s DBE program does not serve a remedial purpose; it instead provides an unconstitutional windfall to minority contractors solely on the basis of

their race or sex.” *Id.* at 998. The court held that a Sixth Circuit decision to the contrary, *Tennessee Asphalt Co. v. Farris*, 942 F.2d 969, 970 (6th Cir. 1991), misinterpreted earlier case law. *Id.* at 997, n. 9.

The court found that moreover, even where discrimination is present in a state, a program is narrowly tailored only if it applies only to those minority groups who have actually suffered discrimination. *Id.* at 998, *citing Croson*, 488 U.S. at 478. The court also found that in *Monterey Mechanical Co. v. Wilson*, 125 F.3d 702, 713 (9th Cir. 1997), it had “previously expressed similar concerns about the haphazard inclusion of minority groups in affirmative action programs ostensibly designed to remedy the effects of discrimination.” *Id.* In *Monterey Mechanical*, the court held that “the overly inclusive designation of benefited minority groups was a ‘red flag signaling that the statute is not, as the Equal Protection Clause requires, narrowly tailored.’” *Id.*, *citing Monterey Mechanical*, 125 F.3d at 714. The court found that other courts are in accord. *Id.* at 998-99, *citing Builders Ass’n of Greater Chi. v. County of Cook*, 256 F.3d 642, 647 (7th Cir. 2001); *Associated Gen. Contractors of Ohio, Inc. v. Drabik*, 214 F.3d 730, 737 (6th Cir. 2000); *O’Donnell Constr. Co. v. District of Columbia*, 963 F.2d 420, 427 (D.C. Cir. 1992). Accordingly, the court found that each of the principal minority groups benefited by WSDOT’s DBE program must have suffered discrimination within the State. *Id.* at 999.

The court found that WSDOT’s program closely tracked the sample USDOT DBE program. *Id.* WSDOT calculated its DBE participation goal by first calculating the availability of ready, willing and able DBEs in the State (dividing the number of transportation contracting firms in the Washington State Office of Minority, Women and Disadvantaged Business Enterprises Directory by the total number of transportation contracting firms listed in the Census Bureau’s Washington database, which equaled 11.17%). *Id.* WSDOT then upwardly adjusted the 11.17 percent base figure to 14 percent “to account for the proven capacity of

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

DBEs to perform work, as reflected by the volume of work performed by DBEs [during a certain time period].” *Id.* Although DBEs performed 18 percent of work on State projects during the prescribed time period, Washington set the final adjusted figure at 14 percent because TEA-21 reduced the number of eligible DBEs in Washington by imposing more stringent certification requirements. *Id.* at 999, n. 11. WSDOT did not make an adjustment to account for discriminatory barriers in obtaining bonding and financing. *Id.* WSDOT similarly did not make any adjustment to reflect present or past discrimination “because it lacked any statistical studies evidencing such discrimination.” *Id.*

WSDOT then determined that it needed to achieve 5 percent of its 14 percent goal through race-conscious means based on a 9 percent DBE participation rate on state-funded contracts that did not include affirmative action components (*i.e.*, 9% participation could be achieved through race-neutral means). *Id.* at 1000. The USDOT approved WSDOT goal-setting program and the totality of its 2000 DBE program. *Id.*

Washington conceded that it did not have statistical studies to establish the existence of past or present discrimination. *Id.* It argued, however, that it had evidence of discrimination because minority-owned firms had the capacity to perform 14 percent of the State’s transportation contracts in 2000 but received only 9 percent of the subcontracting funds on contracts that did not include an affirmative action’s component. *Id.* The court found that the State’s methodology was flawed because the 14 percent figure was based on the earlier 18 percent figure, discussed *supra*, which included contracts with affirmative action components. *Id.* The court concluded that the 14 percent figure did not accurately reflect the performance capacity of DBEs in a race-neutral market. *Id.* The court also found the State conceded as much to the district court. *Id.*

The court held that a disparity between DBE performance on contracts with an affirmative action component and those without “does not provide any evidence of discrimination against DBEs.” *Id.* The court found that the only evidence upon which Washington could rely was the disparity between the proportion of DBE firms in the State (11.17%) and the percentage of contracts awarded to DBEs on race-neutral grounds (9%). *Id.* However, the court determined that such evidence was entitled to “little weight” because it did not take into account a multitude of other factors such as firm size. *Id.*

Moreover, the court found that the minimal statistical evidence was insufficient evidence, standing alone, of discrimination in the transportation contracting industry. *Id.* at 1001. The court found that WSDOT did not present any anecdotal evidence. *Id.* The court rejected the State’s argument that the DBE applications themselves constituted evidence of past discrimination because the applications were not properly in the record, and because the applicants were not required to certify that they had been victims of discrimination in the contracting industry. *Id.* Accordingly, the court held that because the State failed to proffer evidence of discrimination within its own transportation contracting market, its DBE program was not narrowly tailored to Congress’s compelling remedial interest. *Id.* at 1002-03.

The court affirmed the district court’s grant on summary judgment to the United States regarding the facial constitutionality of TEA-21, reversed the grant of summary judgment to Washington on the as-applied challenge, and remanded to determine the State’s liability for damages.

The dissent argued that where the State complied with TEA-21 in implementing its DBE program, it was not susceptible to an as-applied challenge.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

9. *Western States Paving Co. v. Washington DOT, USDOT & FHWA*, 2006 WL 1734163, (W.D. Wash. June 23, 2006) (unpublished opinion)

This case was before the district court pursuant to the Ninth Circuit’s remand order in *Western States Paving Co. Washington DOT, USDOT, and FHWA*, 407 F.3d 983 (9th Cir. 2005), *cert. denied*, 546 U.S. 1170 (2006). In this decision, the district court adjudicated cross Motions for Summary Judgment on plaintiff’s claim for injunction and for damages under 42 U.S.C. §§1981, 1983, and §2000d.

Because the WSDOT voluntarily discontinued its DBE program after the Ninth Circuit decision, *supra*, the district court dismissed plaintiff’s claim for injunctive relief as moot. The court found “it is absolutely clear in this case that WSDOT will not resume or continue the activity the Ninth Circuit found unlawful in *Western States*,” and cited specifically to the informational letters WSDOT sent to contractors informing them of the termination of the program.

Second, the court dismissed Western States Paving’s claims under 42 U.S.C. §§ 1981, 1983, and 2000d against Clark County and the City of Vancouver holding neither the City or the County acted with the requisite discriminatory intent. The court held the County and the City were merely implementing the WSDOT’s unlawful DBE program and their actions in this respect were involuntary and required no independent activity. The court also noted that the County and the City were not parties to the precise discriminatory actions at issue in the case, which occurred due to the conduct of the “State defendants.” Specifically, the WSDOT — and not the County or the City — developed the DBE program without sufficient anecdotal and statistical evidence, and improperly relied on the affidavits of contractors seeking DBE certification “who averred that they had been subject to ‘general societal discrimination.’”

Third, the court dismissed plaintiff’s 42 U.S.C. §§ 1981 and 1983 claims against WSDOT, finding them barred by the Eleventh Amendment sovereign immunity doctrine. However, the court allowed plaintiff’s 42 U.S.C. §2000d claim to proceed against WSDOT because it was not similarly barred. The court held that Congress had conditioned the receipt of federal highway funds on compliance with Title VI (42 U.S.C. § 2000d et seq.) and the waiver of sovereign immunity from claims arising under Title VI. Section 2001 specifically provides that “a State shall not be immune under the Eleventh Amendment of the Constitution of the United States from suit in Federal court for a violation of ... Title VI.” The court held that this language put the WSDOT on notice that it faced private causes of action in the event of noncompliance.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The court held that WSDOT’s DBE program was not narrowly tailored to serve a compelling government interest. The court stressed that discriminatory intent is an essential element of a plaintiff’s claim under Title VI. The WSDOT argued that even if sovereign immunity did not bar plaintiff’s §2000d claim, WSDOT could be held liable for damages because there was no evidence that WSDOT staff knew of or consciously considered plaintiff’s race when calculating the annual utilization goal. The court held that since the policy was not “facially neutral” — and was in fact “specifically race conscious” — any resulting discrimination was therefore intentional, whether the reason for the classification was benign or its purpose remedial. As such, WSDOT’s program was subject to strict scrutiny.

In order for the court to uphold the DBE program as constitutional, WSDOT had to show that the program served a compelling interest and was narrowly tailored to achieve that goal. The court found that the Ninth Circuit had already concluded that the program was not narrowly tailored, and the record was devoid of any evidence suggesting that minorities currently suffer or have suffered discrimination in the Washington transportation contracting industry. The court therefore denied WSDOT’s Motion for Summary Judgment on the §2000d claim. The remedy available to Western States remains for further adjudication and the case is currently pending.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

10. *Associated Gen. Contractors of California, Inc. v. Coalition for Econ. Equity (“AGCC”), 950 F.2d 1401 (9th Cir. 1991)*

In *Associated Gen. Contractors of California, Inc. v. Coalition for Econ. Equity (“AGCC”)*, the Ninth Circuit Court of Appeals denied plaintiffs request for preliminary injunction to enjoin enforcement of the city’s bid preference program. 950 F.2d 1401 (9th Cir. 1991). Although an older case, *AGCC* is instructive as to the analysis conducted by the Ninth Circuit. The court discussed the utilization of statistical evidence and anecdotal evidence in the context of the strict scrutiny analysis. *Id.* at 1413-18.

The City of San Francisco adopted an ordinance in 1989 providing bid preferences to prime contractors who were members of groups found disadvantaged by previous bidding practices, and specifically provided a 5 percent bid preference for LBEs, WBEs and MBEs. 950 F.2d at 1405. Local MBEs and WBEs were eligible for a 10 percent total bid preference, representing the cumulative total of the 5 percent preference given Local Business Enterprises (“LBEs”) and the 5 percent preference given MBEs and WBEs. *Id.* The ordinance defined “MBE” as an economically disadvantaged business that was owned and controlled by one or more minority persons, which were defined to include Asian, blacks and Latinos. “WBE” was defined as an economically disadvantaged business that was owned and controlled by one or more women. Economically disadvantaged was defined as a business with average gross annual receipts that did not exceed \$14 million. *Id.*

The Motion for Preliminary Injunction challenged the constitutionality of the MBE provisions of the 1989 Ordinance insofar as it pertained to Public Works construction contracts. *Id.* at 1405. The district court denied the Motion for Preliminary Injunction on the *AGCC*’s constitutional claim on the ground that *AGCC* failed to demonstrate a likelihood of success on the merits. *Id.* at 1412.

The Ninth Circuit Court of Appeals applied the strict scrutiny analysis following the decision of the U.S. Supreme Court in *City of Richmond v. Croson*. The court stated that according to the U.S. Supreme Court in *Croson*, a municipality has a compelling interest in redressing, not only discrimination committed by the municipality itself, but also discrimination committed by private parties within the municipalities’ legislative jurisdiction, so long as the municipality in some way perpetuated the discrimination to be remedied by the program. *Id.* at 1412-13, citing *Croson* at 488 U.S. at 491-92, 537-38. To satisfy this requirement, “the governmental actor need not be an active perpetrator of such discrimination; passive participation will satisfy this sub-part of strict scrutiny review.” *Id.* at 1413, quoting *Coral Construction Company v. King County*, 941 F.2d 910 at 916 (9th Cir. 1991). In addition, the [m]ere infusion of tax dollars into a discriminatory industry may be sufficient governmental involvement to satisfy this prong.” *Id.* at 1413 quoting *Coral Construction*, 941 F.2d at 916.

The court pointed out that the City had made detailed findings of prior discrimination in construction and building within its borders, had testimony taken at more than ten public hearings and received numerous written submissions from the public as part of its anecdotal evidence. *Id.* at 1414. The City Departments continued to discriminate against MBEs and WBEs and continued to operate under the “old boy network” in awarding contracts, thereby disadvantaging MBEs and WBEs. *Id.* And, the City found that large statistical disparities existed between the percentage of contracts awarded to MBEs and the percentage of available MBEs. 950 F.2d at 1414. The court stated the City also found “discrimination in the private sector against MBEs and WBEs that is manifested in and exacerbated by the City’s procurement practices.” *Id.* at 1414.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The Ninth Circuit found the study commissioned by the City indicated the existence of large disparities between the award of city contracts to available nonminority businesses and to MBEs. *Id.* at 1414. Using the City and County of San Francisco as the “relevant market,” the study compared the number of available MBE prime construction contractors in San Francisco with the amount of contract dollars awarded by the City to San Francisco-based MBEs for a particular year. *Id.* at 1414. The study found that available MBEs received far fewer city contracts in proportion to their numbers than their available nonminority counterparts. *Id.* Specifically, the study found that with respect to prime construction contracting, disparities between the number of available local Asian-, black- and Hispanic-owned firms and the number of contracts awarded to such firms were statistically significant and supported an inference of discrimination. *Id.* For example, in prime contracting for construction, although MBE availability was determined to be at 49.5 percent, MBE dollar participation was only 11.1 percent. *Id.* The Ninth Circuit stated that in its decision in *Coral Construction*, it emphasized that such statistical disparities are “an invaluable tool and demonstrating the discrimination necessary to establish a compelling interest. *Id.* at 1414, citing to *Coral Construction*, 941 F.2d at 918 and *Croson*, 488 U.S. at 509.

The court noted that the record documents a vast number of individual accounts of discrimination, which bring “the cold numbers convincingly to life. *Id.* at 1414, quoting *Coral Construction*, 941 F.2d at 919. These accounts include numerous reports of MBEs being denied contracts despite being the low bidder, MBEs being told they were not qualified although they were later found qualified when evaluated by outside parties, MBEs being refused work even after they were awarded contracts as low bidder, and MBEs being harassed by city personnel to discourage them from bidding on city contracts. *Id.* at 1415. The City pointed to numerous individual accounts of discrimination, that an “old boy network” still exists, and that racial discrimination is still prevalent within the San Francisco construction industry. *Id.* The court found that such a “combination of convincing anecdotal and statistical evidence is potent.” *Id.* at 1415 quoting *Coral Construction*, 941 F.2d at 919.

The court also stated that the 1989 Ordinance applies only to resident MBEs. The City, therefore, according to the court, appropriately confined its study to the city limits in order to focus on those whom the preference scheme targeted. *Id.* at 1415. The court noted that the statistics relied upon by the City to demonstrate discrimination in its contracting processes considered only MBEs located within the City of San Francisco. *Id.*

The court pointed out the City’s findings were based upon dozens of specific instances of discrimination that are laid out with particularity in the record, as well as the significant statistical disparities in the award of contracts. The court noted that the City must simply demonstrate the existence of past discrimination with specificity, but there is no requirement that the legislative findings specifically detail each and every incidence that the legislative body has relied upon in support of this decision that affirmative action is necessary. *Id.* at 1416.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

In its analysis of the “narrowly tailored” requirement, the court focused on three characteristics identified by the decision in *Croson* as indicative of narrow tailoring. First, an MBE program should be instituted either after, or in conjunction with, race-neutral means of increasing minority business participation in public contracting. *Id.* at 1416. Second, the plan should avoid the use of “rigid numerical quotas.” *Id.* According to the Supreme Court, systems that permit waiver in appropriate cases and therefore require some individualized consideration of the applicants pose a lesser danger of offending the Constitution. *Id.* Mechanisms that introduce flexibility into the system also prevent the imposition of a disproportionate burden on a few individuals. *Id.* Third, “an MBE program must be limited in its effective scope to the boundaries of the enacting jurisdiction. *Id.* at 1416 quoting *Coral Construction*, 941 F.2d at 922.

The court found that the record showed the City considered, but rejected as not viable, specific race-neutral alternatives including a fund to assist newly established MBEs in meeting bonding requirements. The court stated that “while strict scrutiny requires serious, good faith consideration of race-neutral alternatives, strict scrutiny does not require exhaustion of every possible such alternative ... however irrational, costly, unreasonable, and unlikely to succeed such alternative may be.” *Id.* at 1417 quoting *Coral Construction*, 941 F.2d at 923. The court found the City ten years before had attempted to eradicate discrimination in city contracting through passage of a race-neutral ordinance that prohibited city contractors from discriminating against their employees on the basis of race and required contractors to take steps to integrate their work force; and that the City made and continues to make efforts to enforce the anti-discrimination ordinance. *Id.* at 1417. The court stated inclusion of such race-neutral measures is one factor suggesting that an MBE plan is narrowly tailored. *Id.* at 1417.

The court also found that the Ordinance possessed the requisite flexibility. Rather than a rigid quota system, the City adopted a more modest system according to the court, that of bid preferences. *Id.* at 1417. The court pointed out that there were no goals, quotas, or set-asides and moreover, the plan remedies only specifically identified discrimination: the City provides preferences only to those minority groups found to have previously received a lower percentage of specific types of contracts than their availability to perform such work would suggest. *Id.* at 1417.

The court rejected the argument of AGCC that to pass constitutional muster any remedy must provide redress only to specific individuals who have been identified as victims of discrimination. *Id.* at 1417, n. 12. The Ninth Circuit agreed with the district court that an iron-clad requirement limiting any remedy to individuals personally proven to have suffered prior discrimination would render any race-conscious remedy “superfluous,” and would thwart the Supreme Court’s directive in *Croson* that race-conscious remedies may be permitted in some circumstances. *Id.* at 1417, n. 12. The court also found that the burdens of the bid preferences on those not entitled to them appear “relatively light and well distributed.” *Id.* at 1417. The court stated that the Ordinance was “limited in its geographical scope to the boundaries of the enacting jurisdiction. *Id.* at 1418, quoting *Coral Construction*, 941 F.2d at 925. The court found that San Francisco had carefully limited the ordinance to benefit only those MBEs located within the City’s borders. *Id.* 1418.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

11. *Coral Construction Co. v. King County*, 941 F.2d 910 (9th Cir. 1991)

In *Coral Construction Co. v. King County*, 941 F.2d 910 (9th Cir. 1991), the Ninth Circuit examined the constitutionality of King County, Washington’s minority and women business set-aside program in light of the standard set forth in *City of Richmond v. J.A. Croson Co.* The court held that although the County presented ample anecdotal evidence of disparate treatment of MBE contractors and subcontractors, the total absence of pre-program enactment statistical evidence was problematic to the compelling government interest component of the strict scrutiny analysis. The court remanded to the district court for a determination of whether the post-program enactment studies constituted a sufficient compelling government interest. Per the narrow tailoring prong of the strict scrutiny test, the court found that although the program included race-neutral alternative measures and was flexible (*i.e.*, included a waiver provision), the over breadth of the program to include MBEs outside of King County was fatal to the narrow tailoring analysis.

The court also remanded on the issue of whether the plaintiffs were entitled to damages under 42 U.S.C. §§ 1981 and 1983, and in particular to determine whether evidence of causation existed. With respect to the WBE program, the court held the plaintiff had standing to challenge the program, and applying the intermediate scrutiny analysis, held the WBE program survived the facial challenge.

In finding the absence of any statistical data in support of the County’s MBE Program, the court made it clear that statistical analyses have served and will continue to serve an important role in cases in which the existence of discrimination is a disputed issue. 941 F.2d at 918. The court noted that it has repeatedly approved the use of statistical proof to establish a prima facie case of discrimination. *Id.* The court pointed out that the U.S. Supreme Court in *Croson* held that where “gross

statistical disparities can be shown, they alone may in a proper case constitute prima facie proof of a pattern or practice of discrimination.” *Id.* at 918, quoting *Hazelwood School Dist. v. United States*, 433 U.S. 299, 307-08, and *Croson*, 488 U.S. at 501.

The court points out that statistical evidence may not fully account for the complex factors and motivations guiding employment decisions, many of which may be entirely race-neutral. *Id.* at 919. The court noted that the record contained a plethora of anecdotal evidence, but that anecdotal evidence, standing alone, suffers the same flaws as statistical evidence. *Id.* at 919. While anecdotal evidence may suffice to prove individual claims of discrimination, rarely, according to the court, if ever, can such evidence show a systemic pattern of discrimination necessary for the adoption of an affirmative action plan. *Id.*

Nonetheless, the court held that the combination of convincing anecdotal and statistical evidence is potent. *Id.* at 919. The court pointed out that individuals who testified about their personal experiences brought the cold numbers of statistics “convincingly to life.” *Id.* at 919, quoting *International Brotherhood of Teamsters v. United States*, 431 U.S. 324, 339 (1977). The court also pointed out that the Eleventh Circuit Court of Appeals, in passing upon a minority set-aside program similar to the one in King County, concluded that the testimony regarding complaints of discrimination combined with the gross statistical disparities uncovered by the County studies provided more than enough evidence on the question of prior discrimination and need for racial classification to justify the denial of a Motion for Summary Judgment. *Id.* at 919, citing *Cone Corp. v. Hillsborough County*, 908 F.2d 908, 916 (11th Cir. 1990).

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The court found that the MBE Program of the County could not stand without a proper statistical foundation. *Id.* at 919. The court addressed whether post-enactment studies done by the County of a statistical foundation could be considered by the court in connection with determining the validity of the County MBE Program. The court held that a municipality must have *some* concrete evidence of discrimination in a particular industry before it may adopt a remedial program. *Id.* at 920. However, the court said this requirement of *some* evidence does not mean that a program will be automatically struck down if the evidence before the municipality at the time of enactment does not completely fulfill both prongs of the strict scrutiny test. *Id.* Rather, the court held, the factual predicate for the program should be evaluated based upon all evidence presented to the district court, whether such evidence was adduced before or after enactment of the MBE Program. *Id.* Therefore, the court adopted a rule that a municipality should have before it some evidence of discrimination before adopting a race-conscious program, while allowing post-adoption evidence to be considered in passing on the constitutionality of the program. *Id.*

The court, therefore, remanded the case to the district court for determination of whether the consultant studies that were performed after the enactment of the MBE Program could provide an adequate factual justification to establish a “propelling government interest” for King County’s adopting the MBE Program. *Id.* at 922.

The court also found that *Croson* does not require a showing of active discrimination by the enacting agency, and that passive participation, such as the infusion of tax dollars into a discriminatory industry, suffices. *Id.* at 922, *citing Croson*, 488 U.S. at 492. The court pointed out that the Supreme Court in *Croson* concluded that if the City had evidence before it, that nonminority contractors were systematically excluding minority businesses from subcontracting opportunities, it could take action to end the discriminatory exclusion. *Id.* at 922. The

court points out that if the record ultimately supported a finding of systemic discrimination, the County adequately limited its program to those businesses that receive tax dollars, and the program imposed obligations upon only those businesses which voluntarily sought King County tax dollars by contracting with the County. *Id.*

The court addressed several factors in terms of the narrowly tailored analysis, and found that first, an MBE program should be instituted either after, or in conjunction with, race-neutral means of increasing minority business participation and public contracting. *Id.* at 922, *citing Croson*, 488 U.S. at 507. The second characteristic of the narrowly tailored program, according to the court, is the use of minority utilization goals on a case-by-case basis, rather than upon a system of rigid numerical quotas. *Id.* Finally, the court stated that an MBE program must be limited in its effective scope to the boundaries of the enacting jurisdiction. *Id.*

Among the various narrowly tailored requirements, the court held consideration of race-neutral alternatives is among the most important. *Id.* at 922. Nevertheless, the court stated that while strict scrutiny requires serious, good faith consideration of race-neutral alternatives, strict scrutiny does not require exhaustion of every possible such alternative. *Id.* at 923. The court noted that it does not intend a government entity exhaust *every* alternative, however irrational, costly, unreasonable, and unlikely to succeed such alternative might be. *Id.* Thus, the court required only that a state exhausts race-neutral measures that the state is authorized to enact, and that have a reasonable possibility of being effective. *Id.* The court noted in this case the County considered alternatives, but determined that they were not available as a matter of law. *Id.* The County cannot be required to engage in conduct that may be illegal, nor can it be compelled to expend precious tax dollars on projects where potential for success is marginal at best. *Id.*

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The court noted that King County had adopted some race-neutral measures in conjunction with the MBE Program, for example, hosting one or two training sessions for small businesses, covering such topics as doing business with the government, small business management, and accounting techniques. *Id.* at 923. In addition, the County provided information on assessing Small Business Assistance Programs. *Id.* The court found that King County fulfilled its burden of considering race-neutral alternative programs. *Id.*

A second indicator of a program’s narrowly tailoring is program flexibility. *Id.* at 924. The court found that an important means of achieving such flexibility is through use of case-by-case utilization goals, rather than rigid numerical quotas or goals. *Id.* at 924. The court pointed out that King County used a “percentage preference” method, which is not a quota, and while the preference is locked at 5 percent, such a fixed preference is not unduly rigid in light of the waiver provisions. The court found that a valid MBE Program should include a waiver system that accounts for both the availability of qualified MBEs and whether the qualified MBEs have suffered from the effects of past discrimination by the County or prime contractors. *Id.* at 924. The court found that King County’s program provided waivers in both instances, including where neither minority nor a woman’s business is available to provide needed goods or services and where available minority and/or women’s businesses have given price quotes that are unreasonably high. *Id.*

The court also pointed out other attributes of the narrowly tailored and flexible MBE program, including a bidder that does not meet planned goals, may nonetheless be awarded the contract by demonstrating a good faith effort to comply. *Id.* The actual percentages of required MBE participation are determined on a case-by-case basis. Levels of participation may be reduced if the prescribed levels are not feasible, if qualified MBEs are unavailable, or if MBE price quotes are not competitive. *Id.*

The court concluded that an MBE program must also be limited in its geographical scope to the boundaries of the enacting jurisdiction. *Id.* at 925. Here the court held that King County’s MBE program fails this third portion of “narrowly tailored” requirement. The court found the definition of “minority business” included in the Program indicated that a minority-owned business may qualify for preferential treatment if the business has been discriminated against in the particular geographical areas in which it operates. The court held this definition as overly broad. *Id.* at 925. The court held that the County should ask the question whether a business has been discriminated against in King County. *Id.* This determination, according to the court, is not an insurmountable burden for the County, as the rule does not require finding specific instances of discriminatory exclusion for each MBE. *Id.* Rather, if the County successfully proves malignant discrimination within the King County business community, an MBE would be presumptively eligible for relief if it had previously sought to do business in the County. *Id.*

In other words, if systemic discrimination in the County is shown, then it is fair to presume that an MBE was victimized by the discrimination. *Id.* at 925. For the presumption to attach to the MBE, however, it must be established that the MBE is, or attempted to become, an active participant in the County’s business community. *Id.* Because King County’s program permitted MBE participation even by MBEs that have no prior contact with King County, the program was overbroad to that extent. *Id.* Therefore, the court reversed the grant of summary judgment to King County on the MBE program on the basis that it was geographically overbroad.

L. Legal — Recent decisions involving programs in the Ninth Circuit Court of Appeals

The court considered the gender-specific aspect of the MBE program. The court determined the degree of judicial scrutiny afforded gender-conscious programs was intermediate scrutiny, rather than strict scrutiny. *Id.* at 930. Under intermediate scrutiny, gender-based classification must serve an important governmental objective, and there must be a direct, substantial relationship between the objective and the means chosen to accomplish the objective. *Id.* at 931.

In this case, the court concluded, that King County's WBE preference survived a facial challenge. *Id.* at 932. The court found that King County had a legitimate and important interest in remedying the many disadvantages that confront women business owners and that the means chosen in the program were substantially related to the objective. *Id.* The court found the record adequately indicated discrimination against women in the King County construction industry, noting the anecdotal evidence including an affidavit of the president of a consulting engineering firm. *Id.* at 933. Therefore, the court upheld the WBE portion of the MBE program and affirmed the district court's grant of summary judgment to King County for the WBE program.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

F. Federal Circuit Courts of Appeal Decisions Involving the Federal DBE Program in Other Jurisdictions

There are several recent and pending cases involving challenges to the United States Federal DBE Program and its implementation by the states and their governmental entities for federally funded projects. These cases could have a significant impact on the nature and provisions of contracting and procurement on federally funded projects, including and relating to the utilization of DBEs. In addition, these cases provide an instructive analysis of the recent application of the strict scrutiny test to MBE/WBE- and DBE-type programs.

1. *Midwest Fence Corporation v. U.S. Department of Transportation, Illinois Department of Transportation, Illinois State Toll Highway Authority*, 840 F.3d 932, 2016 WL 6543514 (7th Cir. 2016), cert. denied, 2017 WL 497345 (2017)

Plaintiff Midwest Fence Corporation is a guardrails and fencing specialty contractor that usually bids on projects as a subcontractor. 2016 WL 6543514 at *1. Midwest Fence is not a DBE. *Id.* Midwest Fence alleges that the defendants' DBE programs violated its Fourteenth Amendment right to equal protection under the law, and challenges the United States DOT Federal DBE Program and the implementation of the Federal DBE Program by the Illinois DOT (IDOT). *Id.* Midwest Fence also challenges the Illinois State Toll Highway Authority (Tollway) and its implementation of its DBE Program. *Id.*

The district court granted all the defendants' motions for summary judgment. *Id.* at *1. See *Midwest Fence Corp. v. U.S. Department of Transportation, et al.*, 84 F. Supp. 3d 705 (N.D. Ill. 2015) (see discussion of district court decision below). The Seventh Circuit Court of Appeals affirmed the grant of summary judgment by the district court. *Id.* The court held that it joins the other federal circuit courts of appeal in holding that the Federal DBE Program is facially constitutional, the

program serves a compelling government interest in remedying a history of discrimination in highway construction contracting, the program provides states with ample discretion to tailor their DBE programs to the realities of their own markets and requires the use of race- and gender-neutral measures before turning to race- and gender-conscious measures. *Id.*

The court of appeals also held the IDOT and Tollway programs survive strict scrutiny because these state defendants establish a substantial basis in evidence to support the need to remedy the effects of past discrimination in their markets, and the programs are narrowly tailored to serve that remedial purpose. *Id.* at *1.

Procedural history. Midwest Fence asserted the following primary theories in its challenge to the Federal DBE Program, IDOT's implementation of it, and the Tollway's own program:

1. The federal regulations prescribe a method for setting individual contract goals that places an undue burden on non-DBE subcontractors, especially certain kinds of subcontractors, including guardrail and fencing contractors like Midwest Fence.
2. The presumption of social and economic disadvantage is not tailored adequately to reflect differences in the circumstances actually faced by women and the various racial and ethnic groups who receive that presumption.
3. The federal regulations are unconstitutionally vague, particularly with respect to good faith efforts to justify a front-end waiver.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

Id. at *3-4. Midwest Fence also asserted that IDOT’s implementation of the Federal DBE Program is unconstitutional for essentially the same reasons. And, Midwest Fence challenges the Tollway’s program on its face and as applied. *Id.* at *4.

The district court found that Midwest Fence had standing to bring most of its claims and on the merits, and the court upheld the facial constitutionality of the Federal DBE Program. 84 F. Supp. 3d at 722-23 729; *id.* at *4.

The district court also concluded Midwest Fence did not rebut the evidence of discrimination that IDOT offered to justify its program, and Midwest Fence had presented no “affirmative evidence” that IDOT’s implementation unduly burdened non-DBEs, failed to make use of race-neutral alternatives, or lacked flexibility. 84 F. Supp. 3d at 733, 737; *id.* at *4.

The district court noted that Midwest Fence’s challenge to the Tollway’s program paralleled the challenge to IDOT’s program, and concluded that the Tollway, like IDOT, had established a strong basis in evidence for its program. 84 F. Supp. 3d at 737, 739; *id.* at *4. In addition, the court concluded that, like IDOT’s program, the Tollway’s program imposed a minimal burden on non-DBEs, employed a number of race-neutral measures, and offered substantial flexibility. 84 F. Supp. 3d at 739-740; *id.* at *4.

Standing to challenge the DBE Programs generally. The defendants argued that Midwest Fence lacked standing. The court of appeals held that the district court correctly found that Midwest Fence has standing. *Id.* at *5. The court of appeals stated that by alleging and then offering evidence of lost bids, decreased revenue, difficulties keeping its business afloat as a result of the DBE program, and its inability to compete for contracts on an equal footing with DBEs, Midwest Fence showed both causation and redressability. *Id.* at *5.

The court of appeals distinguished its ruling in the *Dunnet Bay Construction Co. v. Borggren*, 799 F. 3d 676 (7th Cir. 2015), holding that there was no standing for the plaintiff Dunnet Bay based on an unusual and complex set of facts under which it would have been impossible for the plaintiff Dunnet Bay to have won the contract it sought and for which it sought damages. IDOT did not award the contract to anyone under the first bid and had re-let the contract, thus Dunnet Bay suffered no injury because of the DBE program in the first bid. *Id.* at *5. The court of appeals held this case is distinguishable from *Dunnet Bay* because Midwest Fence seeks prospective relief that would enable it to compete with DBEs on an equal basis more generally than in *Dunnet Bay*. *Id.* at *5.

Standing to challenge the IDOT Target Market Program. The district court had carved out one narrow exception to its finding that Midwest Fence had standing generally, finding that Midwest Fence lacked standing to challenge the IDOT “target market program.” *Id.* at *6. The court of appeals found that no evidence in the record established Midwest Fence bid on or lost any contracts subject to the IDOT target market program. *Id.* at *6. The court stated that IDOT had not set aside any guardrail and fencing contracts under the target market program. *Id.* Therefore, Midwest Fence did not show that it had suffered from an inability to compete on an equal footing in the bidding process with respect to contracts within the target market program. *Id.*

Facial versus as-applied challenge to the USDOT Program. In this appeal, Midwest Fence did not challenge whether USDOT had established a “compelling interest” to remedy the effects of past or present discrimination. Thus, it did not challenge the national compelling interest in remedying past discrimination in its claims against the Federal DBE Program. *Id.* at *6. Therefore, the court of appeals focused on whether the federal program is narrowly tailored. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

First, the court addressed a preliminary issue, namely, whether Midwest Fence could maintain an as-applied challenge against USDOT and the Federal DBE Program or whether, as the district court held, the claim against USDOT is limited to a facial challenge. *Id.* Midwest Fence sought a declaration that the federal regulations are unconstitutional as applied in Illinois. *Id.* The district court rejected the attempt to bring that claim against USDOT, treating it as applying only to IDOT. *Id.* at *6 citing *Midwest Fence*, 84 F. Supp. 3d at 718. The court of appeals agreed with the district court. *Id.*

The court of appeals pointed out that a principal feature of the federal regulations is their flexibility and adaptability to local conditions, and that flexibility is important to the constitutionality of the Federal DBE Program, including because a race- and gender-conscious program must be narrowly tailored to serve the compelling governmental interest. *Id.* at *6. The flexibility in regulations, according to the court, makes the state, not USDOT, primarily responsible for implementing their own programs in ways that comply with the Equal Protection Clause. *Id.* at *6. The court said that a state, not USDOT, is the correct party to defend a challenge to its implementation of its program. *Id.* Thus, the court held the district court did not err by treating the claims against USDOT as only a facial challenge to the federal regulations. *Id.*

Federal DBE Program: Narrow Tailoring. The Seventh Circuit noted that the Eighth, Ninth, and Tenth Circuits all found the Federal DBE Program constitutional on its face, and the Seventh Circuit agreed with these other circuits. *Id.* at *7. The court found that narrow tailoring requires “a close match between the evil against which the remedy is directed and the terms of the remedy.” *Id.* The court stated it looks to four factors in determining narrow tailoring: (a) “the necessity for the relief and the efficacy of alternative [race-neutral] remedies,” (b) “the flexibility and duration of the relief, including the availability of waiver provisions,” (c) “the relationship of the numerical goals to the relevant

labor [or here, contracting] market,” and (d) “the impact of the relief on the rights of third parties.” *Id.* at *7 quoting *United States v. Paradise*, 480 U.S. 149, 171 (1987). The Seventh Circuit also pointed out that the Tenth Circuit added to this analysis the question of over- or under-inclusiveness. *Id.* at *7.

In applying these factors to determine narrow tailoring, the court said that first, the Federal DBE Program requires states to meet as much as possible of their overall DBE participation goals through race- and gender-neutral means. *Id.* at *7, citing 49 C.F.R. § 26.51(a). Next, on its face, the federal program is both flexible and limited in duration. *Id.* Quotas are flatly prohibited, and states may apply for waivers, including waivers of “any provisions regarding administrative requirements, overall goals, contract goals or good faith efforts,” § 26.15(b). *Id.* at *7. The regulations also require states to remain flexible as they administer the program over the course of the year, including continually reassessing their DBE participation goals and whether contract goals are necessary. *Id.*

The court pointed out that a state need not set a contract goal on every USDOT-assisted contract, nor must they set those goals at the same percentage as the overall participation goal. *Id.* at *7. Together, the court found, all of these provisions allow for significant and ongoing flexibility. *Id.* at *8. States are not locked into their initial DBE participation goals. *Id.* Their use of contract goals is meant to remain fluid, reflecting a state’s progress towards overall DBE goal. *Id.*

As for duration, the court said that Congress has repeatedly reauthorized the program after taking new looks at the need for it. *Id.* at *8. And, as noted, states must monitor progress toward meeting DBE goals on a regular basis and alter the goals if necessary. *Id.* They must stop using race- and gender-conscious measures if those measures are no longer needed. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

The court found that the numerical goals are also tied to the relevant markets. *Id.* at *8. In addition, the regulations prescribe a process for setting a DBE participation goal that focuses on information about the specific market, and that it is intended to reflect the level of DBE participation you would expect absent the effects of discrimination. *Id.* at *8, *citing* § 26.45(b). The court stated that the regulations thus instruct states to set their DBE participation goals to reflect actual DBE availability in their jurisdictions, as modified by other relevant factors like DBE capacity. *Id.* at *8.

Midwest Fence “mismatch” argument: burden on third parties.

Midwest Fence, the court said, focuses its criticism on the burden of third parties and argues the program is over-inclusive. *Id.* at *8. But, the court found, the regulations include mechanisms to minimize the burdens the program places on non-DBE third parties. *Id.* A primary example, the court points out, is supplied in § 26.33(a), which requires states to take steps to address overconcentration of DBEs in certain types of work if the overconcentration unduly burdens non-DBEs to the point that they can no longer participate in the market. *Id.* at *8. The court concluded that standards can be relaxed if uncompromising enforcement would yield negative consequences, for example, states can obtain waivers if special circumstances make the state’s compliance with part of the federal program “impractical,” and contractors who fail to meet a DBE contract goal can still be awarded the contract if they have documented good faith efforts to meet the goal. *Id.* at *8, *citing* § 26.51(a) and § 26.53(a)(2).

Midwest Fence argued that a “mismatch” in the way contract goals are calculated results in a burden that falls disproportionately on specialty subcontractors. *Id.* at *8. Under the federal regulations, the court noted, states’ overall goals are set as a percentage of all their USDOT-assisted contracts. *Id.* However, states may set contract goals “only on those [USDOT]-assisted contracts that have subcontracting possibilities.” *Id.*, *quoting* § 26.51(e)(1)(emphasis added).

Midwest Fence argued that because DBEs must be small, they are generally unable to compete for prime contracts, and this they argue is the “mismatch.” *Id.* at *8. Where contract goals are necessary to meet an overall DBE participation goal, those contract goals are met almost entirely with *subcontractor* dollars, which, Midwest Fence asserts, places a heavy burden on non-DBE subcontractors while leaving non-DBE prime contractors in the clear. *Id.* at *8.

The court goes through a hypothetical example to explain the issue Midwest Fence has raised as a mismatch that imposes a disproportionate burden on specialty subcontractors like Midwest Fence. *Id.* at *8. In the example provided by the court, the overall participation goal for a state calls for DBEs to receive a certain percentage of *total* funds, but in practice in the hypothetical it requires the state to award DBEs for less than all of the available subcontractor funds because it determines that there are no subcontracting possibilities on half the contracts, thus rendering them ineligible for contract goals. *Id.* The mismatch is that the federal program requires the state to set its overall goal on all funds it will spend on contracts, but at the same time the contracts eligible for contract goals must be ones that have subcontracting possibilities. *Id.* Therefore, according to Midwest Fence, in practice the participation goals set would require the state to award DBEs from the available subcontractor funds while taking no business away from the prime contractors. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

The court stated that it found “[t]his prospect is troubling.” *Id.* at *9. The court said that the DBE program can impose a disproportionate burden on small, specialized non-DBE subcontractors, especially when compared to larger prime contractors with whom DBEs would compete less frequently. *Id.* This potential, according to the court, for a disproportionate burden, however, does not render the program facially unconstitutional. *Id.* The court said that the constitutionality of the Federal DBE Program depends on how it is implemented. *Id.*

The court pointed out that some of the suggested race- and gender-neutral means that states can use under the federal program are designed to increase DBE participation in prime contracting and other fields where DBE participation has historically been low, such as specifically encouraging states to make contracts more accessible to small businesses. *Id.* at *9, *citing* § 26.39(b). The court also noted that the federal program contemplates DBEs’ ability to compete equally requiring states to report DBE participation as prime contractors and makes efforts to develop that potential. *Id.* at *9.

The court stated that states will continue to resort to contract goals that open the door to the type of mismatch that Midwest Fence describes, but the program on its face does not compel an unfair distribution of burdens. *Id.* at *9. Small specialty contractors may have to bear at least some of the burdens created by remedying past discrimination under the Federal DBE Program, but the Supreme Court has indicated that innocent third parties may constitutionally be required to bear at least some of the burden of the remedy. *Id.* at *9.

Over-Inclusive argument. Midwest Fence also argued that the federal program is over-inclusive because it grants preferences to groups without analyzing the extent to which each group is actually disadvantaged. *Id.* at *9. In response, the court mentioned two federal-specific arguments, noting that Midwest Fence’s criticisms are best

analyzed as part of its as-applied challenge against the state defendants. *Id.* First, Midwest Fence contends nothing proves that the disparities relied upon by the study consultant were caused by discrimination. *Id.* at *9. The court found that to justify its program, USDOT does not need definitive proof of discrimination, but must have a strong basis in evidence that remedial action is necessary to remedy past discrimination. *Id.*

Second, Midwest Fence attacks what it perceives as the one-size-fits-all nature of the program, suggesting that the regulations ought to provide different remedies for different groups, but instead the federal program offers a single approach to all the disadvantaged groups, regardless of the degree of disparities. *Id.* at *9. The court pointed out Midwest Fence did not argue that any of the groups were not in fact disadvantaged at all, and that the federal regulations ultimately require individualized determinations. *Id.* at *10. Each presumptively disadvantaged firm owner must certify that he or she is, in fact, socially and economically disadvantaged, and that presumption can be rebutted. *Id.* In this way, the court said, the federal program requires states to extend benefits only to those who are actually disadvantaged. *Id.*

Therefore, the court agreed with the district court that the Federal DBE Program is narrowly tailored on its face, so it survives strict scrutiny.

Claims against IDOT and the Tollway: void for vagueness. Midwest Fence argued that the federal regulations are unconstitutionally vague as applied by IDOT because the regulations fail to specify what good faith efforts a contractor must make to qualify for a waiver, and focuses its attack on the provisions of the regulations, which address possible cost differentials in the use of DBEs. *Id.* at *11. Midwest Fence argued that Appendix A of 49 C.F.R., Part 26 at ¶ IV(D)(2) is too vague in its language on when a difference in price is significant enough to justify falling short of the DBE contract goal. *Id.* The court found if the standard

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

seems vague, that is likely because it was meant to be flexible, and a more rigid standard could easily be too arbitrary and hinder prime contractors' ability to adjust their approaches to the circumstances of particular projects. *Id.* at *11.

The court said Midwest Fence's real argument seems to be that in practice, prime contractors err too far on the side of caution, granting significant price preferences to DBEs instead of taking the risk of losing a contract for failure to meet the DBE goal. *Id.* at *12. Midwest Fence contends this creates a *de facto* system of quotas because contractors believe they must meet the DBE goal or lose the contract. *Id.* But Appendix A to the regulations, the court noted, cautions against this very approach. *Id.* The court found flexibility and the availability of waivers affect whether a program is narrowly tailored, and that the regulations caution against quotas, provide examples of good faith efforts prime contractors can make and states can consider, and instruct a bidder to use good business judgment to decide whether a price difference is reasonable or excessive. *Id.* For purposes of contract awards, the court holds this is enough to give fair notice of conduct that is forbidden or required. *Id.* at *12.

Equal Protection challenge: compelling interest with strong basis in evidence. In ruling on the merits of Midwest Fence's equal protection claims based on the actions of IDOT and the Tollway, the first issue the court addresses is whether the state defendants had a compelling interest in enacting their programs. *Id.* at *12. The court stated that it, along with the other circuit courts of appeal, have held a state agency is entitled to rely on the federal government's compelling interest in remedying the effects of past discrimination to justify its own DBE plan for highway construction contracting. *Id.* But, since not all of IDOT's contracts are federally funded, and the Tollway did not receive federal funding at all, with respect to those contracts, the court said it

must consider whether IDOT and the Tollway established a strong basis in evidence to support their programs. *Id.*

IDOT program. IDOT relied on an availability and a disparity study to support its program. The disparity study found that DBEs were significantly underutilized as prime contractors comparing firm availability of prime contractors in the construction field to the amount of dollars they received in prime contracts. The disparity study collected utilization records, defined IDOT's market area, identified businesses that were willing and able to provide needed services, weighted firm availability to reflect IDOT's contracting pattern with weights assigned to different areas based on the percentage of dollars expended in those areas, determined whether there was a statistically significant underutilization of DBEs by calculating the dollars each group would be expected to receive based on availability, calculated the difference between the expected and actual amount of contract dollars received, and ensured that results were not attributable to chance. *Id.* at *13.

The court said that the disparity study determined disparity ratios that were statistically significant, and the study found that DBEs were significantly underutilized as prime contractors, noting that a figure below 0.80 is generally considered "solid evidence of systematic underutilization calling for affirmative action to correct it." *Id.* at *13. The study found that DBEs made up 25.55 percent of prime contractors in the construction field, received 9.13 percent of prime contracts valued below \$500,000 and 8.25 percent of the available contract dollars in that range, yielding a disparity ratio of 0.32 for prime contracts under \$500,000. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

In the realm of contraction subcontracting, the study showed that DBEs may have 29.24 percent of available subcontractors, and in the construction industry they receive 44.62 percent of available subcontracts, but those subcontracts amounted to only 10.65 percent of available subcontracting dollars. *Id.* at *13. This, according to the study, yielded a statistically significant disparity ratio of 0.36, which the court found low enough to signal systemic under-utilization. *Id.*

IDOT relied on additional data to justify its program, including conducting a zero-goal experiment in 2002 and in 2003, when it did not apply DBE goals to contracts. *Id.* at *13. Without contract goals, the share of the contracts' value that DBEs received dropped dramatically, to just 1.5 percent of the total value of the contracts. *Id.* at *13. And in those contracts advertised without a DBE goal, the DBE subcontractor participation rate was 0.84 percent.

Tollway program. Tollway also relied on a disparity study limited to the Tollway's contracting market area. The study used a "custom census" process, creating a database of representative projects, identifying geographic and product markets, counting businesses in those markets, identifying and verifying which businesses are minority- and women-owned, and verifying the ownership status of all the other firms. *Id.* at *13. The study examined the Tollway's historical contract data, reported its DBE utilization as a percentage of contract dollars, and compared DBE utilization and DBE availability, coming up with disparity indices divided by race and sex, as well as by industry group. *Id.*

The study found that out of 115 disparity indices, 80 showed statistically significant under-utilization of DBEs. *Id.* at *14. The study discussed statistical disparities in earnings and the formation of businesses by minorities and women, and concluded that a statistically significant adverse impact on earnings was observed in both the economy at large and in the construction and construction-related professional services

sector." *Id.* at *14. The study also found women and minorities are not as likely to start their own business, and that minority business formation rates would likely be substantially and significantly higher if markets operated in a race- and sex-neutral manner. *Id.*

The study used regression analysis to assess differences in wages, business-owner earnings, and business-formation rates between white men and minorities and women in the wider construction economy. *Id.* at *14. The study found statistically significant disparities remained between white men and other groups, controlling for various independent variables such as age, education, location, industry affiliation, and time. *Id.* The disparities, according to the study, were consistent with a market affected by discrimination. *Id.*

The Tollway also presented additional evidence, including that the Tollway set aspirational participation goals on a small number of contracts, and those attempts failed. *Id.* at *14. In 2004, the court noted the Tollway did not award a single prime contract or subcontract to a DBE, and the DBE participation rate in 2005 was 0.01 percent across all construction contracts. *Id.* In addition, the Tollway also considered, like IDOT, anecdotal evidence that provided testimony of several DBE owners regarding barriers that they themselves faced. *Id.*

Midwest Fence's criticisms. Midwest Fence's expert consultant argued that the study consultant failed to account for DBEs' readiness, willingness, and ability to do business with IDOT and the Tollway, and that the method of assessing readiness and willingness was flawed. *Id.* at *14. In addition, the consultant for Midwest Fence argued that one of the studies failed to account for DBEs' relative capacity, "meaning a firm's ability to take on more than one contract at a time." The court noted that one of the study consultants did not account for firm capacity and the other study consultant found no effective way to account for capacity. *Id.* at *14, n. 2. The court said one study did

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

perform a regression analysis to measure relative capacity and limited its disparity analysis to contracts under \$500,000, which was, according to the study consultant, to take capacity into account to the extent possible. *Id.*

The court pointed out that one major problem with Midwest Fence’s report is that the consultant did not perform any substantive analysis of his own. *Id.* at *15. The evidence offered by Midwest Fence and its consultant was, according to the court, “speculative at best.” *Id.* at *15. The court said the consultant’s relative capacity analysis was similarly speculative, arguing that the assumption that firms have the same ability to provide services up to \$500,000 may not be true in practice, and that if the estimates of capacity are too low the resulting disparity index overstates the degree of disparity that exists. *Id.* at *15.

The court stated Midwest Fence’s expert similarly argued that the existence of the DBE program “may” cause an upward bias in availability, that any observations of the public sector in general “may” be affected by the DBE program’s existence, and that data become less relevant as time passes. *Id.* at *15. The court found that given the substantial utilization disparity as shown in the reports by IDOT and the Tollway defendants, Midwest Fence’s speculative critiques did not raise a genuine issue of fact as to whether the defendants had a substantial basis in evidence to believe that action was needed to remedy discrimination. *Id.* at *15.

The court rejected Midwest Fence’s argument that requiring it to provide an independent statistical analysis places an impossible burden on it due to the time and expense that would be required. *Id.* at *15. The court noted that the burden is initially on the government to justify its programs, and that since the state defendants offered evidence to do so, the burden then shifted to Midwest Fence to show a genuine issue of material fact as to whether the state defendants had a substantial

basis in evidence for adopting their DBE programs. *Id.* Speculative criticism about potential problems, the court found, will not carry that burden. *Id.*

With regard to the capacity question, the court noted it was Midwest Fence’s strongest criticism and that courts had recognized it as a serious problem in other contexts. *Id.* at *15. The court said the failure to account for relative capacity did not undermine the substantial basis in evidence in this particular case. *Id.* at *15. Midwest Fence did not explain how to account for relative capacity. *Id.* In addition, it has been recognized, the court stated, that defects in capacity analyses are not fatal in and of themselves. *Id.* at *15.

The court concluded that the studies show striking utilization disparities in specific industries in the relevant geographic market areas, and they are consistent with the anecdotal and less formal evidence defendants had offered. *Id.* at *15. The court found Midwest Fence’s expert’s “speculation” that failure to account for relative capacity might have biased DBE availability upward does not undermine the statistical core of the strong basis in evidence required. *Id.*

In addition, the court rejected Midwest Fence’s argument that the disparity studies do not prove discrimination, noting again that a state need not conclusively prove the existence of discrimination to establish a strong basis in evidence for concluding that remedial action is necessary, and that where gross statistical disparities can be shown, they alone may constitute prima facie proof of a pattern or practice of discrimination. *Id.* at *15. The court also rejected Midwest Fence’s attack on the anecdotal evidence stating that the anecdotal evidence bolsters the state defendants’ statistical analyses. *Id.* at *15.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

In connection with Midwest Fence’s argument relating to the Tollway defendant, Midwest Fence argued that the Tollway’s supporting data was from before it instituted its DBE program. *Id.* at *16. The Tollway responded by arguing that it used the best data available and that in any event its data sets show disparities. *Id.* at *16. The court found this point persuasive even assuming some of the Tollway’s data were not exact. *Id.* The court said that while every single number in the Tollway’s “arsenal of evidence” may not be exact, the overall picture still shows beyond reasonable dispute a marketplace with systemic under-utilization of DBEs far below the disparity index lower than 80 as an indication of discrimination, and that Midwest Fence’s “abstract criticisms” do not undermine that core of evidence. *Id.* at *16.

Narrow Tailoring. The court applied the narrow tailoring factors to determine whether IDOT’s and the Tollway’s implementation of their DBE programs yielded a close match between the evil against which the remedy is directed and the terms of the remedy. *Id.* at *16. First the court addressed the necessity for the relief and the efficacy of alternative race-neutral remedies factor. *Id.* The court reiterated that Midwest Fence has not undermined the defendants’ strong combination of statistical and other evidence to show that their programs are needed to remedy discrimination. *Id.*

Both IDOT and the Tollway, according to the court, use race- and gender-neutral alternatives, and the undisputed facts show that those alternatives have not been sufficient to remedy discrimination. *Id.* The court noted that the record shows IDOT uses nearly all of the methods described in the federal regulations to maximize a portion of the goal that will be achieved through race-neutral means. *Id.*

As for flexibility, both IDOT and the Tollway make front-end waivers available when a contractor has made good faith efforts to comply with a DBE goal. *Id.* at *17. The court rejected Midwest Fence’s arguments that there were a low number of waivers granted, and that contractors fear of having a waiver denied showed the system was a *de facto* quota system. *Id.* The court found that IDOT and the Tollway have not granted large numbers of waivers, but there was also no evidence that they have *denied* large numbers of waivers. *Id.* The court pointed out that the evidence from Midwest Fence does not show that defendants are responsible for failing to grant front-end waivers that the contractors do not request. *Id.*

The court stated in the absence of evidence that defendants failed to adhere to the general good faith effort guidelines and arbitrarily deny or discourage front-end waiver requests, Midwest Fence’s contention that contractors fear losing contracts if they ask for a waiver does not make the system a quota system. *Id.* at *17. Midwest Fence’s own evidence, the court stated, shows that IDOT granted in 2007, 57 of 63 front-end waiver requests, and in 2010, it granted 21 of 35 front-end waiver requests. *Id.* at *17. In addition, the Tollway granted at least some front-end waivers involving 1.02 percent of contract dollars. *Id.* Without evidence that far more waivers were requested, the court was satisfied that even this low total by the Tollway does not raise a genuine dispute of fact. *Id.*

The court also rejected as “underdeveloped” Midwest Fence’s argument that the court should look at the dollar value of waivers granted rather than the raw number of waivers granted. *Id.* at *17. The court found that this argument does not support a different outcome in this case because the defendants grant more front-end waiver requests than they deny, regardless of the dollar amounts those requests encompass. Midwest Fence presented no evidence that IDOT and the Tollway have an unwritten policy of granting only low-value waivers. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

The court stated that Midwest’s “best argument” against narrowed tailoring is its “mismatch” argument, which was discussed above. *Id.* at *17. The court said Midwest’s broad condemnation of the IDOT and Tollway programs as failing to create a “light” and “diffuse” burden for third parties was not persuasive. *Id.* The court noted that the DBE programs, which set DBE goals on only some contracts and allow those goals to be waived if necessary, may end up foreclosing one of several opportunities for a non-DBE specialty subcontractor like Midwest Fence. *Id.* But, there was no evidence that they impose the entire burden on that subcontractor by shutting it out of the market entirely. *Id.* However, the court found that Midwest Fence’s point that subcontractors appear to bear a disproportionate share of the burden as compared to prime contractors “is troubling.” *Id.* at *17.

Although the evidence showed disparities in both the prime contracting and subcontracting markets, under the federal regulations, individual contract goals are set only for contracts that have subcontracting possibilities. *Id.* The court pointed out that some DBEs are able to bid on prime contracts, but the necessarily small size of DBEs makes that difficult in most cases. *Id.*

But, according to the court, in the end the record shows that the problem Midwest Fence raises is largely “theoretical.” *Id.* at *18. Not all contracts have DBE goals, so subcontractors are on an even footing for those contracts without such goals. *Id.* IDOT and the Tollway both use neutral measures including some designed to make prime contracts more assessable to DBEs. *Id.* The court noted that DBE trucking and material suppliers count toward fulfillment of a contract’s DBE goal, even though they are not used as line items in calculating the contract goal in the first place, which opens up contracts with DBE goals to non-DBE subcontractors. *Id.*

The court stated that if Midwest Fence “had presented evidence rather than theory on this point, the result might be different.” *Id.* at *18. “Evidence that subcontractors were being frozen out of the market or bearing the entire burden of the DBE program would likely require a trial to determine at a minimum whether IDOT or the Tollway were adhering to their responsibility to avoid overconcentration in subcontracting.” *Id.* at *18. The court concluded that Midwest Fence “has shown how the Illinois program *could* yield that result but not that it actually does so.” *Id.*

In light of the IDOT and Tollway programs’ mechanisms to prevent subcontractors from having to bear the entire burden of the DBE programs, including the use of DBE materials and trucking suppliers in satisfying goals, efforts to draw DBEs into prime contracting, and other mechanisms, according to the court, Midwest Fence did not establish a genuine dispute of fact on this point. *Id.* at *18. The court stated that the “theoretical possibility of a ‘mismatch’ could be a problem, but we have no evidence that it actually is.” *Id.* at *18.

Therefore, the court concluded that IDOT and the Tollway DBE programs are narrowly tailored to serve the compelling state interest in remedying discrimination in public contracting. *Id.* at *18. They include race- and gender-neutral alternatives, set goals with reference to actual market conditions, and allow for front-end waivers. *Id.* “So far as the record before us shows, they do not unduly burden third parties in service of remedying discrimination,” according to the court. Therefore, Midwest Fence failed to present a genuine dispute of fact “on this point.” *Id.*

Petition for a Writ of Certiorari. Midwest Fence filed a Petition for a Writ of Certiorari to the United States Supreme Court in 2017, and Certiorari was denied. 2017 WL 497345 (2017).

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

2. *Dunnet Bay Construction Company v. Borggren, Illinois DOT, et al.*, 799 F.3d 676, 2015 WL 4934560 (7th Cir. 2015), cert. denied, *Dunnet Bay Construction Co. v. Blankenhorn, Randall S., et al.*, 2016 WL 193809 (Oct. 3, 2016).

Dunnet Bay Construction Company sued the Illinois Department of Transportation (IDOT) asserting that the Illinois DOT's DBE Program discriminates on the basis of race. The district court granted summary judgment to Illinois DOT, concluding that Dunnet Bay lacked standing to raise an equal protection challenge based on race, and held that the Illinois DOT DBE Program survived the constitutional and other challenges. 2015 WL 4934560 at *1. (See 2014 WL 552213, C.D. Ill. Fed. 12, 2014) (See summary of district decision in Section E. below). The Court of Appeals affirmed the grant of summary judgment to IDOT.

Dunnet Bay engages in general highway construction and is owned and controlled by two white males. 2015 WL 4934560 at *1. It's average annual gross receipts between 2007 and 2009 were over \$52 million. *Id.* IDOT administers its DBE Program implementing the Federal DBE Program. IDOT established a statewide aspirational goal for DBE participation of 22.77 percent. *Id.* at *2. Under IDOT's DBE Program, if a bidder fails to meet the DBE contract goal, it may request a modification of the goal, and provide documentation of its good faith efforts to meet the goal. *Id.* at *3. These requests for modification are also known as "waivers." *Id.*

The record showed that IDOT historically granted goal modification request or waivers: in 2007, it granted 57 of 63 pre-award goal modification requests; the six other bidders ultimately met the contract goal with post-bid assistance. *Id.* at *3. In 2008, IDOT granted 50 of the 55 pre-award goal modification requests; the other five bidders ultimately met the DBE goal. In calendar year 2009, IDOT granted 32 of 58 goal modification requests; the other contractors ultimately met the

goals. In calendar year 2010, IDOT received 35 goal modification requests; it granted 21 of them and denied the rest. *Id.*

Dunnet Bay alleged that IDOT had taken the position no waivers would be granted. *Id.* at *3-1. IDOT responded that it was not its policy to not grant waivers, but instead IDOT would aggressively pursue obtaining the DBE participation in their contract goals, including that waivers were going to be reviewed at a high level to make sure the appropriate documentation was provided in order for a waiver to be issued. *Id.*

The U.S. FHWA approved the methodology IDOT used to establish a statewide overall DBE goal of 22.77 percent. *Id.* at *5. The FHWA reviewed and approved the individual contract goals set for work on a project known as the Eisenhower project that Dunnet Bay bid on in 2010. *Id.* Dunnet Bay submitted to IDOT a bid that was the lowest bid on the project, but it was substantially over the budget estimate for the project. *Id.* at *5. Dunnet Bay did not achieve the goal of 22 percent, but three other bidders each met the DBE goal. *Id.* Dunnet Bay requested a waiver based on its good faith efforts to obtain the DBE goal. *Id.* at *6. Ultimately, IDOT determined that Dunnet Bay did not properly exercise good faith efforts and its bid was rejected. *Id.* at *6-9.

Because all the bids were over budget, IDOT decided to rebid the Eisenhower project. *Id.* at *8, *17. There were four separate Eisenhower projects advertised for bids, and IDOT granted one of the four goal modification requests from that bid letting. Dunnet Bay bid on one of the rebid projects, but it was not the lowest bid; it was the third out of five bidders. *Id.* at *9, *17. Dunnet Bay did meet the 22.77 percent contract DBE goal, on the rebid prospect, but was not awarded the contract because it was not the lowest. *Id.*

Dunnet Bay then filed its lawsuit seeking damages as well as a declaratory judgement that the IDOT DBE Program is unconstitutional and injunctive relief against its enforcement.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

The district court granted the IDOT Defendants' motion for summary judgment and denied Dunnet Bay's motion. *Id.* at *9. The district court concluded that Dunnet Bay lacked Article III standing to raise an equal protection challenge because it has not suffered a particularized injury that was called by IDOT, and that Dunnet Bay was not deprived of the ability to compete on an equal basis. *Id. Dunnet Bay Construction Company v. Hannig*, 2014 WL 552213, at *30 (C.D. Ill. Feb. 12, 2014).

Even if Dunnet Bay had standing to bring an equal protection claim, the district court held that IDOT was entitled to summary judgment. The district court concluded that Dunnet Bay was held to the same standards as every other bidder, and thus could not establish that it was the victim of racial discrimination. *Id.* at *31. In addition, the district court determined that IDOT had not exceeded its federal authority under the federal rules and that Dunnet Bay's challenge to the DBE Program failed under the Seventh Circuit Court of Appeals decision in *Northern Contracting, Inc. v. Illinois*, 473 F.3d 715, 721 (7th Cir. 2007), which insulates a state DBE Program from a constitutional attack absent a showing that the state exceeded its federal authority. *Id.* at *10. (See discussion of the district court decision in *Dunnet Bay* below in Section E).

Dunnet Bay lacks standing to raise an equal protection claim. The court first addressed the issue whether Dunnet Bay had standing to challenge IDOT's DBE Program on the ground that it discriminated on the basis of race in the award of highway construction contracts.

The court found that Dunnet Bay had not established that it was excluded from competition or otherwise disadvantaged because of race-based measures. *Id.* at *10. Nothing in IDOT's DBE Program, the court stated, excluded Dunnet Bay from competition for any contract. *Id.* at *13. IDOT's DBE Program is not a "set-aside program," in which nonminority owned businesses could not even bid on certain contracts.

Id. Under IDOT's DBE Program, all contractors, minority and nonminority contractors, can bid on all contracts. *Id.*

The court said the absence of complete exclusion from competition with minority- or women-owned businesses distinguished the IDOT DBE Program from other cases in which the court ruled there was standing to challenge a program. *Id.* at *13. Dunnet Bay, the court found, has not alleged and has not produced evidence to show that it was treated less favorably than any other contractor because of the race of its owners. *Id.* This lack of an explicit preference from minority-owned businesses distinguishes the IDOT DBE Program from other cases. *Id.* Under IDOT's DBE Program, all contractors are treated alike and subject to the same rules. *Id.*

In addition, the court distinguished other cases in which the contractors were found to have standing because in those cases standing was based in part on the fact they had lost an award of a contract for failing to meet the DBE goal or failing to show good faith efforts, despite being the low bidders on the contract, and the second lowest bidder was awarded the contract. *Id.* at *14. In contrast with these cases where the plaintiffs had standing, the court said Dunnet Bay could not establish that it would have been awarded the contract but for its failure to meet the DBE goal or demonstrate good faith efforts. *Id.* at 28.

The evidence established that Dunnet Bay's bid was substantially over the program estimated budget, and IDOT rebid the contract because the low bid was over the project estimate. *Id.* In addition, Dunnet Bay had been left off the For Bidders List that is submitted to DBEs, which was another reason IDOT decided to rebid the contract. *Id.*

The court found that even assuming Dunnet Bay could establish it was excluded from competition with DBEs or that it was disadvantaged as compared to DBEs, it could not show that any difference in treatment was because of race. *Id.* at *15. For the three years preceding 2010, the

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

year it bid on the project, Dunnet Bay's average gross receipts were over \$52 million. *Id.* Therefore, the court found Dunnet Bay's size makes it ineligible to qualify as a DBE, regardless of the race of its owners. *Id.* Dunnet Bay did not show that any additional costs or burdens that it would incur are because of race, but the additional costs and burdens are equally attributable to Dunnet Bay's size. *Id.* Dunnet Bay had not established, according to the court, that the denial of equal treatment resulted from the imposition of a racial barrier. *Id.*

Dunnet Bay also alleged that it was forced to participate in a discriminatory scheme and was required to consider race in subcontracting, and thus argued that it may assert third-party rights. *Id.* at *15. The court stated that it has not adopted the broad view of standing regarding asserting third-party rights. *Id.* at *16. The court concluded that Dunnet Bay's claimed injury of being forced to participate in a discriminatory scheme amounts to a challenge to the state's application of a federally mandated program, which the Seventh Circuit Court of Appeals has determined "must be limited to the question of whether the state exceeded its authority." *Id. quoting, Northern Contracting, 473 F.3d at 720-21.* The court found Dunnet Bay was not denied equal treatment because of racial discrimination, but instead any difference in treatment was equally attributable to Dunnet Bay's size. *Id.*

The court stated that Dunnet Bay did not establish causal or redressability. *Id.* at *17. It failed to demonstrate that the DBE Program caused it any injury during the first bid process. *Id.* IDOT did not award the contract to anyone under the first bid and re-let the contract. *Id.* Therefore, Dunnet Bay suffered no injury because of the DBE Program. *Id.* The court also found that Dunnet Bay could not establish redressability because IDOT's decision to re-let the contract redressed any injury. *Id.* at *17.

In addition, the court concluded that prudential limitations preclude Dunnet Bay from bringing its claim. *Id.* at *17. The court said that a litigant generally must assert his own legal rights and interests, and cannot rest his claim to relief on the legal rights or interests of third parties. *Id.* The court rejected Dunnet Bay's attempt to assert the equal protection rights of a nonminority-owned small business. *Id.* at *17-18.

Dunnet Bay did not produce sufficient evidence that IDOT's implementation of the Federal DBE Program constitutes race discrimination as it did not establish that IDOT exceeded its federal authority. The court said that in the alternative to denying Dunnet Bay standing, even if Dunnet Bay had standing, IDOT was still entitled to summary judgment. *Id.* at *18. The court stated that to establish an equal protection claim under the Fourteenth Amendment, Dunnet Bay must show that IDOT "acted with discriminatory intent." *Id.*

The court established the standard based on its previous ruling in the *Northern Contracting v. IDOT* case that in implementing its DBE Program, IDOT may properly rely on "the federal government's compelling interest in remedying the effects of past discrimination in the national construction market." *Id.* at *19, *quoting Northern Contracting, 473 F.3d at 720.* Significantly, the court held following its *Northern Contracting* decision as follows: "[A] state is insulated from [a constitutional challenge as to whether its program is narrowly tailored to achieve this compelling interest], absent a showing that the state exceeded its federal authority." *Id. quoting Northern Contracting, 473 F.3d at 721.*

Dunnet Bay contends that IDOT exceeded its federal authority by effectively creating racial quotas by designing the Eisenhower project to meet a pre-determined DBE goal and eliminating waivers. *Id.* at *19. Dunnet Bay asserts that IDOT exceeds its authority by: (1) setting the contract's DBE participation goal at 22 percent without the required

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

analysis; (2) implementing a “no-waiver” policy; (3) preliminarily denying its goal modification request without assessing its good faith efforts; (4) denying it a meaningful reconsideration hearing; (5) determining that its good faith efforts were inadequate; and (6) providing no written or other explanation of the basis for its good-faith-efforts determination. *Id.*

In challenging the DBE contract goal, Dunnet Bay asserts that the 22 percent goal was “arbitrary” and that IDOT manipulated the process to justify a preordained goal. *Id.* at *20. The court stated Dunnet Bay did not identify any regulation or other authority that suggests political motivations matter, provided IDOT did not exceed its federal authority in setting the contract goal. *Id.* Dunnet Bay does not actually challenge how IDOT went about setting its DBE goal on the contract. *Id.* Dunnet Bay did not point to any evidence to show that IDOT failed to comply with the applicable regulation providing only general guidance on contract goal setting. *Id.*

The FHWA approved IDOT’s methodology to establish its statewide DBE goal and approved the individual contract goals for the Eisenhower project. *Id.* at *20. Dunnet Bay did not identify any part of the regulation that IDOT allegedly violated by reevaluating and then increasing its DBE contract goal, by expanding the geographic area used to determine DBE availability, by adding pavement patching and landscaping work into the contract goal, by including items that had been set aside for small business enterprises, or by any other means by which it increased the DBE contract goal. *Id.*

The court agreed with the district court’s conclusion that because the federal regulations do not specify a procedure for arriving at contract goals, it is not apparent how IDOT could have exceeded its federal authority. *Id.* at 20.

The court found Dunnet Bay did not present sufficient evidence to raise a reasonable inference that IDOT had actually implemented a no-waiver policy. *Id.* at *20. The court noted IDOT had granted waivers in 2009 and in 2010 that amounted to 60 percent of the waiver requests. *Id.* The court stated that IDOT’s record of granting waivers refutes any suggestion of a no-waiver policy. *Id.*

The court did not agree with Dunnet Bay’s challenge that IDOT rejected its bid without determining whether it had made good faith efforts, pointing out that IDOT in fact determined that Dunnet Bay failed to document adequate good faith efforts, and thus it had complied with the federal regulations. *Id.* at *21. The court found IDOT’s determination that Dunnet Bay failed to show good faith efforts was supported in the record. *Id.* The court noted the reasons provided by IDOT, included Dunnet Bay did not utilize IDOT’s supportive services, and that the other bidders all met the DBE goal, whereas Dunnet Bay did not come close to the goal in its first bid. *Id.* at 21-22.

The court said the performance of other bidders in meeting the contract goal is listed in the federal regulations as a consideration when deciding whether a bidder has made good faith efforts to obtain DBE participation goals, and was a proper consideration. *Id.* at *22. The court said Dunnet Bay’s efforts to secure the DBE participation goal may have been hindered by the omission of Dunnet Bay from the For Bid List, but found the rebidding of the contract remedied that oversight. *Id.*

Conclusion. The court affirmed the district court’s grant of summary judgement to the Illinois DOT, concluding that Dunnet Bay lacks standing, and that the Illinois DBE Program implementing the Federal DBE Program survived the constitutional and other challenges made by Dunnet Bay.

Petition for a Writ of Certiorari. Dunnet Bay filed a Petition for a Writ of Certiorari to the United States Supreme Court in 2016. The Petition was denied by the Supreme Court.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

3. *Northern Contracting, Inc. v. Illinois*, 473 F.3d 715 (7th Cir. 2007)

In *Northern Contracting, Inc. v. Illinois*, the Seventh Circuit affirmed the district court decision upholding the validity and constitutionality of the Illinois Department of Transportation's ("IDOT") DBE Program. Plaintiff Northern Contracting Inc. ("NCI") was a white male-owned construction company specializing in the construction of guardrails and fences for highway construction projects in Illinois. 473 F.3d 715, 717 (7th Cir. 2007). Initially, NCI challenged the constitutionality of both the federal regulations and the Illinois statute implementing these regulations. *Id.* at 719. The district court granted the USDOT's Motion for Summary Judgment, concluding that the federal government had demonstrated a compelling interest and that TEA-21 was sufficiently narrowly tailored. NCI did not challenge this ruling and thereby forfeited the opportunity to challenge the federal regulations. *Id.* at 720. NCI also forfeited the argument that IDOT's DBE program did not serve a compelling government interest. *Id.* The sole issue on appeal to the Seventh Circuit was whether IDOT's program was narrowly tailored. *Id.*

IDOT typically adopted a new DBE plan each year. *Id.* at 718. In preparing for Fiscal Year 2005, IDOT retained a consulting firm to determine DBE availability. *Id.* The consultant first identified the relevant geographic market (Illinois) and the relevant product market (transportation infrastructure construction). *Id.* The consultant then determined availability of minority- and women-owned firms through analysis of Dun & Bradstreet's Marketplace data. *Id.* This initial list was corrected for errors in the data by surveying the D&B list. *Id.* In light of these surveys, the consultant arrived at a DBE availability of 22.77 percent. *Id.* The consultant then ran a regression analysis on earnings and business information and concluded that in the absence of discrimination, relative DBE availability would be 27.5 percent. *Id.* IDOT considered this, along with other data, including DBE utilization on IDOTs "zero goal" experiment conducted in 2002 to 2003, in which IDOT

did not use DBE goals on 5 percent of its contracts (1.5% utilization) and data of DBE utilization on projects for the Illinois State Toll Highway Authority which does not receive federal funding and whose goals are completely voluntary (1.6% utilization). *Id.* at 719. On the basis of all of this data, IDOT adopted a 22.77 percent goal for 2005. *Id.*

Despite the fact the NCI forfeited the argument that IDOT's DBE program did not serve a compelling state interest, the Seventh Circuit briefly addressed the compelling interest prong of the strict scrutiny analysis, noting that IDOT had satisfied its burden. *Id.* at 720. The court noted that, post-*Adarand*, two other circuits have held that a state may rely on the federal government's compelling interest in implementing a local DBE plan. *Id.* at 720-21, citing *Western States Paving Co., Inc. v. Washington State DOT*, 407 F.3d 983, 987 (9th Cir. 2005), cert. denied, 126 S.Ct. 1332 (Feb. 21, 2006) and *Sherbrooke Turf, Inc. v. Minnesota DOT*, 345 F.3d 964, 970 (8th Cir. 2003), cert. denied, 541 U.S. 1041 (2004). The court stated that NCI had not articulated any reason to break ranks from the other circuits and explained that "[i]nsofar as the state is merely complying with federal law it is acting as the agent of the federal government If the state does exactly what the statute expects it to do, and the statute is conceded for purposes of litigation to be constitutional, we do not see how the state can be thought to have violated the Constitution." *Id.* at 721, quoting *Milwaukee County Pavers Association v. Fielder*, 922 F.2d 419, 423 (7th Cir. 1991). The court did not address whether IDOT had an independent interest that could have survived constitutional scrutiny.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

In addressing the narrowly tailored prong with respect to IDOT’s DBE program, the court held that IDOT had complied. *Id.* The court concluded its holding in *Milwaukee* that a state is insulated from a constitutional attack absent a showing that the state exceeded its federal authority remained applicable. *Id.* at 721-22. The court noted that the Supreme Court in *Adarand Constructors v. Peña*, 515 U.S. 200 (1995) did not seize the opportunity to overrule that decision, explaining that the Court did not invalidate its conclusion that a challenge to a state’s application of a federally mandated program must be limited to the question of whether the state exceeded its authority. *Id.* at 722.

The court further clarified the *Milwaukee* opinion in light of the interpretations of the opinions offered in by the Ninth Circuit in *Western States* and Eighth Circuit in *Sherbrooke*. *Id.* The court stated that the Ninth Circuit in *Western States* misread the *Milwaukee* decision in concluding that *Milwaukee* did not address the situation of an as-applied challenge to a DBE program. *Id.* at 722, n. 5. Relatedly, the court stated that the Eighth Circuit’s opinion in *Sherbrooke* (that the *Milwaukee* decision was compromised by the fact that it was decided under the prior law “when the 10 percent federal set-aside was more mandatory”) was unconvincing since all recipients of federal transportation funds are still required to have compliant DBE programs. *Id.* at 722. Federal law makes more clear now that the compliance could be achieved even with no DBE utilization if that were the result of a good faith use of the process. *Id.* at 722, n. 5. The court stated that IDOT in this case was acting as an instrument of federal policy and NCI’s collateral attack on the federal regulations was impermissible. *Id.* at 722.

The remainder of the court’s opinion addressed the question of whether IDOT exceeded its grant of authority under federal law, and held that all of NCI’s arguments failed. *Id.* First, NCI challenged the method by which the local base figure was calculated, the first step in the goal-setting process. *Id.* NCI argued that the number of registered and prequalified DBEs in Illinois should have simply been counted. *Id.* The court stated that while the federal regulations list several examples of methods for determining the local base figure, *Id.* at 723, these examples are not intended as an exhaustive list. The court pointed out that the fifth item in the list is entitled “Alternative Methods,” and states: “You may use other methods to determine a base figure for your overall goal. Any methodology you choose must be based on demonstrable evidence of local market conditions and be designated to ultimately attain a goal that is rationally related to the relative availability of DBEs in your market.” *Id.* (citing 49 CFR § 26.45(c)(5)). According to the court, the regulations make clear that “relative availability” means “the availability of ready, willing and able DBEs relative to all business ready, willing, and able to participate” on DOT contracts. *Id.* The court stated NCI pointed to nothing in the federal regulations that indicated that a recipient must so narrowly define the scope of the ready, willing, and available firms to a simple count of the number of registered and prequalified DBEs. *Id.* The court agreed with the district court that the remedial nature of the federal scheme militates in favor of a method of DBE availability calculation that casts a broader net. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

Second, NCI argued that the IDOT failed to properly adjust its goal based on local market conditions. *Id.* The court noted that the federal regulations do not require any adjustments to the base figure, but simply provide recipients with authority to make such adjustments if necessary. *Id.* According to the court, NCI failed to identify any aspect of the regulations requiring IDOT to separate prime contractor availability from subcontractor availability, and pointed out that the regulations require the local goal to be focused on overall DBE participation. *Id.*

Third, NCI contended that IDOT violated the federal regulations by failing to meet the maximum feasible portion of its overall goal through race-neutral means of facilitating DBE participation. *Id.* at 723-24. NCI argued that IDOT should have considered DBEs who had won subcontracts on goal projects where the prime contractor did not consider DBE status, instead of only considering DBEs who won contracts on no-goal projects. *Id.* at 724. The court held that while the regulations indicate that where DBEs win subcontracts on goal projects strictly through low bid this can be counted as race-neutral participation, the regulations did not require IDOT to search for this data, for the purpose of calculating past levels of race-neutral DBE participation. *Id.* According to the court, the record indicated that IDOT used nearly all the methods described in the regulations to maximize the portion of the goal that will be achieved through race-neutral means. *Id.*

The court affirmed the decision of the district court upholding the validity of the IDOT DBE program and found that it was narrowly tailored to further a compelling governmental interest. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

4. *Sherbrooke Turf, Inc. v. Minnesota DOT, and Gross Seed Company v. Nebraska Department of Roads*, 345 F.3d 964 (8th Cir. 2003), cert. denied, 541 U.S. 1041 (2004)

This case is instructive in its analysis of state DOT DBE-type programs and their evidentiary basis and implementation. This case also is instructive in its analysis of the narrowly tailored requirement for state DBE programs. In upholding the challenged Federal DBE Program at issue in this case the Eighth Circuit emphasized the race-, ethnicity- and gender-neutral elements, the ultimate flexibility of the Program, and the fact the Program was tied closely only to labor markets with identified discrimination.

In *Sherbrooke Turf, Inc. v. Minnesota DOT, and Gross Seed Company v. Nebraska Department of Roads*, the U.S. Court of Appeals for the Eighth Circuit upheld the constitutionality of the Federal DBE Program (49 CFR Part 26). The court held the Federal Program was narrowly tailored to remedy a compelling governmental interest. The court also held the federal regulations governing the states' implementation of the Federal DBE Program were narrowly tailored, and the state DOT's implementation of the Federal DBE Program was narrowly tailored to serve a compelling government interest.

Sherbrooke and *Gross Seed* both contended that the Federal DBE Program on its face and as applied in Minnesota and Nebraska violated the Equal Protection component of the Fifth Amendment's Due Process Clause. The Eighth Circuit engaged in a review of the Federal DBE Program and the implementation of the Program by the Minnesota DOT and the Nebraska Department of Roads ("Nebraska DOR") under a strict scrutiny analysis and held that the Federal DBE Program was valid and constitutional and that the Minnesota DOT's and Nebraska DOR's implementation of the Program also was constitutional and valid. Applying the strict scrutiny analysis, the court first considered whether

the Federal DBE Program established a compelling governmental interest, and found that it did. It concluded that Congress had a strong basis in evidence to support its conclusion that race-based measures were necessary for the reasons stated by the Tenth Circuit in *Adarand*, 228 F.3d at 1167-76. Although the contractors presented evidence that challenged the data, they failed to present affirmative evidence that no remedial action was necessary because minority-owned small businesses enjoy non-discriminatory access to participation in highway contracts. Thus, the court held they failed to meet their ultimate burden to prove that the DBE Program is unconstitutional on this ground.

Finally, *Sherbrooke* and *Gross Seed* argued that the Minnesota DOT and Nebraska DOR must independently satisfy the compelling governmental interest test aspect of strict scrutiny review. The government argued, and the district courts below agreed, that participating states need not independently meet the strict scrutiny standard because under the DBE Program the state must still comply with the DOT regulations. The Eighth Circuit held that this issue was not addressed by the Tenth Circuit in *Adarand*. The Eighth Circuit concluded that neither side's position is entirely sound.

The court rejected the contention of the contractors that their facial challenges to the DBE Program must be upheld unless the record before Congress included strong evidence of race discrimination in construction contracting in Minnesota and Nebraska. On the other hand, the court held a valid race-based program must be narrowly tailored, and to be narrowly tailored, a national program must be limited to those parts of the country where its race-based measures are demonstrably needed to the extent that the federal government delegates this tailoring function, as a state's implementation becomes relevant to a reviewing court's strict scrutiny. Thus, the court left the question of state implementation to the narrow tailoring analysis.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

The court held that a reviewing court applying strict scrutiny must determine if the race-based measure is narrowly tailored. That is, whether the means chosen to accomplish the government’s asserted purpose are specifically and narrowly framed to accomplish that purpose. The contractors have the ultimate burden of establishing that the DBE Program is not narrowly tailored. *Id.* The compelling interest analysis focused on the record before Congress; the narrow-tailoring analysis looks at the roles of the implementing highway construction agencies.

For determining whether a race-conscious remedy is narrowly tailored, the court looked at factors such as the efficacy of alternative remedies, the flexibility and duration of the race-conscious remedy, the relationship of the numerical goals to the relevant labor market, and the impact of the remedy on third parties. *Id.* Under the DBE Program, a state receiving federal highway funds must, on an annual basis, submit to USDOT an overall goal for DBE participation in its federally funded highway contracts. *See*, 49 CFR § 26.45(f)(1). The overall goal “must be based on demonstrable evidence” as to the number of DBEs who are ready, willing, and able to participate as contractors or subcontractors on federally assisted contracts. 49 CFR § 26.45(b). The number may be adjusted upward to reflect the state’s determination that more DBEs would be participating absent the effects of discrimination, including race-related barriers to entry. *See*, 49 CFR § 26.45(d).

The state must meet the “maximum feasible portion” of its overall goal by race-neutral means and must submit for approval a projection of the portion it expects to meet through race-neutral means. *See*, 49 CFR § 26.45(a), (c). If race-neutral means are projected to fall short of achieving the overall goal, the state must give preference to firms it has certified as DBEs. However, such preferences may not include quotas. 49 CFR § 26.45(b). During the course of the year, if a state determines that it will exceed or fall short of its overall goal, it must adjust its use of

race-conscious and race-neutral methods “[t]o ensure that your DBE program continues to be narrowly tailored to overcome the effects of discrimination.” 49 CFR § 26.51(f).

Absent bad faith administration of the program, a state’s failure to achieve its overall goal will not be penalized. *See*, 49 CFR § 26.47. If the state meets its overall goal for two consecutive years through race-neutral means, it is not required to set an annual goal until it does not meet its prior overall goal for a year. *See*, 49 CFR § 26.51(f)(3). In addition, DOT may grant an exemption or waiver from any and all requirements of the Program. *See*, 49 CFR § 26.15(b).

Like the district courts below, the Eighth Circuit concluded that the USDOT regulations, on their face, satisfy the Supreme Court’s narrowing tailoring requirements. First, the regulations place strong emphasis on the use of race-neutral means to increase minority business participation in government contracting. 345 F.3d at 972. Narrow tailoring does not require exhaustion of every conceivable race-neutral alternative, but it does require serious good faith consideration of workable race-neutral alternatives. 345 F.3d at 971, *citing Grutter v. Bollinger*, 539 U.S. 306.

Second, the revised DBE program has substantial flexibility. A state may obtain waivers or exemptions from any requirements and is not penalized for a good faith effort to meet its overall goal. In addition, the program limits preferences to small businesses falling beneath an earnings threshold, and any individual whose net worth exceeds \$750,000.00 cannot qualify as economically disadvantaged. *See*, 49 CFR § 26.67(b). Likewise, the DBE program contains built-in durational limits. 345 F.3d at 972. A state may terminate its DBE program if it meets or exceeds its annual overall goal through race-neutral means for two consecutive years. *Id.*; 49 CFR § 26.51(f)(3).

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

Third, the court found, the USDOT has tied the goals for DBE participation to the relevant labor markets. The regulations require states to set overall goals based upon the likely number of minority contractors that would have received federal assisted highway contracts but for the effects of past discrimination. *See*, 49 CFR § 26.45(c)-(d)(Steps 1 and 2). Though the underlying estimates may be inexact, the exercise requires states to focus on establishing realistic goals for DBE participation in the relevant contracting markets. *Id.* at 972.

Finally, Congress and DOT have taken significant steps, the court held, to minimize the race-based nature of the DBE Program. Its benefits are directed at all small businesses owned and controlled by the socially and economically disadvantaged. While TEA-21 creates a presumption that members of certain racial minorities fall within that class, the presumption is rebuttable, wealthy minority owners and wealthy minority-owned firms are excluded, and certification is available to persons who are not presumptively disadvantaged that demonstrate actual social and economic disadvantage. Thus, race is made relevant in the Program, but it is not a determinative factor. 345 F.3d at 973. For these reasons, the court agreed with the district courts that the revised DBE Program is narrowly tailored on its face.

Sherbrooke and *Gross Seed* also argued that the DBE Program as applied in Minnesota and Nebraska is not narrowly tailored. Under the Federal Program, states set their own goals, based on local market conditions; their goals are not imposed by the federal government; nor do recipients have to tie them to any uniform national percentage. 345 F.3d at 973, citing 64 Fed. Reg. at 5102.

The court analyzed what Minnesota and Nebraska did in connection with their implementation of the Federal DBE Program. Minnesota DOT commissioned a disparity study of the highway contracting market in Minnesota. The study group determined that DBEs made up 11.4

percent of the prime contractors and subcontractors in a highway construction market. Of this number, 0.6 percent were minority-owned and 10.8 percent women-owned. Based upon its analysis of business formation statistics, the consultant estimated that the number of participating minority-owned business would be 34 percent higher in a race-neutral market. Therefore, the consultant adjusted its DBE availability figure from 11.4 percent to 11.6 percent. Based on the study, Minnesota DOT adopted an overall goal of 11.6 percent DBE participation for federally assisted highway projects. Minnesota DOT predicted that it would need to meet 9 percent of that overall goal through race and gender-conscious means, based on the fact that DBE participation in State highway contracts dropped from 10.25 percent in 1998 to 2.25 percent in 1999 when its previous DBE Program was suspended by the injunction by the district court in an earlier decision in *Sherbrooke*. Minnesota DOT required each prime contract bidder to make a good faith effort to subcontract a prescribed portion of the project to DBEs, and determined that portion based on several individualized factors, including the availability of DBEs in the extent of subcontracting opportunities on the project.

The contractor presented evidence attacking the reliability of the data in the study, but it failed to establish that better data were available or that Minnesota DOT was otherwise unreasonable in undertaking this thorough analysis and relying on its results. *Id.* The precipitous drop in DBE participation when no race-conscious methods were employed, the court concluded, supports Minnesota DOT's conclusion that a substantial portion of its overall goal could not be met with race-neutral measures. *Id.* On that record, the court agreed with the district court that the revised DBE Program serves a compelling government interest and is narrowly tailored on its face and as applied in Minnesota.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

In Nebraska, the Nebraska DOR commissioned a disparity study also to review availability and capability of DBE firms in the Nebraska highway construction market. The availability study found that between 1995 and 1999, when Nebraska followed the mandatory 10 percent set-aside requirement, 9.95 percent of all available and capable firms were DBEs, and DBE firms received 12.7 percent of the contract dollars on federally assisted projects. After apportioning part of this DBE contracting to race-neutral contracting decisions, Nebraska DOR set an overall goal of 9.95 percent DBE participation and predicted that 4.82 percent of this overall goal would have to be achieved by race-and-gender conscious means. The Nebraska DOR required that prime contractors make a good faith effort to allocate a set portion of each contract's funds to DBE subcontractors. The Eighth Circuit concluded that Gross Seed, like Sherbrooke, failed to prove that the DBE Program is not narrowly tailored as applied in Nebraska. Therefore, the court affirmed the district courts' decisions in *Gross Seed* and *Sherbrooke*. (See district court opinions discussed *infra*.)

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

5. *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147 (10th Cir. 2000) cert. granted then dismissed as improvidently granted sub nom. *Adarand Constructors, Inc. v. Mineta*, 532 U.S. 941, 534 U.S. 103 (2001)

This is the *Adarand* decision by the United States Court of Appeals for the Tenth Circuit, which was on remand from the earlier Supreme Court decision applying the strict scrutiny analysis to any constitutional challenge to the Federal DBE Program. See *Adarand Constructors, Inc. v. Pena*, 515 U.S. 200 (1995). The decision of the Tenth Circuit in this case was considered by the United States Supreme Court, after that court granted certiorari to consider certain issues raised on appeal. The Supreme Court subsequently dismissed the writ of certiorari “as improvidently granted” without reaching the merits of the case. The court did not decide the constitutionality of the Federal DBE Program as it applies to state DOTs or local governments.

The Supreme Court held that the Tenth Circuit had not considered the issue before the Supreme Court on certiorari, namely whether a race-based program applicable to direct federal contracting is constitutional. This issue is distinguished from the issue of the constitutionality of the USDOT DBE Program as it pertains to procurement of federal funds for highway projects let by states, and the implementation of the Federal DBE Program by state DOTs. Therefore, the Supreme Court held it would not reach the merits of a challenge to federal laws relating to direct federal procurement.

Turning to the Tenth Circuit decision in *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147 (10th Cir. 2000), the Tenth Circuit upheld in general the facial constitutionality of the Federal DBE Program. The court found that the federal government had a compelling interest in not perpetuating the effects of racial discrimination in its own distribution of federal funds and in remediating the effects of past discrimination in government contracting, and that the evidence supported the existence of past and present discrimination sufficient to justify the Federal DBE Program. The court also held that the Federal DBE Program is “narrowly tailored,” and therefore upheld the constitutionality of the Federal DBE Program.

It is significant to note that the court in determining the Federal DBE Program is “narrowly tailored” focused on the current regulations, 49 CFR Part 26, and in particular § 26.1(a), (b), and (f). The court pointed out that the federal regulations instruct recipients as follows:

[y]ou must meet the maximum feasible portion of your overall goal by using race-neutral means of facilitating DBE participation, 49 CFR § 26.51(a)(2000); see also 49 CFR § 26.51(f)(2000) (if a recipient can meet its overall goal through race-neutral means, it must implement its program without the use of race-conscious contracting measures), and enumerate a list of race-neutral measures, see 49 CFR § 26.51(b)(2000). The current regulations also outline several race-neutral means available to program recipients including assistance in overcoming bonding and financing obstacles, providing technical assistance, establishing programs to assist start-up firms, and other methods. See 49 CFR § 26.51(b). We therefore are dealing here with revisions that emphasize the continuing need to employ non-race-conscious methods even as the need for race-conscious remedies is recognized. 228 F.3d at 1178-1179.

L. Legal — Other federal circuit courts of appeal decisions involving the Federal DBE Program

In considering whether the Federal DBE Program is narrowly tailored, the court also addressed the argument made by the contractor that the program is over- and under-inclusive for several reasons, including that Congress did not inquire into discrimination against each particular minority racial or ethnic group. The court held that insofar as the scope of inquiry suggested was a particular state's construction industry alone, this would be at odds with its holding regarding the compelling interest in Congress's power to enact nationwide legislation. *Id.* at 1185-1186. The court held that because of the "unreliability of racial and ethnic categories and the fact that discrimination commonly occurs based on much broader racial classifications," extrapolating findings of discrimination against the various ethnic groups "is more a question of nomenclature than of narrow tailoring." *Id.* The court found that the "Constitution does not erect a barrier to the government's effort to combat discrimination based on broad racial classifications that might prevent it from enumerating particular ethnic origins falling within such classifications." *Id.*

Finally, the Tenth Circuit did not specifically address a challenge to the letting of federally funded construction contracts by state departments of transportation. The court pointed out that plaintiff Adarand "conceded that its challenge in the instant case is to 'the federal program, implemented by federal officials,' and not to the letting of federally funded construction contracts by state agencies." 228 F.3d at 1187. The court held that it did not have before it a sufficient record to enable it to evaluate the separate question of Colorado DOT's implementation of race-conscious policies. *Id.* at 1187-1188.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

G. Recent Court Decisions Regarding the Federal DBE Program in Other Jurisdictions

1. *United States v. Taylor*, 232 F.Supp. 3d 741 (W.D. Penn 2017)

In a recent criminal case that is noteworthy because it involved a challenge to the Federal DBE Program, a federal district court in the Western District of Pennsylvania upheld the Indictment by the United States against Defendant Taylor who had been indicted on multiple counts arising out of a scheme to defraud the United States Department of Transportation's Disadvantaged Business Enterprise Program ("Federal DBE Program"). *United States v. Taylor*, 232 F.Supp. 3d 741, 743 (W.D. Penn. 2017). Also, the court in denying the motion to dismiss the Indictment upheld the federal regulations in issue against a challenge to the Federal DBE Program.

Procedural and case history. This was a white-collar criminal case arising from a fraud on the Federal DBE Program by Century Steel Erectors ("CSE") and WMCC, Inc., and their respective principals. In this case, the Government charged one of the owners of CSE, Defendant Donald Taylor, with fourteen separate criminal offenses. The Government asserted that Defendant and CSE used WMCC, Inc., a certified DBE as a "front" to obtain 13 federally funded highway construction contracts requiring DBE status, and that CSE performed the work on the jobs while it was represented to agencies and contractors that WMCC would be performing the work. *Id.* at 743.

The Government contended that WMCC did not perform a "commercially useful function" on the jobs as the DBE regulations require and that CSE personnel did the actual work concealing from general contractors and government entities that CSE and its personnel were doing the work. *Id.* WMCC's principal was paid a relatively nominal "fixed-fee" for permitting use of WMCC's name on each of these subcontracts. *Id.* at 744.

Defendant's contentions. This case concerned *inter alia* a motion to dismiss the Indictment. Defendant argued that Count One must be dismissed because he had been mischarged under the "defraud clause" of [18 U.S.C. § 371](#), in that the allegations did not support a charge that he defrauded the United States. *Id.* at 745. He contended that the DBE program is administered through state and county entities, such that he could not have defrauded the United States, which he argued merely provides funding to the states to administer the DBE program. *Id.*

Defendant also argued that the Indictment must be dismissed because the underlying federal regulations, [49 C.F.R. § 26.55\(c\)](#), that support the counts against him were void for vagueness as applied to the facts at issue. *Id.* More specifically, he challenged the definition of "commercially useful function" set forth in the regulations and also contended that Congress improperly delegated its duties to the Executive branch in promulgating the federal regulations at issue. *Id.* at 745.

Federal government position. The Government argued that the charge at Count One was supported by the allegations in the Indictment which made clear that the charge was for defrauding the United States' Federal DBE Program rather than the state and county entities. *Id.* The Government also argued that the challenged federal regulations are neither unconstitutionally vague nor were they promulgated in violation of the principles of separation of powers. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Material facts in Indictment. The court pointed out that the Pennsylvania Department of Transportation (“PennDOT”) and the Pennsylvania Turnpike Commission (“PTC”) receive federal funds from FHWA for federally funded highway projects and, as a result, are required to establish goals and objectives in administering the DBE Program. *Id.* at 745. State and local authorities, the court stated, are also delegated the responsibility to administer the program by, among other things, certifying entities as DBEs; tracking the usage of DBEs on federally funded highway projects through the award of credits to general contractors on specific projects; and reporting compliance with the participation goals to the federal authorities. *Id.* at 745-746.

WMCC received 13 federally funded subcontracts totaling approximately \$2.34 million under PennDOT’s and PTC’s DBE program and WMCC was paid a total of \$1.89 million.” *Id.* at 746 . These subcontracts were between WMCC and a general contractor, and required WMCC to furnish and erect steel and/or precast concrete on federally funded Pennsylvania highway projects. *Id.* Under PennDOT’s program, the entire amount of WMCC’s subcontract with the general contractor, including the cost of materials and labor, was counted toward the general contractor’s DBE goal because WMCC was certified as a DBE and “ostensibly performed a commercially useful function in connection with the subcontract.” *Id.*

The stated purpose of the conspiracy was for Defendant and his co-conspirators to enrich themselves by using WMCC as a “front” company to fraudulently obtain the profits on DBE subcontracts slotted for legitimate DBE’s and to increase CSE profits by marketing CSE to general contractors as a “one-stop shop,” which could not only provide the concrete or steel beams, but also erect the beams and provide the general contractor with DBE credits. *Id.* at 746 .

As a result of these efforts, the court said the “conspirators” caused the general contractors to pay WMCC for DBE subcontracts and were deceived into crediting expenditures toward DBE participation goals, although they were not eligible for such credits because WMCC was not performing a commercially useful function on the jobs. *Id.* at 747. CSE also obtained profits from DBE subcontracts that it was not entitled to receive as it was not a DBE and thereby precluded legitimate DBE’s from obtaining such contracts. *Id.*

Motion to Dismiss — challenges to Federal DBE Regulations.

Defendant sought dismissal of the Indictment by contesting the propriety of the underlying federal regulations in several different respects, including claiming that [49 C.F.R. § 26.55\(c\)](#) was “void for vagueness” because the phrase “commercially useful function” and other phrases therein were not sufficiently defined. *Id.* at 754. Defendant also presented a non-delegation challenge to the regulatory scheme involving the DBE Program. *Id.* The Government countered that dismissal of the Indictment was not justified under these theories and that the challenges to the regulations should be overruled. The court agreed with the Government’s position and denied the motion to dismiss. *Id.* at 754.

The court disagreed with Defendant’s assessment that the challenged DBE regulations are so vague that people of ordinary intelligence cannot ascertain the meaning of same, including the phrases “commercially useful function;” “industry practices;” and “other relevant factors.” *Id.* at 755, *citing*, [49 C.F.R. § 26.55\(c\)](#). The court noted that other federal courts have rejected vagueness and related challenges to the federal DBE regulations in both civil, *see* [Midwest Fence Corp. v. United States Dep’t of Transp.](#), 840 F.3d 932 (7th Cir. 2016) (rejecting vagueness challenge to [49 C.F.R. § 26.53\(a\)](#) and “good faith efforts” language), and criminal matters, *United States v. Maxwell*, 579 F.3d 1282, at 1302 (11th Cir. 2009).

L. Legal — Other recent district court decisions regarding the Federal DBE Program

With respect to the alleged vagueness of the phrase “commercially useful function,” the court found the regulations both specifically describes the types of activities that: (1) fall within the definition of that phrase in [§ 26.55\(c\)\(1\)](#); and, (2) are beyond the scope of the definition of that phrase in [§ 26.55\(c\)\(2\)](#). *Id.* at 755, *citing*, [49 C.F.R. §§ 26.55\(c\)\(1\)–\(2\)](#). The phrases “industry practices” and “other relevant factors” are undefined, the court said, but “an undefined word or phrase does not render a statute void when a court could ascertain the term’s meaning by reading it in context.” *Id.* at 756.

The context, according to the court, is that these federal DBE regulations are used in a comprehensive regulatory scheme by the DOT and FHWA to ensure participation of DBEs in federally funded highway construction projects. *Id.* at 756. These particular phrases, the court pointed out, are also not the most prominently featured in the regulations as they are utilized in a sentence describing how to determine if the activities of a DBE constitute a “commercially useful function.” *Id.*, *citing*, [49 C.F.R. § 26.55\(c\)](#).

While Defendant suggested that the language of these undefined phrases was overbroad, the court held it is necessarily limited by [§ 26.55\(c\)\(2\)](#), expressly stating that “[a] DBE does not perform a commercially useful function if its role is limited to that of an extra participant in a transaction, contract, or project through which funds are passed in order to obtain the appearance of DBE participation.” *Id.* at 756, *quoting*, [49 C.F.R. § 26.55\(c\)](#).

The district court in this case also found persuasive the reasoning of both the United States District Court for the Southern District of Florida and the United States Court of Appeals for the Eleventh Circuit, construing the federal DBE regulations in [United States v. Maxwell](#). *Id.* at 756. The court noted that in [Maxwell](#), the defendant argued in a post-trial motion that [§ 26.55\(c\)](#) was “ambiguous” and the evidence

presented at trial showing that he violated this regulation could not support his convictions for various mail and wire fraud offenses. *Id.* at 756. The trial court disagreed, holding that:

the rules involving which entities must do the DBE/CSBE work are not ambiguous, or susceptible to different but equally plausible interpretations. Rather, the rules clearly state that a DBE [...] is required to do its own work, which includes managing, supervising and performing the work involved And, under the federal program, it is clear that the DBE is also required to negotiate, order, pay for, and install its own materials.

Id. at 756, *quoting*, [United States v. Maxwell](#), 579 F.3d 1282, 1302 (11th Cir. 2009). The defendant in [Maxwell](#), the court said, made this same argument on appeal to the Eleventh Circuit, which soundly rejected it, explaining that:

[b]oth the County and federal regulations explicitly say that a CSBE or DBE is required to perform a commercially useful function. Both regulatory schemes define a commercially useful function as being responsible for the execution of the contract and actually performing, managing, and supervising the work involved. And the DBE regulations make clear that a DBE does not perform a commercially useful function if its role is limited to that of an extra participant in a transaction, contract, or project through which funds are passed in order to obtain the appearance of DBE participation. [49 C.F.R. § 26.55\(c\)\(2\)](#). There is no obvious ambiguity about whether a CSBE or DBE subcontractor performs a commercially useful function when the job is managed by the primary contractor, the work is performed by the employees of the primary contractor, the primary contractor does all of the negotiations, evaluations, and payments for the necessary materials, and the subcontractor does nothing more than provide a minimal amount of labor and serve as a signatory on two-party checks. In short, no matter

L. Legal — Other recent district court decisions regarding the Federal DBE Program

how these regulations are read, the jury could conclude that what FLP did was not the performance of a “commercially useful function.”

Id. at 756, quoting, [United States v. Maxwell](#), 579 F.3d 1282, 1302 (11th Cir. 2009).

Thus, the Western District of Pennsylvania federal district court in this case concluded the Eleventh Circuit in [Maxwell](#) found that the federal regulations were sufficient in the context of a scheme similar to that charged against Defendant Taylor in this case: WMCC was “fronted” as the DBE, receiving a fixed fee for passing through funds to CSE, which utilized its personnel to perform virtually all of the work under the subcontracts. *Id.* at 757.

Federal DBE regulations are authorized by Congress and the Federal DBE Program has been upheld by the courts. The court stated Defendant’s final argument to dismiss the charges relied upon his unsupported claims that the U.S. DOT lacked the authority to promulgate the DBE regulations and that it exceeded its authority in doing so. *Id.* at 757. The court found that the Government’s exhaustive summary of the legislative history and executive rulemaking that has taken place with respect to the relevant statutory provisions and regulations suffices to demonstrate that the federal DBE regulations were made under the broad grant of rights authorized by Congressional statutes. *Id.*, citing, [49 U.S.C. § 322\(a\)](#) (“The Secretary of Transportation may prescribe regulations to carry out the duties and powers of the Secretary. An officer of the Department of Transportation may prescribe regulations to carry out the duties and powers of the officer.”); [23 U.S.C. § 304](#) (The Secretary of Transportation “should assist, insofar as feasible, small business enterprises in obtaining contracts in connection with the prosecution of the highway system.”); [23 U.S.C. § 315](#) (“[Subject to certain exceptions related to tribal lands and national forests], the Secretary is authorized to prescribe and promulgate all

needful rules and regulations for the carrying out of the provisions of this Title.”).

Also, significantly, the court pointed out that the Federal DBE Program has been upheld in various contexts, “even surviving strict scrutiny review,” with courts holding that the program is narrowly tailored to further compelling governmental interests. *Id.* at 757, citing, [Midwest Fence Corp.](#), 840 F.3d at 942 (citing [Western States Paving Co. v. Washington State Dep’t of Transportation](#), 407 F.3d 983, 993 (9th Cir. 2005); [Sherbrooke Turf, Inc. v. Minnesota Dep’t of Transportation](#), 345 F.3d 964, 973 (8th Cir. 2003); [Adarand Constructors, Inc. v. Slater](#), 228 F.3d 1147, 1155 (10th Cir. 2000)).

In light of this authority as to the validity of the federal regulations and the Federal DBE Program, the Western District of Pennsylvania federal district court in this case held that Defendant failed to meet his burden to demonstrate that dismissal of the Indictment was warranted. *Id.*

Conclusion. The court denied the Defendant’s motion to dismiss the Indictment. The Defendant subsequently pleaded guilty. Recently on March 13, 2018, the court issued the final Judgment sentencing the Defendant to Probation for 3 years; ordered Restitution in the amount of \$85,221.21; and a \$30,000 fine. The case also was terminated on March 13, 2018.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

2. *Midwest Fence Corporation v. United States DOT and Federal Highway Administration, the Illinois DOT, the Illinois State Toll Highway Authority, et al.*, 84 F. Supp. 3d 705, 2015 WL 1396376 (N.D. Ill, March 24, 2015), affirmed, 840 F.3d 932 (7th Cir. 2016).

In *Midwest Fence Corporation v. USDOT, the FHWA, the Illinois DOT and the Illinois State Toll Highway Authority*, Case No. 1:10-3-CV-5627, United States District Court for the Northern District of Illinois, Eastern Division, Plaintiff Midwest Fence Corporation, which is a guardrail, bridge rail and fencing contractor owned and controlled by white males challenged the constitutionality and the application of the USDOT, Disadvantaged Business Enterprise (“DBE”) Program. In addition, Midwest Fence similarly challenged the Illinois Department of Transportation’s (“IDOT”) implementation of the Federal DBE Program for federally funded projects, IDOT’s implementation of its own DBE Program for state-funded projects and the Illinois State Tollway Highway Authority’s (“Tollway”) separate DBE Program.

The federal district court in 2011 issued an Opinion and Order denying the Defendants’ Motion to Dismiss for lack of standing, denying the Federal Defendants’ Motion to Dismiss certain Counts of the Complaint as a matter of law, granting IDOT Defendants’ Motion to Dismiss certain Counts and granting the Tollway Defendants’ Motion to Dismiss certain Counts, but giving leave to Midwest to replead subsequent to this Order. *Midwest Fence Corp. v. United States DOT, Illinois DOT, et al.*, 2011 WL 2551179 (N.D. Ill. June 27, 2011).

Midwest Fence in its Third Amended Complaint challenged the constitutionality of the Federal DBE Program on its face and as applied, and challenged the IDOT’s implementation of the Federal DBE Program. Midwest Fence also sought a declaration that the USDOT regulations have not been properly authorized by Congress and a declaration that SAFETEA-LU is unconstitutional. Midwest Fence sought relief from the

IDOT Defendants, including a declaration that state statutes authorizing IDOT’s DBE Program for State-funded contracts are unconstitutional; a declaration that IDOT does not follow the USDOT regulations; a declaration that the IDOT DBE Program is unconstitutional and other relief against the IDOT. The remaining Counts sought relief against the Tollway Defendants, including that the Tollway’s DBE Program is unconstitutional, and a request for punitive damages against the Tollway Defendants. The court in 2012 granted the Tollway Defendants’ Motion to Dismiss Midwest Fence’s request for punitive damages.

Equal protection framework, strict scrutiny and burden of proof. The court held that under a strict scrutiny analysis, the burden is on the government to show both a compelling interest and narrowly tailoring. 2015 WL 1396376 at *7. The government must demonstrate a strong basis in evidence for its conclusion that remedial action is necessary. *Id.* Since the Supreme Court decision in *Crosby*, numerous courts have recognized that disparity studies provide probative evidence of discrimination. *Id.* The court stated that an inference of discrimination may be made with empirical evidence that demonstrates a significant statistical disparity between the number of qualified minority contractors and the number of such contractors actually engaged by the locality or the locality’s prime contractors. *Id.* The court said that anecdotal evidence may be used in combination with statistical evidence to establish a compelling governmental interest. *Id.*

In addition to providing “hard proof” to back its compelling interest, the court stated that the government must also show that the challenged program is narrowly tailored. *Id.* at *7. While narrow tailoring requires “serious, good faith consideration of workable race-neutral alternatives,” the court said it does not require “exhaustion of every conceivable race-neutral alternative.” *Id.*, citing *Grutter v. Bollinger*, 539 U.S. 306, 339 (2003); *Fischer v. Univ. of Texas at Austin*, 133 S.Ct. 2411, 2420 (2013).

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Once the governmental entity has shown acceptable proof of a compelling interest in remedying past discrimination and illustrated that its plan is narrowly tailored to achieve this goal, the party challenging the affirmative action plan bears the ultimate burden of proving that the plan is unconstitutional. 2015 WL 1396376 at *7. To successfully rebut the government’s evidence, a challenger must introduce “credible, particularized evidence” of its own. *Id.*

This can be accomplished, according to the court, by providing a neutral explanation for the disparity between DBE utilization and availability, showing that the government’s data is flawed, demonstrating that the observed disparities are statistically insignificant, or presenting contrasting statistical data. *Id.* Conjecture and unsupported criticisms of the government’s methodology are insufficient. *Id.*

Standing. The court found that Midwest had standing to challenge the Federal DBE Program, IDOT’s implementation of it, and the Tollway Program. *Id.* at *8. The court, however, did not find that Midwest had presented any facts suggesting its inability to compete on an equal footing for the Target Market Program contracts. The Target Market Program identified a variety of remedial actions that IDOT was authorized to take in certain Districts, which included individual contract goals, DBE participation incentives, as well as set-asides. *Id.* at *9.

The court noted that Midwest did not identify any contracts that were subject to the Target Market Program, nor identify any set-asides that were in place in these districts that would have hindered its ability to compete for fencing and guardrails work. *Id.* at *9. Midwest did not allege that it would have bid on contracts set aside pursuant to the Target Market Program had it not been prevented from doing so. *Id.* Because nothing in the record Midwest provided suggested that the Target Market Program impeded Midwest’s ability to compete for work

in these Districts, the court dismissed Midwest’s claim relating to the Target Market Program for lack of standing.

Facial challenge to the Federal DBE Program. The court found that remedying the effects of race and gender discrimination within the road construction industry is a compelling governmental interest. The court also found that the Federal Defendants have supported their compelling interest with a strong basis in evidence. *Id.* at *11. The Federal Defendants, the court said, presented an extensive body of testimony, reports, and studies that they claim provided the strong basis in evidence for their conclusion that race and gender-based classifications are necessary. *Id.* The court took judicial notice of the existence of Congressional hearings and reports and the collection of evidence presented to Congress in support of the Federal DBE Program’s 2012 reauthorization under MAP-21, including both statistical and anecdotal evidence. *Id.*

The court also considered a report from a consultant who reviewed 95 disparity and availability studies concerning minority- and women-owned businesses, as well as anecdotal evidence, that were completed from 2000 to 2012. *Id.* at *11. Sixty-four of the studies had previously been presented to Congress. *Id.* The studies examine procurement for over 100 public entities and funding sources across 32 states. *Id.* The consultant’s report opined that metrics such as firm revenue, number of employees, and bonding limits should not be considered when determining DBE availability because they are all “likely to be influenced by the presence of discrimination if it exists” and could potentially result in a built-in downward bias in the availability measure. *Id.* at *11.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

To measure disparity, the consultant divided DBE utilization by availability and multiplied by 100 to calculate a “disparity index” for each study. *Id. at *11*. The report found 66 percent of the studies showed a disparity index of 80 or below, that is, significantly underutilized relative to their availability. *Id.* The report also examined data that showed lower earnings and business formation rates among women and minorities, even when variables such as age and education were held constant. *Id.* The report concluded that the disparities were not attributable to factors other than race and sex and were consistent with the presence of discrimination in construction and related professional services. *Id.*

The court distinguished the Federal Circuit decision in *Rothe Dev. Corp. v. Dep’t. of Def.*, 545 F. 3d 1023 (Fed. Cir. 2008) where the Federal Circuit Court held insufficient the reliance on only six disparity studies to support the government’s compelling interest in implementing a national program. *Id. at *12, citing Rothe*, 545 F. 3d at 1046. The court here noted the consultant report supplements the testimony and reports presented to Congress in support of the Federal DBE Program, which courts have found to establish a “strong basis in evidence” to support the conclusion that race-and gender-conscious action is necessary. *Id. at *12*.

The court found through the evidence presented by the Federal Defendants satisfied their burden in showing that the Federal DBE Program stands on a strong basis in evidence. *Id. at *12*. The Midwest expert’s suggestion that the studies used in consultant’s report do not properly account for capacity, the court stated, does not compel the court to find otherwise. The court *quoting Adarand VII*, 228 F.3d at 1173 (10th Cir. 2000) said that general criticism of disparity studies, as opposed to particular evidence undermining the reliability of the particular disparity studies relied upon by the government, is of little persuasive value and does not compel the court to discount the

disparity evidence. *Id.* Midwest failed to present “affirmative evidence” that no remedial action was necessary. *Id.*

Federal DBE Program is narrowly tailored. Once the government has established a compelling interest for implementing a race-conscious program, it must show that the program is narrowly tailored to achieve this interest. *Id. at *12*. In determining whether a program is narrowly tailored, courts examine several factors, including (a) the necessity for the relief and efficacy of alternative race-neutral measures, (b) the flexibility and duration of the relief, including the availability of waiver provisions, (c) the relationship of the numerical goals to the relevant labor market, and (d) the impact of the relief on the rights of third parties. *Id.* The court stated that courts may also assess whether a program is “overinclusive.” *Id.* The court found that each of the above factors supports the conclusion that the Federal DBE Program is narrowly tailored. *Id.*

First, the court said that under the federal regulations, recipients of federal funds can only turn to race- and gender-conscious measures after they have attempted to meet their DBE participation goal through race-neutral means. *Id. at *13*. The court noted that race-neutral means include making contracting opportunities more accessible to small businesses, providing assistance in obtaining bonding and financing, and offering technical and other support services. *Id.* The court found that the regulations require serious, good faith consideration of workable race-neutral alternatives. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Second, the federal regulations contain provisions that limit the Federal DBE Program’s duration and ensure its flexibility. *Id.* at *13. The court found that the Federal DBE Program lasts only as long as its current authorizing act allows, noting that with each reauthorization, Congress must reevaluate the Federal DBE Program in light of supporting evidence. *Id.* The court also found that the Federal DBE Program affords recipients of federal funds and prime contractors substantial flexibility. *Id.* at *13. Recipients may apply for exemptions or waivers, releasing them from program requirements. *Id.* Prime contractors can apply to IDOT for a “good faith efforts waiver” on an individual contract goal. *Id.*

The court stated the availability of waivers is particularly important in establishing flexibility. *Id.* at *13. The court rejected Midwest’s argument that the federal regulations impose a quota in light of the Program’s explicit waiver provision. *Id.* Based on the availability of waivers, coupled with regular congressional review, the court found that the Federal DBE Program is sufficiently limited and flexible. *Id.*

Third, the court said that the Federal DBE Program employs a two-step goal-setting process that ties DBE participation goals by recipients of federal funds to local market conditions. *Id.* at *13. The court pointed out that the regulations delegate goal setting to recipients of federal funds who tailor DBE participation to local DBE availability. *Id.* The court found that the Federal DBE Program’s goal-setting process requires states to focus on establishing realistic goals for DBE participation that are closely tied to the relevant labor market. *Id.*

Fourth, the federal regulations, according to the court, contain provisions that seek to minimize the Program’s burden on non-DBEs. *Id.* at *13. The court pointed out the following provisions aim to keep the burden on non-DBEs minimal: the Federal DBE Program’s presumption of social and economic disadvantage is rebuttable; race is not a determinative factor; in the event DBEs become “overconcentrated” in

a particular area of contract work, recipients must take appropriate measures to address the overconcentration; the use of race-neutral measures; and the availability of good faith efforts waivers. *Id.* at *13.

The court said Midwest’s primary argument is that the practice of states to award prime contracts to the lowest bidder, and the fact the federal regulations prescribe that DBE participation goals be applied to the value of the entire contract, unduly burdens non-DBE subcontractors. *Id.* at *14. Midwest argued that because most DBEs are small subcontractors, setting goals as a percentage of all contract dollars, while requiring a remedy to come only from subcontracting dollars, unduly burdens smaller, specialized non-DBEs. *Id.* The court found that the fact innocent parties may bear some of the burden of a DBE program is itself insufficient to warrant the conclusion that a program is not narrowly tailored. *Id.* The court also found that strong policy reasons support the Federal DBE Program’s approach. *Id.*

The court stated that congressional testimony and the expert report from the Federal Defendants provide evidence that the Federal DBE Program is not overly inclusive. *Id.* at *14. The court noted the report observed statistically significant disparities in business formation and earnings rates in all 50 states for all minority groups and for nonminority women. *Id.*

The court said that Midwest did not attempt to rebut the Federal Defendants’ evidence. *Id.* at *14. Therefore, because the Federal DBE Program stands on a strong basis in evidence and is narrowly tailored to achieve the goal of remedying discrimination, the court found the Program is constitutional on its face. *Id.* at *14. The court thus granted summary judgment in favor of the Federal Defendants. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

As-applied challenge to IDOT’s implementation of the Federal DBE Program. In addition to challenging the Federal DBE Program on its face, Midwest also argued that it is unconstitutional as applied. *Id.* The court stated because the Federal DBE Program is applied to Midwest through IDOT, the court must examine IDOT’s implementation of the Federal DBE Program. *Id.* Following the Seventh Circuit’s decision in *Northern Contracting v. Illinois DOT*, the court said that whether the Federal DBE Program is unconstitutional as applied is a question of whether IDOT exceeded its authority in implementing it. *Id. at *14, citing Northern Contracting, Inc. v. Illinois*, 473 F.3d 715 at 722 (7th Cir. 2007). The court, quoting *Northern Contracting*, held that a challenge to a state’s application of a federally mandated program must be limited to the question of whether the state exceeded its authority. *Id. at *14.*

IDOT not only applies the Federal DBE Program to USDOT-assisted projects, but it also applies the Federal DBE Program to state-funded projects. *Id. at *14.* The court, therefore, held it must determine whether the IDOT Defendants have established a compelling reason to apply the IDOT Program to state-funded projects in Illinois. *Id.*

The court pointed out that the Federal DBE Program delegates the narrow tailoring function to the state, and thus, IDOT must demonstrate that there is a demonstrable need for the implementation of the Federal DBE Program within its jurisdiction. *Id. at *14.* Accordingly, the court assessed whether IDOT has established evidence of discrimination in Illinois sufficient to (1) support its application of the Federal DBE Program to state-funded contracts, and (2) demonstrate that IDOT’s implementation of the Federal DBE Program is limited to a place where race-based measures are demonstrably needed. *Id.*

IDOT’s evidence of discrimination and DBE availability in Illinois. The evidence that IDOT has presented to establish the existence of discrimination in Illinois included two studies, one that was done in 2004 and the other in 2011. *Id. at *15.* The court said that the 2004 study uncovered disparities in earnings and business formation rates among women and minorities in the construction and engineering fields that the study concluded were consistent with discrimination. IDOT maintained that the 2004 study and the 2011 study must be read in conjunction with one another. *Id. at *15.* The court found that the 2011 study provided evidence to establish the disparity from which IDOT’s inference of discrimination primarily arises. *Id. at *15.*

The 2011 study compared the proportion of contracting dollars awarded to DBEs (utilization) with the availability of DBEs. *Id.* The study determined availability through multiple sources, including bidders lists, prequalified business lists, and other methods recommended in the federal regulations. *Id.* The study applied NAICS codes to different types of contract work, assigning greater weight to categories of work in which IDOT had expended the most money. *Id.* This resulted in a “weighted” DBE availability calculation. *Id.*

The 2011 study examined prime and subcontracts and anecdotal evidence concerning race and gender discrimination in the Illinois road construction industry, including one-on-one interviews and a survey of more than 5,000 contractors. *Id. at *15.* The 2011 study, the court said, contained a regression analysis of private sector data and found disparities in earnings and business ownership rates among minorities and women, even when controlling for race- and gender-neutral variables. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The study concluded that there was a statistically significant underutilization of DBEs in the award of both prime and subcontracts in Illinois. *Id.* For example, the court noted the difference the study found in the percentage of available prime construction contractors to the percentage of prime construction contracts under \$500,000, and the percentage of available construction subcontractors to the amount of percentage of dollars received of construction subcontracts. *Id.*

IDOT presented certain evidence to measure DBE availability in Illinois. The court pointed out that the 2004 study and two subsequent Goal-Setting Reports were used in establishing IDOT's DBE participation goal. *Id.* at *15. The 2004 study arrived at IDOT's 22.77 percent DBE participation goal in accordance with the two-step process defined in the federal regulations. *Id.* The court stated the 2004 study employed a seven-step "custom census" approach to calculate baseline DBE availability under step one of the regulations. *Id.*

The process begins by identifying the relevant markets in which IDOT operates and the categories of businesses that account for the bulk of IDOT spending. *Id.* at *15. The industries and counties in which IDOT expends relatively more contract dollars receive proportionately higher weights in the ultimate calculation of statewide DBE availability. *Id.* The study then counts the number of businesses in the relevant markets, and identifies which are minority- and women-owned. *Id.* To ensure the accuracy of this information, the study provides that it takes additional steps to verify the ownership status of each business. *Id.* Under step two of the regulations, the study adjusted this figure to 27.51 percent based on Census Bureau data. *Id.* According to the study, the adjustment takes into account its conclusion that baseline numbers are artificially lower than what would be expected in a race-neutral marketplace. *Id.*

IDOT used separate Goal-Setting Reports that calculated IDOT's DBE participation goal pursuant to the two-step process in the federal regulations, drawing from bidders lists, DBE directories, and the 2011 study to calculate baseline DBE availability. *Id.* at *16. The study and the Goal-Setting Reports gave greater weight to the types of contract work in which IDOT had expended relatively more money. *Id.*

Court rejected Midwest arguments as to the data and evidence. The court rejected the challenges by Midwest to the accuracy of IDOT's data. For example, Midwest argued that the anecdotal evidence contained in the 2011 study does not prove discrimination. *Id.* at *16. The court stated, however, where anecdotal evidence has been offered in conjunction with statistical evidence, it may lend support to the government's determination that remedial action is necessary. *Id.* at *16. The court noted that anecdotal evidence on its own could not be used to show a general policy of discrimination. *Id.*

The court rejected another argument by Midwest that the data collected after IDOT's implementation of the Federal DBE Program may be biased because anything observed about the public sector may be affected by the DBE Program. *Id.* at *16. The court rejected that argument finding post-enactment evidence of discrimination permissible. *Id.*

Midwest's main objection to the IDOT evidence, according to the court, is that it failed to account for capacity when measuring DBE availability and underutilization. *Id.* at *16. Midwest argued that IDOT's disparity studies failed to rule out capacity as a possible explanation for the observed disparities. *Id.* at *16.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

IDOT argued that on prime contracts under \$500,000, capacity is a variable that makes little difference. *Id.* at *17. Prime contracts of varying sizes under \$500,000 were distributed to DBEs and non-DBEs alike at approximately the same rate. *Id.* at *17. IDOT also argued that through regression analysis, the 2011 study demonstrated factors other than discrimination did not account for the disparity between DBE utilization and availability. *Id.*

The court stated that despite Midwest’s argument that the 2011 study took insufficient measures to rule out capacity as a race-neutral explanation for the underutilization of DBEs, the Supreme Court has indicated that a regression analysis need not take into account “all measurable variables” to rule out race-neutral explanations for observed disparities. *Id.* at *17 quoting *Bazemore v. Friday*, 478 U.S. 385, 400 (1986).

Midwest criticisms insufficient, speculative and conjecture — no independent statistical analysis; IDOT followed Northern Contracting and did not exceed the federal regulations. The court found Midwest’s criticisms insufficient to rebut IDOT’s evidence of discrimination or discredit IDOT’s methods of calculating DBE availability. *Id.* at *17. First, the court said, the “evidence” offered by Midwest’s expert reports “is speculative at best.” *Id.* at *17. The court found that for a reasonable jury to find in favor of Midwest, Midwest would have to come forward with “credible, particularized evidence” of its own, such as a neutral explanation for the disparity, or contrasting statistical data. *Id.* at *17. The court held that Midwest failed to make the showing in this case. *Id.*

Second, the court stated that IDOT’s method of calculating DBE availability is consistent with the federal regulations and has been endorsed by the Seventh Circuit. *Id.* at *17. The federal regulations, the court said, approve a variety of methods for accurately measuring

ready, willing, and available DBEs, such as the use of DBE directories, Census Bureau data, and bidders lists. *Id.* The court found that these are the methods the 2011 study adopted in calculating DBE availability. *Id.*

The court said that the Seventh Circuit Court of Appeals approved the “custom census” approach as consistent with the federal regulations. *Id.* at *17, citing to *Northern Contracting v. Illinois DOT*, 473 F.3d at 723. The court noted the Seventh Circuit rejected the argument that availability should be based on a simple count of registered and prequalified DBEs under Illinois law, finding no requirement in the federal regulations that a recipient must so narrowly define the scope of ready, willing, and available firms. *Id.* The court also rejected the notion that an availability measure should distinguish between prime and subcontractors. *Id.* at *17.

The court held that through the 2004 and 2011 studies, and Goal-Setting Reports, IDOT provided evidence of discrimination in the Illinois road construction industry and a method of DBE availability calculation that is consistent with both the federal regulations and the Seventh Circuit decision in *Northern Contract v. Illinois DOT*. *Id.* at *18. The court said that in response to the Seventh Circuit decision and IDOT’s evidence, Midwest offered only conjecture about how these studies supposed failure to account for capacity may or may not have impacted the studies’ result. *Id.*

The court pointed out that although Midwest’s expert’s reports “cast doubt on the validity of IDOT’s methodology, they failed to provide any independent statistical analysis or other evidence demonstrating actual bias.” *Id.* at *18. Without this showing, the court stated, the record fails to demonstrate a lack of evidence of discrimination or actual flaws in IDOT’s availability calculations.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Burden on non-DBE subcontractors; overconcentration. The court addressed the narrow tailoring factor concerning whether a program’s burden on third parties is undue or unreasonable. The parties disagreed about whether the IDOT program resulted in an overconcentration of DBEs in the fencing and guardrail industry. *Id.* at *18. IDOT prepared an overconcentration study comparing the total number of prequalified fencing and guardrail contractors to the number of DBEs that also perform that type of work and determined that no overconcentration problem existed. Midwest presented its evidence relating to overconcentration. *Id.* The court found that Midwest did not show IDOT’s determination that overconcentration does not exist among fencing and guardrail contractors to be unreasonable. *Id.* at *18.

The court stated the fact IDOT sets contract goals as a percentage of total contract dollars does not demonstrate that IDOT imposes an undue burden on non-DBE subcontractors, but to the contrary, IDOT is acting within the scope of the federal regulations that requires goals to be set in this manner. *Id.* at *19. The court noted that it recognizes setting goals as a percentage of total contract value addresses the widespread, indirect effects of discrimination that may prevent DBEs from competing as primes in the first place, and that a sharing of the burden by innocent parties, here non-DBE subcontractors, is permissible. *Id.* at *19. The court held that IDOT carried its burden in providing persuasive evidence of discrimination in Illinois, and found that such sharing of the burden is permissible here. *Id.*

Use of race-neutral alternatives. The court found that IDOT identified several race-neutral programs it used to increase DBE participation, including its Supportive Services, Mentor-Protégé, and Model Contractor Programs. *Id.* at *19. The programs provide workshops and training that help small businesses build bonding capacity, gain access to financial and project management resources, and learn about specific procurement opportunities. *Id.* IDOT conducted several studies including zero-

participation goals contracts in which there was no DBE participation goal, and found that DBEs received only 0.84 percent of the total dollar value awarded. *Id.*

The court held IDOT was compliant with the federal regulations, noting that in the *Northern Contracting v. Illinois DOT* case, the Seventh Circuit found IDOT employed almost all of the methods suggested in the regulations to maximize DBE participation without resorting to race, including providing assistance in obtaining bonding and financing, implementing a supportive services program, and providing technical assistance. *Id.* at *19. The court agreed with the Seventh Circuit, and found that IDOT has made serious, good faith consideration of workable race-neutral alternatives. *Id.*

Duration and flexibility. The court pointed out that the state statute through which the Federal DBE Program is implemented is limited in duration and must be reauthorized every two to five years. *Id.* at *19. The court reviewed evidence that IDOT granted 270 of the 362 good faith waiver requests that it received from 2006 to 2014, and that IDOT granted 1,002 post-award waivers on over \$36 million in contracting dollars. *Id.* at *19. The court noted that IDOT granted the only good faith efforts waiver that Midwest requested. *Id.*

The court held the undisputed facts established that IDOT did not have a “no-waiver policy.” *Id.* at *20. The court found that it could not conclude that the waiver provisions were impermissibly vague, and that IDOT took into consideration the substantial guidance provided in the federal regulations. *Id.* Because Midwest’s own experience demonstrated the flexibility of the Federal DBE Program in practice, the court said it could not conclude that the IDOT program amounts to an impermissible quota system that is unconstitutional on its face. *Id.* at *20.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The court again stated that Midwest had not presented any affirmative evidence showing that IDOT’s implementation of the Federal DBE Program imposes an undue burden on non-DBEs, fails to employ race-neutral measures, or lacks flexibility. *Id.* at *20. Accordingly, the court granted IDOT’s motion for summary judgment.

Facial and as-applied challenges to the Tollway program. The Illinois Tollway Program exists independently of the Federal DBE Program. Midwest challenged the Tollway Program as unconstitutional on its face and as applied. *Id.* at *20. Like the Federal and IDOT Defendants, the Tollway was required to show that its compelling interest in remedying discrimination in the Illinois road construction industry rests on a strong basis in evidence. *Id.* The Tollway relied on a 2006 disparity study, which examined the disparity between the Tollway’s utilization of DBEs and their availability. *Id.*

The study employed a “custom census” approach to calculate DBE availability, and examined the Tollway’s contract data to determine utilization. *Id.* at *20. The 2006 study reported statistically significant disparities for all race and sex categories examined. *Id.* The study also conducted an “economy-wide analysis” examining other race and sex disparities in the wider construction economy from 1979 to 2002. *Id.* at *21. Controlling for race- and gender-neutral variables, the study showed a significant negative correlation between a person’s race or sex and their earning power and ability to form a business. *Id.*

Midwest’s challenges to the Tollway evidence insufficient and speculative. In 2013, the Tollway commissioned a new study, which the court noted was not complete, but there was an “economy-wide analysis” similar to the analysis done in 2006 that updated census data gathered from 2007 to 2011. *Id.* at *21. The updated census analysis, according to the court, controlled for variables such as education, age and occupation

and found lower earnings and rates of business formation among women and minorities as compared to white men. *Id.*

Midwest attacked the Tollway’s 2006 study similar to how it attacked the other studies with regard to IDOT’s DBE Program. *Id.* at *21. For example, Midwest attacked the 2006 study as being biased because it failed to take into account capacity in determining the disparities. *Id.* at *21. The Tollway defended the 2006 study arguing that capacity metrics should not be taken into account because the Tollway asserted they are themselves a product of indirect discrimination, the construction industry is elastic in nature, and that firms can easily ramp up or ratchet down to accommodate the size of a project. *Id.* The Tollway also argued that the “economy-wide analysis” revealed a negative correlation between an individual’s race and sex and their earning power and ability to own or form a business, showing that the underutilization of DBEs is consistent with discrimination. *Id.* at *21.

To successfully rebut the Tollway’s evidence of discrimination, the court stated that Midwest must come forward with a neutral explanation for the disparity, show that the Tollway’s statistics are flawed, demonstrate that the observed disparities are insignificant, or present contrasting data of its own. *Id.* at *22. Again, the court found that Midwest failed to make this showing, and that the evidence offered through the expert reports for Midwest was far too speculative to create a disputed issue of fact suitable for trial. *Id.* at *22. Accordingly, the court found the Tollway Defendants established a strong basis in evidence for the Tollway Program. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Tollway Program is narrowly tailored. As to determining whether the Tollway Program is narrowly tailored, Midwest also argued that the Tollway Program imposed an undue burden on non-DBE subcontractors. Like IDOT, the Tollway sets individual contract goals as a percentage of the value of the entire contract based on the availability of DBEs to perform particular line items. *Id.* at *22.

The court reiterated that setting goals as a percentage of total contract dollars does not demonstrate an undue burden on non-DBE subcontractors, and that the Tollway’s method of goal setting is identical to that prescribed by the federal regulations, which the court already found to be supported by strong policy reasons. *Id.* at *22. The court stated that the sharing of a remedial program’s burden is itself insufficient to warrant the conclusion that the program is not narrowly tailored. *Id.* at *22. The court held the Tollway Program’s burden on non-DBE subcontractors to be permissible. *Id.*

In addressing the efficacy of race-neutral measures, the court found the Tollway implemented race-neutral programs to increase DBE participation, including a program that allows smaller contracts to be unbundled from larger ones, a Small Business Initiative that sets aside contracts for small businesses on a race-neutral basis, partnerships with agencies that provide support services to small businesses, and other programs designed to make it easier for smaller contractors to do business with the Tollway in general. *Id.* at *22. The court held the Tollway’s race-neutral measures are consistent with those suggested under the federal regulations and found that the availability of these programs, which mirror IDOT’s, demonstrates serious, good faith consideration of workable race-neutral alternatives. *Id.* at *22.

In considering the issue of flexibility, the court found the Tollway Program, like the Federal DBE Program, provides for waivers where prime contractors are unable to meet DBE participation goals, but have made good faith efforts to do so. *Id.* at *23. Like IDOT, the court said the Tollway adheres to the federal regulations in determining whether a bidder has made good faith efforts. *Id.* As under the Federal DBE Program, the Tollway Program also allows bidders who have been denied waivers to appeal. *Id.*

From 2006 to 2011, the court stated, the Tollway granted waivers on approximately 20 percent of the 200 prime construction contracts it awarded. *Id.* Because the Tollway demonstrated that waivers are available, routinely granted, and awarded or denied based on guidance found in the federal regulations, the court found the Tollway Program sufficiently flexible. *Id.* at *23.

Midwest presented no affirmative evidence. The court held the Tollway Defendants provided a strong basis in evidence for their DBE Program, whereas Midwest, did not come forward with any concrete, affirmative evidence to shake this foundation. *Id.* at *23. The court thus held the Tollway Program was narrowly tailored and granted the Tollway Defendants’ motion for summary judgment.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

3. Dunnet Bay Construction Company v. Gary Hannig, in its official capacity as Secretary of Transportation for the Illinois DOT and the Illinois DOT, 2014 WL 552213 (C.D. Ill. 2014), affirmed Dunnet Bay Construction Co. v. Borggren, Illinois DOT, et al., 799 F.3d 676, 2015 WL 4934560 (7th Cir. 2015).

In *Dunnet Bay Construction Company v. Gary Hannig, in its official capacity as Secretary of the Illinois DOT and the Illinois DOT*, 2014 WL 552213 (C.D. Ill. Feb. 12, 2014), plaintiff Dunnet Bay Construction Company brought a lawsuit against the Illinois Department of Transportation (IDOT) and the Secretary of IDOT in his official capacity challenging the IDOT DBE Program and its implementation of the Federal DBE Program, including an alleged unwritten “no waiver” policy, and claiming that the IDOT’s program is not narrowly tailored.

Motion to Dismiss certain claims granted. IDOT initially filed a Motion to Dismiss certain Counts of the Complaint. The United States District Court granted the Motion to Dismiss Counts I, II and III against IDOT primarily based on the defense of immunity under the Eleventh Amendment to the United States Constitution. The Opinion held that claims in Counts I and II against Secretary Hannig of IDOT in his official capacity remained in the case.

In addition, the other Counts of the Complaint that remained in the case not subject to the Motion to Dismiss, sought declaratory and injunctive relief and damages based on the challenge to the IDOT DBE Program and its application by IDOT. Plaintiff Dunnet Bay alleged the IDOT DBE Program is unconstitutional based on the unwritten no-waiver policy, requiring Dunnet Bay to meet DBE goals and denying Dunnet Bay a waiver of the goals despite its good faith efforts, and based on other allegations. Dunnet Bay sought a declaratory judgment that IDOT’s DBE program discriminates on the basis of race in the award of federal-aid highway construction contracts in Illinois.

Motions for Summary Judgment. Subsequent to the Court’s Order granting the partial Motion to Dismiss, Dunnet Bay filed a Motion for Summary Judgment, asserting that IDOT had departed from the federal regulations implementing the Federal DBE Program, that IDOT’s implementation of the Federal DBE Program was not narrowly tailored to further a compelling governmental interest, and that therefore, the actions of IDOT could not withstand strict scrutiny. 2014 WL 552213 at * 1. IDOT also filed a Motion for Summary Judgment, alleging that all applicable guidelines from the federal regulations were followed with respect to the IDOT DBE Program, and because IDOT is federally mandated and did not abuse its federal authority, IDOT’s DBE Program is not subject to attack. *Id.*

IDOT further asserted in its Motion for Summary Judgment that there is no Equal Protection violation, claiming that neither the rejection of the bid by Dunnet Bay, nor the decision to re-bid the project, was based upon Dunnet Bay’s race. IDOT also asserted that, because Dunnet Bay was relying on the rights of others and was not denied equal opportunity to compete for government contracts, Dunnet Bay lacked standing to bring a claim for racial discrimination.

Factual background. Plaintiff Dunnet Bay Construction Company is owned by two white males and is engaged in the business of general highway construction. It has been qualified to work on IDOT highway construction projects. In accordance with the federal regulations, IDOT prepared and submitted to the USDOT for approval a DBE Program governing federally funded highway construction contracts. For fiscal year 2010, IDOT established an overall aspirational DBE goal of 22.77 percent for DBE participation, and it projected that 4.12 percent of the overall goal could be met through race neutral measures and the remaining 18.65 percent would require the use of race-conscious goals. 2014 WL 552213 at *3. IDOT normally achieved somewhere between 10 and 14 percent

L. Legal — Other recent district court decisions regarding the Federal DBE Program

participation by DBEs. *Id.* The overall aspirational goal was based upon a statewide disparity study conducted on behalf of IDOT in 2004.

Utilization goals under the IDOT DBE Program Document are determined based upon an assessment for the type of work, location of the work, and the availability of DBE companies to do a part of the work. *Id.* at *4. Each pay item for a proposed contract is analyzed to determine if there are at least two ready, willing, and able DBEs to perform the pay item. *Id.* The capacity of the DBEs, their willingness to perform the work in the particular district, and their possession of the necessary workforce and equipment are also factors in the overall determination. *Id.*

Initially, IDOT calculated the DBE goal for the Eisenhower Project to be 8 percent. When goals were first set on the Eisenhower Project, taking into account every item listed for work, the maximum potential goal for DBE participation for the Eisenhower Project was 20.3 percent. Eventually, an overall goal of approximately 22 percent was set. *Id.* at *4.

At the bid opening, Dunnet Bay's bid was the lowest received by IDOT. Its low bid was over IDOT's estimate for the project. Dunnet Bay, in its bid, identified 8.2 percent of its bid for DBEs. The second low bidder projected DBE participation of 22 percent. Dunnet Bay's DBE participation bid did not meet the percentage participation in the bid documents, and thus IDOT considered Dunnet Bay's good faith efforts to meet the DBE goal. IDOT rejected Dunnet Bay's bid determining that Dunnet Bay had not demonstrated a good faith effort to meet the DBE goal. *Id.* at *9.

The Court found that although it was the low bidder for the construction project, Dunnet Bay did not meet the goal for participation of DBEs despite its alleged good faith efforts. IDOT contended it followed all applicable guidelines in handling the DBE Program, and that

because it did not abuse its federal authority in administering the Program, the IDOT DBE Program is not subject to attack. *Id.* at *23. IDOT further asserted that neither rejection of Dunnet Bay's bid nor the decision to re-bid the Project was based on its race or that of its owners, and that Dunnet Bay lacked standing to bring a claim for racial discrimination on behalf of others (i.e., small businesses operated by white males). *Id.* at *23.

The Court found that the federal regulations recommend a number of non-mandatory, non-exclusive and non-exhaustive actions when considering a bidder's good faith efforts to obtain DBE participation. *Id.* at *25. The federal regulations also provide the state DOT may consider the ability of other bidders to meet the goal. *Id.*

IDOT implementing the Federal DBE Program is acting as an agent of the federal government insulated from constitutional attack absent showing the state exceeded federal authority. The Court held that a state entity such as IDOT implementing a congressionally mandated program may rely "on the federal government's compelling interest in remedying the effects of past discrimination in the national construction market." *Id.* at *26, quoting *Northern Contracting Co., Inc. v. Illinois*, 473 F.3d 715 at 720-21 (7th Cir. 2007). In these instances, the Court stated, the state is acting as an agent of the federal government and is "insulated from this sort of constitutional attack, absent a showing that the state exceeded its federal authority." *Id.* at *26, quoting *Northern Contracting, Inc.*, 473 F.3d at 721. The Court held that accordingly, any "challenge to a state's application of a federally mandated program must be limited to the question of whether the state exceeded its authority." *Id.* at *26, quoting *Northern Contracting, Inc.*, 473 F.3d at 722. Therefore, the Court identified the key issue as determining if IDOT exceeded its authority granted under the federal rules or if Dunnet Bay's challenges are foreclosed by *Northern Contracting*. *Id.* at *26.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The Court found that IDOT did in fact employ a thorough process before arriving at the 22 percent DBE participation goal for the Eisenhower Project. *Id.* at *26. The Court also concluded “because the federal regulations do not specify a procedure for arriving at contract goals, it is not apparent how IDOT could have exceeded its federal authority. Any challenge on this factor fails under *Northern Contracting.*” *Id.* at *26. Therefore, the Court concluded there is no basis for finding that the DBE goal was arbitrarily set or that IDOT exceeded its federal authority with respect to this factor. *Id.* at *27.

The “no-waiver” policy. The Court held that there was not a no-waiver policy considering all the testimony and factual evidence. In particular, the Court pointed out that a waiver was in fact granted in connection with the same bid letting at issue in this case. *Id.* at *27. The Court found that IDOT granted a waiver of the DBE participation goal for another construction contractor on a different contract, but under the same bid letting involved in this matter. *Id.*

Thus, the Court held that Dunnet Bay’s assertion that IDOT adopted a “no-waiver” policy was unsupported and contrary to the record evidence. *Id.* at *27. The Court found the undisputed facts established that IDOT did not have a “no-waiver” policy, and that IDOT did not exceed its federal authority because it did not adopt a “no-waiver” policy. *Id.* Therefore, the Court again concluded that any challenge by Dunnet Bay on this factor failed pursuant to the *Northern Contracting* decision.

IDOT’s decision to reject Dunnet Bay’s bid based on lack of good faith efforts did not exceed IDOT’s authority under federal law. The Court found that IDOT has significant discretion under federal regulations and is often called upon to make a “judgment call” regarding the efforts of the bidder in terms of establishing good faith attempt to meet the DBE goals. *Id.* at *28. The Court stated it was unable to conclude that IDOT erred in determining Dunnet Bay did not make adequate good faith efforts. *Id.* The Court surmised that the strongest evidence that Dunnet Bay did not take all necessary and reasonable steps to achieve the DBE goal is that its DBE participation was under 9 percent while other bidders were able to reach the 22 percent goal. *Id.* Accordingly, the Court concluded that IDOT’s decision rejecting Dunnet Bay’s bid was consistent with the regulations and did not exceed IDOT’s authority under the federal regulations. *Id.*

The Court also rejected Dunnet Bay’s argument that IDOT failed to provide Dunnet Bay with a written explanation as to why its good faith efforts were not sufficient, and thus there were deficiencies with the reconsideration of Dunnet Bay’s bid and efforts as required by the federal regulations. *Id.* at *29. The Court found it was unable to conclude that a technical violation such as to provide Dunnet Bay with a written explanation will provide any relief to Dunnet Bay. *Id.* Additionally, the Court found that because IDOT rebid the project, Dunnet Bay was not prejudiced by any deficiencies with the reconsideration. *Id.*

The Court emphasized that because of the decision to rebid the project, IDOT was not even required to hold a reconsideration hearing. *Id.* at *24. Because the decision on reconsideration as to good faith efforts did not exceed IDOT’s authority under federal law, the Court held Dunnet Bay’s claim failed under the *Northern Contracting* decision. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Dunnet Bay lacked standing to raise an equal protection claim. The Court found that Dunnet Bay was not disadvantaged in its ability to compete against a racially favored business, and neither IDOT's rejection of Dunnet Bay's bid nor the decision to rebid was based on the race of Dunnet Bay's owners or any class-based animus. *Id.* at *29. The Court stated that Dunnet Bay did not point to any other business that was given a competitive advantage because of the DBE goals. *Id.* Dunnet Bay did not cite any cases which involve plaintiffs that are similarly situated to it - businesses that are not at a competitive disadvantage against minority-owned companies or DBEs - and have been determined to have standing. *Id.* at *30.

The Court concluded that any company similarly situated to Dunnet Bay had to meet the same DBE goal under the contract. *Id.* Dunnet Bay, the Court held, was not at a competitive disadvantage and/or unable to compete equally with those given preferential treatment. *Id.*

Dunnet Bay did not point to another contractor that did not have to meet the same requirements it did. The Court thus concluded that Dunnet Bay lacked standing to raise an equal protection challenge because it had not suffered a particularized injury that was caused by IDOT. *Id.* at *30. Dunnet Bay was not deprived of the ability to compete on an equal basis. *Id.* Also, based on the amount of its profits, Dunnet Bay did not qualify as a small business, and therefore, it lacked standing to vindicate the rights of a hypothetical white-owned small business. *Id.* at *30. Because the Court found that Dunnet Bay was not denied the ability to compete on an equal footing in bidding on the contract, Dunnet Bay lacked standing to challenge the DBE Program based on the Equal Protection Clause. *Id.* at *30.

Dunnet Bay did not establish equal protection violation even if it had standing. The Court held that even if Dunnet Bay had standing to bring an equal protection claim, IDOT still is entitled to summary judgment. The Court stated the Supreme Court has held that the "injury in fact" in an equal protection case challenging a DBE Program is the denial of equal treatment resulting from the imposition of the barrier, not the ultimate inability to obtain the benefit. *Id.* at *31. Dunnet Bay, the Court said, implied that but for the alleged "no-waiver" policy and DBE goals which were not narrowly tailored to address discrimination, it would have been awarded the contract. The Court again noted the record established that IDOT did not have a "no-waiver" policy. *Id.* at *31.

The Court also found that because the gravamen of equal protection lies not in the fact of deprivation of a right but in the invidious classification of persons, it does not appear Dunnet Bay can assert a viable claim. *Id.* at *31. The Court stated it is unaware of any authority which suggests that Dunnet Bay can establish an equal protection violation even if it could show that IDOT failed to comply with the regulations relating to the DBE Program. *Id.* The Court said that even if IDOT did employ a "no-waiver policy," such a policy would not constitute an equal protection violation because the federal regulations do not confer specific entitlements upon any individuals. *Id.* at *31.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

In order to support an equal protection claim, the plaintiff would have to establish it was treated less favorably than another entity with which it was similarly situated in all material respects. *Id.* at *51. Based on the record, the Court stated it could only speculate whether Dunnet Bay or another entity would have been awarded a contract without IDOT's DBE Program. But, the Court found it need not speculate as to whether Dunnet Bay or another company would have been awarded the contract, because what is important for equal protection analysis is that Dunnet Bay was treated the same as other bidders. *Id.* at *31. Every bidder had to meet the same percentage goal for subcontracting to DBEs or make good faith efforts. *Id.* Because Dunnet Bay was held to the same standards as every other bidder, it cannot establish it was the victim of discrimination pursuant to the Equal Protection Clause. *Id.* Therefore, IDOT, the Court held, is entitled to summary judgment on Dunnet Bay's claims under the Equal Protection Clause and under Title VI.

Conclusion. The Court concluded IDOT is entitled to summary judgment, holding Dunnet Bay lacked standing to raise an equal protection challenge based on race, and that even if Dunnet Bay had standing, Dunnet Bay was unable to show that it would have been awarded the contract in the absence of any violation. *Id.* at *32. Any other federal claims, the Court held, were foreclosed by the *Northern Contracting* decision because there is no evidence IDOT exceeded its authority under federal law. *Id.* Finally, the Court found Dunnet Bay had not established the likelihood of future harm, and thus was not entitled to injunctive relief.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

4. *Geyer Signal, Inc. v. Minnesota, DOT*, 2014 WL 1309092 (D. Minn. March 31, 2014)

In *Geyer Signal, Inc., et al. v. Minnesota DOT, USDOT, Federal Highway Administration, et al.*, Case No. 11-CV-321, United States District Court for the District Court of Minnesota, the plaintiffs Geyer Signal, Inc. and its owner filed this lawsuit against the Minnesota DOT (MnDOT) seeking a permanent injunction against enforcement and a declaration of unconstitutionality of the Federal DBE Program and Minnesota DOT's implementation of the DBE Program on its face and as applied. Geyer Signal sought an injunction against the Minnesota DOT prohibiting it from enforcing the DBE Program or, alternatively, from implementing the Program improperly; a declaratory judgment declaring that the DBE Program violates the Equal protection element of the Fifth Amendment of the United States Constitution and/or the Equal Protection clause of the Fourteenth Amendment to the United States Constitution and is unconstitutional, or, in the alternative that Minnesota DOT's implementation of the Program is an unconstitutional violation of the Equal Protection Clause, and/or that the Program is void for vagueness; and other relief.

Procedural background. Plaintiff Geyer Signal is a small, family-owned business that performs traffic control work generally on road construction projects. Geyer Signal is a firm owned by a Caucasian male, who also is a named plaintiff.

Subsequent to the lawsuit filed by Geyer Signal, the USDOT and the Federal Highway Administration filed their Motion to permit them to intervene as defendants in this case. The Federal Defendant-Intervenors requested intervention on the case in order to defend the constitutionality of the Federal DBE Program and the federal regulations at issue. The Federal Defendant-Intervenors and the plaintiffs filed a Stipulation that the Federal Defendant-Intervenors have the right to

intervene and should be permitted to intervene in the matter, and consequently the plaintiffs did not contest the Federal Defendant-Intervenor's Motion for Intervention. The Court issued an Order that the Stipulation of Intervention, agreeing that the Federal Defendant-Intervenors may intervene in this lawsuit, be approved and that the Federal Defendant-Intervenors are permitted to intervene in this case.

The Federal Defendants moved for summary judgment and the State defendants moved to dismiss, or in the alternative for summary judgment, arguing that the DBE Program on its face and as implemented by MnDOT is constitutional. The Court concluded that the plaintiffs, Geyer Signal and its white male owner, Kevin Kissner, raised no genuine issue of material fact with respect to the constitutionality of the DBE Program facially or as applied. Therefore, the Court granted the Federal Defendants and the State defendants' motions for summary judgment in their entirety.

Plaintiffs alleged that there is insufficient evidence of a compelling governmental interest to support a race-based program for DBE use in the fields of traffic control or landscaping. (2014 WL 1309092 at *10) Additionally, plaintiffs alleged that the DBE Program is not narrowly tailored because it (1) treats the construction industry as monolithic, leading to an overconcentration of DBE participation in the areas of traffic signal and landscaping work; (2) allows recipients to set contract goals; and (3) sets goals based on the number of DBEs there are, not the amount of work those DBEs can actually perform. *Id.* *10. Plaintiffs also alleged that the DBE Program is unconstitutionally vague because it allows prime contractors to use bids from DBEs that are higher than the bids of non-DBEs, provided the increase in price is not unreasonable, without defining what increased costs are "reasonable." *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Constitutional claims. The Court states that the “heart of plaintiffs’ claims is that the DBE Program and MnDOT’s implementation of it are unconstitutional because the impact of curing discrimination in the construction industry is overconcentrated in particular sub-categories of work.” *Id.* at *11. The Court noted that because DBEs are, by definition, small businesses, plaintiffs contend they “simply cannot perform the vast majority of the types of work required for federally funded MnDOT projects because they lack the financial resources and equipment necessary to conduct such work. *Id.*

As a result, plaintiffs claimed that DBEs only compete in certain small areas of MnDOT work, such as traffic control, trucking, and supply, but the DBE goals that prime contractors must meet are spread out over the entire contract. *Id.* Plaintiffs asserted that prime contractors are forced to disproportionately use DBEs in those small areas of work, and that non-DBEs in those areas of work are forced to bear the entire burden of “correcting discrimination,” while the vast majority of non-DBEs in MnDOT contracting have essentially no DBE competition. *Id.*

Plaintiffs therefore argued that the DBE Program is not narrowly tailored because it means that any DBE goals are only being met through a few areas of work on construction projects, which burden non-DBEs in those sectors and do not alleviate any problems in other sectors. *Id.* at #11.

Plaintiffs brought two facial challenges to the Federal DBE Program. *Id.* Plaintiffs allege that the DBE Program is facially unconstitutional because it is “fatally prone to overconcentration” where DBE goals are met disproportionately in areas of work that require little overhead and capital. *Id.* at 11. Second, plaintiffs alleged that the DBE Program is unconstitutionally vague because it requires prime contractors to accept DBE bids even if the DBE bids are higher than those from non-

DBEs, provided the increased cost is “reasonable” without defining a reasonable increase in cost. *Id.*

Plaintiffs also brought three as-applied challenges based on MnDOT’s implementation of the DBE Program. *Id.* at 12. First, plaintiffs contended that MnDOT has unconstitutionally applied the DBE Program to its contracting because there is no evidence of discrimination against DBEs in government contracting in Minnesota. *Id.* Second, they contended that MnDOT has set impermissibly high goals for DBE participation. Finally, plaintiffs argued that to the extent the DBE Federal Program allows MnDOT to correct for overconcentration, it has failed to do so, rendering its implementation of the Program unconstitutional. *Id.*

Strict scrutiny. It is undisputed that strict scrutiny applied to the Court’s evaluation of the Federal DBE Program, whether the challenge is facial or as - applied. *Id.* at *12. Under strict scrutiny, a “statute’s race-based measures ‘are constitutional only if they are narrowly tailored to further compelling governmental interests.’” *Id.* at *12, quoting *Grutter v. Bollinger*, 539 U.S. 306, 326 (2003).

The Court notes that the DBE Program also contains a gender conscious provision, a classification the Court says that would be subject to intermediate scrutiny. *Id.* at *12, at n.4. Because race is also used by the Federal DBE Program, however, the Program must ultimately meet strict scrutiny, and the Court therefore analyzes the entire Program for its compliance with strict scrutiny. *Id.*

Facial challenge based on overconcentration. The Court says that in order to prevail on a facial challenge, the plaintiff must establish that no set of circumstances exist under which the Federal DBE Program would be valid. *Id.* at *12. The Court states that plaintiffs bear the ultimate burden to prove that the DBE Program is unconstitutional. *Id.* at *.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Compelling governmental interest. The Court points out that the Eighth Circuit Court of Appeals has already held the federal government has a compelling interest in not perpetuating the effects of racial discrimination in its own distribution of federal funds and in remediating the effects of past discrimination in the government contracting markets created by its disbursements. *Id.* *13, quoting *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147, 1165 (10th Cir. 2000). The plaintiffs did not dispute that remedying discrimination in federal transportation contracting is a compelling governmental interest. *Id.* at *13. In accessing the evidence offered in support of a finding of discrimination, the Court concluded that defendants have articulated a compelling interest underlying enactment of the DBE Program. *Id.*

Second, the Court states that the government must demonstrate a strong basis in the evidence supporting its conclusion that race-based remedial action was necessary to further the compelling interest. *Id.* at *13. In assessing the evidence offered in support of a finding of discrimination, the Court considers both direct and circumstantial evidence, including post-enactment evidence introduced by defendants as well as the evidence in the legislative history itself. *Id.* The party challenging the constitutionality of the DBE Program bears the burden of demonstrating that the government's evidence did not support an inference of prior discrimination. *Id.*

Congressional evidence of discrimination: disparity studies and barriers. Plaintiffs argued that the evidence relied upon by Congress in reauthorizing the DBE Program is insufficient and generally critique the reports, studies, and evidence from the Congressional record produced by the Federal Defendants. *Id.* at *13. But, the Court found that plaintiffs did not raise any specific issues with respect to the Federal Defendants' proffered evidence of discrimination. *Id.* *14. Plaintiffs had argued that no party could ever afford to retain an expert to analyze the numerous studies submitted as evidence by the Federal Defendants and find all of

the flaws. *Id.* *14. Federal Defendants had proffered disparity studies from throughout the United States over a period of years in support of the Federal DBE Program. *Id.* at *14. Based on these studies, the Federal Defendants' consultant concluded that minorities and women formed businesses at disproportionately lower rates and their businesses earn statistically less than businesses owned by men or nonminorities. *Id.* at *6.

The Federal Defendants' consultant also described studies supporting the conclusion that there is credit discrimination against minority- and women-owned businesses, concluded that there is a consistent and statistically significant underutilization of minority- and women-owned businesses in public contracting, and specifically found that discrimination existed in MnDOT contracting when no race-conscious efforts were utilized. *Id.* *6. The Court notes that Congress had considered a plethora of evidence documenting the continued presence of discrimination in transportation projects utilizing Federal dollars. *Id.* at *5.

The Court concluded that neither of the plaintiffs' contentions established that Congress lacked a substantial basis in the evidence to support its conclusion that race-based remedial action was necessary to address discrimination in public construction contracting. *Id.* at *14. The Court rejected plaintiffs' argument that because Congress found multiple forms of discrimination against minority- and women-owned business, that evidence showed Congress failed to also find that such businesses specifically face discrimination in public contracting, or that such discrimination is not relevant to the effect that discrimination has on public contracting. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The Court referenced the decision in *Adarand Constructors, Inc.* 228 F.3d at 1175-1176. In *Adarand*, the Court found evidence relevant to Congressional enactment of the DBE Program to include that both race-based barriers to entry and the ongoing race-based impediments to success faced by minority subcontracting enterprises are caused either by continuing discrimination or the lingering effects of past discrimination on the relevant market. *Id.* at *14.

The Court, citing again with approval the decision in *Adarand Constructors, Inc.*, found the evidence presented by the federal government demonstrates the existence of two kinds of discriminatory barriers to minority subcontracting enterprises, both of which show a strong link between racial disparities in the federal government's disbursements of public funds for construction contracts and the channeling of those funds due to private discrimination. *Id.* at *14, quoting *Adarand Constructors, Inc.* 228 F.3d at 1167-68. The first discriminatory barriers are to the formation of qualified minority subcontracting enterprises due to private discrimination. *Id.* The second discriminatory barriers are to fair competition between minority and nonminority subcontracting enterprises, again due to private discrimination. *Id.* Both kinds of discriminatory barriers preclude existing minority firms from effectively competing for public construction contracts. *Id.*

Accordingly, the Court found that Congress' consideration of discriminatory barriers to entry for DBEs as well as discrimination in existing public contracting establish a strong basis in the evidence for reauthorization of the Federal DBE Program. *Id.* at *14.

Court rejects Plaintiffs' general critique of evidence as failing to meet their burden of proof. The Court held that plaintiffs' general critique of the methodology of the studies relied upon by the Federal Defendants is similarly insufficient to demonstrate that Congress lacked a substantial basis in the evidence. *Id.* at *14. The Court stated that the Eighth Circuit Court of Appeals has already rejected plaintiffs' argument that Congress was required to find specific evidence of discrimination in Minnesota in order to enact the national Program. *Id.* at *14.

Finally, the Court pointed out that plaintiffs have failed to present affirmative evidence that no remedial action was necessary because minority-owned small businesses enjoy non-discriminatory access to and participation in highway contracts. *Id.* at *15. Thus, the Court concluded that plaintiffs failed to meet their ultimate burden to prove that the Federal DBE Program is unconstitutional on this ground. *Id.* at *15, quoting *Sherbrooke Turf, Inc.*, 345 F.3d at 971-73.

Therefore, the Court held that plaintiffs did not meet their burden of raising a genuine issue of material fact as to whether the government met its evidentiary burden in reauthorizing the DBE Federal Program, and granted summary judgment in favor of the Federal Defendants with respect to the government's compelling interest. *Id.* at *15.

Narrowly tailored. The Court states that several factors are examined in determining whether race-conscious remedies are narrowly tailored, and that numerous Federal Courts have already concluded that the DBE Federal Program is narrowly tailored. *Id.* at *15. Plaintiffs in this case did not dispute the various aspects of the Federal DBE Program that courts have previously found to demonstrate narrowly tailoring. *Id.* Instead, plaintiffs argue only that the Federal DBE Program is not narrowly tailored on its face because of overconcentration.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Overconcentration. Plaintiffs argued that if the recipients of federal funds use overall industry participation of minorities to set goals, yet limit actual DBE participation to only defined small businesses that are limited in the work they can perform, there is no way to avoid overconcentration of DBE participation in a few, limited areas of MnDOT work. *Id.* at *15. Plaintiffs asserted that small businesses cannot perform most of the types of work needed or necessary for large highway projects, and if they had the capital to do it, they would not be small businesses. *Id.* at *16. Therefore, plaintiffs argued the DBE Program will always be overconcentrated. *Id.*

The Court states that in order for plaintiffs to prevail on this facial challenge, plaintiffs must establish that the overconcentration it identifies is unconstitutional, and that there are no circumstances under which the Federal DBE Program could be operated without overconcentration. *Id.* The Court concludes that plaintiffs' claim fails on the basis that there are circumstances under which the Federal DBE Program could be operated without overconcentration. *Id.*

First, the Court found that plaintiffs fail to establish that the DBE Program goals will always be fulfilled in a manner that creates overconcentration, because they misapprehend the nature of the goal setting mandated by the DBE Program. *Id.* at *16. The Court states that recipients set goals for DBE participation based on evidence of the availability of ready, willing and able DBEs to participate on DOT-assisted contracts. *Id.* The DBE Program, according to the Court, necessarily takes into account, when determining goals, that there are certain types of work that DBEs may never be able to perform because of the capital requirements. *Id.* In other words, if there is a type of work that no DBE can perform, there will be no demonstrable evidence of the availability of ready, willing and able DBEs in that type of work, and those non-existent DBEs will not be factored into the level of DBE

participation that a locality would expect absent the effects of discrimination. *Id.*

Second, the Court found that even if the DBE Program could have the incidental effect of overconcentration in particular areas, the DBE Program facially provides ample mechanisms for a recipient of federal funds to address such a problem. *Id.* at *16. The Court notes that a recipient retains substantial flexibility in setting individual contract goals and specifically may consider the type of work involved, the location of the work, and the availability of DBEs for the work of the particular contract. *Id.* If overconcentration presents itself as a problem, the Court points out that a recipient can alter contract goals to focus less on contracts that require work in an already overconcentrated area and instead involve other types of work where overconcentration of DBEs is not present. *Id.*

The federal regulations also require contractors to engage in good faith efforts that require breaking out the contract work items into economically feasible units to facilitate DBE participation. *Id.* Therefore, the Court found, the regulations anticipate the possible issue identified by plaintiffs and require prime contractors to subdivide projects that would otherwise typically require more capital or equipment than a single DBE can acquire. *Id.* Also, the Court, states that recipients may obtain waivers of the DBE Program's provisions pertaining to overall goals, contract goals, or good faith efforts, if, for example, local conditions of overconcentration threaten operation of the DBE Program. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The Court also rejects plaintiffs claim that 49 CFR § 26.45(h), which provides that recipients are not allowed to subdivide their annual goals into “group-specific goals,” but rather must provide for participation by all certified DBEs, as evidence that the DBE Program leads to overconcentration. *Id.* at *16. The Court notes that other courts have interpreted this provision to mean that recipients cannot apportion its DBE goal among different minority groups, and therefore the provision does not appear to prohibit recipients from identifying particular overconcentrated areas and remedying overconcentration in those areas. *Id.* at *16. And, even if the provision operated as plaintiffs suggested, that provision is subject to waiver and does not affect a recipient’s ability to tailor specific contract goals to combat overconcentration. *Id.* at *16, n. 5.

The Court states with respect to overconcentration specifically, the federal regulations provide that recipients may use incentives, technical assistance, business development programs, mentor-protégé programs, and other appropriate measures designed to assist DBEs in performing work outside of the specific field in which the recipient has determined that non-DBEs are unduly burdened. *Id.* at *17. All of these measures could be used by recipients to shift DBEs from areas in which they are overconcentrated to other areas of work. *Id.* at *17.

Therefore, the Court held that because the DBE Program provides numerous avenues for recipients of federal funds to combat overconcentration, the Court concluded that plaintiffs’ facial challenge to the Program fails, and granted the Federal Defendants’ motion for summary judgment. *Id.*

C. Facial challenged based on vagueness. The Court held that plaintiffs could not maintain a facial challenge against the Federal DBE Program for vagueness, as their constitutional challenges to the Program are not based in the First Amendment. *Id.* at *17. The Court states that the Eighth Circuit

Court of Appeals has held that courts need not consider facial vagueness challenges based upon constitutional grounds other than the First Amendment. *Id.*

The Court thus granted Federal Defendants’ motion for summary judgment with respect to plaintiffs’ facial claim for vagueness based on the allegation that the Federal DBE Program does not define “reasonable” for purposes of when a prime contractor is entitled to reject a DBEs’ bid on the basis of price alone. *Id.*

As-Applied Challenges to MnDOT’s DBE Program: MnDOT’s program held narrowly tailored. Plaintiffs brought three as-applied challenges against MnDOT’s implementation of the Federal DBE Program, alleging that MnDOT has failed to support its implementation of the Program with evidence of discrimination in its contracting, sets inappropriate goals for DBE participation, and has failed to respond to overconcentration in the traffic control industry. *Id.* at *17.

Alleged failure to find evidence of discrimination. The Court held that a state’s implementation of the Federal DBE Program must be narrowly tailored. *Id.* at *18. To show that a state has violated the narrow tailoring requirement of the Federal DBE Program, the Court says a challenger must demonstrate that “better data was available” and the recipient of federal funds “was otherwise unreasonable in undertaking [its] thorough analysis and in relying on its results.” *Id.*, quoting *Sherbrook Turf, Inc.* at 973.

Plaintiffs’ expert critiqued the statistical methods used and conclusions drawn by the consultant for MnDOT in finding that discrimination against DBEs exists in MnDOT contracting sufficient to support operation of the DBE Program. *Id.* at *18. Plaintiffs’ expert also critiqued the measures of DBE availability employed by the MnDOT consultant and the fact he measured discrimination in both prime and subcontracting markets, instead of solely in subcontracting markets. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Plaintiffs present no affirmative evidence that discrimination does not exist. The Court held that plaintiffs' disputes with MnDOT's conclusion that discrimination exists in public contracting are insufficient to establish that MnDOT's implementation of the Federal DBE Program is not narrowly tailored. *Id.* at *18. First, the Court found that it is insufficient to show that "data was susceptible to multiple interpretations," instead, plaintiffs must "present affirmative evidence that no remedial action was necessary because minority-owned small businesses enjoy non-discriminatory access to and participation in highway contracts." *Id.* at *18, quoting *Sherbrooke Turf, Inc.*, 345 F.3d at 970. Here, the Court found, plaintiffs' expert has not presented affirmative evidence upon which the Court could conclude that no discrimination exists in Minnesota's public contracting. *Id.* at *18.

As for the measures of availability and measurement of discrimination in both prime and subcontracting markets, both of these practices are included in the federal regulations as part of the mechanisms for goal setting. *Id.* at *18. The Court found that it would make little sense to separate prime contractor and subcontractor availability, when DBEs will also compete for prime contracts and any success will be reflected in the recipient's calculation of success in meeting the overall goal. *Id.* at *18, quoting *Northern Contracting, Inc. v. Illinois*, 473 F.3d 715, 723 (7th Cir. 2007). Because these factors are part of the federal regulations defining state goal setting that the Eighth Circuit Court of Appeals has already approved in assessing MnDOT's compliance with narrow tailoring in *Sherbrooke Turf*, the Court concluded these criticisms do not establish that MnDOT has violated the narrow tailoring requirement. *Id.* at *18.

In addition, the Court held these criticisms fail to establish that MnDOT was unreasonable in undertaking its thorough analysis and relying on its results, and consequently do not show lack of narrow tailoring. *Id.* at *18. Accordingly, the Court granted the State defendants' motion for summary judgment with respect to this claim.

Alleged inappropriate goal setting. Plaintiffs second challenge was to the aspirational goals MnDOT has set for DBE performance between 2009 and 2015. *Id.* at *19. The Court found that the goal setting violations the plaintiffs alleged are not the types of violations that could reasonably be expected to recur. *Id.* Plaintiffs raised numerous arguments regarding the data and methodology used by MnDOT in setting its earlier goals. *Id.* But, plaintiffs did not dispute that every three years MnDOT conducts an entirely new analysis of discrimination in the relevant market and establishes new goals. *Id.* Therefore, disputes over the data collection and calculations used to support goals that are no longer in effect are moot. *Id.* Thus, the Court only considered plaintiffs' challenges to the 2013–2015 goals. *Id.*

Plaintiffs raised the same challenges to the 2013–2015 goals as it did to MnDOT's finding of discrimination, namely that the goals rely on multiple approaches to ascertain the availability of DBEs and rely on a measurement of discrimination that accounts for both prime and subcontracting markets. *Id.* at *19. Because these challenges identify only a different interpretation of the data and do not establish that MnDOT was unreasonable in relying on the outcome of the consultants' studies, plaintiffs have failed to demonstrate a material issue of fact related to MnDOT's narrow tailoring as it relates to goal setting. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Alleged overconcentration in the traffic control market. Plaintiffs' final argument was that MnDOT's implementation of the DBE Program violates the Equal Protection Clause because MnDOT has failed to find overconcentration in the traffic control market and correct for such overconcentration. *Id.* at *20. MnDOT presented an expert report that reviewed four different industries into which plaintiffs' work falls based on NAICs codes that firms conducting traffic control-type work identify themselves by. *Id.* After conducting a disproportionality comparison, the consultant concluded that there was not statistically significant overconcentration of DBEs in plaintiffs' type of work.

Plaintiffs' expert found that there is overconcentration, but relied upon six other contractors that have previously bid on MnDOT contracts, which plaintiffs believe perform the same type of work as plaintiff. *Id.* at *20. But, the Court found plaintiffs have provided no authority for the proposition that the government must conform its implementation of the DBE Program to every individual business' self-assessment of what industry group they fall into and what other businesses are similar. *Id.*

The Court held that to require the State to respond to and adjust its calculations on account of such a challenge by a single business would place an impossible burden on the government because an individual business could always make an argument that some of the other entities in the work area the government has grouped it into are not alike. *Id.* at *20. This, the Court states, would require the government to run endless iterations of overconcentration analyses to satisfy each business that non-DBEs are not being unduly burdened in its self-defined group, which would be quite burdensome. *Id.*

Because plaintiffs did not show that MnDOT's reliance on its overconcentration analysis using NAICs codes was unreasonable or that overconcentration exists in its type of work as defined by MnDOT, it has not established that MnDOT has violated narrow tailoring by failing to identify overconcentration or failing to address it. *Id.* at *20. Therefore, the Court granted the State defendants' motion for summary judgment with respect to this claim.

III. Claims Under 42 U.S.C. § 1981 and 42 U.S.C. § 2000. Because the Court concluded that MnDOT's actions are in compliance with the Federal DBE Program, its adherence to that Program cannot constitute a basis for a violation of § 1981. *Id.* at *21. In addition, because the Court concluded that plaintiffs failed to establish a violation of the Equal Protection Clause, it granted the defendants' motions for summary judgment on the 42 U.S.C. § 2000d claim.

Holding. Therefore, the Court granted the Federal Defendants' motion for summary judgment and the States' defendants' motion to dismiss/motion for summary judgment, and dismissed all the claims asserted by the plaintiffs.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

5. *Geod Corporation v. New Jersey Transit Corporation, et al.*, 746 F. Supp.2d 642, 2010 WL 4193051 (D. N. J. October 19, 2010)

Plaintiffs, white male owners of Geod Corporation (“Geod”), brought this action against the New Jersey Transit Corporation (“NJT”) alleging discriminatory practices by NJT in designing and implementing the Federal DBE Program. 746 F. Supp 2d at 644. The plaintiffs alleged that the NJT’s DBE program violated the United States Constitution, 42 U.S.C. § 1981, Title VI of the Civil Rights Act of 1964, 42 U.S.C. § 2000(d) and state law. The district court previously dismissed the complaint against all Defendants except for NJT and concluded that a genuine issue material fact existed only as to whether the method used by NJT to determine its DBE goals during 2010 were sufficiently narrowly tailored, and thus constitutional. *Id.*

New Jersey Transit Program and Disparity Study. NJT relied on the analysis of consultants for the establishment of their goals for the DBE program. The study established the effects of past discrimination, the district court found, by looking at the disparity and utilization of DBEs compared to their availability in the market. *Id.* at 648. The study used several data sets and averaged the findings in order to calculate this ratio, including: (1) the New Jersey DBE vendor List; (2) a Survey of Minority-Owned Business Enterprises (SMOBE) and a Survey of Women-Owned Enterprises (SWOBE) as determined by the U.S. Census Bureau; and (3) detailed contract files for each racial group. *Id.*

The court found the study determined an average annual utilization of 23 percent for DBEs, and to examine past discrimination, several analyses were run to measure the disparity among DBEs by race. *Id.* at 648. The Study found that all but one category was underutilized among the racial and ethnic groups. *Id.* All groups other than Asian DBEs were found to be underutilized. *Id.*

The court held that the test utilized by the study, “conducted to establish a pattern of discrimination against DBEs, proved that discrimination occurred against DBEs during the pre-qualification process and in the number of contracts that are awarded to DBEs. *Id.* at 649. The court found that DBEs are more likely than non-DBEs to be pre-qualified for small construction contracts, but are less likely to pre-qualify for larger construction projects. *Id.*

For fiscal year 2010, the study consultant followed the “three-step process pursuant to USDOT regulations to establish the NJT DBE goal.” *Id.* at 649. First, the consultant determined “the base figure for the relative availability of DBEs in the specific industries and geographical market from which DBE and non-DBE contractors are drawn.” *Id.* In determining the base figure, the consultant (1) defined the geographic marketplace, (2) identified “the relevant industries in which NJ Transit contracts,” and (3) calculated “the weighted availability measure.” *Id.* at 649.

The court found that the study consultant used political jurisdictional methods and virtual methods to pinpoint the location of contracts and/or contractors for NJT, and determined that the geographical marketplace for NJT contracts included New Jersey, New York and Pennsylvania. *Id.* at 649. The consultant used contract files obtained from NJT and data obtained from Dun & Bradstreet to identify the industries with which NJT contracts in these geographical areas. *Id.* The consultant then used existing and estimated expenditures in these particular industries to determine weights corresponding to NJT contracting patterns in the different industries for use in the availability analysis. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The availability of DBEs was calculated by using the following data: Unified Certification Program Business Directories for the states of New Jersey, New York and Pennsylvania; NJT Vendor List; Dun & Bradstreet database; 2002 Survey of Small Business Owners; and NJT Pre-Qualification List. *Id.* at 649-650. The availability rates were then “calculated by comparing the number of ready, willing, and able minority and women-owned firms in the defined geographic marketplace to the total number of ready, willing, and able firms in the same geographic marketplace. *Id.* The availability rates in each industry were weighed in accordance with NJT expenditures to determine a base figure. *Id.*

Second, the consultant adjusted the base figure due to evidence of discrimination against DBE prime contractors and disparities in small purchases and construction pre-qualification. *Id.* at 650. The discrimination analysis examined discrimination in small purchases, discrimination in pre-qualification, two regression analyses, an Essex County disparity study, market discrimination, and previous utilization. *Id.* at 650.

The Final Recommendations Report noted that there were sizeable differences in the small purchase awards to DBEs and non-DBEs with the awards to DBEs being significantly smaller. *Id.* at 650. DBEs were also found to be less likely to be pre-qualified for contracts over \$1 million in comparison to similarly situated non-DBEs. *Id.* The regression analysis using the dummy variable method yielded an average estimate of a discriminatory effect of -28.80 percent. *Id.* The discrimination regression analysis using the residual difference method showed that on average 12.2 percent of the contract amount disparity awarded to DBEs and non-DBEs was unexplained. *Id.*

The consultant also considered evidence of discrimination in the local market in accordance with 49 CFR § 26.45(d). The Final Recommendations Report cited in the 2005 Essex County Disparity Study suggested that discrimination in the labor market contributed to the unexplained portion of the self-employment, employment, unemployment, and wage gaps in Essex County, New Jersey. *Id.* at 650.

The consultant recommended that NJT focus on increasing the number of DBE prime contractors. Because qualitative evidence is difficult to quantify, according to the consultant, only the results from the regression analyses were used to adjust the base goal. *Id.* The base goal was then adjusted from 19.74 percent to 23.79 percent. *Id.*

Third, in order to partition the DBE goal by race-neutral and race-conscious methods, the consultant analyzed the share of all DBE contract dollars won with no goals. *Id.* at 650. He also performed two different regression analyses: one involving predicted DBE contract dollars and DBE receipts if the goal was set at zero. *Id.* at 651. The second method utilized predicted DBE contract dollars with goals and predicted DBE contract dollars without goals to forecast how much firms with goals would receive had they not included the goals. *Id.* The consultant averaged his results from all three methods to conclude that the fiscal year 2010 NJT a portion of the race-neutral DBE goal should be 11.94 percent and a portion of the race-conscious DBE goal should be 11.84 percent. *Id.* at 651.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The district court applied the strict scrutiny standard of review. The district court already decided, in the course of the motions for summary judgment, that compelling interest was satisfied as New Jersey was entitled to adopt the federal government’s compelling interest in enacting TEA-21 and its implementing regulations. *Id.* at 652, *citing Geod v. N.J. Transit Corp.*, 678 F.Supp.2d 276, 282 (D.N.J. 2009). Therefore, the court limited its analysis to whether NJT’s DBE program was narrowly tailored to further that compelling interest in accordance with “its grant of authority under federal law.” *Id.* at 652 *citing Northern Contracting, Inc. v. Illinois Department of Transportation*, 473 F.3d 715, 722 (7th Cir. 2007).

Applying *Northern Contracting v. Illinois*. The district court clarified its prior ruling in 2009 (see 678 F.Supp.2d 276) regarding summary judgment, that the court agreed with the holding in *Northern Contracting, Inc. v. Illinois*, that “a challenge to a state’s application of a federally mandated program must be limited to the question of whether the state exceeded its authority.” *Id.* at 652 quoting *Northern Contracting*, 473 F.3d at 721. The district court in *Geod* followed the Seventh Circuit explanation that when a state department of transportation is acting as an instrument of federal policy, a plaintiff cannot collaterally attack the federal regulations through a challenge to a state’s program. *Id.* at 652, *citing Northern Contracting*, 473 F.3d at 722. Therefore, the district court held that the inquiry is limited to the question of whether the state department of transportation “exceeded its grant of authority under federal law.” *Id.* at 652-653, quoting *Northern Contracting*, 473 F.3d at 722 and *citing also Tennessee Asphalt Co. v. Farris*, 942 F.2d 969, 975 (6th Cir. 1991).

The district court found that the holding and analysis in *Northern Contracting* does not contradict the Eighth Circuit’s analysis in *Sherbrooke Turf, Inc. v. Minnesota Department of Transportation*, 345 F.3d 964, 970-71 (8th Cir. 2003). *Id.* at 653. The court held that the Eighth Circuit’s discussion of whether the DBE programs as implemented by the State of Minnesota and the State of Nebraska were narrowly tailored focused on whether the states were following the USDOT regulations. *Id.* at 653 *citing Sherbrooke Turf*, 345 F.3d 973-74. Therefore, “only when the state exceeds its federal authority is it susceptible to an as-applied constitutional challenge.” *Id.* at 653 *quoting Western States Paving Co., Inc. v. Washington State Department of Transportation*, 407 F.3d 983 (9th Cir. 2005)(McKay, C.J.)(concurring in part and dissenting in part) and *citing South Florida Chapter of the Associated General Contractors v. Broward County*, 544 F.Supp.2d 1336, 1341 (S.D.Fla.2008).

The court held the initial burden of proof falls on the government, but once the government has presented proof that its affirmative action plan is narrowly tailored, the party challenging the affirmative action plan bears the ultimate burden of proving that the plan is unconstitutional. *Id.* at 653.

In analyzing whether NJT’s DBE program was constitutionally defective, the district court focused on the basis of plaintiffs’ argument that it was not narrowly tailored because it includes in the category of DBEs racial or ethnic groups as to which the plaintiffs alleged NJT had no evidence of past discrimination. *Id.* at 653. The court found that most of plaintiffs’ arguments could be summarized as questioning whether NJT presented demonstrable evidence of the availability of ready, willing and able DBEs as required by 49 CFR § 26.45. *Id.* The court held that NJT followed the goal setting process required by the federal regulations. *Id.* The court stated that NJT began this process with the 2002 disparity study that examined past discrimination and found that all of the groups listed in

L. Legal — Other recent district court decisions regarding the Federal DBE Program

the regulations were underutilized with the exception of Asians. *Id.* at 654. In calculating the fiscal year 2010 goals, the consultant used contract files and data from Dun & Bradstreet to determine the geographical location corresponding to NJT contracts and then further focused that information by weighting the industries according to NJT's use. *Id.*

The consultant used various methods to calculate the availability of DBEs, including: the UCP Business Directories for the states of New Jersey, New York and Pennsylvania; NJT Vendor List; Dun & Bradstreet database; 2002 Survey of Small Business Owners; and NJT Pre-Qualification List. *Id.* at 654. The court stated that NJT only utilized one of the examples listed in 49 CFR § 26.45(c), the DBE directories method, in formulating the fiscal year 2010 goals. *Id.*

The district court pointed out, however, the regulations state that the “examples are provided as a starting point for your goal setting process and that the examples are not intended as an exhaustive list. *Id.* at 654, *citing* 46 CFR § 26.45(c). The court concluded the regulations clarify that other methods or combinations of methods to determine a base figure may be used. *Id.* at 654.

The court stated that NJT had used these methods in setting goals for prior years as demonstrated by the reports for 2006 and 2009. *Id.* at 654. In addition, the court noted that the Seventh Circuit held that a custom census, the Dun & Bradstreet database, and the IDOT's list of DBEs were an acceptable combination of methods with which to determine the base figure for TEA-21 purposes. *Id.* at 654, *citing Northern Contracting*, 473 F.3d at 718.

The district court found that the expert witness for plaintiffs had not convinced the court that the data were faulty, and the testimony at trial did not persuade the court that the data or regression analyses relied upon by NJT were unreliable or that another method would provide more accurate results. *Id.* at 654-655.

The court in discussing step two of the goals setting process pointed out that the data examined by the consultant is listed in the regulations as proper evidence to be used to adjust the base figure. *Id.* at 655, *citing* 49 CFR § 26.45(d). These data included evidence from disparity studies and statistical disparities in the ability of DBEs to get pre-qualification. *Id.* at 655. The consultant stated that evidence of societal discrimination was not used to adjust the base goal and that the adjustment to the goal was based on the discrimination analysis, which controls for size of firm and effect of having a DBE goal. *Id.* at 655.

The district court then analyzed NJT's division of the adjusted goal into race-conscious and race-neutral portions. *Id.* at 655. The court noted that narrowly tailoring does not require exhaustion of every conceivable race-neutral alternative, but instead requires serious, good faith consideration of workable race-neutral alternatives. *Id.* at 655. The court agreed with *Western States Paving* that only “when race-neutral efforts prove inadequate do these regulations authorize a State to resort to race-conscious measures to achieve the remainder of its DBE utilization goal.” *Id.* at 655, *quoting Western States Paving*, 407 F.3d at 993-94.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The court found that the methods utilized by NJT had been used by it on previous occasions, which were approved by the USDOT. *Id.* at 655. The methods used by NJT, the court found, also complied with the examples listed in 49 CFR § 26.51, including arranging solicitations, times for the presentation of bids, quantities, specifications, and delivery schedules in ways that facilitate DBE participation; providing pre-qualification assistance; implementing supportive services programs; and ensuring distribution of DBE directories. *Id.* at 655. The court held that based on these reasons and following the *Northern Contracting, Inc. v. Illinois* line of cases, NJT’s DBE program did not violate the Constitution as it did not exceed its federal authority. *Id.* at 655.

However, the district court also found that even under the *Western States Paving Co., Inc. v. Washington State DOT* standard, the NJT program still was constitutional. *Id.* at 655. Although the court found that the appropriate inquiry is whether NJT exceeded its federal authority as detailed in *Northern Contracting, Inc. v. Illinois*, the court also examined the NJT DBE program under *Western States Paving Co. v. Washington State DOT*. *Id.* at 655-656. The court stated that under *Western States Paving*, a Court must “undertake an as-applied inquiry into whether [the state’s] DBE program is narrowly tailored.” *Id.* at 656, quoting *Western States Paving*, 407 F.3d at 997.

Applying *Western States Paving*. The district court then analyzed whether the NJT program was narrowly tailored applying *Western States Paving*. Under the first prong of the narrowly tailoring analysis, a remedial program is only narrowly tailored if its application is limited to those minority groups that have actually suffered discrimination. *Id.* at 656, citing *Western States Paving*, 407 F.3d at 998. The court acknowledged that according to the 2002 Final Report, the ratios of DBE utilization to DBE availability was 1.31. *Id.* at 656. However, the court found that the plaintiffs’ argument failed as the facts in *Western States Paving* were distinguishable from those of NJT, because NJT did receive complaints, i.e.,

anecdotal evidence, of the lack of opportunities for Asian firms. *Id.* at 656. NJT employees testified that Asian firms informally and formally complained of a lack of opportunity to grow and indicated that the DBE Program was assisting with this issue. *Id.* In addition, plaintiff’s expert conceded that Asian firms have smaller average contract amounts in comparison to non-DBE firms. *Id.*

The plaintiff relied solely on the utilization rate as evidence that Asians are not discriminated against in NJT contracting. *Id.* at 656. The court held this was insufficient to overcome the consultant’s determination that discrimination did exist against Asians, and thus this group was properly included in the DBE program. *Id.* at 656.

The district court rejected Plaintiffs’ argument that the first step of the narrow tailoring analysis was not met because NJT focuses its program on sub-contractors when NJT’s expert identified “prime contracting” as the area in which NJT procurements evidence discrimination. *Id.* at 656. The court held that narrow tailoring does not require exhaustion of every conceivable race-neutral alternative, but it does require serious, good faith consideration of workable race-neutral alternatives. *Id.* at 656, citing *Sherbrook Turf*, 345 F.3d at 972 (quoting *Grutter v. Bollinger*, 539 U.S. 306, 339, (2003)). In its efforts to implement race-neutral alternatives, the court found NJT attempted to break larger contracts up in order to make them available to smaller contractors and continues to do so when logistically possible and feasible to the procurement department. *Id.* at 656-657.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The district court found NJT satisfied the third prong of the narrowly tailored analysis, the “relationship of the numerical goals to the relevant labor market.” *Id.* at 657. Finally, under the fourth prong, the court addressed the impact on third-parties. *Id.* at 657. The court noted that placing a burden on third parties is not impermissible as long as that burden is minimized. *Id.* at 657, citing *Western States Paving*, 407 F.3d at 995. The court stated that instances will inevitably occur where non-DBEs will be bypassed for contracts that require DBE goals. However, TEA-21 and its implementing regulations contain provisions intended to minimize the burden on non-DBEs. *Id.* at 657, citing *Western States Paving*, 407 F.3d at 994-995.

The court pointed out the Ninth Circuit in *Western States Paving* found that inclusion of regulations allowing firms that were not presumed to be DBEs to demonstrate that they were socially and economically disadvantaged, and thus qualified for DBE programs, as well as the net worth limitations, were sufficient to minimize the burden on DBEs. *Id.* at 657, citing *Western States Paving*, 407 F.3d at 955. The court held that the plaintiffs did not provide evidence that NJT was not complying with implementing regulations designed to minimize harm to third parties. *Id.*

Therefore, even if the district court utilized the as-applied narrow tailoring inquiry set forth in *Western States Paving*, NJT’s DBE program would not be found to violate the Constitution, as the court held it was narrowly tailored to further a compelling governmental interest. *Id.* at 657.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

6. *Geod Corporation v. New Jersey Transit Corporation, et. seq.* 678 F.Supp.2d 276, 2009 WL 2595607 (D.N.J. August 20, 2009)

Plaintiffs Geod and its officers, who are white males, sued the NJT and state officials seeking a declaration that NJT's DBE program was unconstitutional and in violation of the United States 5th and 14th Amendment to the United States Constitution and the Constitution of the State of New Jersey, and seeking a permanent injunction against NJT for enforcing or utilizing its DBE program. The NJT's DBE program was implemented in accordance with the Federal DBE Program and TEA-21 and 49 CFR Part 26.

The parties filed cross Motions for Summary Judgment. The plaintiff Geod challenged the constitutionality of NJT's DBE program for multiple reasons, including alleging NJT could not justify establishing a program using race- and sex-based preferences; the NJT's disparity study did not provide a sufficient factual predicate to justify the DBE Program; NJT's statistical evidence did not establish discrimination; NJT did not have anecdotal data evidencing a "strong basis in evidence" of discrimination which justified a race- and sex-based program; NJT's program was not narrowly tailored and over-inclusive; NJT could not show an exceedingly persuasive justification for gender preferences; and that NJT's program was not narrowly tailored because race-neutral alternatives existed. In opposition, NJT filed a Motion for Summary Judgment asserting that its DBE program was narrowly tailored because it fully complied with the requirements of the Federal DBE Program and TEA-21.

The district court held that states and their agencies are entitled to adopt the federal governments' compelling interest in enacting TEA-21 and its implementing regulations. 2009 WL 2595607 at *4. The court stated that plaintiff's argument that NJT cannot establish the need for its DBE program was a "red herring, which is unsupported." The plaintiff did not question the constitutionality of the compelling interest of the Federal DBE Program. The court held that all states "inherit the federal governments' compelling interest in establishing a DBE program." *Id.*

The court found that establishing a DBE program "is not contingent upon a state agency demonstrating a need for same, as the federal government has already done so." *Id.* The court concluded that this reasoning rendered plaintiff's assertions that NJT's disparity study did not have sufficient factual predicate for establishing its DBE program, and that no exceedingly persuasive justification was found to support gender-based preferences, as without merit. *Id.* The court held that NJT does not need to justify establishing its DBE program, as it has already been justified by the legislature. *Id.*

The court noted that both plaintiff's and defendant's arguments were based on an alleged split in the Federal Circuit Courts of Appeal. Plaintiff Geod relies on *Western States Paving Company v. Washington State DOT*, 407 F.3d 983(9th Cir. 2005) for the proposition that an as-applied challenge to the constitutionality of a particular DBE program requires a demonstration by the recipient of federal funds that the program is narrowly tailored. *Id.* at *5. In contrast, the NJT relied primarily on *Northern Contracting, Inc. v. State of Illinois*, 473 F.3d 715 (7th Cir. 2007) for the proposition that if a DBE program complies with TEA-21, it is narrowly tailored. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The court viewed the various Federal Circuit Court of Appeals decisions as fact specific determinations which have led to the parties distinguishing cases without any substantive difference in the application of law. *Id.*

The court reviewed the decisions by the Ninth Circuit in *Western States Paving* and the Seventh Circuit of *Northern Contracting*. In *Western States Paving*, the district court stated that the Ninth Circuit held for a DBE program to pass constitutional muster, it must be narrowly tailored; specifically, the recipient of federal funds must evidence past discrimination in the relevant market in order to utilize race conscious DBE goals. *Id.* at *5. The Ninth Circuit, according to district court, made a fact specific determination as to whether the DBE program complied with TEA-21 in order to decide if the program was narrowly tailored to meet the federal regulation's requirements. The district court stated that the requirement that a recipient must evidence past discrimination "is nothing more than a requirement of the regulation." *Id.*

The court stated that the Seventh Circuit in *Northern Contracting* held a recipient must demonstrate that its program is narrowly tailored, and that generally a recipient is insulated from this sort of constitutional attack absent a showing that the state exceeded its federal authority. *Id.*, citing *Northern Contracting*, 473 F.3d at 721. The district court held that implicit in *Northern Contracting* is the fact one may challenge the constitutionality of a DBE program, as it is applied, to the extent that the program exceeds its federal authority. *Id.*

The court, therefore, concluded that it must determine first whether NJT's DBE program complies with TEA-21, then whether NJT exceeded its federal authority in its application of its DBE program. In other words, the district court stated it must determine whether the NJT DBE program complies with TEA-21 in order to determine whether the program, as implemented by NJT, is narrowly tailored. *Id.*

The court pointed out that the Eighth Circuit Court of Appeals in *Sherbrook Turf, Inc. v. Minnesota DOT*, 345 F.3d 964 (8th Cir. 2003) found Minnesota's DBE program was narrowly tailored because it was in compliance with TEA-21's requirements. The Eighth Circuit in *Sherbrook*, according to the district court, analyzed the application of Minnesota's DBE program to ensure compliance with TEA-21's requirements to ensure that the DBE program implemented by Minnesota DOT was narrowly tailored. *Id.* at *5.

The court held that TEA-21 delegates to each state that accepts federal transportation funds the responsibility of implementing a DBE program that comports with TEA-21. In order to comport with TEA-21, the district court stated a recipient must (1) determine an appropriate DBE participation goal, (2) examine all evidence and evaluate whether an adjustment, if any, is needed to arrive at their goal, and (3) if the adjustment is based on continuing effects of past discrimination, provide demonstrable evidence that is logically and directly related to the effect for which the adjustment is sought. *Id.* at *6, citing *Western States Paving Company*, 407 F.3d at 983, 988.

First, the district court stated a recipient of federal funds must determine, at the local level, the figure that would constitute an appropriate DBE involvement goal, based on their relative availability of DBEs. *Id.* at *6, citing 49 CFR § 26.45(c). In this case, the court found that NJT did determine a base figure for the relative availability of DBEs, which accounted for demonstrable evidence of local market conditions and was designed to be rationally related to the relative availability of DBEs. *Id.* The court pointed out that NJT conducted a disparity study, and the disparity study utilized NJT's DBE lists from fiscal years 1995-1999 and Census Data to determine its base DBE goal. The court noted that the plaintiffs' argument that the data used in the disparity study were stale was without merit and had no basis in law. The court found that the disparity study took into account the primary industries,

L. Legal — Other recent district court decisions regarding the Federal DBE Program

primary geographic market, and race neutral alternatives, then adjusted its goal to encompass these characteristics. *Id.* at *6.

The court stated that the use of DBE directories and Census data are what the legislature intended for state agencies to utilize in making a base DBE goal determination. *Id.* Also, the court stated that “perhaps more importantly, NJT’s DBE goal was approved by the USDOT every year from 2002 until 2008.” *Id.* at *6. Thus, the court found NJT appropriately determined their DBE availability, which was approved by the USDOT, pursuant to 49 CFR § 26.45(c). *Id.* at *6. The court held that NJT demonstrated its overall DBE goal is based on demonstrable evidence of the availability of ready, willing, and able DBEs relative to all businesses ready, willing, and able to participate in DOT assisted contracts and reflects its determination of the level of DBE participation it would expect absent the effects of discrimination. *Id.*

Also of significance, the court pointed out that plaintiffs did not provide any evidence that NJT did not set a DBE goal based upon 49 C.F. § 26.45(c). The court thus held that genuine issues of material fact remain only as to whether a reasonable jury may find that the method used by NJT to determine its DBE goal was sufficiently narrowly tailored. *Id.* at *6.

The court pointed out that to determine what adjustment to make, the disparity study examined qualitative data such as focus groups on the pre-qualification status of DBEs, working with prime contractors, securing credit, and its effect on DBE participation, as well as procurement officer interviews to analyze, and compare and contrast their relationships with non-DBE vendors and DBE vendors. *Id.* at *7. This qualitative information was then compared to DBE bids and DBE goals for each year in question. NJT’s adjustment to its DBE goal also included an analysis of the overall disparity ratio, as well as DBE

utilization based on race, gender and ethnicity. *Id.* A decomposition analysis was also performed. *Id.*

The court concluded that NJT provided evidence that it, at a minimum, examined the current capacity of DBEs to perform work in its DOT-assisted contracting program, as measured by the volume of work DBEs have performed in recent years, as well as utilizing the disparity study itself. The court pointed out there were two methods specifically approved by 49 CFR § 26.45(d). *Id.*

The court also found that NJT took into account race neutral measures to ensure that the greatest percentage of DBE participation was achieved through race and gender-neutral means. The district court concluded that “critically,” plaintiffs failed to provide evidence of another, more perfect, method that could have been utilized to adjust NJT’s DBE goal. *Id.* at *7. The court held that genuine issues of material fact remain only as to whether NJT’s adjustment to its DBE goal is sufficiently narrowly tailored and thus constitutional. *Id.*

NJT, the court found, adjusted its DBE goal to account for the effects of past discrimination, noting the disparity study took into account the effects of past discrimination in the pre-qualification process of DBEs. *Id.* at *7. The court quoted the disparity study as stating that it found non-trivial and statistically significant measures of discrimination in contract amounts awarded during the study period. *Id.* at *8.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The court found, however, that what was “gravely critical” about the finding of the past effects of discrimination is that it only took into account six groups including American Indian, Hispanic, Asian, blacks, women and “unknown,” but did not include an analysis of past discrimination for the ethnic group “Iraqi,” which is now a group considered to be a DBE by the NJT. *Id.* Because the disparity report included a category entitled “unknown,” the court held a genuine issue of material fact remains as to whether “Iraqi” is legitimately within NJT’s defined DBE groups and whether a demonstrable finding of discrimination exists for Iraqis. Therefore, the court denied both plaintiffs’ and defendants’ Motions for Summary Judgment as to the constitutionality of NJT’s DBE program.

The court also held that because the law was not clearly established at the time NJT established its DBE program to comply with TEA-21, the individual state defendants were entitled to qualified immunity and their Motion for Summary Judgment as to the state officials was granted. The court, in addition, held that plaintiff’s Title VI claims were dismissed because the individual defendants were not recipients of federal funds, and that the NJT as an instrumentality of the State of New Jersey is entitled to sovereign immunity. Therefore, the court held that the plaintiff’s claims based on the violation of 42 U.S.C. § 1983 were dismissed and NJT’s Motion for Summary Judgment was granted as to that claim.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

7. South Florida Chapter of the Associated General Contractors v. Broward County, Florida, 544 F. Supp.2d 1336 (S.D. Fla. 2008)

Plaintiff, the South Florida Chapter of the Associated General Contractors, brought suit against the Defendant, Broward County, Florida challenging Broward County's implementation of the Federal DBE Program and Broward County's issuance of contracts pursuant to the Federal DBE Program. Plaintiff filed a Motion for a Preliminary Injunction. The court considered only the threshold legal issue raised by plaintiff in the Motion, namely whether or not the decision in *Western States Paving Company v. Washington State Department of Transportation*, 407 F.3d 983 (9th Cir. 2005) should govern the Court's consideration of the merits of plaintiffs' claim. 544 F.Supp.2d at 1337. The court identified the threshold legal issue presented as essentially, "whether compliance with the federal regulations is all that is required of Defendant Broward County." *Id.* at 1338.

The Defendant County contended that as a recipient of federal funds implementing the Federal DBE Program, all that is required of the County is to comply with the federal regulations, relying on case law from the Seventh Circuit in support of its position. 544 F.Supp.2d at 1338, *citing Northern Contracting v. Illinois*, 473 F.3d 715 (7th Cir. 2007). The plaintiffs disagreed, and contended that the County must take additional steps beyond those explicitly provided for in the federal regulations to ensure the constitutionality of the County's implementation of the Federal DBE Program, as administered in the County, *citing Western States Paving*, 407 F.3d 983. The court found that there was no case law on point in the Eleventh Circuit Court of Appeals. *Id.* at 1338.

Ninth Circuit Approach: *Western States*. The district court analyzed the Ninth Circuit Court of Appeals approach in *Western States Paving* and the Seventh Circuit approach in *Milwaukee County Pavers Association v. Fiedler*, 922 F.2d 419 (7th Cir. 1991) and *Northern Contracting*, 473 F.3d 715. The district court in Broward County concluded that the Ninth Circuit in *Western States Paving* held that whether Washington's DBE program is narrowly tailored to further Congress's remedial objective depends upon the presence or absence of discrimination in the State's transportation contracting industry, and that it was error for the district court in *Western States Paving* to uphold Washington's DBE program simply because the state had complied with the federal regulations. 544 F.Supp.2d at 1338-1339. The district court in Broward County pointed out that the Ninth Circuit in *Western States Paving* concluded it would be necessary to undertake an as-applied inquiry into whether the state's program is narrowly tailored. 544 F.Supp.2d at 1339, *citing Western States Paving*, 407 F.3d at 997.

In a footnote, the district court in *Broward County* noted that the USDOT "appears not to be of one mind on this issue, however." 544 F.Supp.2d at 1339, n. 3. The district court stated that the "United States DOT has, in analysis posted on its Web site, implicitly instructed states and localities outside of the Ninth Circuit to ignore the *Western States Paving* decision, which would tend to indicate that this agency may not concur with the 'opinion of the United States' as represented in *Western States*." 544 F.Supp.2d at 1339, n. 3. The district court noted that the United States took the position in the *Western States Paving* case that the "state would have to have evidence of past or current effects of discrimination to use race-conscious goals." 544 F.Supp.2d at 1338, *quoting Western States Paving*.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The Court also pointed out that the Eighth Circuit Court of Appeals in *Sherbrooke Turf, Inc. v. Minnesota Department of Transportation*, 345 F.3d 964 (8th Cir. 2003) reached a similar conclusion as in *Western States Paving*. 544 F.Supp.2d at 1339. The Eighth Circuit in *Sherbrooke*, like the court in *Western States Paving*, “concluded that the federal government had delegated the task of ensuring that the state programs are narrowly tailored, and looked to the underlying data to determine whether those programs were, in fact, narrowly tailored, rather than simply relying on the states’ compliance with the federal regulations.” 544 F.Supp.2d at 1339.

Seventh Circuit Approach: Milwaukee County and Northern Contracting. The district court in Broward County next considered the Seventh Circuit approach. The Defendants in Broward County agreed that the County must make a local finding of discrimination for its program to be constitutional. 544 F.Supp.2d at 1339. The County, however, took the position that it must make this finding through the process specified in the federal regulations, and should not be subject to a lawsuit if that process is found to be inadequate. *Id.* In support of this position, the County relied primarily on the Seventh Circuit’s approach, first articulated in *Milwaukee County Pavers Association v. Fiedler*, 922 F.2d 419 (7th Cir. 1991), then reaffirmed in *Northern Contracting*, 473 F.3d 715 (7th Cir. 2007). 544 F.Supp.2d at 1339.

Based on the Seventh Circuit approach, insofar as the state is merely doing what the statute and federal regulations envisage and permit, the attack on the state is an impermissible collateral attack on the federal statute and regulations. 544 F.Supp.2d at 1339-1340. This approach concludes that a state’s role in the federal program is simply as an agent, and insofar “as the state is merely complying with federal law it is acting as the agent of the federal government and is no more subject to being enjoined on equal protection grounds than the federal civil

servants who drafted the regulations.” 544 F.Supp.2d at 1340, *quoting Milwaukee County Pavers*, 922 F.2d at 423.

The Ninth Circuit addressed the *Milwaukee County Pavers* case in *Western States Paving*, and attempted to distinguish that case, concluding that the constitutionality of the federal statute and regulations were not at issue in *Milwaukee County Pavers*. 544 F.Supp.2d at 1340. In 2007, the Seventh Circuit followed up the critiques made in *Western States Paving* in the *Northern Contracting* decision. *Id.* The Seventh Circuit in *Northern Contracting* concluded that the majority in *Western States Paving* misread its decision in *Milwaukee County Pavers* as did the Eighth Circuit Court of Appeals in *Sherbrooke*. 544 F.Supp.2d at 1340, *citing Northern Contracting*, 473 F.3d at 722, n.5. The district court in Broward County pointed out that the Seventh Circuit in *Northern Contracting* emphasized again that the state DOT is acting as an instrument of federal policy, and a plaintiff cannot collaterally attack the federal regulations through a challenge to the state DOT’s program. 544 F.Supp.2d at 1340, *citing Northern Contracting*, 473 F.3d at 722.

The district court in *Broward County* stated that other circuits have concurred with this approach, including the Sixth Circuit Court of Appeals decision in *Tennessee Asphalt Company v. Farris*, 942 F.2d 969 (6th Cir. 1991). 544 F.Supp.2d at 1340. The district court in *Broward County* held that the Tenth Circuit Court of Appeals took a similar approach in *Ellis v. Skinner*, 961 F.2d 912 (10th Cir. 1992). 544 F.Supp.2d at 1340. The district court in *Broward County* held that these Circuit Courts of Appeal have concluded that “where a state or county fully complies with the federal regulations, it cannot be enjoined from carrying out its DBE program, because any such attack would simply constitute an improper collateral attack on the constitutionality of the regulations.” 544 F.Supp.2d at 1340-41.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The district court in *Broward County* held that it agreed with the approach taken by the Seventh Circuit Court of Appeals in *Milwaukee County Pavers* and *Northern Contracting* and concluded that “the appropriate factual inquiry in the instant case is whether or not Broward County has fully complied with the federal regulations in implementing its DBE program.” 544 F.Supp.2d at 1341. It is significant to note that the plaintiffs did not challenge the as-applied constitutionality of the federal regulations themselves, but rather focused their challenge on the constitutionality of Broward County’s actions in carrying out the DBE program. 544 F.Supp.2d at 1341. The district court in *Broward County* held that this type of challenge is “simply an impermissible collateral attack on the constitutionality of the statute and implementing regulations.” *Id.*

The district court concluded that it would apply the case law as set out in the Seventh Circuit Court of Appeals and concurring circuits, and that the trial in this case would be conducted solely for the purpose of establishing whether or not the County has complied fully with the federal regulations in implementing its DBE program. 544 F.Supp.2d at 1341.

Subsequently, there was a Stipulation of Dismissal filed by all parties in the district court, and an Order of Dismissal was filed without a trial of the case in November 2008.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

8. *Northern Contracting, Inc. v. Illinois*, 2005 WL 2230195 (N.D. Ill. Sept. 8, 2005), *aff'd* 473 F.3d 715 (7th Cir. 2007)

This decision is the district court's order that was affirmed by the Seventh Circuit Court of Appeals. This decision is instructive in that it is one of the recent cases to address the validity of the Federal DBE Program and local and state governments' implementation of the program as recipients of federal funds. The case also is instructive in that the court set forth a detailed analysis of race-, ethnicity- and gender-neutral measures as well as evidentiary data required to satisfy constitutional scrutiny.

The district court conducted a trial after denying the parties' Motions for Summary Judgment in *Northern Contracting, Inc. v. State of Illinois, Illinois DOT, and USDOT*, 2004 WL 422704 (N.D. Ill. March 3, 2004), discussed *infra*. The following summarizes the opinion of the district court.

Northern Contracting, Inc. (the "plaintiff"), an Illinois highway contractor, sued the State of Illinois, the Illinois DOT, the United States DOT, and federal and state officials seeking a declaration that federal statutory provisions, the federal implementing regulations ("TEA-21"), the state statute authorizing the DBE program, and the Illinois DBE program itself were unlawful and unconstitutional. 2005 WL 2230195 at *1 (N.D. Ill. Sept. 8, 2005).

Under TEA-21, a recipient of federal funds is required to meet the "maximum feasible portion" of its DBE goal through race-neutral means. *Id.* at *4 (citing regulations). If a recipient projects that it cannot meet its overall DBE goal through race-neutral means, it must establish contract goals to the extent necessary to achieve the overall DBE goal. *Id.* (citing regulation). [The court provided an overview of the pertinent regulations including compliance requirements and qualifications for DBE status.]

Statistical evidence. To calculate its 2005 DBE participation goals, IDOT followed the two-step process set forth in TEA-21: (1) calculation of a base figure for the relative availability of DBEs, and (2) consideration of a possible adjustment of the base figure to reflect the effects of the DBE program and the level of participation that would be expected but for the effects of past and present discrimination. *Id.* at *6. IDOT engaged in a study to calculate its base figure and conduct a custom census to determine whether a more reliable method of calculation existed as opposed to its previous method of reviewing a bidder's list. *Id.*

In compliance with TEA-21, IDOT used a study to evaluate the base figure using a six-part analysis: (1) the study identified the appropriate and relevant geographic market for its contracting activity and its prime contractors; (2) the study identified the relevant product markets in which IDOT and its prime contractors contract; (3) the study sought to identify all available contractors and subcontractors in the relevant industries within Illinois using Dun & Bradstreet's *Marketplace*; (4) the study collected lists of DBEs from IDOT and 20 other public and private agencies; (5) the study attempted to correct for the possibility that certain businesses listed as DBEs were no longer qualified or, alternatively, businesses not listed as DBEs but qualified as such under the federal regulations; and (6) the study attempted to correct for the possibility that not all DBE businesses were listed in the various directories. *Id.* at *6-7. The study utilized a standard statistical sampling procedure to correct for the latter two biases. *Id.* at *7. The study thus calculated a weighted average base figure of 22.7 percent. *Id.*

IDOT then adjusted the base figure based upon two disparity studies and some reports considering whether the DBE availability figures were artificially low due to the effects of past discrimination. *Id.* at *8. One study examined disparities in earnings and business formation rates as between DBEs and their white male-owned counterparts. *Id.* Another

L. Legal — Other recent district court decisions regarding the Federal DBE Program

study included a survey reporting that DBEs are rarely utilized in non-goals projects. *Id.*

IDOT considered three reports prepared by expert witnesses. *Id.* at *9. The first report concluded that minority- and women-owned businesses were underutilized relative to their capacity and that such underutilization was due to discrimination. *Id.* The second report concluded, after controlling for relevant variables such as credit worthiness, “that minorities and women are less likely to form businesses, and that when they do form businesses, those businesses achieve lower earnings than did businesses owned by white males.” *Id.* The third report, again controlling for relevant variables (education, age, marital status, industry and wealth), concluded that minority- and female-owned businesses’ formation rates are lower than those of their white male counterparts, and that such businesses engage in a disproportionate amount of government work and contracts as a result of their inability to obtain private sector work. *Id.*

IDOT also conducted a series of public hearings in which a number of DBE owners who testified that they “were rarely, if ever, solicited to bid on projects not subject to disadvantaged-firm hiring goals.” *Id.* Additionally, witnesses identified 20 prime contractors in IDOT District 1 alone who rarely or never solicited bids from DBEs on non-goals projects. *Id.* The prime contractors did not respond to IDOT’s requests for information concerning their utilization of DBEs. *Id.*

Finally, IDOT reviewed unremediated market data from four different markets (the Illinois State Toll Highway Authority, the Missouri DOT, Cook County’s public construction contracts, and a “non-goals” experiment conducted by IDOT between 2001 and 2002), and considered past utilization of DBEs on IDOT projects. *Id.* at *11. After analyzing all of the data, the study recommended an upward

adjustment to 27.51 percent. However, IDOT decided to maintain its figure at 22.77 percent. *Id.*

IDOT’s representative testified that the DBE program was administered on a “contract-by-contract basis.” *Id.* She testified that DBE goals have no effect on the award of prime contracts but that contracts are awarded exclusively to the “lowest responsible bidder.” IDOT also allowed contractors to petition for a waiver of individual contract goals in certain situations (*e.g.*, where the contractor has been unable to meet the goal despite having made reasonable good faith efforts). *Id.* at *12. Between 2001 and 2004, IDOT received waiver requests on 8.53 percent of its contracts and granted three out of four; IDOT also provided an appeal procedure for a denial from a waiver request. *Id.*

IDOT implemented a number of race- and gender-neutral measures both in its fiscal year 2005 plan and in response to the district court’s earlier summary judgment order, including:

1. A “prompt payment provision” in its contracts, requiring that subcontractors be paid promptly after they complete their work, and prohibiting prime contractors from delaying such payments;
2. An extensive outreach program seeking to attract and assist DBE and other small firms enter and achieve success in the industry (including retaining a network of consultants to provide management, technical and financial assistance to small businesses, and sponsoring networking sessions throughout the state to acquaint small firms with larger contractors and to encourage the involvement of small firms in major construction projects);
3. Reviewing the criteria for prequalification to reduce any unnecessary burdens;

L. Legal — Other recent district court decisions regarding the Federal DBE Program

4. “Unbundling” large contracts; and
5. Allocating some contracts for bidding only by firms meeting the SBA’s definition of small businesses.

Id. (internal citations omitted). IDOT was also in the process of implementing bonding and financing initiatives to assist emerging contractors obtain guaranteed bonding and lines of credit, and establishing a mentor-protégé program. *Id.*

The court found that IDOT attempted to achieve the “maximum feasible portion” of its overall DBE goal through race- and gender-neutral measures. *Id.* at *13. The court found that IDOT determined that race- and gender-neutral measures would account for 6.43 percent of its DBE goal, leaving 16.34 percent to be reached using race- and gender-conscious measures. *Id.*

Anecdotal evidence. A number of DBE owners testified to instances of perceived discrimination and to the barriers they face. *Id.* The DBE owners also testified to difficulties in obtaining work in the private sector and “unanimously reported that they were rarely invited to bid on such contracts.” *Id.* The DBE owners testified to a reluctance to submit unsolicited bids due to the expense involved and identified specific firms that solicited bids from DBEs for goals projects but not for non-goals projects. *Id.* A number of the witnesses also testified to specific instances of discrimination in bidding, on specific contracts, and in the financing and insurance markets. *Id.* at *13-14. One witness acknowledged that all small firms face difficulties in the financing and insurance markets, but testified that it is especially burdensome for DBEs who “frequently are forced to pay higher insurance rates due to racial and gender discrimination.” *Id.* at *14. The DBE witnesses also testified they have obstacles in obtaining prompt payment. *Id.*

The plaintiff called a number of non-DBE business owners who unanimously testified that they solicit business equally from DBEs and non-DBEs on non-goals projects. *Id.* Some non-DBE firm owners testified that they solicit bids from DBEs on a goals project for work they would otherwise complete themselves absent the goals; others testified that they “occasionally award work to a DBE that was not the low bidder in order to avoid scrutiny from IDOT.” *Id.* A number of non-DBE firm owners accused of failing to solicit bids from DBEs on non-goals projects testified and denied the allegations. *Id.* at *15.

Strict scrutiny. The court applied strict scrutiny to the program as a whole (including the gender-based preferences). *Id.* at *16. The court, however, set forth a different burden of proof, finding that the government must demonstrate identified discrimination with specificity and must have a “‘strong basis in evidence’ to conclude that remedial action was necessary, before it embarks on an affirmative action program ... If the government makes such a showing, the party challenging the affirmative action plan bears the ‘ultimate burden’ of demonstrating the unconstitutionality of the program.” *Id.* The court held that challenging party’s burden “can only be met by presenting credible evidence to rebut the government’s proffered data.” *Id.* at *17.

To satisfy strict scrutiny, the court found that IDOT did not need to demonstrate an independent compelling interest; however, as part of the narrowly tailored prong, IDOT needed to show “that there is a demonstrable need for the implementation of the Federal DBE Program within its jurisdiction.” *Id.* at *16.

The court found that IDOT presented “an abundance” of evidence documenting the disparities between DBEs and non-DBEs in the construction industry. *Id.* at *17. The plaintiff argued that the study was “erroneous because it failed to limit its DBE availability figures to those firms ... registered and pre-qualified with IDOT.” *Id.* The plaintiff also

L. Legal — Other recent district court decisions regarding the Federal DBE Program

alleged the calculations of the DBE utilization rate were incorrect because the data included IDOT subcontracts and prime contracts, despite the fact that the latter are awarded to the lowest bidder as a matter of law. *Id.* Accordingly, the plaintiff alleged that IDOT’s calculation of DBE availability and utilization rates was incorrect. *Id.*

The court found that other jurisdictions had utilized the custom census approach without successful challenge. *Id.* at *18. Additionally, the court found “that the remedial nature of the federal statutes counsels for the casting of a broader net when measuring DBE availability.” *Id.* at *19. The court found that IDOT presented “an array of statistical studies concluding that DBEs face disproportionate hurdles in the credit, insurance, and bonding markets.” *Id.* at *21. The court also found that the statistical studies were consistent with the anecdotal evidence. *Id.* The court did find, however, that “there was no evidence of even a single instance in which a prime contractor failed to award a job to a DBE that offered the low bid. This ... is [also] supported by the statistical data ... which shows that at least at the level of subcontracting, DBEs are generally utilized at a rate in line with their ability.” *Id.* at *21, n. 31. Additionally, IDOT did not verify the anecdotal testimony of DBE firm owners who testified to barriers in financing and bonding. However, the court found that such verification was unnecessary. *Id.* at *21, n. 32.

The court further found:

*That such discrimination indirectly affects the ability of DBEs to compete for prime contracts, despite the fact that they are awarded solely on the basis of low bid, cannot be doubted: ‘[E]xperience and size are not race- and gender-neutral variables ... [DBE] construction firms are generally smaller and less experienced because of industry discrimination.’ *Id.* at *21, citing Concrete Works of Colorado, Inc. v. City and County of Denver, 321 F.3d 950 (10th Cir. 2003).*

The parties stipulated to the fact that DBE utilization goals exceed DBE availability for 2003 and 2004. *Id.* at *22. IDOT alleged, and the court so found, that the high utilization on goals projects was due to the success of the DBE program, and not to an absence of discrimination. *Id.* The court found that the statistical disparities coupled with the anecdotal evidence indicated that IDOT’s fiscal year 2005 goal was a “‘plausible lower-bound estimate’ of DBE participation in the absence of discrimination.” *Id.* The court found that the plaintiff did not present persuasive evidence to contradict or explain IDOT’s data. *Id.*

The plaintiff argued that even if accepted at face value, IDOT’s marketplace data did not support the imposition of race- and gender-conscious remedies because there was no evidence of direct discrimination by prime contractors. *Id.* The court found first that IDOT’s indirect evidence of discrimination in the bonding, financing, and insurance markets was sufficient to establish a compelling purpose. *Id.* Second, the court found:

[M]ore importantly, plaintiff fails to acknowledge that, in enacting its DBE program, IDOT acted not to remedy its own prior discriminatory practices, but pursuant to federal law, which both authorized and required IDOT to remediate the effects of *private* discrimination on federally funded highway contracts. This is a fundamental distinction ... [A] state or local government need not independently identify a compelling interest when its actions come in the course of enforcing a federal statute.

Id. at *23. The court distinguished *Builders Ass’n of Greater Chicago v. County of Cook*, 123 F. Supp.2d 1087 (N.D. Ill. 2000), *aff’d* 256 F.3d 642 (7th Cir. 2001), noting that the program in that case was not federally funded. *Id.* at *23, n. 34.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

The court also found that “IDOT has done its best to maximize the portion of its DBE goal” through race- and gender-neutral measures, including anti-discrimination enforcement and small business initiatives. *Id.* at *24. The anti-discrimination efforts included: an internet website where a DBE can file an administrative complaint if it believes that a prime contractor is discriminating on the basis of race or gender in the award of sub-contracts; and requiring contractors seeking prequalification to maintain and produce solicitation records on all projects, both public and private, with and without goals, as well as records of the bids received and accepted. *Id.* The small business initiative included: “unbundling” large contracts; allocating some contracts for bidding only by firms meeting the SBA’s definition of small businesses; a “prompt payment provision” in its contracts, requiring that subcontractors be paid promptly after they complete their work, and prohibiting prime contractors from delaying such payments; and an extensive outreach program seeking to attract and assist DBE and other small firms DBE and other small firms enter and achieve success in the industry (including retaining a network of consultants to provide management, technical and financial assistance to small businesses, and sponsoring networking sessions throughout the state to acquaint small firms with larger contractors and to encourage the involvement of small firms in major construction projects). *Id.*

The court found “[s]ignificantly, plaintiff did not question the efficacy or sincerity of these race- and gender-neutral measures.” *Id.* at *25. Additionally, the court found the DBE program had significant flexibility in that utilized contract-by-contract goal setting (without a fixed DBE participation minimum) and contained waiver provisions. *Id.* The court found that IDOT approved 70 percent of waiver requests although waivers were requested on only 8 percent of all contracts. *Id.*, citing *Adarand Constructors, Inc. v. Slater* “*Adarand VII*,” 228 F.3d 1147, 1177 (10th Cir. 2000) (citing for the proposition that flexibility and waiver are critically important).

The court held that IDOT’s DBE plan was narrowly tailored to the goal of remedying the effects of racial and gender discrimination in the construction industry, and was therefore constitutional.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

9. *Northern Contracting, Inc. v. State of Illinois, Illinois DOT, and USDOT*, 2004 WL 422704 (N.D. Ill. March 3, 2004)

This is the earlier decision in *Northern Contracting, Inc.*, 2005 WL 2230195 (N.D. Ill. Sept. 8, 2005), *see above*, which resulted in the remand of the case to consider the implementation of the Federal DBE Program by the IDOT. This case involves the challenge to the Federal DBE Program. The plaintiff contractor sued the IDOT and the USDOT challenging the facial constitutionality of the Federal DBE Program (TEA-21 and 49 CFR Part 26) as well as the implementation of the Federal Program by the IDOT (*i.e.*, the IDOT DBE Program). The court held valid the Federal DBE Program, finding there is a compelling governmental interest and the federal program is narrowly tailored. The court also held there are issues of fact regarding whether IDOT's DBE Program is narrowly tailored to achieve the federal government's compelling interest. The court denied the Motions for Summary Judgment filed by the plaintiff and by IDOT, finding there were issues of material fact relating to IDOT's implementation of the Federal DBE Program.

The court in *Northern Contracting*, held that there is an identified compelling governmental interest for implementing the Federal DBE Program and that the Federal DBE Program is narrowly tailored to further that interest. Therefore, the court granted the Federal defendants' Motion for Summary Judgment challenging the validity of the Federal DBE Program. In this connection, the district court followed the decisions and analysis in *Sherbrooke Turf, Inc. v. Minnesota Department of Transportation*, 345 F.3d 964 (8th Cir. 2003) and *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147 (10th Cir. 2000) ("*Adarand VII*"), *cert. granted then dismissed as improvidently granted*, 532 U.S. 941, 534 U.S. 103 (2001). The court held, like these two Courts of Appeals that have addressed this issue, that Congress had a strong basis in evidence to conclude that the DBE Program was necessary to redress private discrimination in federally assisted highway subcontracting. The

court agreed with the *Adarand VII* and *Sherbrooke Turf* courts that the evidence presented to Congress is sufficient to establish a compelling governmental interest, and that the contractors had not met their burden of introducing credible particularized evidence to rebut the Government's initial showing of the existence of a compelling interest in remedying the nationwide effects of past and present discrimination in the federal construction procurement subcontracting market. 2004 WL422704 at *34, *citing Adarand VII*, 228 F.3d at 1175.

In addition, the court analyzed the second prong of the strict scrutiny test, whether the government provided sufficient evidence that its program is narrowly tailored. In making this determination, the court looked at several factors, such as the efficacy of alternative remedies; the flexibility and duration of the race-conscious remedies, including the availability of waiver provisions; the relationships between the numerical goals and relevant labor market; the impact of the remedy on third parties; and whether the program is over-or-under-inclusive. The narrow tailoring analysis with regard to the as-applied challenge focused on IDOT's implementation of the Federal DBE Program.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

First, the court held that the Federal DBE Program does not mandate the use of race-conscious measures by recipients of federal dollars, but in fact requires only that the goal reflect the recipient’s determination of the level of DBE participation it would expect absent the effects of the discrimination. 49 CFR § 26.45(b). The court recognized, as found in the *Sherbrooke Turf* and *Adarand VII* cases, that the Federal Regulations place strong emphasis on the use of race-neutral means to increase minority business participation in government contracting, that although narrow tailoring does not require exhaustion of every conceivable race-neutral alternative, it does require “serious, good faith consideration of workable race-neutral alternatives.” 2004 WL422704 at *36, citing and quoting *Sherbrooke Turf*, 345 F.3d at 972, quoting *Grutter v. Bollinger*, 539 U.S. 306 (2003). The court held that the Federal regulations, which prohibit the use of quotas and severely limit the use of set-asides, meet this requirement. The court agreed with the *Adarand VII* and *Sherbrooke Turf* courts that the Federal DBE Program does require recipients to make a serious good faith consideration of workable race-neutral alternatives before turning to race-conscious measures.

Second, the court found that because the Federal DBE Program is subject to periodic reauthorization, and requires recipients of Federal dollars to review their programs annually, the Federal DBE scheme is appropriately limited to last no longer than necessary.

Third, the court held that the Federal DBE Program is flexible for many reasons, including that the presumption that women and minority are socially disadvantaged is deemed rebutted if an individual’s personal net worth exceeds \$750,000.00, and a firm owned by individual who is not presumptively disadvantaged may nevertheless qualify for such status if the firm can demonstrate that its owners are socially and economically disadvantaged. 49 CFR § 26.67(b)(1)(d). The court found other aspects of the Federal Regulations provide ample flexibility,

including recipients may obtain waivers or exemptions from any requirements. Recipients are not required to set a contract goal on every USDOT-assisted contract. If a recipient estimates that it can meet the entirety of its overall goals for a given year through race-neutral means, it must implement the Program without setting contract goals during the year. If during the course of any year in which it is using contract goals a recipient determines that it will exceed its overall goals, it must adjust the use of race-conscious contract goals accordingly. 49 CFR § 26.51(e)(f). Recipients also administering a DBE Program in good faith cannot be penalized for failing to meet their DBE goals, and a recipient may terminate its DBE Program if it meets its annual overall goal through race-neutral means for two consecutive years. 49 CFR § 26.51(f). Further, a recipient may award a contract to a bidder/offeror that does not meet the DBE Participation goals so long as the bidder has made adequate good faith efforts to meet the goals. 49 CFR § 26.53(a)(2). The regulations also prohibit the use of quotas. 49 CFR § 26.43.

Fourth, the court agreed with the *Sherbrooke Turf* court’s assessment that the Federal DBE Program requires recipients to base DBE goals on the number of ready, willing and able disadvantaged business in the local market, and that this exercise requires recipients to establish realistic goals for DBE participation in the relevant labor markets.

Fifth, the court found that the DBE Program does not impose an unreasonable burden on third parties, including non-DBE subcontractors and taxpayers. The court found that the Federal DBE Program is a limited and properly tailored remedy to cure the effects of prior discrimination, a sharing of the burden by parties such as non-DBEs is not impermissible.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

Finally, the court found that the Federal DBE Program was not over-inclusive because the regulations do not provide that every woman and every member of a minority group is disadvantaged. Preferences are limited to small businesses with a specific average annual gross receipts over three fiscal years of \$16.6 million or less (at the time of this decision), and businesses whose owners' personal net worth exceed \$750,000.00 are excluded. 49 CFR § 26.67(b)(1). In addition, a firm owned by a white male may qualify as socially and economically disadvantaged. 49 CFR § 26.67(d).

The court analyzed the constitutionality of the IDOT DBE Program. The court adopted the reasoning of the Eighth Circuit in *Sherbrooke Turf*, that a recipient's implementation of the Federal DBE Program must be analyzed under the narrow tailoring analysis but not the compelling interest inquiry. Therefore, the court agreed with *Sherbrooke Turf* that a recipient need not establish a distinct compelling interest before implementing the Federal DBE Program, but did conclude that a recipient's implementation of the Federal DBE Program must be narrowly tailored. The court found that issues of fact remain in terms of the validity of the IDOT's DBE Program as implemented in terms of whether it was narrowly tailored to achieve the Federal Government's compelling interest. The court, therefore, denied the contractor plaintiff's Motion for Summary Judgment and the Illinois DOT's Motion for Summary Judgment.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

10. *Klaver Construction, Inc. v. Kansas DOT*, 211 F. Supp.2d 1296 (D. Kan. 2002)

This is another case that involved a challenge to the USDOT Regulations that implement TEA-21 (49 CFR Part 26), in which the plaintiff contractor sought to enjoin the Kansas Department of Transportation (“DOT”) from enforcing its DBE Program on the grounds that it violates the Equal Protection Clause under the Fourteenth Amendment. This case involves a direct constitutional challenge to racial and gender preferences in federally funded state highway contracts. This case concerned the constitutionality of the Kansas DOT’s implementation of the Federal DBE Program, and the constitutionality of the gender-based policies of the federal government and the race- and gender-based policies of the Kansas DOT. The court granted the federal and state defendants’ (USDOT and Kansas DOT) Motions to Dismiss based on lack of standing. The court held the contractor could not show the specific aspects of the DBE Program that it contends are unconstitutional have caused its alleged injuries.

L. Legal — Other recent district court decisions regarding the Federal DBE Program

11. *Sherbrooke Turf, Inc. v. Minnesota DOT*, 2001 WL 1502841, No. 00-CV-1026 (D. Minn. 2001) (unpublished opinion), *aff'd* 345 F.3d 964 (8th Cir. 2003)

Sherbrooke involved a landscaping service contractor owned and operated by Caucasian males. The contractor sued the Minnesota DOT claiming the Federal DBE provisions of the TEA-21 are unconstitutional. *Sherbrooke* challenged the “federal affirmative action programs,” the USDOT implementing regulations, and the Minnesota DOT’s participation in the DBE Program. The USDOT and the FHWA intervened as Federal defendants in the case. *Sherbrooke*, 2001 WL 1502841 at *1.

The United States District Court in *Sherbrooke* relied substantially on the Tenth Circuit Court of Appeals decision in *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147 (10th Cir. 2000), in holding that the Federal DBE Program is constitutional. The district court addressed the issue of “random inclusion” of various groups as being within the Program in connection with whether the Federal DBE Program is “narrowly tailored.” The court held that Congress cannot enact a national program to remedy discrimination without recognizing classes of people whose history has shown them to be subject to discrimination and allowing states to include those people in its DBE Program.

The court held that the Federal DBE Program attempts to avoid the “potentially invidious effects of providing blanket benefits to minorities” in part, by restricting a state’s DBE preference to identified groups actually appearing in the target state. In practice, this means Minnesota can only certify members of one or another group as potential DBEs if they are present in the local market. This minimizes the chance that individuals — simply on the basis of their birth — will benefit from Minnesota’s DBE program. If a group is not present in the local market, or if they are found in such small numbers that they cannot be expected to be able to participate in the kinds of construction work TEA-21 covers, that group will not be included in the accounting used to set Minnesota’s overall DBE contracting goal.

Sherbrooke, 2001 WL 1502841 at *10 (D. Minn.). The court rejected plaintiff’s claim that the Minnesota DOT must independently demonstrate how its program comports with a strict scrutiny standard. The court held that the “Constitution calls out for different requirements when a state implements a federal affirmative action program, as opposed to those occasions when a state or locality initiates the Program.” *Id.* at *11 (emphasis added). The court in a footnote ruled that TEA-21, being a federal program, “relieves the state of any burden to independently carry the strict scrutiny burden.” *Id.* at *11 n. 3. The court held states that establish DBE programs under TEA-21 and 49 CFR Part 26 are implementing a Congressionally-required program and not establishing a local one. As such, the court concluded that the state need not independently prove its DBE program meets the strict scrutiny standard. *Id.*

L. Legal — Other recent district court decisions regarding the Federal DBE Program

12. *Gross Seed Co. v. Nebraska Department of Roads*, Civil Action File No. 4:00CV3073 (D. Neb. May 6, 2002), *aff'd* 345 F.3d 964 (8th Cir. 2003)

The United States District Court for the District of Nebraska held in *Gross Seed Co. v. Nebraska* (with the USDOT and FHWA as Interveners), that the Federal DBE Program (codified at 49 CFR Part 26) is constitutional. The court also held that the Nebraska Department of Roads (“Nebraska DOR”) DBE Program adopted and implemented solely to comply with the Federal DBE Program is “approved” by the court because the court found that 49 CFR Part 26 and TEA-21 were constitutional.

The court concluded, similar to the court in *Sherbrooke Turf*, that the State of Nebraska did not need to independently establish that its program met the strict scrutiny requirement because the Federal DBE Program satisfied that requirement, and was therefore constitutional. The court did not engage in a thorough analysis or evaluation of the Nebraska DOR Program or its implementation of the Federal DBE Program. The court points out that the Nebraska DOR Program is adopted in compliance with the Federal DBE Program, and that the USDOT approved the use of Nebraska DOR’s proposed DBE goals for fiscal year 2001, pending completion of USDOT’s review of those goals. Significantly, however, the court in its findings does note that the Nebraska DOR established its overall goals for fiscal year 2001 based upon an independent availability/disparity study.

The court upheld the constitutionality of the Federal DBE Program by finding the evidence presented by the federal government and the history of the federal legislation are sufficient to demonstrate that past discrimination does exist “in the construction industry” and that racial and gender discrimination “within the construction industry” is sufficient to demonstrate a compelling interest in individual areas, such as highway construction. The court held that the Federal DBE Program was sufficiently “narrowly tailored” to satisfy a strict scrutiny analysis based again on the evidence submitted by the federal government as to the Federal DBE Program.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

H. Federal Circuit Courts of Appeal Decisions Involving State/Local Government MBE/WBE/DBE Programs in Other Jurisdictions

1. *H. B. Rowe Co., Inc. v. W. Lyndo Tippett, NCDOT, et al.*, 615 F.3d 233 (4th Cir. 2010)

The State of North Carolina enacted statutory legislation that required prime contractors to engage in good faith efforts to satisfy participation goals for minority and women subcontractors on state-funded projects. (See facts as detailed in the decision of the United States District Court for the Eastern District of North Carolina discussed below.). The plaintiff, a prime contractor, brought this action after being denied a contract because of its failure to demonstrate good faith efforts to meet the participation goals set on a particular contract that it was seeking an award to perform work with the North Carolina Department of Transportation (“NCDOT”). Plaintiff asserted that the participation goals violated the Equal Protection Clause and sought injunctive relief and money damages.

After a bench trial, the district court held the challenged statutory scheme constitutional both on its face and as applied, and the plaintiff prime contractor appealed. 615 F.3d 233 at 236. The Court of Appeals held that the State did not meet its burden of proof in all respects to uphold the validity of the state legislation. But, the Court agreed with the district court that the State produced a strong basis in evidence justifying the statutory scheme on its face, and as applied to African American and Native American subcontractors, and that the State demonstrated that the legislative scheme is narrowly tailored to serve its compelling interest in remedying discrimination against these racial groups. The Court thus affirmed the decision of the district court in part, reversed it in part and remanded for further proceedings consistent with the opinion. *Id.*

The Court found that the North Carolina statutory scheme “largely mirrored the federal Disadvantaged Business Enterprise (“DBE”) program, with which every state must comply in awarding highway construction contracts that utilize federal funds.” 615 F.3d 233 at 236. The Court also noted that federal courts of appeal “have uniformly upheld the Federal DBE Program against equal-protection challenges.” *Id.*, at footnote 1, *citing, Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147 (10th Cir. 2000).

In 2004, the State retained a consultant to prepare and issue a third study of subcontractors employed in North Carolina’s highway construction industry. The study, according to the Court, marshaled evidence to conclude that disparities in the utilization of minority subcontractors persisted. 615 F.3d 233 at 238. The Court pointed out that in response to the study, the North Carolina General Assembly substantially amended state legislation section 136-28.4 and the new law went into effect in 2006. The new statute modified the previous statutory scheme, according to the Court in five important respects. *Id.*

First, the amended statute expressly conditions implementation of any participation goals on the findings of the 2004 study. Second, the amended statute eliminates the 5 and 10 percent annual goals that were set in the predecessor statute. 615 F.3d 233 at 238-239. Instead, as amended, the statute requires the NCDOT to “establish annual aspirational goals, not mandatory goals, ... for the overall participation in contracts by disadvantaged minority-owned and women-owned businesses ... [that] shall not be applied rigidly on specific contracts or projects.” *Id.* at 239, *quoting*, N.C. Gen.Stat. § 136-28.4(b)(2010). The statute further mandates that the NCDOT set “contract-specific goals or project-specific goals ... for each disadvantaged minority-owned and women-owned business category that has demonstrated significant disparity in contract utilization” based on availability, as determined by the study. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Third, the amended statute narrowed the definition of “minority” to encompass only those groups that have suffered discrimination. *Id.* at 239. The amended statute replaced a list of defined minorities to any certain groups by defining “minority” as “only those racial or ethnicity classifications identified by [the study] ... that have been subjected to discrimination in the relevant marketplace and that have been adversely affected in their ability to obtain contracts with the Department.” *Id.* at 239 quoting section 136-28.4(c)(2)(2010).

Fourth, the amended statute required the NCDOT to reevaluate the Program over time and respond to changing conditions. 615 F.3d 233 at 239. Accordingly, the NCDOT must conduct a study similar to the 2004 study at least every five years. *Id.* § 136-28.4(b). Finally, the amended statute contained a sunset provision which was set to expire on August 31, 2009, but the General Assembly subsequently extended the sunset provision to August 31, 2010. *Id.* Section 136-28.4(e) (2010).

The Court also noted that the statute required only good faith efforts by the prime contractors to utilize subcontractors, and that the good faith requirement, the Court found, proved permissive in practice: prime contractors satisfied the requirement in 98.5 percent of cases, failing to do so in only 13 of 878 attempts. 615 F.3d 233 at 239.

Strict scrutiny. The Court stated the strict scrutiny standard was applicable to justify a race-conscious measure, and that it is a substantial burden but not automatically “fatal in fact.” 615 F.3d 233 at 241. The Court pointed out that “[t]he unhappy persistence of both the practice and the lingering effects of racial discrimination against minority groups in this country is an unfortunate reality, and government is not disqualified from acting in response to it.” *Id.* at 241 quoting *Alexander v. Estep*, 95 F.3d 312, 315 (4th Cir. 1996). In so acting, a governmental entity must demonstrate it had a compelling interest in “remediating the effects of past

or present racial discrimination.” *Id.*, quoting *Shaw v. Hunt*, 517 U.S. 899, 909 (1996).

Thus, the Court found that to justify a race-conscious measure, a state must identify that discrimination, public or private, with some specificity, and must have a strong basis in evidence for its conclusion that remedial action is necessary. 615 F.3d 233 at 241 quoting, *Croson*, 488 U.S. at 504 and *Wygant v. Jackson Board of Education*, 476 U.S. 267, 277 (1986)(plurality opinion).

The Court significantly noted that: “There is no ‘precise mathematical formula to assess the quantum of evidence that rises to the *Croson* ‘strong basis in evidence’ benchmark.” 615 F.3d 233 at 241, quoting *Rothe Dev. Corp. v. Department of Defense*, 545 F.3d 1023, 1049 (Fed.Cir. 2008). The Court stated that the sufficiency of the State’s evidence of discrimination “must be evaluated on a case-by-case basis.” *Id.* at 241. (internal quotation marks omitted).

The Court held that a state “need not conclusively prove the existence of past or present racial discrimination to establish a strong basis in evidence for concluding that remedial action is necessary. 615 F.3d 233 at 241, citing *Concrete Works*, 321 F.3d at 958. “Instead, a state may meet its burden by relying on “a significant statistical disparity” between the availability of qualified, willing, and able minority subcontractors and the utilization of such subcontractors by the governmental entity or its prime contractors. *Id.* at 241, citing *Croson*, 488 U.S. at 509 (plurality opinion). The Court stated that we “further require that such evidence be ‘corroborated by significant anecdotal evidence of racial discrimination.’” *Id.* at 241, quoting *Maryland Troopers Association, Inc. v. Evans*, 993 F.2d 1072, 1077 (4th Cir. 1993).

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court pointed out that those challenging race-based remedial measures must “introduce credible, particularized evidence to rebut” the state’s showing of a strong basis in evidence for the necessity for remedial action. *Id.* at 241-242, *citing Concrete Works*, 321 F.3d at 959. Challengers may offer a neutral explanation for the state’s evidence, present contrasting statistical data, or demonstrate that the evidence is flawed, insignificant, or not actionable. *Id.* at 242 (citations omitted). However, the Court stated, “that mere speculation that the state’s evidence is insufficient or methodologically flawed does not suffice to rebut a state’s showing. *Id.* at 242, *citing Concrete Works*, 321 F.3d at 991.

The Court held that to satisfy strict scrutiny, the state’s statutory scheme must also be “narrowly tailored” to serve the state’s compelling interest in not financing private discrimination with public funds. 615 F.3d 233 at 242, *citing Alexander*, 95 F.3d at 315 (*citing Adarand*, 515 U.S. at 227).

Intermediate scrutiny. The Court held that courts apply “intermediate scrutiny” to statutes that classify on the basis of gender. *Id.* at 242. The Court found that a defender of a statute that classifies on the basis of gender meets this intermediate scrutiny burden “by showing at least that the classification serves important governmental objectives and that the discriminatory means employed are substantially related to the achievement of those objectives.” *Id.*, *quoting Mississippi University for Women v. Hogan*, 458 U.S. 718, 724 (1982). The Court noted that intermediate scrutiny requires less of a showing than does “the most exacting” strict scrutiny standard of review. *Id.* at 242. The Court found that its “sister circuits” provide guidance in formulating a governing evidentiary standard for intermediate scrutiny. These courts agree that such a measure “can rest safely on something less than the ‘strong basis in evidence’ required to bear the weight of a race- or ethnicity-conscious

program.” *Id.* at 242, *quoting Engineering Contractors*, 122 F.3d at 909 (other citations omitted).

In defining what constitutes “something less” than a ‘strong basis in evidence,’ the courts, ... also agree that the party defending the statute must ‘present [] sufficient probative evidence in support of its stated rationale for enacting a gender preference, *i.e.*,...the evidence [must be] sufficient to show that the preference rests on evidence-informed analysis rather than on stereotypical generalizations.” 615 F.3d 233 at 242 *quoting Engineering Contractors*, 122 F.3d at 910 and *Concrete Works*, 321 F.3d at 959. The gender-based measures must be based on “reasoned analysis rather than on the mechanical application of traditional, often inaccurate, assumptions.” *Id.* at 242 *quoting Hogan*, 458 U.S. at 726.

Plaintiff’s burden. The Court found that when a plaintiff alleges that a statute violates the Equal Protection Clause as applied and, on its face, the plaintiff bears a heavy burden. In its facial challenge, the Court held that a plaintiff “has a very heavy burden to carry, and must show that [a statutory scheme] cannot operate constitutionally under any circumstance.” *Id.* at 243, *quoting West Virginia v. U.S. Department of Health & Human Services*, 289 F.3d 281, 292 (4th Cir. 2002).

Statistical evidence. The Court examined the State’s statistical evidence of discrimination in public-sector subcontracting, including its disparity evidence and regression analysis. The Court noted that the statistical analysis analyzed the difference or disparity between the amount of subcontracting dollars minority- and women-owned businesses actually won in a market and the amount of subcontracting dollars they would be expected to win given their presence in that market. 615 F.3d 233 at 243. The Court found that the study grounded its analysis in the “disparity index,” which measures the participation of a given racial, ethnic, or gender group engaged in subcontracting. *Id.* In calculating a disparity

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

index, the study divided the percentage of total subcontracting dollars that a particular group won by the percent that group represents in the available labor pool, and multiplied the result by 100. *Id.* The closer the resulting index is to 100, the greater that group's participation. *Id.*

The Court held that after *Croson*, a number of our sister circuits have recognized the utility of the disparity index in determining statistical disparities in the utilization of minority- and women-owned businesses. *Id.* at 243-244 (Citations to multiple federal circuit court decisions omitted.) The Court also found that generally "courts consider a disparity index lower than 80 as an indication of discrimination." *Id.* at 244. Accordingly, the study considered only a disparity index lower than 80 as warranting further investigation. *Id.*

The Court pointed out that after calculating the disparity index for each relevant racial or gender group, the consultant tested for the statistical significance of the results by conducting standard deviation analysis through the use of t-tests. The Court noted that standard deviation analysis "describes the probability that the measured disparity is the result of mere chance." 615 F.3d 233 at 244, quoting *Eng'g Contractors*, 122 F.3d at 914. The consultant considered the finding of two standard deviations to demonstrate "with 95 percent certainty that disparity, as represented by either overutilization or underutilization, is actually present." *Id.*, citing *Eng'g Contractors*, 122 F.3d at 914.

The study analyzed the participation of minority and women subcontractors in construction contracts awarded and managed from the central NCDOT office in Raleigh, North Carolina. 615 F.3d 233 at 244. To determine utilization of minority and women subcontractors, the consultant developed a master list of contracts mainly from State-maintained electronic databases and hard copy files; then selected from that list a statistically valid sample of contracts, and calculated the percentage of subcontracting dollars awarded to minority- and women-

owned businesses during the 5-year period ending in June 2003. (The study was published in 2004). *Id.* at 244.

The Court found that the use of data for centrally-awarded contracts was sufficient for its analysis. It was noted that data from construction contracts awarded and managed from the NCDOT divisions across the state and from preconstruction contracts, which involve work from engineering firms and architectural firms on the design of highways, was incomplete and not accurate. 615 F.3d 233 at 244, n.6. These data were not relied upon in forming the opinions relating to the study. *Id.* at 244, n. 6.

To estimate availability, which the Court defined as the percentage of a particular group in the relevant market area, the consultant created a vendor list comprising: (1) subcontractors approved by the department to perform subcontract work on state-funded projects, (2) subcontractors that performed such work during the study period, and (3) contractors qualified to perform prime construction work on state-funded contracts. 615 F.3d 233 at 244. The Court noted that prime construction work on state-funded contracts was included based on the testimony by the consultant that prime contractors are qualified to perform subcontracting work and often do perform such work. *Id.* at 245. The Court also noted that the consultant submitted its master list to the NCDOT for verification. *Id.* at 245.

Based on the utilization and availability figures, the study prepared the disparity analysis comparing the utilization based on the percentage of subcontracting dollars over the five-year period, determining the availability in numbers of firms and their percentage of the labor pool, a disparity index which is the percentage of utilization in dollars divided by the percentage of availability multiplied by 100, and a T Value. 615 F.3d 233 at 245.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court concluded that the figures demonstrated prime contractors underutilized all of the minority subcontractor classifications on state-funded construction contracts during the study period. 615 F.3d 233 245. The disparity index for each group was less than 80 and, thus, the Court found warranted further investigation. *Id.* The t-test results, however, demonstrated marked underutilization only of African American and Native American subcontractors. *Id.* For African Americans the t-value fell outside of two standard deviations from the mean and, therefore, was statistically significant at a 95 percent confidence level. *Id.* The Court found there was at least a 95 percent probability that prime contractors' underutilization of African American subcontractors was *not* the result of mere chance. *Id.*

For Native American subcontractors, the t-value of 1.41 was significant at a confidence level of approximately 85 percent. 615 F.3d 233 at 245. The t-values for Hispanic American and Asian American subcontractors, demonstrated significance at a confidence level of approximately 60 percent. The disparity index for women subcontractors found that they were overutilized during the study period. The overutilization was statistically significant at a 95 percent confidence level. *Id.*

To corroborate the disparity study, the consultant conducted a regression analysis studying the influence of certain company and business characteristics — with a particular focus on owner race and gender — on a firm's gross revenues. 615 F.3d 233 at 246. The consultant obtained the data from a telephone survey of firms that conducted or attempted to conduct business with the NCDOT. The survey pool consisted of a random sample of such firms. *Id.*

The consultant used the firms' gross revenues as the dependent variable in the regression analysis to test the effect of other variables, including company age and number of full-time employees, and the owners' years of experience, level of education, race, ethnicity, and

gender. 615 F.3d 233 at 246. The analysis revealed that minority and women ownership universally had a negative effect on revenue, and African American ownership of a firm had the largest negative effect on that firm's gross revenue of all the independent variables included in the regression model. *Id.* These findings led to the conclusion that for African Americans the disparity in firm revenue was not due to capacity-related or managerial characteristics alone. *Id.*

The Court rejected the arguments by the plaintiffs attacking the availability estimates. The Court rejected the plaintiff's expert, Dr. George LaNoue, who testified that bidder data — reflecting the number of subcontractors that actually bid on Department subcontracts — estimates availability better than “vendor data.” 615 F.3d 233 at 246. Dr. LaNoue conceded, however, that the State does not compile bidder data and that bidder data actually reflects skewed availability in the context of a goals program that urges prime contractors to solicit bids from minority and women subcontractors. *Id.* The Court found that the plaintiff's expert did not demonstrate that the vendor data used in the study was unreliable, or that the bidder data would have yielded less support for the conclusions reached. In sum, the Court held that the plaintiffs challenge to the availability estimate failed because it could not demonstrate that the 2004 study's availability estimate was inadequate. *Id.* at 246. The Court cited *Concrete Works*, 321 F.3d at 991 for the proposition that a challenger cannot meet its burden of proof through conjecture and unsupported criticisms of the state's evidence,” and that the plaintiff Rowe presented no viable alternative for determining availability. *Id.* at 246-247, citing *Concrete Works*, 321 F.3d 991 and *Sherbrooke Turf, Inc. v. Minn. Department of Transportation*, 345 F.3d 964, 973 (8th Cir. 2003).

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court also rejected the plaintiff’s argument that minority subcontractors participated on state-funded projects at a level consistent with their availability in the relevant labor pool, based on the state’s response that evidence as to the *number* of minority subcontractors working with state-funded projects does not effectively rebut the evidence of discrimination in terms of subcontracting *dollars*. 615 F.3d 233 at 247. The State pointed to evidence indicating that prime contractors used minority businesses for low-value work in order to comply with the goals, and that African American ownership had a significant negative impact on firm revenue unrelated to firm capacity or experience. *Id.* The Court concluded plaintiff did not offer any contrary evidence. *Id.*

The Court found that the State bolstered its position by presenting evidence that minority subcontractors have the capacity to perform higher-value work. 615 F.3d 233 at 247. The study concluded, based on a sample of subcontracts and reports of annual firm revenue, that exclusion of minority subcontractors from contracts under \$500,000 was not a function of capacity. *Id.* at 247. Further, the State showed that over 90 percent of the NCDOT’s subcontracts were valued at \$500,000 or less, and that capacity constraints do not operate with the same force on subcontracts as they may on prime contracts because subcontracts tend to be relatively small. *Id.* at 247. The Court pointed out that the Court in *Rothe II*, 545 F.3d at 1042-45, faulted disparity analyses of total construction dollars, including prime contracts, for failing to account for the relative capacity of firms in that case. *Id.* at 247.

The Court pointed out that in addition to the statistical evidence, the State also presented evidence demonstrating that from 1991 to 1993, during the Program’s suspension, prime contractors awarded substantially fewer subcontracting dollars to minority and women subcontractors on state-funded projects. The Court rejected the

plaintiff’s argument that evidence of a decline in utilization does not raise an inference of discrimination. 615 F.3d 233 at 247-248. The Court held that the very significant decline in utilization of minority and women-subcontractors — nearly 38 percent — “surely provides a basis for a fact finder to infer that discrimination played some role in prime contractors’ reduced utilization of these groups during the suspension.” *Id.* at 248, *citing Adarand v. Slater*, 228 F.3d at 1174 (finding that evidence of declining minority utilization after a program has been discontinued “strongly supports the government’s claim that there are significant barriers to minority competition in the public subcontracting market, raising the specter of racial discrimination.”) The Court found such an inference is particularly compelling for minority-owned businesses because, even during the study period, prime contractors continue to underutilize them on state-funded road projects. *Id.* at 248.

Anecdotal evidence. The State additionally relied on three sources of anecdotal evidence contained in the study: a telephone survey, personal interviews, and focus groups. The Court found the anecdotal evidence showed an informal “good old boy” network of white contractors that discriminated against minority subcontractors. 615 F.3d 233 at 248. The Court noted that three-quarters of African American respondents to the telephone survey agreed that an informal network of prime and subcontractors existed in the State, as did the majority of other minorities, that more than half of African American respondents believed the network excluded their companies from bidding or awarding a contract as did many of the other minorities. *Id.* at 248. The Court found that nearly half of nonminority male respondents corroborated the existence of an informal network, however, only 17 percent of them believed that the network excluded their companies from bidding or winning contracts. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Anecdotal evidence also showed a large majority of African American respondents reported that double standards in qualifications and performance made it more difficult for them to win bids and contracts, that prime contractors view minority firms as being less competent than nonminority firms, and that nonminority firms change their bids when not required to hire minority firms. 615 F.3d 233 at 248. In addition, the anecdotal evidence showed African American and Native American respondents believed that prime contractors sometimes dropped minority subcontractors after winning contracts. *Id.* at 248. The Court found that interview and focus-group responses echoed and underscored these reports. *Id.*

The anecdotal evidence indicated that prime contractors already know who they will use on the contract before they solicit bids: that the “good old boy network” affects business because prime contractors just pick up the phone and call their buddies, which excludes others from that market completely; that prime contractors prefer to use other less qualified minority-owned firms to avoid subcontracting with African American-owned firms; and that prime contractors use their preferred subcontractor regardless of the bid price. 615 F.3d 233 at 248-249. Several minority subcontractors reported that prime contractors do not treat minority firms fairly, pointing to instances in which prime contractors solicited quotes the day before bids were due, did not respond to bids from minority subcontractors, refused to negotiate prices with them, or gave minority subcontractors insufficient information regarding the project. *Id.* at 249.

The Court rejected the plaintiffs’ contention that the anecdotal data was flawed because the study did not verify the anecdotal data and that the consultant oversampled minority subcontractors in collecting the data. The Court stated that the plaintiffs offered no rationale as to why a fact finder could not rely on the State’s “unverified” anecdotal data, and pointed out that a fact finder could very well conclude that anecdotal evidence need not- and indeed cannot-be verified because it “is nothing more than a witness’ narrative of an incident told from the witness’ perspective and including the witness’ perceptions.” 615 F.3d 233 at 249, *quoting Concrete Works*, 321 F.3d at 989.

The Court held that anecdotal evidence simply supplements statistical evidence of discrimination. *Id.* at 249. The Court rejected plaintiffs’ argument that the study oversampled representatives from minority groups, and found that surveying more nonminority men would not have advanced the inquiry. *Id.* at 249. It was noted that the samples of the minority groups were randomly selected. *Id.* The Court found the state had compelling anecdotal evidence that minority subcontractors face race-based obstacles to successful bidding. *Id.* at 249.

Strong basis in evidence that the minority participation goals were necessary to remedy discrimination. The Court held that the State presented a “strong basis in evidence” for its conclusion that minority participation goals were necessary to remedy discrimination against African American and Native American subcontractors.” 615 F.3d 233 at 250. Therefore, the Court held that the State satisfied the strict scrutiny test. The Court found that the State’s data demonstrated that prime contractors grossly underutilized African American and Native American subcontractors in public sector subcontracting during the study. *Id.* at 250. The Court noted that these findings have particular resonance because since 1983, North Carolina has encouraged minority participation in state-funded highway projects, and yet African American and Native American subcontractors continue to be underutilized on such projects. *Id.* at 250.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

In addition, the Court found the disparity index in the study demonstrated statistically significant underutilization of African American subcontractors at a 95 percent confidence level, and of Native American subcontractors at a confidence level of approximately 85 percent. 615 F.3d 233 at 250. The Court concluded the State bolstered the disparity evidence with regression analysis demonstrating that African American ownership correlated with a significant, negative impact on firm revenue, and demonstrated there was a dramatic decline in the utilization of minority subcontractors during the suspension of the program in the 1990s. *Id.*

Thus, the Court held the State’s evidence showing a gross statistical disparity between the availability of qualified American and Native American subcontractors and the amount of subcontracting dollars they win on public sector contracts established the necessary statistical foundation for upholding the minority participation goals with respect to these groups. 615 F.3d 233 at 250. The Court then found that the State’s anecdotal evidence of discrimination against these two groups sufficiently supplemented the State’s statistical showing. *Id.* The survey in the study exposed an informal, racially exclusive network that systemically disadvantaged minority subcontractors. *Id.* at 251. The Court held that the State could conclude with good reason that such networks exert a chronic and pernicious influence on the marketplace that calls for remedial action. *Id.* The Court found the anecdotal evidence indicated that racial discrimination is a critical factor underlying the gross statistical disparities presented in the study. *Id.* at 251. Thus, the Court held that the State presented substantial statistical evidence of gross disparity, corroborated by “disturbing” anecdotal evidence.

The Court held in circumstances like these, the Supreme Court has made it abundantly clear a state can remedy a public contracting system

that withholds opportunities from minority groups because of their race. 615 F.3d 233 at 251-252.

Narrowly tailored. The Court then addressed whether the North Carolina statutory scheme was narrowly tailored to achieve the State’s compelling interest in remedying discrimination against African American and Native American subcontractors in public-sector subcontracting. The following factors were considered in determining whether the statutory scheme was narrowly tailored.

Neutral measures. The Court held that narrowly tailoring requires “serious, good faith consideration of workable race-neutral alternatives,” but a state need not “exhaust [] ... every conceivable race-neutral alternative.” 615 F.3d 233 at 252 quoting *Grutter v. Bollinger*, 539 U.S. 306, 339 (2003). The Court found that the study details numerous alternative race-neutral measures aimed at enhancing the development and competitiveness of small or otherwise disadvantaged businesses in North Carolina. *Id.* at 252. The Court pointed out various race-neutral alternatives and measures, including a Small Business Enterprise Program; waiving institutional barriers of bonding and licensing requirements on certain small business contracts of \$500,000 or less; and the Department contracts for support services to assist disadvantaged business enterprises with bookkeeping and accounting, taxes, marketing, bidding, negotiation, and other aspects of entrepreneurial development. *Id.* at 252.

The Court found that plaintiff identified no viable race-neutral alternatives that North Carolina had failed to consider and adopt. The Court also found that the State had undertaken most of the race-neutral alternatives identified by USDOT in its regulations governing the Federal DBE Program. 615 F.3d 233 at 252, *citing* 49 CFR § 26.51(b). The Court concluded that the State gave serious good faith consideration to race-neutral alternatives prior to adopting the statutory scheme. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court concluded that despite these race-neutral efforts, the study demonstrated disparities continue to exist in the utilization of African American and Native American subcontractors in state-funded highway construction subcontracting, and that these “persistent disparities indicate the necessity of a race-conscious remedy.” 615 F.3d 233 at 252.

Duration. The Court agreed with the district court that the program was narrowly tailored in that it set a specific expiration date and required a new disparity study every five years. 615 F.3d 233 at 253. The Court found that the program’s inherent time limit and provisions requiring regular reevaluation ensure it is carefully designed to endure only until the discriminatory impact has been eliminated. *Id.* at 253, citing *Adarand Constructors v. Slater*, 228 F.3d at 1179 (quoting *United States v. Paradise*, 480 U.S. 149, 178 (1987)).

Program’s goals related to percentage of minority subcontractors. The Court concluded that the State had demonstrated that the Program’s participation goals are related to the percentage of minority subcontractors in the relevant markets in the State. 615 F.3d 233 at 253. The Court found that the NCDOT had taken concrete steps to ensure that these goals accurately reflect the availability of minority-owned businesses on a project-by-project basis. *Id.*

Flexibility. The Court held that the Program was flexible and thus satisfied this indicator of narrow tailoring. 615 F.3d 233 at 253. The Program contemplated a waiver of project-specific goals when prime contractors make good faith efforts to meet those goals, and that the good faith efforts essentially require only that the prime contractor solicit and consider bids from minorities. *Id.* The State does not require or expect the prime contractor to accept any bid from an unqualified bidder, or any bid that is not the lowest bid. *Id.* The Court found there was a lenient standard and flexibility of the “good faith” requirement, and noted the evidence

showed only 13 of 878 good faith submissions failed to demonstrate good faith efforts. *Id.*

Burden on non-MWBE/DBEs. The Court rejected the two arguments presented by plaintiff that the Program created onerous solicitation and follow-up requirements, finding that there was no need for additional employees dedicated to the task of running the solicitation program to obtain MBE/WBEs, and that there was no evidence to support the claim that plaintiff was required to subcontract millions of dollars of work that it could perform itself for less money. 615 F.3d 233 at 254. The State offered evidence from the study that prime contractors need not submit subcontract work that they can self-perform. *Id.*

Overinclusive. The Court found by its own terms the statutory scheme is not overinclusive because it limited relief to only those racial or ethnicity classifications that have been subjected to discrimination in the relevant marketplace and that had been adversely affected in their ability to obtain contracts with the Department. 615 F.3d 233 at 254. The Court concluded that in tailoring the remedy this way, the legislature did not randomly include racial groups that may never have suffered from discrimination in the construction industry, but rather, contemplated participation goals only for those groups shown to have suffered discrimination. *Id.*

In sum, the Court held that the statutory scheme is narrowly tailored to achieve the State’s compelling interest in remedying discrimination in public-sector subcontracting against African American and Native American subcontractors. *Id.* at 254.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Women-owned businesses overutilized. The study's public-sector disparity analysis demonstrated that women-owned businesses won far more than their expected share of subcontracting dollars during the study period. 615 F.3d 233 at 254. In other words, the Court concluded that prime contractors substantially overutilized women subcontractors on public road construction projects. *Id.* The Court found the public-sector evidence did not evince the "exceedingly persuasive justification" the Supreme Court requires. *Id.* at 255.

The Court noted that the State relied heavily on private-sector data from the study attempting to demonstrate that prime contractors significantly underutilized women subcontractors in the general construction industry statewide and in the Charlotte, North Carolina area. 615 F.3d 233 at 255. However, because the study did not provide a t-test analysis on the private-sector disparity figures to calculate statistical significance, the Court could not determine whether this private underutilization was "the result of mere chance." *Id.* at 255. The Court found troubling the "evidentiary gap" that there was no evidence indicating the extent to which women-owned businesses competing on public-sector road projects vied for private-sector subcontracts in the general construction industry. *Id.* at 255. The Court also found that the State did not present any anecdotal evidence indicating that women subcontractors successfully bidding on State contracts faced private-sector discrimination. *Id.* In addition, the Court found missing any evidence prime contractors that discriminate against women subcontractors in the private sector nevertheless win public-sector contracts. *Id.*

The Court pointed out that it did not suggest that the proponent of a gender-conscious program "must always tie private discrimination to public action." 615 F.3d 233 at 255, n. 11. But, the Court held where, as here, there existed substantial probative evidence of overutilization in the relevant public sector, a state must present something more than

generalized private-sector data unsupported by compelling anecdotal evidence to justify a gender-conscious program. *Id.* at 255, n. 11.

Moreover, the Court found the state failed to establish the amount of overlap between general construction and road construction subcontracting. 615 F.3d 233 at 256. The Court said that the dearth of evidence as to the correlation between public road construction subcontracting and private general construction subcontracting severely limits the private data's probative value in this case. *Id.*

Thus, the Court held that the State could not overcome the strong evidence of overutilization in the public sector in terms of gender participation goals, and that the proffered private-sector data failed to establish discrimination in the particular field in question. 615 F.3d 233 at 256. Further, the anecdotal evidence, the Court concluded, indicated that most women subcontractors do not experience discrimination. *Id.* Thus, the Court held that the State failed to present sufficient evidence to support the Program's current inclusion of women subcontractors in setting participation goals. *Id.*

Holding. The Court held that the state legislature had crafted legislation that withstood the constitutional scrutiny. 615 F.3d 233 at 257. The Court concluded that in light of the statutory scheme's flexibility and responsiveness to the realities of the marketplace, and given the State's strong evidence of discrimination against African American and Native American subcontractors in public-sector subcontracting, the State's application of the statute to these groups is constitutional. *Id.* at 257. However, the Court also held that because the State failed to justify its application of the statutory scheme to women, Asian American, and Hispanic American subcontractors, the Court found those applications were not constitutional.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Therefore, the Court affirmed the judgment of the district court with regard to the facial validity of the statute, and with regard to its application to African American and Native American subcontractors. 615 F.3d 233 at 258. The Court reversed the district court's judgment insofar as it upheld the constitutionality of the state legislature as applied to women, Asian American and Hispanic American subcontractors. *Id.* The Court thus remanded the case to the district court to fashion an appropriate remedy consistent with the opinion. *Id.*

Concurring opinions. It should be pointed out that there were two concurring opinions by the three Judge panel: one judge concurred in the judgment, and the other judge concurred fully in the majority opinion and the judgment.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

2. *Jana-Rock Construction, Inc. v. New York State Dept. of Economic Development*, 438 F.3d 195 (2d Cir. 2006)

This recent case is instructive in connection with the determination of the groups that may be included in an MBE/WBE-type program, and the standard of analysis utilized to evaluate a local government's non-inclusion of certain groups. In this case, the Second Circuit Court of Appeals held racial classifications that are challenged as "under-inclusive" (*i.e.*, those that exclude persons from a particular racial classification) are subject to a "rational basis" review, not strict scrutiny.

Plaintiff Luiere, a 70 percent shareholder of Jana-Rock Construction, Inc. ("Jana Rock") and the "son of a Spanish mother whose parents were born in Spain," challenged the constitutionality of the State of New York's definition of "Hispanic" under its local minority-owned business program. 438 F.3d 195, 199-200 (2d Cir. 2006). Under the USDOT regulations, 49 CFR § 26.5, "Hispanic Americans" are defined as "persons of Mexican, Puerto Rican, Cuban, Dominican, Central or South American, or other Spanish or Portuguese culture or origin, regardless of race." *Id.* at 201. Upon proper application, Jana-Rock was certified by the New York Department of Transportation as a Disadvantaged Business Enterprise ("DBE") under the federal regulations. *Id.*

However, unlike the federal regulations, the State of New York's local minority-owned business program included in its definition of minorities "Hispanic persons of Mexican, Puerto Rican, Dominican, Cuban, Central or South American of either Indian or Hispanic origin, regardless of race." The definition did not include all persons from, or descendants of persons from, Spain or Portugal. *Id.* Accordingly, Jana-Rock was denied MBE certification under the local program; Jana-Rock filed suit alleging a violation of the Equal Protection Clause. *Id.* at 202-03. The plaintiff conceded that the overall minority-owned business program satisfied the requisite strict scrutiny, but argued that the definition of "Hispanic" was fatally under-inclusive. *Id.* at 205.

The Second Circuit found that the narrow-tailoring prong of the strict scrutiny analysis "allows New York to identify which groups it is prepared to prove are in need of affirmative action without demonstrating that no other groups merit consideration for the program." *Id.* at 206. The court found that evaluating under-inclusiveness as an element of the strict scrutiny analysis was at odds with the United States Supreme Court decision in *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469 (1989) which required that affirmative action programs be no broader than necessary. *Id.* at 207-08. The court similarly rejected the argument that the state should mirror the federal definition of "Hispanic," finding that Congress has more leeway than the states to make broader classifications because Congress is making such classifications on the national level. *Id.* at 209.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The court opined — without deciding — that it may be impermissible for New York to simply adopt the “federal USDOT definition of Hispanic without at least making an independent assessment of discrimination against Hispanics of Spanish Origin in New York.” *Id.* Additionally, finding that the plaintiff failed to point to any discriminatory purpose by New York in failing to include persons of Spanish or Portuguese descent, the court determined that the rational basis analysis was appropriate. *Id.* at 213.

The court held that the plaintiff failed the rational basis test for three reasons: (1) because it was not irrational nor did it display animus to exclude persons of Spanish and Portuguese descent from the definition of Hispanic; (2) because the fact the plaintiff could demonstrate evidence of discrimination that he personally had suffered did not render New York’s decision to exclude persons of Spanish and Portuguese descent irrational; and (3) because the fact New York may have relied on Census data including a small percentage of Hispanics of Spanish descent did not mean that it was irrational to conclude that Hispanics of Latin American origin were in greater need of remedial legislation. *Id.* at 213-14. Thus, the Second Circuit affirmed the conclusion that New York had a rational basis for its definition to not include persons of Spanish and Portuguese descent, and thus affirmed the district court decision upholding the constitutionality of the challenged definition.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

3. *Rapid Test Prods., Inc. v. Durham Sch. Servs., Inc.*, 460 F.3d 859 (7th Cir. 2006)

In *Rapid Test Products, Inc. v. Durham School Services Inc.*, the Seventh Circuit Court of Appeals held that 42 U.S.C. § 1981 (the federal anti-discrimination law) did not provide an “entitlement” in disadvantaged businesses to receive contracts subject to set-aside programs; rather, § 1981 provided a remedy for individuals who were subject to discrimination.

Durham School Services, Inc. (“Durham”), a prime contractor, submitted a bid for and won a contract with an Illinois school district. The contract was subject to a set-aside program reserving some of the subcontracts for disadvantaged business enterprises (a race- and gender-conscious program). Prior to bidding, Durham negotiated with Rapid Test Products, Inc. (“Rapid Test”), made one payment to Rapid Test as an advance, and included Rapid Test in its final bid. Rapid Test believed it had received the subcontract. However, after the school district awarded the contract to Durham, Durham gave the subcontract to one of Rapid Test’s competitor’s, a business owned by an Asian male. The school district agreed to the substitution. Rapid Test brought suit against Durham under 42 U.S.C. § 1981 alleging that Durham discriminated against it because Rapid’s owner was a black woman.

The district court granted summary judgment in favor of Durham holding the parties’ dealing had been too indefinite to create a contract. On appeal, the Seventh Circuit Court of Appeals stated that “§ 1981 establishes a rule against discrimination in contracting and does not create any entitlement to be the beneficiary of a contract reserved for firms owned by specified racial, sexual, ethnic, or religious groups. Arguments that a particular set-aside program is a lawful remedy for prior discrimination may or may not prevail if a potential subcontractor claims to have been excluded, but it is to victims of discrimination rather than frustrated beneficiaries that § 1981 assigns the right to litigate.”

The court held that if race or sex discrimination is the reason why Durham did not award the subcontract to Rapid Test, then § 1981 provides relief. Having failed to address this issue, the Seventh Circuit Court of Appeals remanded the case to the district court to determine whether Rapid Test had evidence to back up its claim that race and sex discrimination, rather than a nondiscriminatory reason such as inability to perform the services Durham wanted, accounted for Durham’s decision to hire Rapid Test’s competitor.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

4. *Virdi v. DeKalb County School District*, 135 Fed. Appx. 262, 2005 WL 138942 (11th Cir. 2005) (unpublished opinion)

Although it is an unpublished opinion, *Virdi v. DeKalb County School District* is a recent Eleventh Circuit decision reviewing a challenge to a local government MBE/WBE-type program, which is instructive to the disparity study. In *Virdi*, the Eleventh Circuit struck down an MBE/WBE goal program that the court held contained racial classifications. The court based its ruling primarily on the failure of the DeKalb County School District (the “District”) to seriously consider and implement a race-neutral program and to the infinite duration of the program.

Plaintiff Virdi, an Asian American architect of Indian descent, filed suit against the District, members of the DeKalb County Board of Education (both individually and in their official capacities) (the “Board”) and the Superintendent (both individually and in his official capacity) (collectively “defendants”) pursuant to 42 U.S.C. §§ 1981 and 1983 and the Fourteenth Amendment alleging that they discriminated against him on the basis of race when awarding architectural contracts. 135 Fed. Appx. 262, 264 (11th Cir. 2005). Virdi also alleged the school district’s Minority Vendor Involvement Program was facially unconstitutional. *Id.*

The district court initially granted the defendants’ Motions for Summary Judgment on all of Virdi’s claims and the Eleventh Circuit Court of Appeals reversed in part, vacated in part, and remanded. *Id.* On remand, the district court granted the defendants’ Motion for Partial Summary Judgment on the facial challenge, and then granted the defendants’ motion for a judgment as a matter of law on the remaining claims at the close of Virdi’s case. *Id.*

In 1989, the Board appointed the Tillman Committee (the “Committee”) to study participation of female- and minority-owned businesses with the District. *Id.* The Committee met with various District departments and a number of minority contractors who claimed they had

unsuccessfully attempted to solicit business with the District. *Id.* Based upon a “general feeling” that minorities were under-represented, the Committee issued the Tillman Report (the “Report”) stating “the Committee’s impression that “[m]inorities ha[d] not participated in school board purchases and contracting in a ratio reflecting the minority make-up of the community.” *Id.* The Report contained no specific evidence of past discrimination nor any factual findings of discrimination. *Id.*

The Report recommended that the District: (1) Advertise bids and purchasing opportunities in newspapers targeting minorities, (2) conduct periodic seminars to educate minorities on doing business with the District, (3) notify organizations representing minority firms regarding bidding and purchasing opportunities, and (4) publish a “how to” booklet to be made available to any business interested in doing business with the District.

Id. The Report also recommended that the District adopt annual, aspirational participation goals for women- and minority-owned businesses. *Id.* The Report contained statements indicating the selection process should remain neutral and recommended that the Board adopt a non-discrimination statement. *Id.*

In 1991, the Board adopted the Report and implemented several of the recommendations, including advertising in the AJC, conducting seminars, and publishing the “how to” booklet. *Id.* The Board also implemented the Minority Vendor Involvement Program (the “MVP”) which adopted the participation goals set forth in the Report. *Id.* at 265.

The Board delegated the responsibility of selecting architects to the Superintendent. *Id.* Virdi sent a letter to the District in October 1991 expressing interest in obtaining architectural contracts. *Id.* Virdi sent the letter to the District Manager and sent follow-up literature; he re-contacted the District Manager in 1992 and 1993. *Id.* In August 1994,

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Virdi sent a letter and a qualifications package to a project manager employed by Heery International. *Id.* In a follow-up conversation, the project manager allegedly told Virdi that his firm was selected not based upon his qualifications, but because the “District was only looking for ‘black-owned firms.’” *Id.* Virdi sent a letter to the project manager requesting confirmation of his statement in writing and the project manager forwarded the letter to the District. *Id.*

After a series of meetings with District officials, in 1997, Virdi met with the newly hired Executive Director. *Id.* at 266. Upon request of the Executive Director, Virdi re-submitted his qualifications but was informed that he would be considered only for future projects (Phase III SPLOST projects). *Id.* Virdi then filed suit before any Phase III SPLOST projects were awarded. *Id.*

The Eleventh Circuit considered whether the MVP was facially unconstitutional and whether the defendants intentionally discriminated against Virdi on the basis of his race. The court held that strict scrutiny applies to all racial classifications and is not limited to merely set-asides or mandatory quotas; therefore, the MVP was subject to strict scrutiny because it contained racial classifications. *Id.* at 267. The court first questioned whether the identified government interest was compelling. *Id.* at 268. However, the court declined to reach that issue because it found the race-based participation goals were not narrowly tailored to achieving the identified government interest. *Id.*

The court held the MVP was not narrowly tailored for two reasons. *Id.* First, because no evidence existed that the District considered race-neutral alternatives to “avoid unwitting discrimination.” The court found that “[w]hile narrow tailoring does not require exhaustion of every conceivable race-neutral alternative, it does require serious, good faith consideration of whether such alternatives could serve the governmental interest at stake.” *Id.*, citing *Grutter v. Bollinger*, 539 U.S.

306, 339 (2003), and *Richmond v. J.A. Croson Co.*, 488 U.S. 469, 509-10 (1989). The court found that District could have engaged in any number of equally effective race-neutral alternatives, including using its outreach procedure and tracking the participation and success of minority-owned business as compared to nonminority-owned businesses. *Id.* at 268, n.8. Accordingly, the court held the MVP was not narrowly tailored. *Id.* at 268.

Second, the court held that the unlimited duration of the MVP’s racial goals negated a finding of narrow tailoring. *Id.* “[R]ace conscious ... policies must be limited in time.” *Id.*, citing *Grutter*, 539 U.S. at 342, and *Walker v. City of Mesquite, TX*, 169 F.3d 973, 982 (5th Cir. 1999). The court held that because the government interest could have been achieved utilizing race-neutral measures, and because the racial goals were not temporally limited, the MVP could not withstand strict scrutiny and was unconstitutional on its face. *Id.* at 268.

With respect to Virdi’s claims of intentional discrimination, the court held that although the MVP was facially unconstitutional, no evidence existed that the MVP or its unconstitutionality caused Virdi to lose a contract that he would have otherwise received. *Id.* Thus, because Virdi failed to establish a causal connection between the unconstitutional aspect of the MVP and his own injuries, the court affirmed the district court’s grant of judgment on that issue. *Id.* at 269. Similarly, the court found that Virdi presented insufficient evidence to sustain his claims against the Superintendent for intentional discrimination. *Id.*

The court reversed the district court’s order pertaining to the facial constitutionality of the MVP’s racial goals, and affirmed the district court’s order granting defendants’ motion on the issue of intentional discrimination against Virdi. *Id.* at 270.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

5. *Concrete Works of Colorado, Inc. v. City and County of Denver*, 321 F.3d 950 (10th Cir. 2003), cert. denied, 540 U.S. 1027, 124 S. Ct. 556 (2003) (Scalia, Justice with whom the Chief Justice Rehnquist, joined, dissenting from the denial of certiorari)

This case is instructive to the disparity study because it is one of the only recent decisions to uphold the validity of a local government MBE/WBE program. It is significant to note that the Tenth Circuit did not apply the narrowly tailored test and thus did not rule on an application of the narrowly tailored test, instead finding that the plaintiff had waived that challenge in one of the earlier decisions in the case. This case also is one of the only cases to have found private sector marketplace discrimination as a basis to uphold an MBE/WBE-type program.

In *Concrete Works* the United States Court of Appeals for the Tenth Circuit held that the City and County of Denver had a compelling interest in limiting race discrimination in the construction industry, that the City had an important governmental interest in remedying gender discrimination in the construction industry, and found that the City and County of Denver had established a compelling governmental interest to have a race- and gender-based program. In *Concrete Works*, the Court of Appeals did not address the issue of whether the MWBE Ordinance was narrowly tailored because it held the district court was barred under the law of the case doctrine from considering that issue since it was not raised on appeal by the plaintiff construction companies after they had lost that issue on summary judgment in an earlier decision. Therefore, the Court of Appeals did not reach a decision as to narrowly tailoring or consider that issue in the case.

Case history. Plaintiff, Concrete Works of Colorado, Inc. (“CWC”) challenged the constitutionality of an “affirmative action” ordinance enacted by the City and County of Denver (hereinafter the “City” or “Denver”). 321 F.3d 950, 954 (10th Cir. 2003). The ordinance established participation goals for racial minorities and women on certain City construction and professional design projects. *Id.*

The City enacted an Ordinance No. 513 (“1990 Ordinance”) containing annual goals for MBE/WBE utilization on all competitively bid projects. *Id.* at 956. A prime contractor could also satisfy the 1990 Ordinance requirements by using “good faith efforts.” *Id.* In 1996, the City replaced the 1990 Ordinance with Ordinance No. 304 (the “1996 Ordinance”). The district court stated that the 1996 Ordinance differed from the 1990 Ordinance by expanding the definition of covered contracts to include some privately financed contracts on City-owned land; added updated information and findings to the statement of factual support for continuing the program; refined the requirements for MBE/WBE certification and graduation; mandated the use of MBEs and WBEs on change orders; and expanded sanctions for improper behavior by MBEs, WBEs or majority-owned contractors in failing to perform the affirmative action commitments made on City projects. *Id.* at 956-57.

The 1996 Ordinance was amended in 1998 by Ordinance No. 948 (the “1998 Ordinance”). The 1998 Ordinance reduced annual percentage goals and prohibited an MBE or a WBE, acting as a bidder, from counting self-performed work toward project goals. *Id.* at 957.

CWC filed suit challenging the constitutionality of the 1990 Ordinance. *Id.* The district court conducted a bench trial on the constitutionality of the three ordinances. *Id.* The district court ruled in favor of CWC and concluded that the ordinances violated the Fourteenth Amendment. *Id.* The City then appealed to the Tenth Circuit Court of Appeals. *Id.* The Court of Appeals reversed and remanded. *Id.* at 954.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court of Appeals applied strict scrutiny to race-based measures and intermediate scrutiny to the gender-based measures. *Id.* at 957-58, 959. The Court of Appeals also cited *Richmond v. J.A. Croson Co.*, for the proposition that a governmental entity “can use its spending powers to remedy private discrimination, if it identifies that discrimination with the particularity required by the Fourteenth Amendment.” 488 U.S. 469, 492 (1989) (plurality opinion). Because “an effort to alleviate the effects of societal discrimination is not a compelling interest,” the Court of Appeals held that Denver could demonstrate that its interest is compelling only if it (1) identified the past or present discrimination “with some specificity,” and (2) demonstrated that a “strong basis in evidence” supports its conclusion that remedial action is necessary. *Id.* at 958, quoting *Shaw v. Hunt*, 517 U.S. 899, 909-10 (1996).

The court held that Denver could meet its burden without conclusively proving the existence of past or present racial discrimination. *Id.* Rather, Denver could rely on “empirical evidence that demonstrates ‘a significant statistical disparity between the number of qualified minority contractors ... and the number of such contractors actually engaged by the locality or the locality’s prime contractors.’” *Id.*, quoting *Croson*, 488 U.S. at 509 (plurality opinion). Furthermore, the Court of Appeals held that Denver could rely on statistical evidence gathered from the six-county Denver Metropolitan Statistical Area (MSA) and could supplement the statistical evidence with anecdotal evidence of public and private discrimination. *Id.*

The Court of Appeals held that Denver could establish its compelling interest by presenting evidence of its own direct participation in racial discrimination or its passive participation in private discrimination. *Id.* The Court of Appeals held that once Denver met its burden, CWC had to introduce “credible, particularized evidence to rebut [Denver’s] initial showing of the existence of a compelling interest, which could consist of a neutral explanation for the statistical disparities.” *Id.* (internal

citations and quotations omitted). The Court of Appeals held that CWC could also rebut Denver’s statistical evidence “by (1) showing that the statistics are flawed; (2) demonstrating that the disparities shown by the statistics are not significant or actionable; or (3) presenting contrasting statistical data.” *Id.* (internal citations and quotations omitted). The Court of Appeals held that the burden of proof at all times remained with CWC to demonstrate the unconstitutionality of the ordinances. *Id.* at 960.

The Court of Appeals held that to meet its burden of demonstrating an important governmental interest per the intermediate scrutiny analysis, Denver must show that the gender-based measures in the ordinances were based on “reasoned analysis rather than through the mechanical application of traditional, often inaccurate, assumptions.” *Id.*, quoting *Miss. Univ. for Women v. Hogan*, 458 U.S. 718, 726 (1982).

The studies. Denver presented historical, statistical and anecdotal evidence in support of its MBE/WBE programs. Denver commissioned a number of studies to assess its MBE/WBE programs. *Id.* at 962. The consulting firm hired by Denver utilized disparity indices in part. *Id.* at 962. The 1990 Study also examined MBE and WBE utilization in the overall Denver MSA construction market, both public and private. *Id.* at 963.

The consulting firm also interviewed representatives of MBEs, WBEs, majority-owned construction firms, and government officials. *Id.* Based on this information, the 1990 Study concluded that, despite Denver’s efforts to increase MBE and WBE participation in Denver Public Works projects, some Denver employees and private contractors engaged in conduct designed to circumvent the goals program. *Id.* After reviewing the statistical and anecdotal evidence contained in the 1990 Study, the City Council enacted the 1990 Ordinance. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

After the Tenth Circuit decided *Concrete Works II*, Denver commissioned another study (the “1995 Study”). *Id.* at 963. Using 1987 Census Bureau data, the 1995 Study again examined utilization of MBEs and WBEs in the construction and professional design industries within the Denver MSA. *Id.* The 1995 Study concluded that MBEs and WBEs were more likely to be one-person or family-run businesses. The Study concluded that Hispanic-owned firms were less likely to have paid employees than white-owned firms but that Asian/Native American-owned firms were more likely to have paid employees than white- or other minority-owned firms. To determine whether these factors explained overall market disparities, the 1995 Study used the Census data to calculate disparity indices for all firms in the Denver MSA construction industry and separately calculated disparity indices for firms with paid employees and firms with no paid employees. *Id.* at 964.

The Census Bureau information was also used to examine average revenues per employee for Denver MSA construction firms with paid employees. Hispanic-, Asian-, Native American-, and women-owned firms with paid employees all reported lower revenues per employee than majority-owned firms. The 1995 Study also used 1990 Census data to calculate rates of self-employment within the Denver MSA construction industry. The Study concluded that the disparities in the rates of self-employment for blacks, Hispanics, and women persisted even after controlling for education and length of work experience. The 1995 Study controlled for these variables and reported that blacks and Hispanics working in the Denver MSA construction industry were less than half as likely to own their own businesses as were whites of comparable education and experience. *Id.*

In late 1994 and early 1995, a telephone survey of construction firms doing business in the Denver MSA was conducted. *Id.* at 965. Based on information obtained from the survey, the consultant calculated percentage utilization and percentage availability of MBEs and WBEs.

Percentage utilization was calculated from revenue information provided by the responding firms. Percentage availability was calculated based on the number of MBEs and WBEs that responded to the survey question regarding revenues. Using these utilization and availability percentages, the 1995 Study showed disparity indices of 64 for MBEs and 70 for WBEs in the construction industry. In the professional design industry, disparity indices were 67 for MBEs and 69 for WBEs. The 1995 Study concluded that the disparity indices obtained from the telephone survey data were more accurate than those obtained from the 1987 Census data because the data obtained from the telephone survey were more recent, had a narrower focus, and included data on C corporations. Additionally, it was possible to calculate disparity indices for professional design firms from the survey data. *Id.*

In 1997, the City conducted another study to estimate the availability of MBEs and WBEs and to examine, *inter alia*, whether race and gender discrimination limited the participation of MBEs and WBEs in construction projects of the type typically undertaken by the City (the “1997 Study”). *Id.* at 966. The 1997 Study used geographic and specialization information to calculate MBE/WBE availability. Availability was defined as “the ratio of MBE/WBE firms to the total number of firms in the four-digit SIC codes and geographic market area relevant to the City’s contracts.” *Id.*

The 1997 Study compared MBE/WBE availability and utilization in the Colorado construction industry. *Id.* The statewide market was used because necessary information was unavailable for the Denver MSA. *Id.* at 967. Additionally, data collected in 1987 by the Census Bureau was used because more current data was unavailable. The Study calculated disparity indices for the statewide construction market in Colorado as follows: 41 for African American firms, 40 for Hispanic firms, 14 for Asian and other minorities, and 74 for women-owned firms. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The 1997 Study also contained an analysis of whether African Americans, Hispanics, or Asian Americans working in the construction industry are less likely to be self-employed than similarly situated whites. *Id.* Using data from the Public Use Microdata Samples (“PUMS”) of the 1990 Census of Population and Housing, the Study used a sample of individuals working in the construction industry. The Study concluded that in both Colorado and the Denver MSA, African Americans, Hispanics, and Native Americans working in the construction industry had lower self-employment rates than whites. Asian Americans had higher self-employment rates than whites.

Using the availability figures calculated earlier in the Study, the Study then compared the actual availability of MBE/WBEs in the Denver MSA with the potential availability of MBE/WBEs if they formed businesses at the same rate as whites with the same characteristics. *Id.* Finally, the Study examined whether self-employed minorities and women in the construction industry have lower earnings than white males with similar characteristics. *Id.* at 968. Using linear regression analysis, the Study compared business owners with similar years of education, of similar age, doing business in the same geographic area, and having other similar demographic characteristics. Even after controlling for several factors, the results showed that self-employed African Americans, Hispanics, Native Americans, and women had lower earnings than white males. *Id.*

The 1997 Study also conducted a mail survey of both MBE/WBEs and non-MBE/WBEs to obtain information on their experiences in the construction industry. Of the MBE/WBEs who responded, 35 percent indicated that they had experienced at least one incident of disparate treatment within the last five years while engaged in business activities. The survey also posed the following question: “How often do prime contractors who use your firm as a subcontractor on public sector projects with [MBE/WBE] goals or requirements ... also use your firm on

public sector or private sector projects without [MBE/WBE] goals or requirements?” Fifty-eight percent of minorities and 41 percent of white women who responded to this question indicated they were “seldom or never” used on non-goals projects. *Id.*

MBE/WBEs were also asked whether the following aspects of procurement made it more difficult or impossible to obtain construction contracts: (1) bonding requirements, (2) insurance requirements, (3) large project size, (4) cost of completing proposals, (5) obtaining working capital, (6) length of notification for bid deadlines, (7) prequalification requirements, and (8) previous dealings with an agency. This question was also asked of non-MBE/WBEs in a separate survey. With one exception, MBE/WBEs considered each aspect of procurement more problematic than non-MBE/WBEs. To determine whether a firm’s size or experience explained the different responses, a regression analysis was conducted that controlled for age of the firm, number of employees, and level of revenues. The results again showed that with the same, single exception, MBE/WBEs had more difficulties than non-MBE/WBEs with the same characteristics. *Id.* at 968-69.

After the 1997 Study was completed, the City enacted the 1998 Ordinance. The 1998 Ordinance reduced the annual goals to 10 percent for both MBEs and WBEs and eliminated a provision which previously allowed MBE/WBEs to count their own work toward project goals. *Id.* at 969.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The anecdotal evidence included the testimony of the senior vice-president of a large, majority-owned construction firm who stated that when he worked in Denver, he received credible complaints from minority and women-owned construction firms that they were subject to different work rules than majority-owned firms. *Id.* He also testified that he frequently observed graffiti containing racial or gender epithets written on job sites in the Denver metropolitan area. Further, he stated that he believed, based on his personal experiences, that many majority-owned firms refused to hire minority- or women-owned subcontractors because they believed those firms were not competent. *Id.*

Several MBE/WBE witnesses testified that they experienced difficulty prequalifying for private sector projects and projects with the City and other governmental entities in Colorado. One individual testified that her company was required to prequalify for a private sector project while no similar requirement was imposed on majority-owned firms. Several others testified that they attempted to prequalify for projects, but their applications were denied even though they met the prequalification requirements. *Id.*

Other MBE/WBEs testified that their bids were rejected even when they were the lowest bidder; that they believed they were paid more slowly than majority-owned firms on both City projects and private sector projects; that they were charged more for supplies and materials; that they were required to do additional work not part of the subcontracting arrangement; and that they found it difficult to join unions and trade associations. *Id.* There was testimony detailing the difficulties MBE/WBEs experienced in obtaining lines of credit. One WBE testified that she was given a false explanation of why her loan was declined; another testified that the lending institution required the co-signature of her husband even though her husband, who also owned a construction firm, was not required to obtain her co-signature; a third

testified that the bank required her father to be involved in the lending negotiations. *Id.*

The court also pointed out anecdotal testimony involving recitations of racially- and gender-motivated harassment experienced by MBE/WBEs at work sites. There was testimony that minority and female employees working on construction projects were physically assaulted and fondled, spat upon with chewing tobacco, and pelted with two-inch bolts thrown by males from a height of 80 feet. *Id.* at 969-70.

The legal framework applied by the court. The Court held that the district court incorrectly believed Denver was required to prove the existence of discrimination. Instead of considering whether Denver had demonstrated strong evidence from which an inference of past or present discrimination could be drawn, the district court analyzed whether Denver's evidence showed that there is pervasive discrimination. *Id.* at 970. The court, quoting *Concrete Works II*, stated that "the Fourteenth Amendment does not require a court to make an ultimate finding of discrimination before a municipality may take affirmative steps to eradicate discrimination." *Id.* at 970, quoting *Concrete Works II*, 36 F.3d 1513, 1522 (10th Cir. 1994). Denver's initial burden was to demonstrate that strong evidence of discrimination supported its conclusion that remedial measures were necessary. Strong evidence is that "approaching a prima facie case of a constitutional or statutory violation," not irrefutable or definitive proof of discrimination. *Id.* at 97, quoting *Croson*, 488 U.S. at 500. The burden of proof at all times remained with the contractor plaintiff to prove by a preponderance of the evidence that Denver's "evidence did not support an inference of prior discrimination and thus a remedial purpose." *Id.*, quoting *Adarand VII*, 228 F.3d at 1176.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Denver, the Court held, did introduce evidence of discrimination against each group included in the ordinances. *Id.* at 971. Thus, Denver’s evidence did not suffer from the problem discussed by the court in *Croson*. The Court held the district court erroneously concluded that Denver must demonstrate that the private firms directly engaged in any discrimination in which Denver passively participates do so intentionally, with the purpose of disadvantaging minorities and women. The *Croson* majority concluded that a “city would have a compelling interest in preventing its tax dollars from assisting [local trade] organizations in maintaining a racially segregated construction market.” *Id.* at 971, quoting *Croson*, 488 U.S. 503. Thus, the Court held Denver’s burden was to introduce evidence which raised the inference of discriminatory exclusion in the local construction industry and linked its spending to that discrimination. *Id.*

The Court noted the Supreme Court has stated that the inference of discriminatory exclusion can arise from statistical disparities. *Id.*, citing *Croson*, 488 U.S. at 503. Accordingly, it concluded that Denver could meet its burden through the introduction of statistical and anecdotal evidence. To the extent the district court required Denver to introduce additional evidence to show discriminatory motive or intent on the part of private construction firms, the district court erred. Denver, according to the Court, was under no burden to identify any specific practice or policy that resulted in discrimination. Neither was Denver required to demonstrate that the purpose of any such practice or policy was to disadvantage women or minorities. *Id.* at 972.

The court found Denver’s statistical and anecdotal evidence relevant because it identifies discrimination in the local construction industry, not simply discrimination in society. The court held the genesis of the identified discrimination is irrelevant and the district court erred when it discounted Denver’s evidence on that basis. *Id.*

The court held the district court erroneously rejected the evidence Denver presented on marketplace discrimination. *Id.* at 973. The court rejected the district court’s erroneous legal conclusion that a municipality may only remedy its own discrimination. The court stated this conclusion is contrary to the holdings in *Concrete Works II* and the plurality opinion in *Croson*. *Id.* The court held it previously recognized in this case that “a municipality has a compelling interest in taking affirmative steps to remedy both public *and private* discrimination specifically identified in its area.” *Id.*, quoting *Concrete Works II*, 36 F.3d at 1529 (emphasis added). In *Concrete Works II*, the court stated that “we do not read *Croson* as requiring the municipality to identify an exact linkage between its award of public contracts and private discrimination.” *Id.*, quoting *Concrete Works II*, 36 F.3d at 1529.

The court stated that Denver could meet its burden of demonstrating its compelling interest with evidence of private discrimination in the local construction industry coupled with evidence that it has become a passive participant in that discrimination. *Id.* at 973. Thus, Denver was not required to demonstrate that it is “guilty of prohibited discrimination” to meet its initial burden. *Id.*

Additionally, the court had previously concluded that Denver’s statistical studies, which compared utilization of MBE/WBEs to availability, supported the inference that “local prime contractors” are engaged in racial and gender discrimination. *Id.* at 974, quoting *Concrete Works II*, 36 F.3d at 1529. Thus, the court held Denver’s disparity studies should not have been discounted because they failed to specifically identify those individuals or firms responsible for the discrimination. *Id.*

The Court’s rejection of CWC’s arguments and the district court findings.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Use of marketplace data. The court held the district court, inter alia, erroneously concluded that the disparity studies upon which Denver relied were significantly flawed because they measured discrimination in the overall Denver MSA construction industry, not discrimination by the City itself. *Id.* at 974. The court found that the district court’s conclusion was directly contrary to the holding in *Adarand VII* that evidence of both public and private discrimination in the construction industry is relevant. *Id.*, citing *Adarand VII*, 228 F.3d at 1166-67).

The court held the conclusion reached by the majority in *Croson* that marketplace data are relevant in equal protection challenges to affirmative action programs was consistent with the approach later taken by the court in *Shaw v. Hunt*. *Id.* at 975. In *Shaw*, a majority of the court relied on the majority opinion in *Croson* for the broad proposition that a governmental entity’s “interest in remedying the effects of past or present racial discrimination may in the proper case justify a government’s use of racial distinctions.” *Id.*, quoting *Shaw*, 517 U.S. at 909. The *Shaw* court did not adopt any requirement that only discrimination by the governmental entity, either directly or by utilizing firms engaged in discrimination on projects funded by the entity, was remediable. The court, however, did set out two conditions that must be met for the governmental entity to show a compelling interest. “First, the discrimination must be identified discrimination.” *Id.* at 976, quoting *Shaw*, 517 U.S. at 910. The City can satisfy this condition by identifying the discrimination, “‘public or private, with some specificity.’” *Id.* at 976, citing *Shaw*, 517 U.S. at 910, quoting *Croson*, 488 U.S. at 504 (emphasis added). The governmental entity must also have a “strong basis in evidence to conclude that remedial action was necessary.” *Id.* Thus, the court concluded *Shaw* specifically stated that evidence of either public or private discrimination could be used to satisfy the municipality’s burden of producing strong evidence. *Id.* at 976.

In *Adarand VII*, the court noted it concluded that evidence of marketplace discrimination can be used to support a compelling interest in remedying past or present discrimination through the use of affirmative action legislation. *Id.*, citing *Adarand VII*, 228 F.3d at 1166-67 (“[W]e may consider public and private discrimination not only in the specific area of government procurement contracts but also in the construction industry generally; thus *any findings Congress has made as to the entire construction industry are relevant.*” (emphasis added)). Further, the court pointed out in this case it earlier rejected the argument CWC reasserted here that marketplace data are irrelevant and remanded the case to the district court to determine whether Denver could link its public spending to “the Denver MSA evidence of industry-wide discrimination.” *Id.*, quoting *Concrete Works II*, 36 F.3d at 1529. The court stated that evidence explaining “the Denver government’s role in contributing to the underutilization of MBEs and WBEs in the *private construction market in the Denver MSA*” was relevant to Denver’s burden of producing strong evidence. *Id.*, quoting *Concrete Works II*, 36 F.3d at 1530 (emphasis added).

Consistent with the court’s mandate in *Concrete Works II*, the City attempted to show at trial that it “indirectly contributed to private discrimination by awarding public contracts to firms that in turn discriminated against MBE and/or WBE subcontractors in other private portions of their business.” *Id.* The City can demonstrate that it is a “‘passive participant’ in a system of racial exclusion practiced by elements of the local construction industry” by compiling evidence of marketplace discrimination and then linking its spending practices to the private discrimination. *Id.*, quoting *Croson*, 488 U.S. at 492.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The court rejected CWC's argument that the lending discrimination studies and business formation studies presented by Denver were irrelevant. In *Adarand VII*, the court concluded that evidence of discriminatory barriers to the formation of businesses by minorities and women and fair competition between MBE/WBEs and majority-owned construction firms shows a "strong link" between a government's "disbursements of public funds for construction contracts and the channeling of those funds due to private discrimination." *Id.* at 977, quoting *Adarand VII*, 228 F.3d at 1167-68. The court found that evidence that private discrimination resulted in barriers to business formation is relevant because it demonstrates that MBE/WBEs are precluded *at the outset* from competing for public construction contracts. The court also found that evidence of barriers to fair competition is relevant because it again demonstrates that *existing* MBE/WBEs are precluded from competing for public contracts. Thus, like the studies measuring disparities in the utilization of MBE/WBEs in the Denver MSA construction industry, studies showing that discriminatory barriers to business formation exist in the Denver construction industry are relevant to the City's showing that it indirectly participates in industry discrimination. *Id.* at 977.

The City presented evidence of lending discrimination to support its position that MBE/WBEs in the Denver MSA construction industry face discriminatory barriers to business formation. Denver introduced a disparity study prepared in 1996 and sponsored by the Denver Community Reinvestment Alliance, Colorado Capital Initiatives, and the City. The Study ultimately concluded that "despite the fact that loan applicants of three different racial/ethnic backgrounds in this sample were not appreciably different as businesspeople, they were ultimately treated differently by the lenders on the crucial issue of loan approval or denial." *Id.* at 977-78. In *Adarand VII*, the court concluded that this study, among other evidence, "strongly support[ed] an initial showing of discrimination in lending." *Id.* at 978, quoting *Adarand VII*, 228 F.3d at

1170, n. 13 ("Lending discrimination alone of course does not justify action in the construction market. However, the persistence of such discrimination ... supports the assertion that the formation, as well as utilization, of minority-owned construction enterprises has been impeded."). The City also introduced anecdotal evidence of lending discrimination in the Denver construction industry.

CWC did not present any evidence that undermined the reliability of the lending discrimination evidence but simply repeated the argument, foreclosed by circuit precedent, that it is irrelevant. The court rejected the district court criticism of the evidence because it failed to determine whether the discrimination resulted from discriminatory attitudes or from the neutral application of banking regulations. The court concluded that discriminatory motive can be inferred from the results shown in disparity studies. The court held the district court's criticism did not undermine the study's reliability as an indicator that the City is passively participating in marketplace discrimination. The court noted that in *Adarand VII* it took "judicial notice of the obvious causal connection between access to capital and ability to implement public works construction projects." *Id.* at 978, quoting *Adarand VII*, 228 F.3d at 1170.

Denver also introduced evidence of discriminatory barriers to competition faced by MBE/WBEs in the form of business formation studies. The 1990 Study and the 1995 Study both showed that all minority groups in the Denver MSA formed their own construction firms at rates lower than the total population but that women formed construction firms at higher rates. The 1997 Study examined self-employment rates and controlled for gender, marital status, education, availability of capital, and personal/family variables. As discussed, *supra*, the Study concluded that African Americans, Hispanics, and Native Americans working in the construction industry have lower rates of self-employment than similarly situated whites. Asian Americans had higher

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

rates. The 1997 Study also concluded that minority and female business owners in the construction industry, with the exception of Asian American owners, have lower earnings than white male owners. This conclusion was reached after controlling for education, age, marital status, and disabilities. *Id.* at 978.

The court held that the district court’s conclusion that the business formation studies could not be used to justify the ordinances conflicts with its holding in *Adarand VII*. “[T]he existence of evidence indicating that the number of [MBEs] would be significantly (but unquantifiably) higher but for such barriers is nevertheless relevant to the assessment of whether a disparity is sufficiently significant to give rise to an inference of discriminatory exclusion.” *Id.* at 979, quoting *Adarand VII*, 228 F.3d at 1174.

In sum, the court held the district court erred when it refused to consider or give sufficient weight to the lending discrimination study, the business formation studies, and the studies measuring marketplace discrimination. That evidence was legally relevant to the City’s burden of demonstrating a strong basis in evidence to support its conclusion that remedial legislation was necessary. *Id.* at 979-80.

Variables. CWC challenged Denver’s disparity studies as unreliable because the disparities shown in the studies may be attributable to firm size and experience rather than discrimination. Denver countered, however, that a firm’s size has little effect on its qualifications or its ability to provide construction services and that MBE/WBEs, like all construction firms, can perform most services either by hiring additional employees or by employing subcontractors. CWC responded that elasticity itself is relative to size and experience; MBE/WBEs are less capable of expanding because they are smaller and less experienced. *Id.* at 980.

The court concluded that even if it assumed that MBE/WBEs are less able to expand because of their smaller size and more limited experience, CWC did not respond to Denver’s argument and the evidence it presented showing that experience and size are not race- and gender-neutral variables and that MBE/WBE construction firms are generally smaller and less experienced *because* of industry discrimination. *Id.* at 981. The lending discrimination and business formation studies, according to the court, both strongly supported Denver’s argument that MBE/WBEs are smaller and less experienced because of marketplace and industry discrimination. In addition, Denver’s expert testified that discrimination by banks or bonding companies would reduce a firm’s revenue and the number of employees it could hire. *Id.*

Denver also argued its Studies controlled for size and the 1995 Study controlled for experience. It asserted that the 1990 Study measured revenues per employee for construction for MBE/WBEs and concluded that the resulting disparities, “suggest[] that even among firms of the same employment size, industry utilization of MBEs and WBEs was lower than that of nonminority male-owned firms.” *Id.* at 982. Similarly, the 1995 Study controlled for size, calculating, *inter alia*, disparity indices for firms with no paid employees which presumably are the same size.

Based on the uncontroverted evidence presented at trial, the court concluded that the district court did not give sufficient weight to Denver’s disparity studies because of its erroneous conclusion that the studies failed to adequately control for size and experience. The court held that Denver is permitted to make assumptions about capacity and qualification of MBE/WBEs to perform construction services if it can support those assumptions. The court found the assumptions made in this case were consistent with the evidence presented at trial and supported the City’s position that a firm’s size does not affect its

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

qualifications, willingness, or ability to perform construction services and that the smaller size and lesser experience of MBE/WBEs are, themselves, the result of industry discrimination. Further, the court pointed out CWC did not conduct its own disparity study using marketplace data and thus did not demonstrate that the disparities shown in Denver’s studies would decrease or disappear if the studies controlled for size and experience to CWC’s satisfaction. Consequently, the court held CWC’s rebuttal evidence was insufficient to meet its burden of discrediting Denver’s disparity studies on the issue of size and experience. *Id.* at 982.

Specialization. The district court also faulted Denver’s disparity studies because they did not control for firm specialization. The court noted the district court’s criticism would be appropriate only if there was evidence that MBE/WBEs are more likely to specialize in certain construction fields. *Id.* at 982.

The court found there was no identified evidence showing that certain construction specializations require skills less likely to be possessed by MBE/WBEs. The court found relevant the testimony of the City’s expert, that the data he reviewed showed that MBEs were represented “widely across the different [construction] specializations.” *Id.* at 982-83. There was no contrary testimony that aggregation bias caused the disparities shown in Denver’s studies. *Id.* at 983.

The court held that CWC failed to demonstrate that the disparities shown in Denver’s studies are eliminated when there is control for firm specialization. In contrast, one of the Denver studies, which controlled for SIC-code subspecialty and still showed disparities, provided support for Denver’s argument that firm specialization does not explain the disparities. *Id.* at 983.

The court pointed out that disparity studies may make assumptions about availability as long as the same assumptions can be made for all firms. *Id.* at 983.

Utilization of MBE/WBEs on City projects. CWC argued that Denver could not demonstrate a compelling interest because it overutilized MBE/WBEs on City construction projects. This argument, according to the court, was an extension of CWC’s argument that Denver could justify the ordinances only by presenting evidence of discrimination by the City itself or by contractors while working on City projects. Because the court concluded that Denver could satisfy its burden by showing that it is an indirect participant in industry discrimination, CWC’s argument relating to the utilization of MBE/WBEs on City projects goes only to the weight of Denver’s evidence. *Id.* at 984.

Consistent with the court’s mandate in *Concrete Works II*, at trial Denver sought to demonstrate that the utilization data from projects subject to the goals program were tainted by the program and “reflect[ed] the intended remedial effect on MBE and WBE utilization.” *Id.* at 984, quoting *Concrete Works II*, 36 F.3d at 1526. Denver argued that the non-goals data were the better indicator of past discrimination in public contracting than the data on all City construction projects. *Id.* at 984-85. The court concluded that Denver presented ample evidence to support the conclusion that the evidence showing MBE/WBE utilization on City projects not subject to the ordinances or the goals programs is the better indicator of discrimination in City contracting. *Id.* at 985.

The court rejected CWC’s argument that the marketplace data were irrelevant but agreed that the non-goals data were also relevant to Denver’s burden. The court noted that Denver did not rely heavily on the non-goals data at trial but focused primarily on the marketplace studies to support its burden. *Id.* at 985.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

In sum, the court held Denver demonstrated that the utilization of MBE/WBEs on City projects had been affected by the affirmative action programs that had been in place in one form or another since 1977. Thus, the non-goals data were the better indicator of discrimination in public contracting. The court concluded that, on balance, the non-goals data provided some support for Denver's position that racial and gender discrimination existed in public contracting before the enactment of the ordinances. *Id.* at 987-88.

Anecdotal evidence. The anecdotal evidence, according to the court, included several incidents involving profoundly disturbing behavior on the part of lenders, majority-owned firms, and individual employees. *Id.* at 989. The court found that the anecdotal testimony revealed behavior that was not merely sophomoric or insensitive, but which resulted in real economic or physical harm. While CWC also argued that all new or small contractors have difficulty obtaining credit and that treatment the witnesses characterized as discriminatory is experienced by all contractors, Denver's witnesses specifically testified that they believed the incidents they experienced were motivated by race or gender discrimination. The court found they supported those beliefs with testimony that majority-owned firms were not subject to the same requirements imposed on them. *Id.*

The court held there was no merit to CWC's argument that the witnesses' accounts must be verified to provide support for Denver's burden. The court stated that anecdotal evidence is nothing more than a witness' narrative of an incident told from the witness' perspective and including the witness' perceptions. *Id.*

After considering Denver's anecdotal evidence, the district court found that the evidence "shows that race, ethnicity and gender affect the construction industry and those who work in it" and that the egregious mistreatment of minority and women employees "had direct financial

consequences" on construction firms. *Id.* at 989, quoting *Concrete Works III*, 86 F. Supp.2d at 1074, 1073. Based on the district court's findings regarding Denver's anecdotal evidence and its review of the record, the court concluded that the anecdotal evidence provided persuasive, unrebutted support for Denver's initial burden. *Id.* at 989-90, citing *Int'l Bhd. of Teamsters v. United States*, 431 U.S. 324, 339 (1977) (concluding that anecdotal evidence presented in a pattern or practice discrimination case was persuasive because it "brought the cold [statistics] convincingly to life").

Summary. The court held the record contained extensive evidence supporting Denver's position that it had a strong basis in evidence for concluding that the 1990 Ordinance and the 1998 Ordinance were necessary to remediate discrimination against both MBEs and WBEs. *Id.* at 990. The information available to Denver and upon which the ordinances were predicated, according to the court, indicated that discrimination was persistent in the local construction industry and that Denver was, at least, an indirect participant in that discrimination.

To rebut Denver's evidence, the court stated CWC was required to "establish that Denver's evidence did not constitute strong evidence of such discrimination." *Id.* at 991, quoting *Concrete Works II*, 36 F.3d at 1523. CWC could not meet its burden of proof through conjecture and unsupported criticisms of Denver's evidence. Rather, it must present "credible, particularized evidence." *Id.*, quoting *Adarand VII*, 228 F.3d at 1175. The court held that CWC did not meet its burden. CWC hypothesized that the disparities shown in the studies on which Denver relies could be explained by any number of factors other than racial discrimination. However, the court found it did not conduct its own marketplace disparity study controlling for the disputed variables and presented no other evidence from which the court could conclude that such variables explain the disparities. *Id.* at 991-92.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Narrow tailoring. Having concluded that Denver demonstrated a compelling interest in the race-based measures and an important governmental interest in the gender-based measures, the court held it must examine whether the ordinances were narrowly tailored to serve the compelling interest and are substantially related to the achievement of the important governmental interest. *Id.* at 992.

The court stated it had previously concluded in its earlier decisions that Denver's program was narrowly tailored. CWC appealed the grant of summary judgment and that appeal culminated in the decision in *Concrete Works II*. The court reversed the grant of summary judgment on the compelling-interest issue and concluded that CWC had waived any challenge to the narrow tailoring conclusion reached by the district court. Because the court found *Concrete Works* did not challenge the district court's conclusion with respect to the second prong of *Croson's* strict scrutiny standard — *i.e.*, that the Ordinance is narrowly tailored to remedy past and present discrimination — the court held it need not address this issue. *Id.* at 992, *citing Concrete Works II*, 36 F.3d at 1531, n. 24.

The court concluded that the district court lacked authority to address the narrow tailoring issue on remand because none of the exceptions to the law of the case doctrine are applicable. The district court's earlier determination that Denver's affirmative-action measures were narrowly tailored is law of the case and binding on the parties.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

6. *In re City of Memphis*, 293 F.3d 345 (6th Cir. 2002)

This case is instructive to the disparity study based on its holding that a local or state government may be prohibited from utilizing post-enactment evidence in support of an MBE/WBE-type program. 293 F.3d at 350-351. The United States Court of Appeals for the Sixth Circuit held that pre-enactment evidence was required to justify the City of Memphis' MBE/WBE Program. *Id.* The Sixth Circuit held that a government must have had sufficient evidentiary justification for a racially conscious statute in *advance* of its passage.

The district court had ruled that the City could not introduce a post-enactment study as evidence of a compelling interest to justify its MBE/WBE Program. *Id.* at 350-351. The Sixth Circuit denied the City's application for an interlocutory appeal on the district court's order and refused to grant the City's request to appeal this issue. *Id.* at 350-351.

The City argued that a substantial ground for difference of opinion existed in the federal courts of appeal. 293 F.3d at 350. The court stated some circuits permit post-enactment evidence to supplement pre-enactment evidence. *Id.* This issue, according to the Court, appears to have been resolved in the Sixth Circuit. *Id.* The Court noted the Sixth Circuit decision in *AGC v. Drabik*, 214 F.3d 730 (6th Cir. 2000), which held that under *Crosby* a State must have sufficient evidentiary justification for a racially-conscious statute in advance of its enactment, and that governmental entities must identify that discrimination with some specificity *before* they may use race-conscious relief. *Memphis*, 293 F.3d at 350-351, *citing Drabik*, 214 F.3d at 738.

The Court in *Memphis* said that although *Drabik* did not directly address the admissibility of post-enactment evidence, it held a governmental entity must have pre-enactment evidence sufficient to justify a racially-conscious statute. 293 F.3d at 351. The court concluded *Drabik* indicates the Sixth Circuit would not favor using post-enactment evidence to make that showing. *Id.* at 351. Under *Drabik*, the Court in *Memphis* held the City must present pre-enactment evidence to show a compelling state interest. *Id.* at 351.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

7. *Builders Ass'n of Greater Chicago v. County of Cook, Chicago*, 256 F.3d 642 (7th Cir. 2001)

This case is instructive to the disparity study because of its analysis of the Cook County MBE/WBE program and the evidence used to support that program. The decision emphasizes the need for any race-conscious program to be based upon credible evidence of discrimination by the local government against MBE/WBEs and to be narrowly tailored to remedy only that identified discrimination.

In *Builders Ass'n of Greater Chicago v. County of Cook, Chicago*, 256 F.3d 642 (7th Cir. 2001) the United States Court of Appeals for the Seventh Circuit held the Cook County, Chicago MBE/WBE Program was unconstitutional. The court concluded there was insufficient evidence of a compelling interest. The court held there was no credible evidence that Cook County in the award of construction contracts discriminated against any of the groups “favored” by the Program. The court also found that the Program was not “narrowly tailored” to remedy the wrong sought to be redressed, in part because it was over-inclusive in the definition of minorities. The court noted the list of minorities included groups that have not been subject to discrimination by Cook County.

The court considered as an unresolved issue whether a different, and specifically a more permissive, standard than strict scrutiny is applicable to preferential treatment on the basis of sex, rather than race or ethnicity. 256 F.3d at 644. The court noted that the United States Supreme Court in *United States v. Virginia (“VMI”)*, 518 U.S. 515, 532 and n.6 (1996), held racial discrimination to a stricter standard than sex discrimination, although the court in *Cook County* stated the difference between the applicable standards has become “vanishingly small.” *Id.* The court pointed out that the Supreme Court said in the *VMI* case, that “parties who seek to defend gender-based government action must

demonstrate an ‘exceedingly persuasive’ justification for that action ...” and, realistically, the law can ask no more of race-based remedies either.” 256 F.3d at 644, *quoting in part VMI*, 518 U.S. at 533. The court indicated that the Eleventh Circuit Court of Appeals in the *Engineering Contract Association of South Florida, Inc. v. Metropolitan Dade County*, 122 F.3d 895, 910 (11th Cir. 1997) decision created the “paradox that a public agency can provide stronger remedies for sex discrimination than for race discrimination; it is difficult to see what sense that makes.” 256 F.3d at 644. But, since Cook County did not argue for a different standard for the minority and women’s “set-aside programs,” the women’s program the court determined must clear the same “hurdles” as the minority program.” 256 F.3d at 644-645.

The court found that since the ordinance requires prime contractors on public projects to reserve a substantial portion of the subcontracts for minority contractors, which is inapplicable to private projects, it is “to be expected that there would be more soliciting of these contractors on public than on private projects.” *Id.* Therefore, the court did not find persuasive that there was discrimination based on this difference alone. 256 F.3d at 645. The court pointed out the County “conceded that [it] had no specific evidence of pre-enactment discrimination to support the ordinance.” 256 F.3d at 645 quoting the district court decision, 123 F.Supp.2d at 1093. The court held that a “public agency must have a strong evidentiary basis for thinking a discriminatory remedy appropriate *before* it adopts the remedy.” 256 F.3d at 645 (emphasis in original).

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The court stated that minority enterprises in the construction industry “tend to be subcontractors, moreover, because as the district court found not clearly erroneously, 123 F.Supp.2d at 1115, they tend to be new and therefore small and relatively untested — factors not shown to be attributable to discrimination by the County.” 256 F.3d at 645. The court held that there was no basis for attributing to the County any discrimination that prime contractors may have engaged in. *Id.* The court noted that “[i]f prime contractors on County projects were discriminating against minorities and this was known to the County, whose funding of the contracts thus knowingly perpetuated the discrimination, the County might be deemed sufficiently complicit ... to be entitled to take remedial action.” *Id.* But, the court found “of that there is no evidence either.” *Id.*

The court stated that if the County had been complicit in discrimination by prime contractors, it found “puzzling” to try to remedy that discrimination by requiring discrimination in favor of minority stockholders, as distinct from employees. 256 F.3d at 646. The court held that even if the record made a case for remedial action of the general sort found in the MWBE ordinance by the County, it would “flunk the constitutional test” by not being carefully designed to achieve the ostensible remedial aim and no more. 256 F.3d at 646. The court held that a state and local government that has discriminated just against blacks may not by way of remedy discriminate in favor of blacks and Asian Americans and women. *Id.* Nor, the court stated, may it discriminate more than is necessary to cure the effects of the earlier discrimination. *Id.* “Nor may it continue the remedy in force indefinitely, with no effort to determine whether, the remedial purpose attained, continued enforcement of the remedy would be a gratuitous discrimination against nonminority persons.” *Id.* The court, therefore, held that the ordinance was not “narrowly tailored” to the wrong that it seeks to correct. *Id.*

The court thus found that the County both failed to establish the premise for a racial remedy, and also that the remedy goes further than is necessary to eliminate the evil against which it is directed. 256 F.3d at 647. The court held that the list of “favored minorities” included groups that have never been subject to significant discrimination by Cook County. *Id.* The court found it unreasonable to “presume” discrimination against certain groups merely on the basis of having an ancestor who had been born in a particular country. *Id.* Therefore, the court held the ordinance was overinclusive.

The court found that the County did not make any effort to show that, were it not for a history of discrimination, minorities would have 30 percent, and women 10 percent, of County construction contracts. 256 F.3d at 647. The court also rejected the proposition advanced by the County in this case—“that a comparison of the fraction of minority subcontractors on public and private projects established discrimination against minorities by prime contractors on the latter type of project.” 256 F.3d at 647-648.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

8. *Associated Gen. Contractors v. Drabik*, 214 F.3d 730 (6th Cir. 2000), affirming Case No. C2-98-943, 998 WL 812241 (S.D. Ohio 1998)

This case is instructive to the disparity study based on the analysis applied in finding the evidence insufficient to justify an MBE/WBE program, and the application of the narrowly tailored test. The Sixth Circuit Court of Appeals enjoined the enforcement of the state MBE program, and in so doing reversed state court precedent finding the program constitutional. This case affirmed a district court decision enjoining the award of a “set-aside” contract based on the State of Ohio’s MBE program with the award of construction contracts.

The court held, among other things, that the mere existence of societal discrimination was insufficient to support a racial classification. The court found that the economic data were insufficient and too outdated. The court concluded the State could not establish a compelling governmental interest and that the statute was not narrowly tailored. The court said the statute failed the narrow tailoring test, including because there was no evidence that the State had considered race-neutral remedies.

This case involves a suit by the Associated General Contractors of Ohio and Associated General Contractors of Northwest Ohio, representing Ohio building contractors to stop the award of a construction contract for the Toledo Correctional Facility to a minority-owned business (“MBE”), in a bidding process from which nonminority-owned firms were statutorily excluded from participating under Ohio’s state Minority Business Enterprise Act. 214 F.3d at 733.

AGC of Ohio and AGC of Northwest Ohio (Plaintiffs-Appellees) claimed the Ohio Minority Business Enterprise Act (“MBEA”) was unconstitutional in violation of the Equal Protection Clause of the Fourteenth Amendment. The district court agreed, and permanently

enjoined the state from awarding any construction contracts under the MBEA. Drabik, Director of the Ohio Department of Administrative Services and others appealed the district court’s Order. *Id.* at 733. The Sixth Circuit Court of Appeals affirmed the Order of the district court, holding unconstitutional the MBEA and enjoining the state from awarding any construction contracts under that statute. *Id.*

Ohio passed the MBEA in 1980. *Id.* at 733. This legislation “set-aside” 5 percent, by value, of all state construction projects for bidding by certified MBEs exclusively. *Id.* Pursuant to the MBEA, the state decided to set aside, for MBEs only, bidding for construction of the Toledo Correctional Facility’s Administration Building. Non-MBEs were excluded on racial grounds from bidding on that aspect of the project and restricted in their participation as subcontractors. *Id.*

The Court noted it ruled in 1983 that the MBEA was constitutional, see *Ohio Contractors Ass’n v. Keip*, 713 F.2d 167 (6th Cir. 1983). *Id.* Subsequently, the United States Supreme Court in two landmark decisions applied the criteria of strict scrutiny under which such “racially preferential set-asides” were to be evaluated. *Id.* (see *City of Richmond v. J.A. Croson Co.* (1989) and *Adarand Constructors, Inc. v. Peña* (1995), citation omitted.) The Court noted that the decision in *Keip* was a more relaxed treatment accorded to equal protection challenges to state contracting disputes prior to *Croson*. *Id.* at 733-734.

Strict scrutiny. The Court found it is clear a government has a compelling interest in assuring that public dollars do not serve to finance the evil of private prejudice. *Id.* at 734-735, citing *Croson*, 488 U.S. at 492. But, the Court stated, “statistical disparity in the proportion of contracts awarded to a particular group, standing alone does not demonstrate such an evil.” *Id.* at 735.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court said there is no question that remedying the effects of past discrimination constitutes a compelling governmental interest. *Id.* at 735. The Court stated to make this showing, a state cannot rely on mere speculation, or legislative pronouncements, of past discrimination, but rather, the Supreme Court has held the state bears the burden of demonstrating a strong basis in evidence for its conclusion that remedial action was necessary by proving either that the state itself discriminated in the past or was a passive participant in private industry's discriminatory practices. *Id.* at 735, quoting *Croson*, 488 U.S. at 486-92.

Thus, the Court concluded that the linchpin of the *Croson* analysis is its mandating of strict scrutiny, the requirement that a program be narrowly tailored to achieve a compelling government interest, but above all its holding that governments must identify discrimination with some specificity before they may use race-conscious relief; explicit findings of a constitutional or statutory violation must be made. *Id.* at 735, quoting *Croson*, 488 U.S. at 497.

Statistical evidence: compelling interest. The Court pointed out that proponents of “racially discriminatory systems” such as the MBEA have sought to generate the necessary evidence by a variety of means, however, such efforts have generally focused on “mere underrepresentation” by showing a lesser percentage of contracts awarded to a particular group than that group's percentage in the general population. *Id.* at 735. “Raw statistical disparity” of this sort is part of the evidence offered by Ohio in this case, according to the Court. *Id.* at 736. The Court stated however, “such evidence of mere statistical disparities has been firmly rejected as insufficient by the Supreme Court, particularly in a context such as contracting, where special qualifications are so relevant.” *Id.*

The Court said that although Ohio's most “compelling” statistical evidence in this case compared the percentage of contracts awarded to minorities to the percentage of minority-owned businesses in Ohio, which the Court noted provided stronger statistics than the statistics in *Croson*, it was still insufficient. *Id.* at 736. The Court found the problem with Ohio's statistical comparison was that the percentage of minority-owned businesses in Ohio “did not take into account how many of those businesses were construction companies of any sort, let alone how many were qualified, willing, and able to perform state construction contracts.” *Id.*

The Court held the statistical evidence that the Ohio legislature had before it when the MBEA was enacted consisted of data that was deficient. *Id.* at 736. The Court said that much of the data was severely limited in scope (ODOT contracts) or was irrelevant to this case (ODOT purchasing contracts). *Id.* The Court again noted the data did not distinguish minority construction contractors from minority businesses generally, and therefore “made no attempt to identify minority construction contracting firms that are ready, willing, and able to perform state construction contracts of any particular size.” *Id.* The Court also pointed out the program was not narrowly tailored, because the state conceded the AGC showed that the State had not performed a recent study. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court also concluded that even statistical comparisons that might be apparently more pertinent, such as with the percentage of all firms qualified, in some minimal sense, to perform the work in question, would also fail to satisfy the Court's criteria. *Id.* at 736. "If MBEs comprise 10 percent of the total number of contracting firms in the state, but only get 3 percent of the dollar value of certain contracts, that does not alone show discrimination, or even disparity. It does not account for the relative size of the firms, either in terms of their ability to do particular work or in terms of the number of tasks they have the resources to complete." *Id.* at 736.

The Court stated the only cases found to present the necessary "compelling interest" sufficient to justify a narrowly tailored race-based remedy, are those that expose "pervasive, systematic, and obstinate discriminatory conduct ..." *Id.* at 737, quoting *Adarand*, 515 U.S. at 237. The Court said that Ohio had made no such showing in this case.

Narrow tailoring. A second and separate hurdle for the MBEA, the Court held, is its failure of narrow tailoring. The Court noted the Supreme Court in *Adarand* taught that a court called upon to address the question of narrow tailoring must ask, "for example, whether there was 'any consideration of the use of race-neutral means to increase minority business participation' in government contracting" *Id.* at 737, quoting *Croson*, 488 U.S. at 507. The Court stated a narrowly tailored set-aside program must be appropriately limited such that it will not last longer than the discriminatory effects it is designed to eliminate and must be linked to identified discrimination. *Id.* at 737. The Court said that the program must also not suffer from "overinclusiveness." *Id.* at 737, quoting *Croson*, 515 U.S. at 506.

The Court found the MBEA suffered from defects both of over and under-inclusiveness. *Id.* at 737. By lumping together the groups of Blacks, Native Americans, Hispanics and Orientals, the MBEA may well provide preference where there has been no discrimination, and may not provide relief to groups where discrimination might have been proven. *Id.* at 737. Thus, the Court said, the MBEA was satisfied if contractors of Thai origin, who might never have been seen in Ohio until recently, receive 10 percent of state contracts, while African Americans receive none. *Id.*

In addition, the Court found that Ohio's own underutilization statistics suffer from a fatal conceptual flaw: they do not report the actual use of minority firms; they only report the use of minority firms who have gone to the trouble of being certified and listed among the state's 1,180 MBEs. *Id.* at 737. The Court said there was no examination of whether contracts are being awarded to minority firms who have never sought such preference to take advantage of the special minority program, for whatever reason, and who have been awarded contracts in open bidding. *Id.*

The Court pointed out the district court took note of the outdated character of any evidence that might have been marshaled in support of the MBEA, and added that even if such data had been sufficient to justify the statute twenty years ago, it would not suffice to continue to justify it forever. *Id.* at 737-738. The MBEA, the Court noted, has remained in effect for twenty years and has no set expiration. *Id.* at 738. The Court reiterated a race-based preference program must be appropriately limited such that it will not last longer than the discriminatory effects it is designed to eliminate. *Id.* at 737.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Finally, the Court mentioned that one of the factors *Croson* identified as indicative of narrow tailoring is whether non-race-based means were considered as alternatives to the goal. *Id.* at 738. The Court concluded the historical record contained no evidence that the Ohio legislature gave any consideration to the use of race-neutral means to increase minority participation in state contracting before resorting to race-based quotas. *Id.* at 738.

The district court had found that the supplementation of the state's existing data which might be offered given a continuance of the case would not sufficiently enhance the relevance of the evidence to justify delay in the district court's hearing. *Id.* at 738. The Court stated that under *Croson*, the state must have had sufficient evidentiary justification for a racially-conscious statute in *advance* of its passage. *Id.* The Court said that *Croson* required governmental entities must identify that discrimination with some specificity *before* they may use race-conscious relief. *Id.* at 738.

The Court also referenced the district court finding that the state had been lax in maintaining the type of statistics that would be necessary to undergird its affirmative action program, and that the proper maintenance of current statistics is relevant to the requisite narrow tailoring of such a program. *Id.* at 738-739. But, the Court noted the state does not know how many minority-owned businesses are not certified as MBEs, and how many of them have been successful in obtaining state contracts. *Id.* at 739.

The court was mindful of the fact it was striking down an entire class of programs by declaring the State of Ohio MBE statute in question unconstitutional, and noted that its decision was "not reconcilable" with the Ohio Supreme Court's decision in *Ritchie Produce*, 707 N.E.2d 871 (Ohio 1999) (upholding the Ohio State MBE Program).

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

9. *W.H. Scott Constr. Co. v. City of Jackson, Mississippi*, 199 F.3d 206 (5th Cir. 1999)

A nonminority general contractor brought this action against the City of Jackson and City officials asserting that a City policy and its minority business enterprise program for participation and construction contracts violated the Equal Protection Clause of the U.S. Constitution.

City of Jackson MBE Program. In 1985 the City of Jackson adopted an MBE Program, which initially had a goal of 5 percent of all city contracts. 199 F.3d at 208. *Id.* The 5 percent goal was not based on any objective data. *Id.* at 209. Instead, it was a “guess” that was adopted by the City. *Id.* The goal was later increased to 15 percent because it was found that 10 percent of businesses in Mississippi were minority-owned. *Id.*

After the MBE Program’s adoption, the City’s Department of Public Works included a Special Notice to bidders as part of its specifications for all City construction projects. *Id.* The Special Notice encouraged prime construction contractors to include in their bid 15 percent participation by subcontractors certified as Disadvantaged Business Enterprises (DBEs) and 5 percent participation by those certified as WBEs. *Id.*

The Special Notice defined a DBE as a small business concern that is owned and controlled by socially and economically disadvantaged individuals, which had the same meaning as under Section 8(d) of the Small Business Act and subcontracting regulations promulgated pursuant to that Act. *Id.* The court found that Section 8(d) of the SBA states that prime contractors are to presume that socially and economically disadvantaged individuals include certain racial and ethnic groups or any other individual found to be disadvantaged by the SBA. *Id.*

In 1991, the Mississippi legislature passed a bill that would allow cities to set aside 20 percent of procurement for minority business. *Id.* at 209-210. The City of Jackson City Council voted to implement the set-aside, contingent on the City’s adoption of a disparity study. *Id.* at 210. The City conducted a disparity study in 1994 and concluded that the total underutilization of African American and Asian American-owned firms was statistically significant. *Id.* The study recommended that the City implement a range of MBE goals from 10–15 percent. *Id.* The City, however, was not satisfied with the study, according to the court, and chose not to adopt its conclusions. *Id.* Instead, the City retained its 15 percent MBE goal and did not adopt the disparity study. *Id.*

W.H. Scott did not meet DBE goal. In 1997 the City advertised for the construction of a project and the W.H. Scott Construction Company, Inc. (Scott) was the lowest bidder. *Id.* Scott obtained 11.5 percent WBE participation, but it reported that the bids from DBE subcontractors had not been low bids and, therefore, its DBE-participation percentage would be only 1 percent. *Id.*

Although Scott did not achieve the DBE goal and subsequently would not consider suggestions for increasing its minority participation, the Department of Public Works and the Mayor, as well as the City’s Financial Legal Departments, approved Scott’s bid and it was placed on the agenda to be approved by the City Council. *Id.* The City Council voted against the Scott bid without comment. Scott alleged that it was told the City rejected its bid because it did not achieve the DBE goal, but the City alleged that it was rejected because it exceeded the budget for the project. *Id.*

The City subsequently combined the project with another renovation project and awarded that combined project to a different construction company. *Id.* at 210-211. Scott maintained the rejection of his bid was racially motivated and filed this suit. *Id.* at 211.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

District court decision. The district court granted Scott’s motion for summary judgment agreeing with Scott that the relevant Policy included not just the Special Notice, but that it also included the MBE Program and Policy document regarding MBE participation. *Id.* at 211. The district court found that the MBE Policy was unconstitutional because it lacked requisite findings to justify the 15 percent minority-participation goal and survive strict scrutiny based on the 1989 decision in the *City of Richmond, v. J.A. Croson Co.* *Id.* The district court struck down minority-participation goals for the City’s construction contracts only. *Id.* at 211. The district court found that Scott’s bid was rejected because Scott lacked sufficient minority participation, not because it exceeded the City’s budget. *Id.* In addition, the district court awarded Scott lost profits. *Id.*

Standing. The Fifth Circuit determined that in equal protection cases challenging affirmative action policies, “injury in fact” for purposes of establishing standing is defined as the inability to compete on an equal footing in the bidding process. *Id.* at 213. The court stated that Scott need not prove that it lost contracts because of the Policy, but only prove that the Special Notice forces it to compete on an unequal basis. *Id.* The question, therefore, the court said is whether the Special Notice imposes an obligation that is born unequally by DBE contractors and non-DBE contractors. *Id.* at 213.

The court found that if a non-DBE contractor is unable to procure 15 percent DBE participation, it must still satisfy the City that adequate good faith efforts have been made to meet the contract goal or risk termination of its contracts, and that such efforts include engaging in advertising, direct solicitation and follow-up, assistance in attaining bonding or insurance required by the contractor. *Id.* at 214. The court concluded that although the language does not expressly authorize a DBE contractor to satisfy DBE-participation goals by keeping the

requisite percentage of work for itself, it would be nonsensical to interpret it as precluding a DBE contractor from doing so. *Id.* at 215.

If a DBE contractor performed 15 percent of the contract dollar amount, according to the court, it could satisfy the participation goal and avoid both a loss of profits to subcontractors and the time and expense of complying with the good faith requirements. *Id.* at 215. The court said that non-DBE contractors do not have this option, and thus, Scott and other non-DBE contractors are at a competitive disadvantage with DBE contractors. *Id.*

The court, therefore, found Scott had satisfied standing to bring the lawsuit.

Constitutional strict scrutiny analysis and guidance in determining types of evidence to justify a remedial MBE program. The court first rejected the City’s contention that the Special Notice should not be subject to strict scrutiny because it establishes goals rather than mandate quotas for DBE participation. *Id.* at 215-217. The court stated the distinction between goals or quotas is immaterial because these techniques induce an employer to hire with an eye toward meeting a numerical target, and as such, they will result in individuals being granted a preference because of their race. *Id.* at 215. The court also rejected the City’s argument that the DBE classification created a preference based on “disadvantage,” not race. *Id.* at 215-216. The court found that the Special Notice relied on Section 8(d) and Section 8(a) of the Small Business Act, which provide explicitly for a race-based presumption of social disadvantage, and thus requires strict scrutiny. *Id.* at 216-217.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The court discussed the *City of Richmond v. Croson* case as providing guidance in determining what types of evidence would justify the enactment of an MBE-type program. *Id.* at 217-218. The court noted the Supreme Court stressed that a governmental entity must establish a factual predicate, tying its set-aside percentage to identified injuries in the particular local industry. *Id.* at 217. The court pointed out given the Supreme Court in *Croson's* emphasis on statistical evidence, other courts considering equal protection challenges to minority-participation programs have looked to disparity indices, or to computations of disparity percentages, in determining whether *Croson's* evidentiary burden is satisfied. *Id.* at 218. The court found that disparity studies are probative evidence for discrimination because they ensure that the “relevant statistical pool,” of qualified minority contractors is being considered. *Id.* at 218.

The court in a footnote stated that it did not attempt to craft a precise mathematical formula to assess the quantum of evidence that rises to the *Croson* “strong basis in evidence” benchmark. *Id.* at 218, n.11. The sufficiency of a municipality’s findings of discrimination in a local industry must be evaluated on a case-by-case basis. *Id.*

The City argued that it was error for the district court to ignore its statistical evidence supporting the use of racial presumptions in its DBE-participation goals, and highlighted the disparity study it commissioned in response to *Croson*. *Id.* at 218. The court stated, however, that whatever probity the study’s findings might have had on the analysis is irrelevant to the case, because the City refused to adopt the study when it was issued in 1995. *Id.* In addition, the court said the study was restricted to the letting of prime contracts by the City under the City’s Program, and did not include an analysis of the availability and utilization of qualified minority subcontractors, the relevant statistical pool, in the City’s construction projects. *Id.* at 218.

The court noted that had the City adopted particularized findings of discrimination within its various agencies, and set participation goals for each accordingly, the outcome of the decision might have been different. *Id.* at 219. Absent such evidence in the City’s construction industry, however, the court concluded the City lacked the factual predicates required under the Equal Protection Clause to support the City’s 15 percent DBE-participation goal. *Id.* Thus, the court held the City failed to establish a compelling interest justifying the MBE program or the Special Notice, and because the City failed a strict scrutiny analysis on this ground, the court declined to address whether the program was narrowly tailored.

Lost profits and damages. Scott sought damages from the City under 42 U.S.C. § 1983, including lost profits. *Id.* at 219. The court, affirming the district court, concluded that in light of the entire record the City Council rejected Scott’s low bid because Scott failed to meet the Special Notice’s DBE-participation goal, not because Scott’s bid exceeded the City’s budget. *Id.* at 220. The court, therefore, affirmed the award of lost profits to Scott.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

10. *Monterey Mechanical v. Wilson*, 125 F.3d 702 (9th Cir. 1997)

This case is instructive in that the Ninth Circuit analyzed and held invalid the enforcement of an MBE/WBE-type program. Although the program at issue utilized the term “goals” as opposed to “quotas,” the Ninth Circuit rejected such a distinction, holding “[t]he relevant question is not whether a statute requires the use of such measures, but whether it authorizes or encourages them.” The case also is instructive because it found the use of “goals” and the application of “good faith efforts” in connection with achieving goals to trigger strict scrutiny.

Monterey Mechanical Co. (the “plaintiff”) submitted the low bid for a construction project for the California Polytechnic State University (the “University”). 125 F.3d 702, 704 (9th Cir. 1994). The University rejected the plaintiff’s bid because the plaintiff failed to comply with a state statute requiring prime contractors on such construction projects to subcontract 23 percent of the work to MBE/WBEs or, alternatively, demonstrate good faith outreach efforts. *Id.* The plaintiff conducted good faith outreach efforts but failed to provide the requisite documentation; the awardee prime contractor did not subcontract any portion of the work to MBE/WBEs but did include documentation of good faith outreach efforts. *Id.*

Importantly, the University did not conduct a disparity study, and instead argued that because “the ‘goal requirements’ of the scheme [did] not involve racial or gender quotas, set-asides or preferences,” the University did not need a disparity study. *Id.* at 705. The plaintiff protested the contract award and sued the University’s trustees, and a number of other individuals (collectively the “defendants”) alleging the state law was violative of the Equal Protection Clause. *Id.* The district court denied the plaintiff’s motion for an interlocutory injunction and the plaintiff appealed to the Ninth Circuit Court of Appeals. *Id.*

The defendants first argued that the statute was constitutional because it treated all general contractors alike, by requiring all to comply with the MBE/WBE participation goals. *Id.* at 708. The court held, however, that a minority or women business enterprise could satisfy the participation goals by allocating the requisite percentage of work to itself. *Id.* at 709. The court held that contrary to the district court’s finding, such a difference was not *de minimis*. *Id.*

The defendants also argued that the statute was not subject to strict scrutiny because the statute did not impose rigid quotas, but rather only required good faith outreach efforts. *Id.* at 710. The court rejected the argument finding that although the statute permitted awards to bidders who did not meet the percentage goals, “they are rigid in requiring precisely described and monitored efforts to attain those goals.” *Id.* The court cited its own earlier precedent to hold that “the provisions are not immunized from scrutiny because they purport to establish goals rather than quotas ... [T]he relevant question is not whether a statute requires the use of such measures, but whether it authorizes or encourages them.” *Id.* at 710-11 (internal citations and quotations omitted). The court found that the statute encouraged set-asides and cited *Concrete Works of Colorado v. Denver*, 36 F.3d 1512 (10th Cir. 1994), as analogous support for the proposition. *Id.* at 711.

The court found that the statute treated contractors differently based upon their race, ethnicity and gender, and although “worded in terms of goals and good faith, the statute imposes mandatory requirements with concreteness.” *Id.* The court also noted that the statute may impose additional compliance expenses upon non-MBE/WBE firms who are required to make good faith outreach efforts (*e.g.*, advertising) to MBE/WBE firms. *Id.* at 712.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The court then conducted strict scrutiny (race), and an intermediate scrutiny (gender) analyses. *Id.* at 712-13. The court found the University presented “no evidence” to justify the race- and gender-based classifications and thus did not consider additional issues of proof. *Id.* at 713. The court found that the statute was not narrowly tailored because the definition of “minority” was overbroad (*e.g.*, inclusion of Aleuts). *Id.* at 714, citing *Wygant v. Jackson Board of Education*, 476 U.S. 267, 284, n. 13 (1986) and *City of Richmond v. J.A. Croson, Co.*, 488 U.S. 469, 505-06 (1989). The court found “[a] broad program that sweeps in all minorities with a remedy that is in no way related to past harms cannot survive constitutional scrutiny.” *Id.* at 714, citing *Hopwood v. State of Texas*, 78 F.3d 932, 951 (5th Cir. 1996). The court held that the statute violated the Equal Protection Clause.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

11. *Eng'g Contractors Ass'n of S. Florida v. Metro. Dade County*, 122 F.3d 895 (11th Cir. 1997)

Engineering Contractors Association of South Florida v. Metropolitan Engineering Contractors Association is a paramount case in the Eleventh Circuit and is instructive to the disparity study. This decision has been cited and applied by the courts in various circuits that have addressed MBE/WBE-type programs or legislation involving local government contracting and procurement.

In *Engineering Contractors Association*, six trade organizations (the “plaintiffs”) filed suit in the district court for the Southern District of Florida, challenging three affirmative action programs administered by Engineering Contractors Association, Florida, (the “County”) as violative of the Equal Protection Clause. 122 F.3d 895, 900 (11th Cir. 1997). The three affirmative action programs challenged were the Black Business Enterprise program (“BBE”), the Hispanic Business Enterprise program (“HBE”), and the Woman Business Enterprise program, (“WBE”), (collectively “MWBE” programs). *Id.* The plaintiffs challenged the application of the program to County construction contracts. *Id.*

For certain classes of construction contracts valued over \$25,000, the County set participation goals of 15 percent for BBEs, 19 percent for HBEs, and 11 percent for WBEs. *Id.* at 901. The County established five “contract measures” to reach the participation goals: (1) set-asides, (2) subcontractor goals, (3) project goals, (4) bid preferences, and (5) selection factors. Once a contract was identified as covered by a participation goal, a review committee would determine whether a contract measure should be utilized. *Id.* The County Commission would make the final determination and its decision was appealable to the County Manager. *Id.* The County reviewed the efficacy of the MWBE programs annually, and reevaluated the continuing viability of the MWBE programs every five years. *Id.*

In a bench trial, the district court applied strict scrutiny to the BBE and HBE programs and held that the County lacked the requisite “strong basis in evidence” to support the race- and ethnicity-conscious measures. *Id.* at 902. The district court applied intermediate scrutiny to the WBE program and found that the “County had presented insufficient probative evidence to support its stated rationale for implementing a gender preference.” *Id.* Therefore, the County had failed to demonstrate a “compelling interest” necessary to support the BBE and HBE programs, and failed to demonstrate an “important interest” necessary to support the WBE program. *Id.* The district court assumed the existence of a sufficient evidentiary basis to support the existence of the MWBE programs but held the BBE and HBE programs were not narrowly tailored to the interests they purported to serve; the district court held the WBE program was not substantially related to an important government interest. *Id.* The district court entered a final judgment enjoining the County from continuing to operate the MWBE programs and the County appealed. The Eleventh Circuit Court of Appeals affirmed. *Id.* at 900, 903.

On appeal, the Eleventh Circuit considered four major issues:

1. Whether the plaintiffs had standing. [The Eleventh Circuit answered this in the affirmative and that portion of the opinion is omitted from this summary];
2. Whether the district court erred in finding the County lacked a “strong basis in evidence” to justify the existence of the BBE and HBE programs;
3. Whether the district court erred in finding the County lacked a “sufficient probative basis in evidence” to justify the existence of the WBE program; and
4. Whether the MWBE programs were narrowly tailored to the interests they were purported to serve. *Id.* at 903.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Eleventh Circuit held that the BBE and HBE programs were subject to the strict scrutiny standard enunciated by the U.S. Supreme Court in *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469 (1989). *Id.* at 906. Under this standard, “an affirmative action program must be based upon a ‘compelling government interest’ and must be ‘narrowly tailored’ to achieve that interest.” *Id.* The Eleventh Circuit further noted:

“In practice, the interest that is alleged in support of racial preferences is almost always the same — remedying past or present discrimination. That interest is widely accepted as compelling. As a result, the true test of an affirmative action program is usually not the nature of the government’s interest, but rather the adequacy of the evidence of discrimination offered to show that interest.” *Id.* (internal citations omitted).

Therefore, strict scrutiny requires a finding of a “‘strong basis in evidence’ to support the conclusion that remedial action is necessary.” *Id.*, citing *Croson*, 488 U.S. at 500). The requisite “‘strong basis in evidence’ cannot rest on ‘an amorphous claim of societal discrimination, on simple legislative assurances of good intention, or on congressional findings of discrimination in the national economy.’” *Id.* at 907, citing *Ensley Branch, NAACP v. Seibels*, 31 F.3d 1548, 1565 (11th Cir. 1994) (citing and applying *Croson*). However, the Eleventh Circuit found that a governmental entity can “justify affirmative action by demonstrating ‘gross statistical disparities’ between the proportion of minorities hired ... and the proportion of minorities willing and able to do the work ... Anecdotal evidence may also be used to document discrimination, especially if buttressed by relevant statistical evidence.” *Id.* (internal citations omitted).

Notwithstanding the “exceedingly persuasive justification” language utilized by the Supreme Court in *United States v. Virginia*, 116 S. Ct. 2264 (1996) (evaluating gender-based government action), the Eleventh Circuit held that the WBE program was subject to traditional intermediate scrutiny. *Id.* at 908. Under this standard, the government must provide “sufficient probative evidence” of discrimination, which is a lesser standard than the “strong basis in evidence” under strict scrutiny. *Id.* at 910.

The County provided two types of evidence in support of the MWBE programs: (1) statistical evidence, and (2) non-statistical “anecdotal” evidence. *Id.* at 911. As an initial matter, the Eleventh Circuit found that in support of the BBE program, the County permissibly relied on substantially “post-enactment” evidence (*i.e.*, evidence based on data related to years following the initial enactment of the BBE program). *Id.* However, “such evidence carries with it the hazard that the program at issue may itself be masking discrimination that might otherwise be occurring in the relevant market.” *Id.* at 912. A district court should not “speculate about what the data *might* have shown had the BBE program never been enacted.” *Id.*

The statistical evidence. The County presented five basic categories of statistical evidence: (1) County contracting statistics; (2) County subcontracting statistics; (3) marketplace data statistics; (4) The Wainwright Study; and (5) The Brimmer Study. *Id.* In summary, the Eleventh Circuit held that the County’s statistical evidence (described more fully below) was subject to more than one interpretation. *Id.* at 924. The district court found that the evidence was “insufficient to form the requisite strong basis in evidence for implementing a racial or ethnic preference, and that it was insufficiently probative to support the County’s stated rationale for imposing a gender preference.” *Id.* The district court’s view of the evidence was a permissible one. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

County contracting statistics. The County presented a study comparing three factors for County non-procurement Construction contracts over two time periods (1981-1991 and 1993): (1) the percentage of bidders that were MWBE firms; (2) the percentage of awardees that were MWBE firms; and (3) the proportion of County contract dollars that had been awarded to MWBE firms. *Id.* at 912.

The Eleventh Circuit found that notably, for the BBE and HBE statistics, generally there were no “consistently negative disparities between the bidder and awardee percentages. In fact, by 1993, the BBE and HBE bidders are being awarded *more* than their proportionate ‘share’ ... when the bidder percentages are used as the baseline.” *Id.* at 913. For the WBE statistics, the bidder/awardee statistics were “decidedly mixed” as across the range of County construction contracts. *Id.*

The County then refined those statistics by adding in the total percentage of annual County construction dollars awarded to MBE/WBEs, by calculating “disparity indices” for each program and classification of construction contract. The Eleventh Circuit explained:

“[A] disparity index compares the amount of contract awards a group actually got to the amount we would have expected it to get based on that group’s bidding activity and awardee success rate. More specifically, a disparity index measures the participation of a group in County contracting dollars by dividing that group’s contract dollar percentage by the related bidder or awardee percentage, and multiplying that number by 100 percent.” *Id.* at 914. “The utility of disparity indices or similar measures ... has been recognized by a number of federal circuit courts.” *Id.*

The Eleventh Circuit found that “[i]n general ... disparity indices of 80 percent or greater, which are close to full participation, are not considered indications of discrimination.” *Id.* The Eleventh Circuit noted that “the EEOC’s disparate impact guidelines use the 80 percent test as the boundary line for determining a prima facie case of discrimination.” *Id.*, citing 29 CFR § 1607.4D. In addition, no circuit that has “explicitly endorsed the use of disparity indices [has] indicated that an index of 80 percent or greater might be probative of discrimination.” *Id.*, citing *Concrete Works v. City & County of Denver*, 36 F.3d 1513, 1524 (10th Cir. 1994) (crediting disparity indices ranging from 0% to 3.8%); *Contractors Ass’n v. City of Philadelphia*, 6 F.3d 990 (3d Cir. 1993) (crediting disparity index of 4%).

After calculation of the disparity indices, the County applied a standard deviation analysis to test the statistical significance of the results. *Id.* at 914. “The standard deviation figure describes the probability that the measured disparity is the result of mere chance.” *Id.* The Eleventh Circuit had previously recognized “[s]ocial scientists consider a finding of two standard deviations significant, meaning there is about one chance in 20 that the explanation for the deviation could be random and the deviation must be accounted for by some factor other than chance.” *Id.*

The statistics presented by the County indicated “statistically significant underutilization of BBEs in County construction contracting.” *Id.* at 916. The results were “less dramatic” for HBEs and mixed as between favorable and unfavorable for WBEs. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Eleventh Circuit then explained the burden of proof:

“[O]nce the proponent of affirmative action introduces its statistical proof as evidence of its remedial purpose, thereby supplying the [district] court with the means for determining that [it] had a firm basis for concluding that remedial action was appropriate, it is incumbent upon the [plaintiff] to prove their case; they continue to bear the ultimate burden of persuading the [district] court that the [defendant’s] evidence did not support an inference of prior discrimination and thus a remedial purpose, or that the plan instituted on the basis of this evidence was not sufficiently ‘narrowly tailored.’” *Id.* (internal citations omitted).

The Eleventh Circuit noted that a plaintiff has at least three methods to rebut the inference of discrimination with a “neutral explanation” by: “(1) showing that the statistics are flawed; (2) demonstrating that the disparities shown by the statistics are not significant or actionable; or (3) presenting contrasting statistical data.” *Id.* (internal quotations and citations omitted). The Eleventh Circuit held that the plaintiffs produced “sufficient evidence to establish a neutral explanation for the disparities.” *Id.*

The plaintiffs alleged that the disparities were “better explained by firm size than by discrimination ... [because] minority and female-owned firms tend to be smaller, and that it stands to reason smaller firms will win smaller contracts.” *Id.* at 916-17. The plaintiffs produced Census data indicating, on average, minority- and female-owned construction firms in Engineering Contractors Association were smaller than non-MBE/WBE firms. *Id.* at 917. The Eleventh Circuit found that the plaintiff’s explanation of the disparities was a “plausible one, in light of the uncontroverted evidence that MBE/WBE construction firms tend to be substantially smaller than non-MBE/WBE firms.” *Id.*

Additionally, the Eleventh Circuit noted that the County’s own expert admitted that “firm size plays a significant role in determining which firms win contracts.” *Id.* The expert stated:

The size of the firm has got to be a major determinant because of course some firms are going to be larger, are going to be better prepared, are going to be in a greater natural capacity to be able to work on some of the contracts while others simply by virtue of their small size simply would not be able to do it. *Id.*

The Eleventh Circuit then summarized:

Because they are bigger, bigger firms have a bigger chance to win bigger contracts. It follows that, all other factors being equal and in a perfectly nondiscriminatory market, one would expect the bigger (on average) non-MWBE firms to get a disproportionately higher percentage of total construction dollars awarded than the smaller MWBE firms. *Id.*

In anticipation of such an argument, the County conducted a regression analysis to control for firm size. *Id.* A regression analysis is “a statistical procedure for determining the relationship between a dependent and independent variable, *e.g.*, the dollar value of a contract award and firm size.” *Id.* (internal citations omitted). The purpose of the regression analysis is “to determine whether the relationship between the two variables is statistically meaningful.” *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The County’s regression analysis sought to identify disparities that could not be explained by firm size, and theoretically instead based on another factor, such as discrimination. *Id.* The County conducted two regression analyses using two different proxies for firm size: (1) total awarded value of all contracts bid on; and (2) largest single contract awarded. *Id.* The regression analyses accounted for most of the negative disparities regarding MBE/WBE participation in County construction contracts (*i.e.*, most of the unfavorable disparities became statistically insignificant, corresponding to standard deviation values less than two). *Id.*

Based on an evaluation of the regression analysis, the district court held that the demonstrated disparities were attributable to firm size as opposed to discrimination. *Id.* at 918. The district court concluded that the few unexplained disparities that remained after regressing for firm size were insufficient to provide the requisite “strong basis in evidence” of discrimination of BBEs and HBEs. *Id.* The Eleventh Circuit held that this decision was not clearly erroneous. *Id.*

With respect to the BBE statistics, the regression analysis explained all but one negative disparity, for one type of construction contract between 1989-1991. *Id.* The Eleventh Circuit held the district court permissibly found that this did not constitute a “strong basis in evidence” of discrimination. *Id.*

With respect to the HBE statistics, one of the regression methods failed to explain the unfavorable disparity for one type of contract between 1989-1991, and both regression methods failed to explain the unfavorable disparity for another type of contract during that same time period. *Id.* However, by 1993, both regression methods accounted for all of the unfavorable disparities, and one of the disparities for one type of contract was actually favorable for HBEs. *Id.* The Eleventh Circuit

held the district court permissibly found that this did not constitute a “strong basis in evidence” of discrimination. *Id.*

Finally, with respect to the WBE statistics, the regression analysis explained all but one negative disparity, for one type of construction contract in the 1993 period. *Id.* The regression analysis explained all of the other negative disparities, and in the 1993 period, a disparity for one type of contract was actually favorable to WBEs. *Id.* The Eleventh Circuit held the district court permissibly found that this evidence was not “sufficiently probative of discrimination.” *Id.*

The County argued that the district court erroneously relied on the disaggregated data (*i.e.*, broken down by contract type) as opposed to the consolidated statistics. *Id.* at 919. The district court declined to assign dispositive weight to the aggregated data for the BBE statistics for 1989-1991 because (1) the aggregated data for 1993 did not show negative disparities when regressed for firm size, (2) the BBE disaggregated data left only one unexplained negative disparity for one type of contract for 1989-1991 when regressed for firm size, and (3) “the County’s own expert testified as to the utility of examining the disaggregated data ‘insofar as they reflect different kinds of work, different bidding practices, perhaps a variety of other factors that could make them heterogeneous with one another.’” *Id.*

Additionally, the district court noted, and the Eleventh Circuit found that “the aggregation of disparity statistics for nonheterogenous data populations can give rise to a statistical phenomenon known as ‘Simpson’s Paradox,’ which leads to illusory disparities in improperly aggregated data that disappear when the data are disaggregated.” *Id.* at 919, n. 4 (internal citations omitted). “Under those circumstances,” the Eleventh Circuit held that the district court did not err in assigning less weight to the aggregated data, in finding the aggregated data for BBEs for 1989-1991 did not provide a “strong basis in evidence” of

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

discrimination, or in finding that the disaggregated data formed an insufficient basis of support for any of the MBE/WBE programs given the applicable constitutional requirements. *Id.* at 919.

County subcontracting statistics. The County performed a subcontracting study to measure MBE/WBE participation in the County's subcontracting businesses. For each MBE/WBE category (BBE, HBE, and WBE), "the study compared the proportion of the designated group that filed a subcontractor's release of lien on a County construction project between 1991 and 1994 with the proportion of sales and receipt dollars that the same group received during the same time period." *Id.*

The district court found the statistical evidence insufficient to support the use of race- and ethnicity-conscious measures, noting problems with some of the data measures. *Id.* at 920.

Most notably, the denominator used in the calculation of the MWBE sales and receipts percentages is based upon the total sales and receipts from all sources for the firm filing a subcontractor's release of lien with the County. That means, for instance, that if a nationwide non-MWBE company performing 99 percent of its business outside of Dade County filed a single subcontractor's release of lien with the County during the relevant time frame, all of its sales and receipts for that time frame would be counted in the denominator against which MWBE sales and receipts are compared. As the district court pointed out, that is not a reasonable way to measure Dade County subcontracting participation. Id. The County's argument that a strong majority (72%) of the subcontractors were located in Dade County did not render the district court's decision to fail to credit the study erroneous. *Id.*

Marketplace data statistics. The County conducted another statistical study "to see what the differences are in the marketplace and what the relationships are in the marketplace." *Id.* The study was based on a sample of 568 contractors from a pool of 10,462 firms that had filed a "certificate

of competency" with Dade County as of January 1995. *Id.* The selected firms participated in a telephone survey inquiring about the race, ethnicity, and gender of the firm's owner, and asked for information on the firm's total sales and receipts from all sources. *Id.* The County's expert then studied the data to determine "whether meaningful relationships existed between (1) the race, ethnicity, and gender of the surveyed firm owners, and (2) the reported sales and receipts of that firm. *Id.* The expert's hypothesis was that unfavorable disparities may be attributable to marketplace discrimination. The expert performed a regression analysis using the number of employees as a proxy for size. *Id.*

The Eleventh Circuit first noted that the statistical pool used by the County was substantially larger than the actual number of firms, willing, able, and qualified to do the work as the statistical pool represented all those firms merely licensed as a construction contractor. *Id.* Although this factor did not render the study meaningless, the district court was entitled to consider that in evaluating the weight of the study. *Id.* at 921. The Eleventh Circuit quoted the Supreme Court for the following proposition: "[w]hen special qualifications are required to fill particular jobs, comparisons to the general population (rather than to the smaller group of individuals who possess the necessary qualifications) may have little probative value." *Id.*, quoting *Croson*, 488 U.S. at 501, quoting *Hazelwood Sch. Dist. v. United States*, 433 U.S. 299, 308 n. 13 (1977).

The Eleventh Circuit found that after regressing for firm size, neither the BBE nor WBE data showed statistically significant unfavorable disparities. *Id.* Although the marketplace data did reveal unfavorable disparities even after a regression analysis, the district court was not required to assign those disparities controlling weight, especially in light of the dissimilar results of the County Contracting Statistics, discussed *supra.* *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Wainwright Study. The County also introduced a statistical analysis prepared by Jon Wainwright, analyzing “the personal and financial characteristics of self-employed persons working full-time in the Dade County construction industry, based on data from the 1990 Public Use Microdata Sample database” (derived from the decennial census). *Id.* The study “(1) compared construction business ownership rates of MBE/WBEs to those of non-MBE/WBEs, and (2) analyzed disparities in personal income between MBE/WBE and non-MBE/WBE business owners.” *Id.* “The study concluded that blacks, Hispanics, and women are less likely to own construction businesses than similarly situated white males, and MBE/WBEs that do enter the construction business earn less money than similarly situated white males.” *Id.*

With respect to the first conclusion, Wainwright controlled for “human capital” variables (education, years of labor market experience, marital status, and English proficiency) and “financial capital” variables (interest and dividend income, and home ownership). *Id.* The analysis indicated that blacks, Hispanics and women enter the construction business at lower rates than would be expected, once numerosity, and identified human and financial capital are controlled for. *Id.* The disparities for blacks and women (but not Hispanics) were substantial and statistically significant. *Id.* at 922. The underlying theory of this business ownership component of the study is that any significant disparities remaining after control of variables are due to the ongoing effects of past and present discrimination. *Id.*

The Eleventh Circuit held, in light of *Croson*, the district court need not have accepted this theory. *Id.* The Eleventh Circuit quoted *Croson*, in which the Supreme Court responded to a similar argument advanced by the plaintiffs in that case: “There are numerous explanations for this dearth of minority participation, including past societal discrimination in education and economic opportunities *as well as both black and white career and entrepreneurial choices. Blacks may be disproportionately*

attracted to industries other than construction.” *Id.*, quoting *Croson*, 488 U.S. at 503. Following the Supreme Court in *Croson*, the Eleventh Circuit held “the disproportionate attraction of a minority group to non-construction industries does not mean that discrimination in the construction industry is the reason.” *Id.*, quoting *Croson*, 488 U.S. at 503. Additionally, the district court had evidence that between 1982 and 1987, there was a substantial growth rate of MBE/WBE firms as opposed to non-MBE/WBE firms, which would further negate the proposition that the construction industry was discriminating against minority- and women-owned firms. *Id.* at 922.

With respect to the personal income component of the Wainwright study, after regression analyses were conducted, only the BBE statistics indicated a statistically significant disparity ratio. *Id.* at 923. However, the Eleventh Circuit held the district court was not required to assign the disparity controlling weight because the study did not regress for firm size, and in light of the conflicting statistical evidence in the County Contracting Statistics and Marketplace Data Statistics, discussed *supra*, which did regress for firm size. *Id.*

The Brimmer Study. The final study presented by the County was conducted under the supervision of Dr. Andrew F. Brimmer and concerned only black-owned firms. *Id.* The key component of the study was an analysis of the business receipts of black-owned construction firms for the years of 1977, 1982 and 1987, based on the Census Bureau’s Survey of Minority- and Women-Owned Businesses, produced every five years. *Id.* The study sought to determine the existence of disparities between sales and receipts of black-owned firms in Dade County compared to the sales and receipts of all construction firms in Dade County. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The study indicated substantial disparities in 1977 and 1987 but not 1982. *Id.* The County alleged that the absence of disparity in 1982 was due to substantial race-conscious measures for a major construction contract (Metrorail project), and not due to a lack of discrimination in the industry. *Id.* However, the study made no attempt to filter for the Metrorail project and “complete[ly] fail[ed]” to account for firm size. *Id.* Accordingly, the Eleventh Circuit found the district court permissibly discounted the results of the Brimmer study. *Id.* at 924.

Anecdotal evidence. In addition, the County presented a substantial amount of anecdotal evidence of perceived discrimination against BBEs, a small amount of similar anecdotal evidence pertaining to WBEs, and no anecdotal evidence pertaining to HBEs. *Id.* The County presented three basic forms of anecdotal evidence: “(1) the testimony of two County employees responsible for administering the MBE/WBE programs; (2) the testimony, primarily by affidavit, of twenty-three MBE/WBE contractors and subcontractors; and (3) a survey of black-owned construction firms.” *Id.*

The County employees testified that the decentralized structure of the County construction contracting system affords great discretion to County employees, which in turn creates the opportunity for discrimination to infect the system. *Id.* They also testified to specific incidents of discrimination, for example, that MBE/WBEs complained of receiving lengthier punch lists than their non-MBE/WBE counterparts. *Id.* They also testified that MBE/WBEs encounter difficulties in obtaining bonding and financing. *Id.*

The MBE/WBE contractors and subcontractors testified to numerous incidents of perceived discrimination in the Dade County construction market, including:

*Situations in which a project foreman would refuse to deal directly with a black or female firm owner, instead preferring to deal with a white employee; instances in which an MWBE owner knew itself to be the low bidder on a subcontracting project, but was not awarded the job; instances in which a low bid by an MWBE was “shopped” to solicit even lower bids from non-MWBE firms; instances in which an MWBE owner received an invitation to bid on a subcontract within a day of the bid due date, together with a “letter of unavailability” for the MWBE owner to sign in order to obtain a waiver from the County; and instances in which an MWBE subcontractor was hired by a prime contractor, but subsequently was replaced with a non-MWBE subcontractor within days of starting work on the project. *Id.* at 924-25.*

Finally, the County submitted a study prepared by Dr. Joe E. Feagin, comprised of interviews of 78 certified black-owned construction firms. *Id.* at 925. The interviewees reported similar instances of perceived discrimination, including: “difficulty in securing bonding and financing; slow payment by general contractors; unfair performance evaluations that were tainted by racial stereotypes; difficulty in obtaining information from the County on contracting processes; and higher prices on equipment and supplies than were being charged to non-MBE/WBE firms.” *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Eleventh Circuit found that numerous black- and some female-owned construction firms in Dade County perceived that they were the victims of discrimination and two County employees also believed that discrimination could taint the County's construction contracting process. *Id.* However, such anecdotal evidence is helpful "only when it [is] combined with and reinforced by sufficiently probative statistical evidence." *Id.* In her plurality opinion in *Croson*, Justice O'Connor found that "evidence of a pattern of individual discriminatory acts can, if supported by appropriate statistical proof, lend support to a local government's determination that broader remedial relief is justified." *Id.*, quoting *Croson*, 488 U.S. at 509 (emphasis added by the Eleventh Circuit). Accordingly, the Eleventh Circuit held that "anecdotal evidence can play an important role in bolstering statistical evidence, but that only in the rare case will anecdotal evidence suffice standing alone." *Id.* at 925. The Eleventh Circuit also cited to opinions from the Third, Ninth and Tenth Circuits as supporting the same proposition. *Id.* at 926. The Eleventh Circuit affirmed the decision of the district court enjoining the continued operation of the MBE/WBE programs because they did not rest on a "constitutionally sufficient evidentiary foundation." *Id.*

Although the Eleventh Circuit determined that the MBE/WBE program did not survive constitutional muster due to the absence of a sufficient evidentiary foundation, the Eleventh Circuit proceeded with the second prong of the strict scrutiny analysis of determining whether the MBE/WBE programs were narrowly tailored (BBE and HBE programs) or substantially related (WBE program) to the legitimate government interest they purported to serve, *i.e.*, "remedying the effects of present and past discrimination against blacks, Hispanics, and women in the Dade County construction market." *Id.*

Narrow tailoring. "The essence of the 'narrowly tailored' inquiry is the notion that explicitly racial preferences ... must only be a 'last resort' option." *Id.*, quoting *Hayes v. North Side Law Enforcement Officers Ass'n*, 10 F.3d 207, 217 (4th Cir. 1993) and citing *Croson*, 488 U.S. at 519 (Kennedy, J., concurring in part and concurring in the judgment) ("[T]he strict scrutiny standard ... forbids the use of even narrowly drawn racial classifications except as a last resort.").

The Eleventh Circuit has identified four factors to evaluate whether a race- or ethnicity-conscious affirmative action program is narrowly tailored: (1) "the necessity for the relief and the efficacy of alternative remedies; (2) the flexibility and duration of the relief; (3) the relationship of numerical goals to the relevant labor market; and (4) the impact of the relief on the rights of innocent third parties." *Id.* at 927, citing *Ensley Branch*, 31 F.3d at 1569. The four factors provide "a useful analytical structure." *Id.* at 927. The Eleventh Circuit focused only on the first factor in the present case "because that is where the County's MBE/WBE programs are most problematic." *Id.*

The Eleventh Circuit *flatly reject[ed]* the County's assertion that 'given a strong basis in evidence of a race-based problem, a race-based remedy is necessary.' *That is simply not the law. If a race-neutral remedy is sufficient to cure a race-based problem, then a race-conscious remedy can never be narrowly tailored to that problem.*" *Id.*, citing *Croson*, 488 U.S. at 507 (holding that affirmative action program was not narrowly tailored where "there does not appear to have been any consideration of the use of race-neutral means to increase minority business participation in city contracting") ... *Supreme Court decisions teach that a race-conscious remedy is not merely one of many equally acceptable medications the government may use to treat a race-based problem. Instead, it is the strongest of medicines, with many potential side effects, and must be reserved for those severe cases that are highly resistant to conventional treatment.* *Id.* at 927.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Eleventh Circuit held that the County “clearly failed to give serious and good faith consideration to the use of race- and ethnicity-neutral measures.” *Id.* Rather, the determination of the necessity to establish the MWBE programs was based upon a conclusory legislative statement as to its necessity, which in turn was based upon an “equally conclusory analysis” in the Brimmer study, and a report that the SBA only was able to direct 5 percent of SBA financing to black-owned businesses between 1968-1980. *Id.*

The County admitted, and the Eleventh Circuit concluded, that the County failed to give any consideration to any alternative to the HBE affirmative action program. *Id.* at 928. Moreover, the Eleventh Circuit found that the testimony of the County’s own witnesses indicated the viability of race- and ethnicity-neutral measures to remedy many of the problems facing black- and Hispanic-owned construction firms. *Id.* The County employees identified problems, virtually all of which were related to the County’s own processes and procedures, including: “the decentralized County contracting system, which affords a high level of discretion to County employees; the complexity of County contract specifications; difficulty in obtaining bonding; difficulty in obtaining financing; unnecessary bid restrictions; inefficient payment procedures; and insufficient or inefficient exchange of information.” *Id.* The Eleventh Circuit found that the problems facing MBE/WBE contractors were “institutional barriers” to entry facing every new entrant into the construction market, and were perhaps affecting the MBE/WBE contractors disproportionately due to the “institutional youth” of black- and Hispanic-owned construction firms. *Id.* “It follows that those firms should be helped the most by dismantling those barriers, something the County could do at least in substantial part.” *Id.*

The Eleventh Circuit noted that the race- and ethnicity-neutral options available to the County mirrored those available and cited by Justice O’Connor in *Croson*:

[T]he city has at its disposal a whole array of race-neutral measures to increase the accessibility of city contracting opportunities to small entrepreneurs of all races. Simplification of bidding procedures, relaxation of bonding requirements, and training and financial aid for disadvantaged entrepreneurs of all races would open the public contracting market to all those who have suffered the effects of past societal discrimination and neglect ... The city may also act to prohibit discrimination in the provision of credit or bonding by local suppliers and banks. Id., quoting Croson, 488 U.S. at 509-10. The Eleventh Circuit found that except for some “half-hearted programs” consisting of “limited technical and financial aid that might benefit BBEs and HBEs,” the County had not “seriously considered” or tried most of the race- and ethnicity-neutral alternatives available. Id. at 928. “Most notably ... the County has not taken any action whatsoever to ferret out and respond to instances of discrimination if and when they have occurred in the County’s own contracting process.” Id.

The Eleventh Circuit found that the County had taken no steps to “inform, educate, discipline, or penalize” discriminatory misconduct by its own employees. *Id.* at 929. Nor had the County passed any local ordinances expressly prohibiting discrimination by local contractors, subcontractors, suppliers, bankers, or insurers. *Id.* “Instead of turning to race- and ethnicity-conscious remedies as a last resort, the County has turned to them as a first resort.” Accordingly, the Eleventh Circuit held that even if the BBE and HBE programs were supported by the requisite evidentiary foundation, they violated the Equal Protection Clause because they were not narrowly tailored. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Substantial relationship. The Eleventh Circuit held that due to the relaxed “substantial relationship” standard for gender-conscious programs, if the WBE program rested upon a sufficient evidentiary foundation, it could pass the substantial relationship requirement. *Id.* However, because it did not rest upon a sufficient evidentiary foundation, the WBE program could not pass constitutional muster. *Id.*

For all of the foregoing reasons, the Eleventh Circuit affirmed the decision of the district court declaring the MBE/WBE programs unconstitutional and enjoining their continued operation.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

12. *Concrete Works of Colorado, Inc. v. City and County of Denver*, 36 F.3d 1513 (10th Cir. 1994)

The court considered whether the City and County of Denver's race- and gender-conscious public contract award program complied with the Fourteenth Amendment's guarantee of equal protection of the laws. Plaintiff-Appellant Concrete Works of Colorado, Inc. ("Concrete Works") appealed the district court's summary judgment order upholding the constitutionality of Denver's public contract program. The court concluded that genuine issues of material fact exist with regard to the evidentiary support that Denver presents to demonstrate that its program satisfies the requirements of *City of Richmond v. J.A. Croson Co.*, 488 U.S. 469 (1989). Accordingly, the court reversed and remanded. 36 F.3d 1513 (10th Cir. 1994).

Background. In, 1990, the Denver City Council enacted Ordinance ("Ordinance") to enable certified racial minority business enterprises ("MBEs")¹ and women-owned business enterprises ("WBEs") to participate in public works projects "to an extent approximating the level of [their] availability and capacity." *Id.* at 1515. This Ordinance was the most recent in a series of provisions that the Denver City Council has adopted since 1983 to remedy perceived race and gender discrimination in the distribution of public and private construction contracts. *Id.* at 1516.

In 1992, Concrete Works, a nonminority and male-owned construction firm, filed this Equal Protection Clause challenge to the Ordinance. *Id.* Concrete Works alleged that the Ordinance caused it to lose three construction contracts for failure to comply with either the stated MBE and WBE participation goals or the good-faith requirements. Rather than pursuing administrative or state court review of the OCC's findings, Concrete Works initiated this action, seeking a permanent injunction against enforcement of the Ordinance and damages for lost contracts. *Id.*

In 1993, and after extensive discovery, the district court granted Denver's summary judgment motion. *Concrete Works, Inc. v. City and County of Denver*, 823 F.Supp. 821 (D.Colo.1993). The court concluded that Concrete Works had standing to bring this claim. *Id.* With respect to the merits, the court held that Denver's program satisfied the strict scrutiny standard embraced by a majority of the Supreme Court in *Croson* because it was narrowly tailored to achieve a compelling government interest. *Id.*

Standing. At the outset, the Tenth Circuit on appeal considered Denver's contention that Concrete Works fails to satisfy its burden of establishing standing to challenge the Ordinance's constitutionality. *Id.* at 1518. The court concluded that Concrete Works demonstrated "injury in fact" because it submitted bids on three projects and the Ordinance prevented it from competing on an equal basis with minority and women-owned prime contractors. *Id.*

Specifically, the unequal nature of the bidding process lied in the Ordinance's requirement that a nonminority prime contractor must meet MBE and WBE participation goals by entering into joint ventures with MBEs and WBEs or hiring them as subcontractors (or satisfying the ten-step good faith requirement). *Id.* In contrast, minority and women-owned prime contractors could use their own work to satisfy MBE and WBE participation goals. *Id.* Thus, the extra requirements, the court found imposed costs and burdens on nonminority firms that precluded them from competing with MBEs and WBEs on an equal basis. *Id.* at 1519.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

In addition to demonstrating “injury in fact,” Concrete Works, the court held, also satisfied the two remaining elements to establish standing: (1) a causal relationship between the injury and the challenged conduct; and (2) a likelihood that the injury will be redressed by a favorable ruling. Thus, the court concluded that Concrete Works had standing to challenge the constitutionality of Denver’s race- and gender-conscious contract program. *Id.*

Equal Protection Clause Standards. The court determined the appropriate standard of equal protection review by examining the nature of the classifications embodied in the statute. The court applied strict scrutiny to the Ordinance’s race-based preference scheme, and thus inquired whether the statute was narrowly tailored to achieve a compelling government interest. *Id.* Gender-based classifications, in contrast, the court concluded are evaluated under the intermediate scrutiny rubric, which provides that the law must be substantially related to an important government objective. *Id.*

Permissible Evidence and Burdens of Proof. In *Croson*, a plurality of the Court concluded that state and local governments have a compelling interest in remedying identified past and present discrimination within their borders. *Id. citing, Croson*, 488 U.S. at 492, 509, The plurality explained that the Fourteenth Amendment permits race-conscious programs that seek both to eradicate discrimination by the governmental entity itself and to prevent the public entity from acting as a “ ‘passive participant’ in a system of racial exclusion practiced by elements of the local construction industry” by allowing tax dollars “to finance the evil of private prejudice.” *Id. citing, Croson* at 492.

A. Geographic Scope of the Data. Concrete Works contended that *Croson* precluded the court from considering empirical evidence of discrimination in the six-county Denver Metropolitan Statistical Area (MSA). Instead, it argued *Croson* would allow Denver only to use data describing discrimination within the City and County of Denver. *Id.* at 1520.

The court stated that a majority in *Croson* observed that because discrimination varies across market areas, state and local governments cannot rely on national statistics of discrimination in the construction industry to draw conclusions about prevailing market conditions in their own regions. *Id.* at 1520, *citing Croson* at 504. The relevant area in which to measure discrimination, then, is the local construction market, but that is not necessarily confined by jurisdictional boundaries. *Id.*

The court said that *Croson* supported its consideration of data from the Denver MSA because this data was sufficiently geographically targeted to the relevant market area. *Id.* The record revealed that over 80 percent of Denver Department of Public Works (“DPW”) construction and design contracts were awarded to firms located within the Denver MSA. *Id.* at 1520. To confine the permissible data to a governmental body’s strict geographical boundaries, the court found, would ignore the economic reality that contracts are often awarded to firms situated in adjacent areas. *Id.*

The court said that it is important that the pertinent data closely relate to the jurisdictional area of the municipality whose program is scrutinized, but here Denver’s contracting activity, insofar as construction work was concerned, was closely related to the Denver MSA. *Id.* at 1520. Therefore, the court held that data from the Denver MSA was adequately particularized for strict scrutiny purposes. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

B. Anecdotal Evidence. Concrete Works argued that the district court committed reversible error by considering such non-empirical evidence of discrimination as testimony from minority and women-owned firms delivered during public hearings, affidavits from MBEs and WBEs, summaries of telephone interviews that Denver officials conducted with MBEs and WBEs, and reports generated during Office of Affirmative Action compliance investigations. *Id.*

The court stated that selective anecdotal evidence about minority contractors' experiences, without more, would not provide a strong basis in evidence to demonstrate public or private discrimination in Denver's construction industry sufficient to pass constitutional muster under *Croson*. *Id.* at 1520.

Personal accounts of actual discrimination or the effects of discriminatory practices may, according to the court, however, vividly complement empirical evidence. *Id.* The court concluded that anecdotal evidence of a municipality's institutional practices that exacerbate discriminatory market conditions are often particularly probative. *Id.* Therefore, the government may include anecdotal evidence in its evidentiary mosaic of past or present discrimination. *Id.*

The court pointed out that in the context of employment discrimination suits arising under Title VII of the Civil Rights Act of 1964, the Supreme Court has stated that anecdotal evidence may bring "cold numbers convincingly to life." *Id.* at 1520, quoting, *International Bhd. of Teamsters v. United States*, 431 U.S. 324, 339 (1977). In fact, the court found, the majority in *Croson* impliedly endorsed the inclusion of personal accounts of discrimination. *Id.* at 1521. The court thus deemed anecdotal evidence of public and private race and gender discrimination appropriate supplementary evidence in the strict scrutiny calculus. *Id.*

C. Post-Enactment Evidence. Concrete Works argued that the court should consider only evidence of discrimination that existed prior to Denver's enactment of the Ordinance. *Id.* In *Croson*, the court noted that the Supreme Court underscored that a municipality "must identify [the] discrimination ... with some specificity *before* [it] may use race-conscious relief." *Id.* at 1521, quoting, *Croson*, 488 U.S. at 504 (emphasis added). Absent any pre-enactment evidence of discrimination, the court said a municipality would be unable to satisfy *Croson*. *Id.*

However, the court did not read *Croson's* evidentiary requirement as foreclosing the consideration of post-enactment evidence. *Id.* at 1521. Post-enactment evidence, if carefully scrutinized for its accuracy, the court found would often prove quite useful in evaluating the remedial effects or shortcomings of the race-conscious program. *Id.* This, the court noted was especially true in this case, where Denver first implemented a limited affirmative action program in 1983 and has since modified and expanded its scope. *Id.*

The court held the strong weight of authority endorses the admissibility of post-enactment evidence to determine whether an affirmative action contract program complies with *Croson*. *Id.* at 1521. The court agreed that post-enactment evidence may prove useful for a court's determination of whether an ordinance's deviation from the norm of equal treatment is necessary. *Id.* Thus, evidence of discrimination existing subsequent to enactment of the 1990 Ordinance, the court concluded was properly before it. *Id.*

D. Burdens of Production and Proof. The court stated that the Supreme Court in *Croson* struck down the City of Richmond's minority set-aside program because the City failed to provide an adequate evidentiary showing of past or present discrimination. *Id.* at 1521, citing, *Croson*, 488 U.S. at 498–506. The court pointed out that because the Fourteenth Amendment only tolerates race-conscious programs that narrowly seek

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

to remedy identified discrimination, the Supreme Court in *Croson* explained that state and local governments “must identify that discrimination ... with some specificity before they may use race-conscious relief.” *Id.*, citing *Croson*, at 504. The court said that the Supreme Court’s benchmark for judging the adequacy of the government’s factual predicate for affirmative action legislation was whether there exists a “*strong basis in evidence* for [the government’s] conclusion that remedial action was necessary.” *Id.*, quoting, *Croson*, at 500.

Although *Croson* places the burden of production on the municipality to demonstrate a “strong basis in evidence” that its race- and gender-conscious contract program aims to remedy specifically identified past or present discrimination, the court held the Fourteenth Amendment does not require a court to make an ultimate judicial finding of discrimination before a municipality may take affirmative steps to eradicate discrimination. *Id.* at 1521, citing, *Wygant*, 476 U.S. at 292 (O’Connor, J., concurring in part and concurring in the judgment). An affirmative action response to discrimination is sustainable against an equal protection challenge so long as it is predicated upon strong evidence of discrimination. *Id.* at 1522, citing, *Croson*, 488 U.S. at 504.

An inference of discrimination, the court found, may be made with empirical evidence that demonstrates “a significant statistical disparity between the number of qualified minority contractors ... and the number of such contractors actually engaged by the locality or the locality’s prime contractors.” *Id.* at 1522, quoting, *Croson* at 509 (plurality). The court concluded that it did not read *Croson* to require an attempt to craft a precise mathematical formula to assess the quantum of evidence that rises to the *Croson* “strong basis in evidence” benchmark. *Id.* That, the court stated, must be evaluated on a case-by-case basis. *Id.*

The court said that the adequacy of a municipality’s showing of discrimination must be evaluated in the context of the breadth of the remedial program advanced by the municipality. *Id.* at 1522, citing, *Croson* at 498. Ultimately, whether a strong basis in evidence of past or present discrimination exists, thereby establishing a compelling interest for the municipality to enact a race-conscious ordinance, the court found is a question of law. *Id.* Underlying that legal conclusion, however, the court noted are factual determinations about the accuracy and validity of a municipality’s evidentiary support for its program. *Id.*

Notwithstanding the burden of initial production that rests with the municipality, “[t]he ultimate burden [of proof] remains with [the challenging party] to demonstrate the unconstitutionality of an affirmative-action program.” *Id.* at 1522, quoting, *Wygant*, 476 U.S. at 277–78(plurality). Thus, the court stated that once Denver presented adequate statistical evidence of precisely defined discrimination in the Denver area construction market, it became incumbent upon Concrete Works either to establish that Denver’s evidence did not constitute strong evidence of such discrimination or that the remedial statute was not narrowly drawn. *Id.* at 1523. Absent such a showing by Concrete Works, the court said, summary judgment upholding Denver’s Ordinance would be appropriate. *Id.*

E. Evidentiary Predicate Underlying Denver’s Ordinance. The evidence of discrimination that Denver presents to demonstrate a compelling government interest in enacting the Ordinance consisted of three categories: (1) evidence of discrimination in city contracting from the mid–1970s to 1990; (2) data about MBE and WBE utilization in the overall Denver MSA construction market between 1977 and 1992; and (3) anecdotal evidence that included personal accounts by MBEs and WBEs who have experienced both public and private discrimination and testimony from city officials who describe institutional governmental practices that perpetuate public discrimination. *Id.* at 1523.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

1. Discrimination in the Award of Public Contracts. The court considered the evidence that Denver presented to demonstrate underutilization of MBEs and WBEs in the award of city contracts from the mid-1970s to 1990. The court found that Denver offered persuasive pieces of evidence that, considered in the abstract, could give rise to an inference of race- and gender-based public discrimination on isolated public works projects. *Id.* at 1523. However, the court also found the record showed that MBE and WBE utilization on public contracts as a whole during this period was strong in comparison to the total number of MBEs and WBEs within the local construction industry. *Id.* at 1524. Denver offered a rebuttal to this more general evidence, but the court stated it was clear that the weight to be given both to the general evidence and to the specific evidence relating to individual contracts presented genuine disputes of material facts.

The court then engaged in an analysis of the factual record and an identification of the genuine material issues of fact arising from the parties' competing evidence.

(a) Federal Agency Reports of Discrimination in Denver. Denver submitted federal agency reports of discrimination in Denver public contract awards. *Id.* at 1524. The record contained a summary of a 1978 study by the United States General Accounting Office ("GAO"), which showed that between 1975 and 1977 minority businesses were significantly underrepresented in the performance of Denver public contracts that were financed in whole or in part by federal grants. *Id.*

Concrete Works argued that a material fact issue arose about the validity of this evidence because "the 1978 GAO Report was nothing more than a listing of the problems faced by all small firms, first starting out in business." *Id.* at 1524. The court pointed out, however, Concrete Works ignored the GAO Report's empirical data, which quantified the actual disparity between the utilization of minority contractors and their representation in the local construction industry. *Id.* In addition, the court noted that the GAO Report reflected the findings of an objective third party. *Id.* Because this data remained uncontested, notwithstanding Concrete Works' conclusory allegations to the contrary, the court found the 1978 GAO Report provided evidence to support Denver's showing of discrimination. *Id.*

Added to the GAO findings was a 1979 letter from the United States Department of Transportation ("US DOT") to the Mayor of the City of Denver, describing the US DOT Office of Civil Rights' study of Denver's discriminatory contracting practices at Stapleton International Airport. *Id.* at 1524. US DOT threatened to withhold additional federal funding for Stapleton because Denver had "denied minority contractors the benefits of, excluded them from, or otherwise discriminated against them concerning contracting opportunities at Stapleton," in violation of Title VI of the Civil Rights Act of 1964 and other federal laws. *Id.*

The court discussed the following data as reflected of the low level of MBE and WBE utilization on Stapleton contracts prior to Denver's adoption of an MBE and WBE goals program at Stapleton in 1981: for the years 1977 to 1980, respectively, MBE utilization was 0 percent, 3.8 percent, 0.7 percent, and 2.1 percent; data on WBE utilization was unknown for the years 1977 to 1979, and it was 0.05 percent for 1980. *Id.* at 1524.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The court stated that like its unconvincing attempt to discredit the GAO Report, Concrete Works presented no evidence to challenge the validity of US DOT's allegations. *Id.* Concrete Works, the court said, failed to introduce evidence refuting the substance of US DOT's information, attacking its methodology, or challenging the low utilization figures for MBEs at Stapleton before 1981. *Id.* at 1525. Thus, according to the court, Concrete Works failed to create a genuine issue of fact about the conclusions in the US DOT's report. *Id.* In sum, the court found the federal agency reports of discrimination in Denver's contract awards supported Denver's contention that race and gender discrimination existed prior to the enactment of the challenged Ordinance. *Id.*

(b) Denver's Reports of Discrimination. Denver pointed to evidence of public discrimination prior to 1983, the year that the first Denver ordinance was enacted. *Id.* at 1525. A 1979 DPW "Major Bond Projects Final Report," which reviewed MBE and WBE utilization on projects funded by the 1972 and 1974 bond referenda and the 1975 and 1976 revenue bonds, the court said, showed strong evidence of underutilization of MBEs and WBEs. *Id.* Based on this Report's description of the approximately \$85 million in contract awards, there was 0 percent MBE and WBE utilization for professional design and construction management projects, and less than 1 percent utilization for construction. *Id.* The Report concluded that if MBEs and WBEs had been utilized in the same proportion as found in the construction industry, 5 percent of the contract dollars would have been awarded to MBEs and WBEs. *Id.*

To undermine this data, Concrete Works alleged that the DPW Report contained "no information about the number of minority or women owned firms that were used" on these bond projects. *Id.* at 1525. However, the court concluded the Report's description of MBE and WBE utilization in terms of contract dollars provided a more accurate depiction of total utilization than would the mere number of MBE and

WBE firms participating in these projects. *Id.* Thus, the court said this line of attack by Concrete Works was unavailing. *Id.*

Concrete Works also advanced expert testimony that Denver's data demonstrated strong MBE and WBE utilization on the total DPW contracts awarded between 1978 and 1982. *Id.* Denver responded by pointing out that because federal and city affirmative action programs were in place from the mid-1970s to the present, this overall DPW data reflected the intended remedial effect on MBE and WBE utilization of these programs. *Id.* at 1526. Based on its contention that the overall DPW data was therefore "tainted" and distorted by these pre-existing affirmative action goals programs, Denver asked the court to focus instead on the data generated from specific public contract programs that were, for one reason or another, insulated from federal and local affirmative action goals programs, i.e., "non-goals public projects." *Id.*

Given that the same local construction industry performed both goals and non-goals public contracts, Denver argued that data generated on non-goals public projects offered a control group with which the court could compare MBE and WBE utilization on public contracts governed by a goals program and those insulated from such goal requirements. *Id.* Denver argued that the utilization of MBEs and WBEs on non-goals projects was the better test of whether there had been discrimination historically in Denver contracting practices. *Id.* at 1526.

DGS data. The first set of data from non-goals public projects that Denver identified were MBE and WBE disparity indices on Denver Department of General Services ("DGS") contracts, which represented one-third of all city construction funding and which, prior to the enactment of the 1990 Ordinance, were not subject to the goals program instituted in the earlier ordinances for DPW contracts. *Id.* at 1526. The DGS data, the court found, revealed extremely low MBE and WBE utilization. *Id.* For MBEs, the DGS data showed a 0.14 disparity

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

index in 1989 and a 0.19 disparity index in 1990 — evidence the court stated was of significant underutilization. *Id.* For WBEs, the disparity index was 0.47 in 1989 and 1.36 in 1990 — the latter, the court said showed greater than full participation and the former demonstrating underutilization. *Id.*

The court noted that it did not have the benefit of relevant authority with which to compare Denver’s disparity indices for WBEs. Nevertheless, the court concluded Denver’s data indicated significant WBE underutilization such that the Ordinance’s gender classification arose from “reasoned analysis rather than through the mechanical application of traditional, often inaccurate, assumptions.” *Id.* at 1526, n.19, quoting, *Mississippi Univ. of Women*, 458 U.S. at 726.

DPW data. The second set of data presented by Denver, the court said, reflected distinct MBE and WBE underutilization on non-goals public projects consisting of separate DPW projects on which no goals program was imposed. *Id.* at 1527. Concrete Works, according to the court, attempted to trivialize the significance of this data by contending that the projects, in dollar terms, reflected a small fraction of the total Denver MSA construction market. *Id.* But, the court noted that Concrete Works missed the point because the data was not intended to reflect conditions in the overall market. *Id.* Instead the data dealt solely with the utilization levels for city-funded projects on which no MBE and WBE goals were imposed. *Id.* The court found that it was particularly telling that the disparity index significantly deteriorated on projects for which the city did not establish minority and gender participation goals. *Id.* Insofar as Concrete Works did not attack the data on any other grounds, the court considered it was persuasive evidence of underlying discrimination in the Denver construction market. *Id.*

Empirical data. The third evidentiary item supporting Denver’s contention that public discrimination existed prior to enactment of the challenged Ordinance was empirical data from 1989, generated after Denver modified its race- and gender-conscious program. *Id.* at 1527. In the wake of *Croson*, Denver amended its program by eliminating the minimum annual goals program for MBE and WBE participation and by requiring MBEs and WBEs to demonstrate that they had suffered from past discrimination. *Id.*

This modification, the court said, resulted in a noticeable decline in the share of DPW construction dollars awarded to MBEs. *Id.* From 1985 to 1988 (prior to the 1989 modification of Denver’s program), DPW construction dollars awarded to MBEs ranged from 17 to nearly 20 percent of total dollars. *Id.* However, the court noted the figure dropped to 10.4 percent in 1989, after the program modifications took effect. *Id.* at 1527. Like the DGS and non-goals DPW projects, this 1989 data, the court concluded, further supported the inference that MBE and WBE utilization significantly declined after deletion of a goals program or relaxation of the minimum MBE and WBE utilization goal requirements. *Id.*

Nonetheless, the court stated it must consider Denver’s empirical support for its contention that public discrimination existed prior to the enactment of the Ordinance in the context of the overall DPW data, which showed consistently strong MBE and WBE utilization from 1978 to the present. *Id.* at 1528. The court noted that although Denver’s argument may prove persuasive at trial that the non-goals projects were the most reliable indicia of discrimination, the record on summary judgment contained two sets of data, one that gave rise to an inference of discrimination and the other that undermined such an inference. *Id.* This discrepancy, the court found, highlighted why summary judgment was inappropriate on this record. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Availability data. The court concluded that uncertainty about the capacity of MBEs and WBEs in the local market to compete for, and perform, the public projects for which there was underutilization of MBEs and WBEs further highlighted why the record was not ripe for summary judgment. *Id.* at 1528. Although Denver’s data used as its baseline the percentage of firms in the local construction market that were MBEs and WBEs, Concrete Works argued that a more accurate indicator would consider the capacity of local MBEs and WBEs to undertake the work. *Id.* The court said that uncertainty about the capacity of MBEs and WBEs in the local market to compete for, and perform, the public projects for which there was underutilization of MBEs and WBEs further highlighted why the record was not ripe for summary judgment. *Id.*

The court agreed with the other circuits which had at that time interpreted *Croson* impliedly to permit a municipality to rely, as did Denver, on general data reflecting the number of MBEs and WBEs in the marketplace to defeat the challenger’s summary judgment motion or request for a preliminary injunction. *Id.* at 1527 *citing, Contractors Ass’n*, 6 F.3d at 1005 (comparing MBE participation in city contracts with the “percentage of [MBE] availability or composition in the ‘population’ of Philadelphia area construction firms”); *Associated Gen. Contractors*, 950 F.2d at 1414 (relying on availability data to conclude that city presented “detailed findings of prior discrimination”); *Cone Corp.*, 908 F.2d at 916 (statistical disparity between “the total percentage of minorities involved in construction and the work going to minorities” shows that “the racial classification in the County plan [was] necessary”).

But, the court found Concrete Works had identified a legitimate factual dispute about the accuracy of Denver’s data and questioned whether Denver’s reliance on the percentage of MBEs and WBEs available in the marketplace overstated, “the ability of MBEs or WBEs to conduct

business relative to the industry as a whole because M/WBEs tend to be smaller and less experienced than nonminority-owned firms.” *Id.* at 1528. In other words, the court said, a disparity index calculated on the basis of the absolute number of MBEs in the local market may show greater underutilization than does data that takes into consideration the size of MBEs and WBEs. *Id.*

The court stated that it was not implying that availability was not an appropriate barometer to calculate MBE and WBE utilization, nor did it cast aspersions on data that simply used raw numbers of MBEs and WBEs compared to numbers of total firms in the market. *Id.* The court concluded, however, once credible information about the size or capacity of the firms was introduced in the record, it became a factor that the court should consider. *Id.*

Denver presented several responses. *Id.* at 1528. It argued that a construction firm’s precise “capacity” at a given moment in time belied quantification due to the industry’s highly elastic nature. *Id.* DPW contracts represented less than 4 percent of total MBE revenues and less than 2 percent of WBE revenues in 1989, thereby the court said, strongly implied that MBE and WBE participation in DPW contracts did not render these firms incapable of concurrently undertaking additional work. *Id.* at 1529. Denver presented evidence that most MBEs and WBEs had never participated in city contracts, “although almost all firms contacted indicated that they were interested in City work.” *Id.* Of those MBEs and WBEs who have received work from DPW, available data showed that less than 10 percent of their total revenues were from DPW contracts. *Id.*

The court held all of the back and forth arguments highlighted that there were genuine and material factual disputes in the record, and that such disputes about the accuracy of Denver’s data should not be resolved at summary judgment. *Id.* at 1529.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

(c) *Evidence of Private Discrimination in the Denver MSA*. In recognition that a municipality has a compelling interest in taking affirmative steps to remedy both public and private discrimination specifically identified in its area, the court also considered data about conditions in the overall Denver MSA construction industry between 1977 and 1992. *Id.* at 1529. The court stated that given DPW and DGS construction contracts represented approximately 2 percent of all construction in the Denver MSA, Denver MSA industry data sharpened the picture of local market conditions for MBEs and WBEs. *Id.*

According to Denver’s expert affidavits, the MBE disparity index in the Denver MSA was 0.44 in 1977, 0.26 in 1982, and 0.43 in 1990. *Id.* The corresponding WBE disparity indices were 0.46 in 1977, 0.30 in 1982, and 0.42 in 1989. *Id.* This pre-enactment evidence of the overall Denver MSA construction market — i.e., combined public and private sector utilization of MBEs and WBEs — the court found gave rise to an inference that local prime contractors discriminated on the basis of race and gender. *Id.*

The court pointed out that rather than offering any evidence in rebuttal, Concrete Works merely stated that this empirical evidence did not prove that the Denver government itself discriminated against MBEs and WBEs. *Id.* at 1529. Concrete Works asked the court to define the appropriate market as limited to contracts with the City and County of Denver. *Id.* But, the court said that such a request ignored the lesson of *Croson* that a municipality may design programs to prevent tax dollars from “financ[ing] the evil of private prejudice.” *Id.*, quoting, *Croson*, 488 U.S. at 492.

The court found that what the Denver MSA data did not indicate, however, was whether there was any linkage between Denver’s award of public contracts and the Denver MSA evidence of industry-wide discrimination. *Id.* at 1529. The court said it could not tell whether Denver indirectly contributed to private discrimination by awarding public contracts to firms that in turn discriminated against MBE and/or WBE subcontractors in other private portions of their business or whether the private discrimination was practiced by firms who did not receive any public contracts. *Id.*

Neither *Croson* nor its progeny, the court pointed out, clearly stated whether private discrimination that was in no way funded with public tax dollars could, by itself, provide the requisite strong basis in evidence necessary to justify a municipality’s affirmative action program. *Id.* The court said a plurality in *Croson* suggested that remedial measures could be justified upon a municipality’s showing that “it had essentially become a ‘passive participant’ in a system of racial exclusion practiced by elements of the local construction industry.” *Id.* at 1529, quoting, *Croson*, 488 U.S. at 492.

The court concluded that *Croson* did not require the municipality to identify an exact linkage between its award of public contracts and private discrimination, but such evidence would at least enhance the municipality’s factual predicate for a race- and gender-conscious program. *Id.* at 1529. The record before the court did not explain the Denver government’s role in contributing to the underutilization of MBEs and WBEs in the private construction market in the Denver MSA, and the court stated that this may be a fruitful issue to explore at trial. *Id.* at 1530.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

(d). *Anecdotal Evidence.* The record, according to the court, contained numerous personal accounts by MBEs and WBEs, as well as prime contractors and city officials, describing discriminatory practices in the Denver construction industry. *Id.* at 1530. Such anecdotal evidence was collected during public hearings in 1983 and 1988, interviews, the submission of affidavits, and case studies performed by a consulting firm that Denver employed to investigate public and private market conditions in 1990, prior to the enactment of the 1990 Ordinance. *Id.*

The court indicated again that anecdotal evidence about minority- and women-owned contractors' experiences could bolster empirical data that gave rise to an inference of discrimination. *Id.* at 1530. While a factfinder, the court stated, should accord less weight to personal accounts of discrimination that reflect isolated incidents, anecdotal evidence of a municipality's institutional practices carry more weight due to the systemic impact that such institutional practices have on market conditions. *Id.*

The court noted that in addition to the individual accounts of discrimination that MBEs and WBEs had encountered in the Denver MSA, City affirmative action officials explained that change orders offered a convenient means of skirting project goals by permitting what would otherwise be a new construction project (and thus subject to the MBE and WBE participation requirements) to be characterized as an extension of an existing project and thus within DGS's bailiwick. *Id.* at 1530. An assistant city attorney, the court said, also revealed that projects have been labelled "remodeling," as opposed to "reconstruction," because the former fall within DGS, and thus were not subject to MBE and WBE goals prior to the enactment of the 1990 Ordinance. *Id.* at 1530. The court concluded over the object of Concrete Works that this anecdotal evidence could be considered in conjunction with Denver's statistical analysis. *Id.*

2. Summary. The court summarized its ruling by indicating Denver had compiled substantial evidence to support its contention that the Ordinance was enacted to remedy past race- and gender-based discrimination. *Id.* at 1530. The court found in contrast to the predicate facts on which Richmond unsuccessfully relied in *Croson*, that Denver's evidence of discrimination both in the award of public contracts and within the overall Denver MSA was particularized and geographically targeted. *Id.* The court emphasized that Denver need not negate all evidence of non-discrimination, nor was it Denver's burden to prove judicially that discrimination did exist. *Id.* Rather, the court held, Denver need only come forward with a "strong basis in evidence" that its Ordinance was a narrowly tailored response to specifically identified discrimination. *Id.* Then, the court said it became Concrete Works' burden to show that there was no such strong basis in evidence to support Denver's affirmative action legislation. *Id.*

The court also stated that Concrete Works had specifically identified potential flaws in Denver's data and had put forth evidence that Denver's data failed to support an inference of either public or private discrimination. *Id.* at 1530. With respect to Denver's evidence of public discrimination, for example, the court found overall DPW data demonstrated strong MBE and WBE utilization, yet data for isolated DPW projects and DGS contract awards suggested to the contrary. *Id.* The parties offered conflicting rationales for this disparate data, and the court concluded the record did not provide a clear explanation. *Id.* In addition, the court said that Concrete Works presented a legitimate contention that Denver's disparity indices failed to consider the relatively small size of MBEs and WBEs, which the court noted further impeded its ability to draw conclusions from the existing record. *Id.* at 1531.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Significantly, the court pointed out that because Concrete Works did not challenge the district court’s conclusion with respect to the second prong of *Croson’s* strict scrutiny standard — i.e., that the Ordinance was narrowly tailored to remedy past and present discrimination — the court need not and did not address this issue. *Id.* at 1531.

On remand, the court stated the parties should be permitted to develop a factual record to support their competing interpretations of the empirical data. *Id.* at 1531. Accordingly, the court reversed the district court ruling granting summary judgment and remanded the case for further proceedings. See *Concrete Works of Colorado v. City and County of Denver*, 321 F. 3d 950 (10th Cir. 2003).

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

13. *Contractor’s Association of E. Pennsylvania v. City of Philadelphia*, 91 F.3d 586 (3d Cir. 1996)

The City of Philadelphia (City) and intervening defendant United Minority Enterprise Associates (UMEA) appealed from the district court’s judgment declaring that the City’s DBE/MBE/WBE program for black construction contractors, violated the Equal Protection rights of the Contractors Association of Eastern Pennsylvania (CAEP) and eight other contracting associations (Contractors). The Third Circuit affirmed the district court that the Ordinance was not narrowly tailored to serve a compelling state interest. 91 F. 3d 586, 591 (3d Cir. 1996), *affirming*, *Contractors Ass’n of Eastern Pa. v. City of Philadelphia*, 893 F.Supp. 419 (E.D.Pa.1995).

The Ordinance. The City’s Ordinance sought to increase the participation of “disadvantaged business enterprises” (DBEs) in City contracting. *Id.* at 591. DBEs are businesses defined as those at least 51 percent owned by “socially and economically disadvantaged” persons. “Socially and economically disadvantaged” persons are, in turn, defined as “individuals who have ... been subjected to racial, sexual or ethnic prejudice because of their identity as a member of a group or differential treatment because of their handicap without regard to their individual qualities, and whose ability to compete in the free enterprise system has been impaired due to diminished capital and credit opportunities as compared to others in the same business area who are not socially disadvantaged. *Id.* The Third Circuit found in *Contractors Ass’n of Eastern Pa. v. City of Philadelphia*, 6 F.3d 990, 999 (3d Cir.1993) (*Contractors II*), this definition “includes only individuals who are both victims of prejudice based on status and economically deprived.” Businesses majority-owned by racial minorities (minority business enterprises or MBEs) and women are rebuttably presumed to be DBEs, but businesses that would otherwise qualify as DBEs are rebuttably

presumed not to be DBEs if they have received more than \$5 million in City contracts. *Id.* at 591-592.

The Ordinance set participation “goals” for different categories of DBEs: racial minorities (15%), women (10%) and handicapped (2%). *Id.* at 592. These percentage goals were percentages of the total dollar amount spent by the City in each of the three contract categories: vending contracts, construction contracts, and personal and professional service contracts. Dollars received by DBE *subcontractors* in connection with City financed prime contracts are counted towards the goals as well as dollars received by DBE *prime* contractors. *Id.*

Two different strategies were authorized. When there were sufficient DBEs qualified to perform a City contract to ensure competitive bidding, a contract could be let on a sheltered market basis — i.e., only DBEs will be permitted to bid. In other instances, the contract would be let on a non-sheltered basis — i.e., any firm may bid — with the goals requirements being met through subcontracting. *Id.* at 592 The sheltered market strategy saw little use. It was attempted on a trial basis, but there were too few DBEs in any given area of expertise to ensure reasonable prices, and the program was abandoned. *Id.* Evidence submitted by the City indicated that no construction contract was let on a sheltered market basis from 1988 to 1990, and there was no evidence that the City had since pursued that approach. *Id.* Consequently, the Ordinance’s participation goals were achieved almost entirely by requiring that prime contractors subcontract work to DBEs in accordance with the goals. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court stated that the significance of complying with the goals is determined by a series of presumptions. *Id.* at 593. Where at least one bidding contractor submitted a satisfactory Schedule for Participation, it was presumed that all contractors who did not submit a satisfactory Schedule did not exert good faith efforts to meet the program goals, and the “lowest responsible, responsive contractor” received the contract. *Id.* Where none of the bidders submitted a satisfactory Schedule, it was presumed that all but the bidder who proposed “the highest goals” of DBE participation at a “reasonable price” did not exert good faith efforts, and the contract was awarded to the “lowest, responsible, responsive contractor” who was granted a Waiver and proposed the highest level of DBE participation at a reasonable price. *Id.* Non-complying bidders in either situation must rebut the presumption in order to secure a waiver.

Procedural History. This appeal is the third appeal to consider this challenge to the Ordinance. On the first appeal, the Third Circuit affirmed the district court’s ruling that the Contractors had standing to challenge the set-aside program, but reversed the grant of summary judgment in their favor because UMEA had not been afforded a fair opportunity to develop the record. *Id.* at 593 citing, *Contractors Ass’n of Eastern Pa. v. City of Philadelphia*, 945 F.2d 1260 (3d Cir.1991) (*Contractors I*).

On the second appeal, the Third Circuit reviewed a second grant of summary judgment for the Contractors. *Id.*, citing, *Contractors II*, 6 F.3d 990. The Court in that appeal concluded that the Contractors had standing to challenge the program only as it applied to the award of construction contracts, and held that the pre-enactment evidence available to the City Council in 1982 did “not provide a sufficient evidentiary basis” for a conclusion that there had been discrimination against women and minorities in the construction industry. *Id.* citing, 6 F.3d at 1003. The Court further held, however, that evidence of

discrimination obtained after 1982 could be considered in determining whether there was a sufficient evidentiary basis for the Ordinance. *Id.*

In the second appeal, 6 F.3d 990 (3d. Cir. 1993), after evaluating both the pre-enactment and post-enactment evidence in the summary judgment record, the Court affirmed the grant of summary judgment insofar as it declared to be unconstitutional those portions of the program requiring set-asides for women and non-black minority contractors. *Id.* at 594. The Court also held that the 2 percent set-aside for the handicapped passed rational basis review and ordered the court to enter summary judgment for the City with respect to that portion of the program. *Id.* In addition, the Court concluded that the portions of the program requiring a set-aside for black contractors could stand only if they met the “strict scrutiny” standard of Equal Protection review and that the record reflected a genuine issue of material fact as to whether they were narrowly tailored to serve a compelling interest of the City as required under that standard. *Id.*

This third appeal followed a nine-day bench trial and a resolution by the district court of the issues thus presented. That trial and this appeal thus concerned only the constitutionality of the Ordinance’s preferences for black contractors. *Id.*

Trial. At trial, the City presented a study done in 1992 after the filing of this suit, which was reflected in two pretrial affidavits by the expert study consultant and his trial testimony. *Id.* at 594. The core of his analysis concerning discrimination by the City centered on disparity indices prepared using data from fiscal years 1979–81. The disparity indices were calculated by dividing the percentage of all City construction dollars received by black construction firms by their percentage representation among all area construction firms, multiplied by 100.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The consultant testified that the disparity index for black construction firms in the Philadelphia metropolitan area for the period studied was about 22.5. According to the consultant, the smaller the resulting figure was, the greater the inference of discrimination, and he believed that 22.5 was a disparity attributable to discrimination. *Id.* at 595. A number of witnesses testified to discrimination in City contracting before the City Council, prior to the enactment of the Ordinance, and the consultant testified that his statistical evidence was corroborated by their testimony. *Id.* at 595.

Based on information provided in an affidavit by a former City employee (John Macklin), the study consultant also concluded that black representation in contractor associations was disproportionately low in 1981 and that between 1979 and 1981 black firms had received no subcontracts on City-financed construction projects. *Id.* at 595. The City also offered evidence concerning two programs instituted by others prior to 1982 which were intended to remedy the effects of discrimination in the construction industry but which, according to the City, had been unsuccessful. *Id.* The first was the Philadelphia Plan, a program initiated in the late 1960s to increase the hiring of minorities on public construction sites.

The second program was a series of programs implemented by the Philadelphia Urban Coalition, a non-profit organization (Urban Coalition programs). These programs were established around 1970, and offered loans, loan guarantees, bonding assistance, training, and various forms of non-financial assistance concerning the management of a construction firm and the procurement of public contracts. *Id.* According to testimony from a former City Council member and others, neither program succeeded in eradicating the effects of discrimination. *Id.*

The City pointed to the waiver and exemption sections of the Ordinance as proof that there was adequate flexibility in its program. The City contended that its 15 percent goal was appropriate. The City maintained that the goal of 15 percent may be required to account for waivers and exemptions allowed by the City, was a flexible goal rather than a rigid quota in light of the waivers and exemptions allowed by the Ordinance, and was justified in light of the discrimination in the construction industry. *Id.* at 595.

The Contractors presented testimony from an expert witness challenging the validity and reliability of the study and its conclusions, including, *inter alia*, the data used, the assumptions underlying the study, and the failure to include federally funded contracts let through the City Procurement Department. *Id.* at 595. The Contractors relied heavily on the legislative history of the Ordinance, pointing out that it reflected no identification of any specific discrimination against black contractors and no data from which a Council person could find that specific discrimination against black contractors existed or that it was an appropriate remedy for any such discrimination. *Id.* at 595 They pointed as well to the absence of any consideration of race-neutral alternatives by the City Council prior to enacting the Ordinance. *Id.* at 596.

On cross-examination, the Contractors elicited testimony that indicated that the Urban Coalition programs were relatively successful, which the Court stated undermined the contention that race-based preferences were needed. *Id.* The Contractors argued that the 15 percent figure must have been simply picked from the air and had no relationship to any legitimate remedial goal because the City Council had no evidence of identified discrimination before it. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

At the conclusion of the trial, the district court made findings of fact and conclusions of law. It determined that the record reflected no “strong basis in evidence” for a conclusion that discrimination against black contractors was practiced by the City, nonminority prime contractors, or contractors associations during any relevant period. *Id.* at 596 *citing*, 893 F.Supp. at 447. The court also determined that the Ordinance was “not ‘narrowly tailored’ to even the perceived objective declared by City Council as the reason for the Ordinance.” *Id.* at 596, *citing*, 893 F. Supp. at 441.

Burden of Persuasion. The Court held affirmative action programs, when challenged, must be subjected to “strict scrutiny” review. *Id.* at 596. Accordingly, a program can withstand a challenge only if it is narrowly tailored to serve a compelling state interest. The municipality has a compelling state interest that can justify race-based preferences only when it has acted to remedy identified present or past discrimination in which it engaged or was a “passive participant;” race-based preferences cannot be justified by reference to past “societal” discrimination in which the municipality played no material role. *Id.* Moreover, the Court found the remedy must be tailored to the discrimination identified. *Id.*

The Court said that a municipality must justify its conclusions regarding discrimination in connection with the award of its construction contracts and the necessity for a remedy of the scope chosen. *Id.* at 597. While this does not mean the municipality must convince a court of the accuracy of its conclusions, the Court stated that it does mean the program cannot be sustained unless there is a strong basis in evidence for those conclusions. *Id.* The party challenging the race-based preferences can succeed by showing either (1) the subjective intent of the legislative body was not to remedy race discrimination in which the municipality played a role, or (2) there is no “strong basis in evidence”

for the conclusions that race-based discrimination existed and that the remedy chosen was necessary. *Id.*

The Third Circuit noted it and other courts have concluded that when the race-based classifications of an affirmative action plan are challenged, the proponents of the plan have the burden of coming forward with evidence providing a firm basis for inferring that the legislatively identified discrimination in fact exists or existed and that the race-based classifications are necessary to remedy the effects of the identified discrimination. *Id.* at 597. Once the proponents of the program meet this burden of production, the opponents of the program must be permitted to attack the tendered evidence and offer evidence of their own tending to show that the identified discrimination did or does not exist and/or that the means chosen as a remedy do not “fit” the identified discrimination. *Id.*

Ultimately, however, the Court found that plaintiffs challenging the program retain the burden of persuading the district court that a violation of the Equal Protection Clause has occurred. *Id.* at 597. This means that the plaintiffs bear the burden of persuading the court that the race-based preferences were not intended to serve the identified compelling interest or that there is no strong basis in the evidence as a whole for the conclusions the municipality needed to have reached with respect to the identified discrimination and the necessity of the remedy chosen. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court explained the significance of the allocation of the burden of persuasion differs depending on the theory of constitutional invalidity that is being considered. If the theory is that the race-based preferences were adopted by the municipality with an intent unrelated to remedying its past discrimination, the plaintiff has the burden of convincing the court that the identified remedial motivation is a pretext and that the real motivation was something else. *Id.* at 597. As noted in *Contractors II*, the Third Circuit held the burden of persuasion here is analogous to the burden of persuasion in Title VII cases. *Id.* at 598, *citing*, 6 F.3d at 1006. The ultimate issue under this theory is one of fact, and the burden of persuasion on that ultimate issue can be very important. *Id.*

The Court said the situation is different when the plaintiff's theory of constitutional invalidity is that, although the municipality may have been thinking of past discrimination and a remedy therefor, its conclusions with respect to the existence of discrimination and the necessity of the remedy chosen have no strong basis in evidence. In such a situation, when the municipality comes forward with evidence of facts alleged to justify its conclusions, the Court found that the plaintiff has the burden of persuading the court that those facts are not accurate. *Id.* The ultimate issue as to whether a strong basis in evidence exists is an issue of law, however. The burden of persuasion in the traditional sense plays no role in the court's resolution of that ultimate issue. *Id.*

The Court held the district court's opinion explicitly demonstrates its recognition that the plaintiffs bore the burden of persuading it that an equal protection violation occurred. *Id.* at 598. The Court found the district court applied the appropriate burdens of production and persuasion, conducted the required evaluation of the evidence, examined the credited record evidence as a whole, and concluded that the "strong basis in evidence" for the City's position did not exist. *Id.*

Three forms of discrimination advanced by the City. The Court pointed out that several distinct forms of racial discrimination were advanced by the City as establishing a pattern of discrimination against minority contractors. The first was discrimination by prime contractors in the awarding of subcontracts. The second was discrimination by contractor associations in admitting members. The third was discrimination by the City in the awarding of prime contracts. The City and UMEA argued that the City may have "passively participated" in the first two forms of discrimination. *Id.* at 599.

A. The evidence of discrimination by private prime contractors. One of the City's theories is that discrimination by prime contractors in the selection of subcontractors existed and may be remedied by the City. The Court noted that as Justice O'Connor observed in *Croscon*: if the city could show that it had essentially become a "passive participant" in a system of racial exclusion practiced by elements of the local construction industry ... the city could take affirmative steps to dismantle such a system. It is beyond dispute that any public entity ... has a compelling government interest in assuring that public dollars ... do not serve to finance the evil of private prejudice. *Id.* at 599, *citing*, 488 U.S. at 492.

The Court found the disparity study focused on just one aspect of the Philadelphia construction industry — the award of prime contracts by the City. *Id.* at 600. The City's expert consultant acknowledged that the only information he had about subcontracting came from an affidavit of one person, John Macklin, supplied to him in the course of his study. As he stated on cross-examination, "I have made no presentation to the Court as to participation by black minorities or blacks in subcontracting." *Id.* at 600. The only record evidence with respect to black participation in the subcontracting market comes from Mr. Macklin who was a member of the MBEC staff and a proponent of the Ordinance. *Id.* Based on a review of City records, found by the district

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

court to be “cursory,” Mr. Macklin reported that not a single subcontract was awarded to minority subcontractors in connection with City-financed construction contracts during fiscal years 1979 through 1981. The district court did not credit this assertion. *Id.*

Prior to 1982, for solely City-financed projects, the City did not require subcontractors to prequalify, did not keep consolidated records of the subcontractors working on prime contracts let by the City, and did not record whether a particular contractor was an MBE. *Id.* at 600. To prepare a report concerning the participation of minority businesses in public works, Mr. Macklin examined the records at the City’s Procurement Department. The department kept procurement logs, project engineer logs, and contract folders. The subcontractors involved in a project were only listed in the engineer’s log. The court found Mr. Macklin’s testimony concerning his methodology was hesitant and unclear, but it does appear that he examined only 25 to 30 percent of the project engineer logs, and that his only basis for identifying a name in that segment of the logs as an MBE was his personal memory of the information he had received in the course of approximately a year of work with the OMO that certified minority contractors. *Id.* The Court quoted the district court finding as to Macklin’s testimony:

Macklin] went to the contract files and looked for contracts in excess of \$30,000.00 that in his view appeared to provide opportunities for subcontracting. (*Id.* at 13.) With that information, Macklin examined some of the project engineer logs for those projects to determine whether minority subcontractors were used by the prime contractors. (*Id.*) Macklin did not look at every available project engineer log. (*Id.*) Rather, he looked at a random 25 to 30 percent of all the project engineer logs. (*Id.*) As with his review of the Procurement Department log, Macklin determined that a minority subcontractor was used on the project only if he personally recognized the firm to be a minority. (*Id.*) Quite plainly, Macklin was unable to determine whether minorities

were used on the remaining 65 to 70 percent of the projects that he did not review. When questioned whether it was possible that minority subcontractors did perform work on some City public works projects during fiscal years 1979 to 1981, and that he just did not see them in the project logs that he looked at, Macklin answered “it is a very good possibility.” 893 F.Supp. at 434.

Id. at 600.

The district court found two other portions of the record significant on this point. First, during the trial, the City presented Oscar Gaskins (“Gaskins”), former general counsel to the General and Specialty Contractors Association of Philadelphia (“GASCAP”) and the Philadelphia Urban Coalition, to testify about minority participation in the Philadelphia construction industry during the 1970s and early 1980s. Gaskins testified that, in his opinion, black contractors are still being subjected to racial discrimination in the private construction industry, and in subcontracting within the City limits. However, the Court pointed out, when Gaskins was asked by the district court to identify even one instance where a minority contractor was denied a private contract or subcontract after submitting the lowest bid, Gaskins was unable to do so. *Id.* at 600-601.

Second, the district court noted that since 1979 the City’s “standard requirements warn [would-be prime contractors] that discrimination will be deemed a ‘substantial breach’ of the public works contract which could subject the prime contractor to an investigation by the Commission and, if warranted, fines, penalties, termination of the contract and forfeiture of all money due.” Like the Supreme Court in *Croson*, the Court stated the district court found significant the City’s inability to point to any allegations that this requirement was being violated. *Id.* at 601.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court held the district court did not err by declining to accept Mr. Macklin's conclusion that there were no subcontracts awarded to black contractors in connection with City-financed construction contracts in fiscal years 1979 to 1981. *Id.* at 601. Accepting that refusal, the Court agreed with the district court's conclusion that the record provides no firm basis for inferring discrimination by prime contractors in the subcontracting market during that period. *Id.*

B. The evidence of discrimination by contractor associations. The Court stated that a city may seek to remedy discrimination by local trade associations to prevent its passive participation in a system of private discrimination. Evidence of "extremely low" membership by MBEs, standing by itself, however, is not sufficient to support remedial action; the city must "link [low MBE membership] to the number of local MBEs eligible for membership." *Id.* at 601.

The City's expert opined that there was statistically low representation of eligible MBEs in the local trade associations. He testified that, while numerous MBEs were eligible to join these associations, three such associations had only one MBE member, and one had only three MBEs. In concluding that there were many eligible MBEs not in the associations, however, he again relied entirely upon the work of Mr. Macklin. The district court rejected the expert's conclusions because it found his reliance on Mr. Macklin's work misplaced. *Id.* at 601. Mr. Macklin formed an opinion that a listed number of MBE and WBE firms were eligible to be members of the plaintiff Associations. *Id.* Because Mr. Macklin did not set forth the criteria for association membership and because the OMO certification list did not provide any information about the MBEs and WBEs other than their names and the fact that they were such, the Court found the district court was without a basis for evaluating Mr. Macklin's opinions. *Id.*

On the other hand, the district court credited "the uncontroverted testimony of John Smith [a former general manager of the CAEP and member of the MBEC] that no black contractor who has ever applied for membership in the CAEP has been denied." *Id.* at 601 *citing*, 893 F.Supp. at 440. The Court pointed out the district court noted as well that the City had not "identified even a single black contractor who was eligible for membership in any of the plaintiffs' associations, who applied for membership, and was denied." *Id.* at 601, *quoting*, 893 F.Supp at 441.

The Court held that given the City's failure to present more than the essentially unexplained opinion of Mr. Macklin, the opposing, uncontradicted testimony of Mr. Smith, and the failure of anyone to identify a single victim of the alleged discrimination, it was appropriate for the district court to conclude that a constitutionally sufficient basis was not established in the evidence. *Id.* at 601. The Court found that even if it accepted Mr. Macklin's opinions, however, it could not hold that the Ordinance was justified by that discrimination. *Id.* at 602. Racial discrimination can justify a race-based remedy only if the City has somehow participated in or supported that discrimination. *Id.* The Court said that this record would not support a finding that this occurred. *Id.*

Contrary to the City's argument, the Court stated nothing in *Croson* suggests that awarding contracts pursuant to a competitive bidding scheme and without reference to association membership could alone constitute passive participation by the City in membership discrimination by contractor associations. *Id.* Prior to 1982, the City let construction contracts on a competitive bid basis. It did not require bidders to be association members, and nothing in the record suggests that it otherwise favored the associations or their members. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

C. The evidence of discrimination by the City. The Court found the record provided substantially more support for the proposition that there was discrimination on the basis of race in the award of prime contracts by the City in the fiscal 1979–1981 period. *Id.* The Court also found the Contractors’ critique of that evidence less cogent than did the district court. *Id.*

The centerpiece of the City’s evidence was its expert’s calculation of disparity indices which gauge the disparity in the award of prime contracts by the City. *Id.* at 602. Following *Contractors II*, the expert calculated a disparity index for black construction firms of 11.4, based on a figure of 114 such firms available to perform City contracts. At trial, he recognized that the 114 figure included black engineering and architecture firms, so he recalculated the index, using only black construction firms (i.e., 57 firms). This produced a disparity index of 22.5. Thus, based on this analysis, black construction firms would have to have received approximately 4.5 times more public works dollars than they did receive in order to have achieved an amount proportionate to their representation among all construction firms. The expert found the disparity sufficiently large to be attributable to discrimination against black contractors. *Id.*

The district court found the study did not provide a strong basis in evidence for an inference of discrimination in the prime contract market. It reached this conclusion primarily for three reasons. The study, in the district court’s view, (1) did not take into account whether the black construction firms were qualified and willing to perform City contracts; (2) mixed statistical data from different sources; and (3) did not account for the “neutral” explanation that qualified black firms were too preoccupied with large, federally assisted projects to perform City projects. *Id.* at 602-3.

The Court said the district court was correct in concluding that a statistical analysis should focus on the minority population capable of performing the relevant work. *Id.* at 603. As *Croson* indicates, “[w]hen special qualifications are required to fill particular jobs, comparisons to the general population (rather than to the smaller group of individuals who possess the necessary qualifications) may have little probative value.” *Id.*, citing, 488 U.S. at 501. In *Croson* and other cases, the Court pointed out, however, the discussion by the Supreme Court concerning qualifications came in the context of a rejection of an analysis using the percentage of a particular minority in the general population. *Id.*

The issue of qualifications can be approached at different levels of specificity, however, the Court stated, and some consideration of the practicality of various approaches is required. An analysis is not devoid of probative value, the Court concluded, simply because it may theoretically be possible to adopt a more refined approach. *Id.* at 603.

To the extent the district court found fault with the analysis for failing to limit its consideration to those black contractors “willing” to undertake City work, the Court found its criticism more problematic. *Id.* at 603. In the absence of some reason to believe otherwise, the Court said one can normally assume that participants in a market with the ability to undertake gainful work will be “willing” to undertake it. Moreover, past discrimination in a marketplace may provide reason to believe the minorities who would otherwise be willing are discouraged from trying to secure the work. *Id.* at 603.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court stated that it seemed a substantial overstatement to assert that the study failed to take into account the qualifications and willingness of black contractors to participate in public works. *Id.* at 603. During the time period in question, fiscal years 1979–81, those firms seeking to bid on City contracts had to prequalify for *each and every* contract they bid on, and the criteria could be set differently from contract to contract. *Id.* The Court said it would be highly impractical to review the hundreds of contracts awarded each year and compare them to each and every MBE. *Id.* The expert chose instead to use as the relevant minority population the black firms listed in the 1982 OMO Directory. The Court found this would appear to be a reasonable choice that, if anything, may have been on the conservative side. *Id.*

When a firm applied to be certified, the OMO required it to detail its bonding experience, prior experience, the size of prior contracts, number of employees, financial integrity, and equipment owned. *Id.* at 603. The OMO visited each firm to substantiate its claims. Although this additional information did not go into the final directory, the OMO was confident that those firms on the list were capable of doing the work required on large scale construction projects. *Id.*

The Contractors point to the small number of black firms that sought to prequalify for City-funded contracts as evidence that black firms were unwilling to work on projects funded solely by the City. *Id.* at 603. During the time period in question, City records showed that only seven black firms sought to prequalify, and only three succeeded in prequalifying. The Court found it inappropriate, however, to conclude that this evidence undermines the inference of discrimination. As the expert indicated in his testimony, the Court noted, if there has been discrimination in City contracting, it is to be expected that black firms may be discouraged from applying, and the low numbers may tend to corroborate the existence of discrimination rather than belie it. The

Court stated that in a sense, to weigh this evidence for or against either party required it to presume the conclusion to be proved. *Id.* at 604.

The Court found that while it was true that the study “mixed data,” the weight given that fact by the district court seemed excessive. *Id.* at 604. The study expert used data from only two sources in calculating the disparity index of 22.5. He used data that originated from the City to determine the total amount of contract dollars awarded by the City, the amount that went to MBEs, and the number of black construction firms. *Id.* He “mixed” this with data from the Bureau of the Census concerning the number of total construction firms in the Philadelphia Standard Metropolitan Statistical Area (PSMSA). The data from the City is not geographically bounded to the same extent that the Census information is. *Id.* Any firm could bid on City work, and any firm could seek certification from the OMO.

Nevertheless, the Court found that due to the burdens of conducting construction at a distant location, the vast majority of the firms were from the Philadelphia region and the Census data offers a reasonable approximation of the total number of firms that might vie for City contracts. *Id.* Although there is a minor mismatch in the geographic scope of the data, given the size of the disparity index calculated by the study, the Court was not persuaded that it was significant. *Id.* at 604.

Considering the use of the OMO Directory and the Census data, the Court found that the index of 22.5 may be a conservative estimate of the actual disparity. *Id.* at 604. While the study used a figure for black firms that took into account qualifications and willingness, it used a figure for total firms that did not. *Id.* If the study under-counted the number of black firms qualified and willing to undertake City construction contracts or over-counted the total number of firms qualified and willing to undertake City construction contracts, the actual disparity would be greater than 22.5. *Id.* Further, while the study limited

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

the index to black firms, the study did not similarly reduce the dollars awarded to minority firms. The study used the figure of \$667,501, which represented the total amount going to all MBEs. If minorities other than blacks received some of that amount, the actual disparity would again be greater. *Id.* at 604.

The Court then considered the district court’s suggestion that the extensive participation of black firms in federally assisted projects, which were also procured through the City’s Procurement Office, accounted for their low participation in the other construction contracts awarded by the City. *Id.* The Court found the district court was right in suggesting that the availability of substantial amounts of federally funded work and the federal set-aside undoubtedly had an impact on the number of black contractors available to bid on other City contracts. *Id.* at 605.

The extent of that impact, according to the Court, was more difficult to gauge, however. That such an impact existed does not necessarily mean that the study’s analysis was without probative force. *Id.* at 605. If, the Court noted for example, one reduced the 57 available black contractors by the 20 to 22 that participated in federally assisted projects in fiscal years 1979–81 and used 35 as a fair approximation of the black contractors available to bid on the remaining City work, the study’s analysis produces a disparity index of 37, which the Court found would be a disparity that still suggests a substantial under-participation of black contractors among the successful bidders on City prime contracts. *Id.*

The court in conclusion stated whether this record provided a strong basis in evidence for an inference of discrimination in the prime contract market “was a close call.” *Id.* at 605. In the final analysis, however, the Court held it was a call that it found unnecessary to make, and thus it chose not to make it. *Id.* Even assuming that the record presents an adequately firm basis for that inference, the Court held the judgment of the district court must be affirmed because the Ordinance was clearly not narrowly tailored to remedy that discrimination. *Id.*

Narrowly Tailored. The Court said that strict scrutiny review requires it to examine the “fit” between the identified discrimination and the remedy chosen in an affirmative action plan. *Croson* teaches that there must be a strong basis in evidence not only for a conclusion that there is, or has been, discrimination, but also for a conclusion that the particular remedy chosen is made “necessary” by that discrimination. *Id.* at 605. The Court concluded that issue is shaped by its prior conclusions regarding the absence of a strong basis in evidence reflecting discrimination by prime contractors in selecting subcontractors and by contractor associations in admitting members. *Id.* at 606.

This left as a possible justification for the Ordinance only the assumption that the record provided a strong basis in evidence for believing the City discriminated against black contractors in the award of prime contracts during fiscal years 1979 to 1981. *Id.* at 606. If the remedy reflected in the Ordinance cannot fairly be said to be necessary in light of the assumed discrimination in awarding prime construction projects, the Court said that the Ordinance cannot stand. The Court held, as did the district court, that the Ordinance was not narrowly tailored. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

A. Inclusion of preferences in the subcontracting market. The Court found the primary focus of the City’s program was the market for subcontracts to perform work included in prime contracts awarded by the City. *Id.* at 606. While the program included authorization for the award of prime contracts on a “sheltered market” basis, that authorization had been sparsely invoked by the City. Its goal with respect to dollars for black contractors had been pursued primarily through requiring that bidding prime contractors subcontract to black contractors in stipulated percentages. *Id.* The 15 percent participation goal and the system of presumptions, which in practice required non-black contractors to meet the goal on virtually every contract, the Court found resulted in a 15 percent set-aside for black contractors in the subcontracting market. *Id.*

Here, as in *Croson*, the Court stated, “[t]o a large extent, the set-aside of subcontracting dollars seems to rest on the unsupported assumption that white contractors simply will not hire minority firms.” *Id.* at 606, *citing*, 488 U.S. at 502. Here, as in *Croson*, the Court found there is no firm evidentiary basis for believing that nonminority contractors will not hire black subcontractors. *Id.* Rather, the Court concluded the evidence, to the extent it suggests that racial discrimination had occurred, suggested discrimination by the City’s Procurement Department against black contractors who were capable of bidding on prime City construction contracts. *Id.* To the considerable extent that the program sought to constrain decision making by private contractors and favor black participation in the subcontracting market, the Court held it was ill-suited as a remedy for the discrimination identified. *Id.*

The Court pointed out it did not suggest that an appropriate remedial program for discrimination by a municipality in the award of primary contracts could never include a component that affects the subcontracting market in some way. *Id.* at 606. It held, however, that a program, like Philadelphia’s program, which focused almost exclusively

on the subcontracting market, was not narrowly tailored to address discrimination by the City in the market for prime contracts. *Id.*

B. The amount of the set-aside in the prime contract market. Having decided that the Ordinance is overbroad in its inclusion of subcontracting, the Court considered whether the 15 percent goal was narrowly tailored to address discrimination in prime contracting. *Id.* at 606. The Court found the record supported the district court’s findings that the Council’s attention at the time of the original enactment and at the time of the subsequent extension was focused solely on the percentage of minorities and women in the general population, and that Council made no effort at either time to determine how the Ordinance might be drafted to remedy particular discrimination — to achieve, for example, the approximate market share for black contractors that would have existed, had the purported discrimination not occurred. *Id.* at 607. While the City Council did not tie the 15 percent participation goal directly to the proportion of minorities in the local population, the Court said the goal was either arbitrarily chosen or, at least, the Council’s sole reference point was the minority percentage in the local population. *Id.*

The Court stated that it was clear that the City, in the entire course of this litigation, had been unable to provide an evidentiary basis from which to conclude that a 15 percent set-aside was necessary to remedy discrimination against black contractors in the market for prime contracts. *Id.* at 607. The study data indicated that, at most, only 0.7 percent of the construction firms qualified to perform City-financed prime contracts in the 1979–1981 period were black construction firms. *Id.* at 607. This, the Court found, indicated that the 15 percent figure chosen is an impermissible one. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court said it was not suggesting that the percentage of the preferred group in the universe of qualified contractors is necessarily the ceiling for all set-asides. It well may be that some premium could be justified under some circumstances. *Id.* at 608. However, the Court noted that the *only* evidentiary basis in the record that appeared at all relevant to fashioning a remedy for discrimination in the prime contracting market was the 0.7 percent figure. That figure did not provide a strong basis in evidence for concluding that a 15 percent set-aside was necessary to remedy discrimination against black contractors in the prime contract market. *Id.*

C. Program alternatives that are either race-neutral or less

burdensome to non-minority contractors. In holding that the Richmond plan was not narrowly tailored, the Court pointed out, the Supreme Court in *Croson* considered it significant that race-neutral remedial alternatives were available and that the City had not considered the use of these means to increase minority business participation in City contracting. *Id.* at 608. It noted, in particular, that barriers to entry like capital and bonding requirements could be addressed by a race-neutral program of city financing for small firms and could be expected to lead to greater minority participation. Nevertheless, such alternatives were not pursued or even considered in connection with the Richmond’s efforts to remedy past discrimination. *Id.*

The district court found that the City’s procurement practices created significant barriers to entering the market for City-awarded construction contracts. *Id.* at 608. Small contractors, in particular, were deterred by the City’s prequalification and bonding requirements from competing in that market. *Id.* Relaxation of those requirements, the district court found, was an available race-neutral alternative that would be likely to lead to greater participation by black contractors. No effort was made by the City, however, to identify barriers to entry in its procurement

process and that process was not altered before or in conjunction with the adoption of the Ordinance. *Id.*

The district court also found that the City could have implemented training and financial assistance programs to assist disadvantaged contractors of all races. *Id.* at 608. The record established that certain neutral City programs had achieved substantial success in fulfilling its goals. The district court concluded, however, that the City had not supported the programs and had not considered emulating and/or expanding the programs in conjunction with the adoption of the Ordinance. *Id.*

The Court held the record provided ample support for the finding of the district court that alternatives to race-based preferences were available in 1982, which would have been either race neutral or, at least, less burdensome to nonminority contractors. *Id.* at 609. The Court found the City could have lowered administrative barriers to entry, instituted a training and financial assistance program, and carried forward the OMO’s certification of minority contractor qualifications. *Id.* The record likewise provided ample support for the district court’s conclusion that the “City Council was not interested in considering race-neutral measures, and it did not do so.” *Id.* at 609. To the extent the City failed to consider or adopt these alternatives, the Court held it failed to narrowly tailor its remedy to prior or existing discrimination against black contractors. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court found it particularly noteworthy that the Ordinance, since its extension, in 1987, for an additional 12 years, had been targeted exclusively toward benefiting only minority and women contractors “whose ability to compete in the free enterprise system has been impaired due to diminished capital and credit opportunities as compared to others in the same business area who are not socially disadvantaged.” *Id.* at 609. The City’s failure to consider a race-neutral program designed to encourage investment in and/or credit extension to small contractors or minority contractors, the Court stated, seemed particularly telling in light of the limited classification of victims of discrimination that the Ordinance sought to favor. *Id.*

Conclusion. The Court held the remedy provided by the program substantially exceeds the limited justification that the record provided. *Id.* at 609. The program provided race-based preferences for blacks in the market for subcontracts where the Court found there was no strong basis in the evidence for concluding that discrimination occurred. *Id.* at 610. The program authorized a 15 percent set-aside applicable to all prime City contracts for black contractors when, the Court concluded there was no basis in the record for believing that such a set-aside of that magnitude was necessary to remedy discrimination by the City in that market. *Id.* Finally, the Court stated the City’s program failed to include race-neutral or less burdensome remedial steps to encourage and facilitate greater participation of black contractors, measures that the record showed to be available. *Id.*

The Court concluded that a city may adopt race-based preferences only when there is a “strong basis in evidence for its conclusion that [the] remedial action was necessary.” *Id.* at 610. Only when such a basis exists is there sufficient assurance that the racial classification is not “merely the product of unthinking stereotypes or a form of racial politics.” *Id.* at 610. That assurance, the Court held was lacking here, and, accordingly, found that the race-based preferences provided by the Ordinance could not stand. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

14. *Contractor’s Association of Eastern Pennsylvania v. City of Philadelphia*, 6 F.3d 996 (3d Cir. 1993)

An association of construction contractors filed suit challenging, on equal protection grounds, a city of Philadelphia ordinance that established a set-aside program for “disadvantaged business enterprises” owned by minorities, women, and handicapped persons. 6 F.3d. at 993. The United States District Court for the Eastern District of Pennsylvania, [735 F.Supp. 1274 \(E.D. Phila. 1990\)](#), granted summary judgment for the [contractors 739 F.Supp. 227](#), and denied the City’s motion to stay the injunctive relief. Appeal was taken. The Third Circuit Court of Appeals, [945 F.2d 1260 \(3d Cir. 1991\)](#), affirmed in part and vacated in part the district court’s decision. *Id.* On remand, the district court again granted summary judgment for the contractors. The City appealed. The Third Circuit Court of Appeals held that: (1) the contractors association had standing, but only to challenge the portions of the ordinance that applied to construction contracts; (2) the City presented sufficient evidence to withstand summary judgment with respect to the race and gender preferences; and (3) the preference for businesses owned by handicapped persons was rationally related to a legitimate government purpose and, thus, did not violate equal protection. *Id.*

Procedural history. Nine associations of construction contractors challenged on equal protection grounds a City of Philadelphia ordinance creating preferences in City contracting for businesses owned by racial and ethnic minorities, women, and handicapped persons. *Id.* at 993. The district court granted summary judgment to the Contractors, holding they had standing to bring this lawsuit and invalidating the Ordinance in all respects. [Contractors Association v. City of Philadelphia, 735 F.Supp. 1274 \(E.D.Pa.1990\)](#). In an earlier opinion, the Third Circuit affirmed the district court’s ruling on standing, but vacated summary judgment on the merits because the City had outstanding discovery requests. [Contractors](#)

[Association v. City of Philadelphia, 945 F.2d 1260 \(3d Cir.1991\)](#). On remand after discovery, the district court again entered summary judgment for the Contractors. The Third Circuit in this case affirmed in part, vacated in part, and reversed in part. 6 F.3d 990, 993.

In 1982, the Philadelphia City Council enacted an ordinance to increase participation in City contracts by minority-owned and women-owned businesses. Phila.Code § 17–500. *Id.* The Ordinance established “goals” for the participation of “disadvantaged business enterprises.” § 17–503. “Disadvantaged business Disadvantaged business enterprises” (DBEs) were defined as those enterprises at least 51 percent owned by “socially and economically disadvantaged individuals,” defined in turn as: those individuals who have been subjected to racial, sexual or ethnic prejudice because of their identity as a member of a group or differential treatment because of their handicap without regard to their individual qualities, and whose ability to compete in the free enterprise system has been impaired due to diminished capital and credit opportunities as compared to others in the same business area who are not socially disadvantaged. *Id.* at 994. The Ordinance further provided that racial minorities and women are rebuttably presumed to be socially and economically disadvantaged individuals, § 17–501(11)(a), but that a business which has received more than \$5 million in City contracts, even if owned by such an individual, is rebuttably presumed not to be a DBE, § 17–501(10). *Id.* at 994.

The Ordinance set goals for participation of DBEs in city contracts: 15 percent for minority-owned businesses, 10 percent for women-owned businesses, and 2 percent for businesses owned by handicapped persons. § 17–503(1). *Id.* at 994. The Ordinance applied to all City contracts, which are divided into three types — vending, construction, and personal and professional services. § 17–501(6). The percentage goals related to the total dollar amounts of City contracts and are

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

calculated separately for each category of contracts and each City agency. *Id.* at 994.

In 1989, nine contractors associations brought suit in the Eastern District of Pennsylvania against the City of Philadelphia and two city officials, challenging the Ordinance as a facial violation of the Equal Protection Clause of the Fourteenth Amendment. *Id.* at 994. After the City moved for judgment on the pleadings contending the Contractors lacked standing, the Contractors moved for summary judgment on the merits. The district court granted the Contractors' motion. It ruled the Contractors had standing, based on affidavits of individual association members alleging they had been denied contracts for failure to meet the DBE goals despite being low bidders. *Id.* at 995 *citing*, [735 F.Supp. at 1283 & n. 3](#).

Turning to the merits of the Contractors' equal protection claim, the district court held that [City of Richmond v. J.A. Croson Co., 488 U.S. 469 \(1989\)](#), required it to apply the strict scrutiny standard to review the sections of the Ordinance creating a preference for minority-owned businesses. *Id.* Under that standard, the Third Circuit held a law will be invalidated if it is not "narrowly tailored" to a "compelling government interest." *Id.* at 995.

Applying *Croson*, the district court struck down the Ordinance because the City had failed to adduce sufficiently specific evidence of past racial discrimination against minority construction contractors in Philadelphia to establish a "compelling government interest." *Id.* at 995, *quoting*, [735 F.Supp. at 1295–98](#). The court also held the Ordinance was not "narrowly tailored," emphasizing the City had not considered using race-neutral means to increase minority participation in City contracting and had failed to articulate a rationale for choosing 15 percent as the goal for minority participation. *Id.* at 995; [735 F.Supp. at 1298–99](#). The court held the Ordinance's preferences for businesses owned by women

and handicapped persons were similarly invalid under the less rigorous intermediate scrutiny and rational basis standards of review. *Id.* at 995 *citing*, [735 F.Supp. at 1299–1309](#).

On appeal, the Third Circuit in 1991 affirmed the district court's ruling on standing, but vacated its judgment on the merits as premature because the Contractors had not responded to certain discovery requests at the time the court ruled. [945 F.2d 1260 \(3d Cir.1991\)](#). The Court remanded so discovery could be completed and explicitly reserved judgment on the merits. *Id.* at 1268. On remand, all parties moved for summary judgment, and the district court reaffirmed its prior decision, holding discovery had not produced sufficient evidence of discrimination in the Philadelphia construction industry against businesses owned by racial minorities, women, and handicapped persons to withstand summary judgment. The City and United Minority Enterprise Associates, Inc. (UMEA), which had intervened filed an appeal. *Id.*

This appeal, the Court said, presented three sets of questions: whether and to what extent the Contractors have standing to challenge the Ordinance, which standards of equal protection review govern the different sections of the Ordinance, and whether these standards justify invalidation of the Ordinance in whole or in part. *Id.* at 995.

Standing. The Supreme Court has confirmed that construction contractors have standing to challenge a minority preference ordinance upon a showing they are "able and ready to bid on contracts [subject to the ordinance] and that a discriminatory policy prevents [them] from doing so on an equal basis." *Id.* at 995. Because the affidavits submitted to the district court established the Contractors were able and ready to bid on construction contracts, but could not do so for failure to meet the DBE percentage requirements, the court held they had standing to challenge the sections of the Ordinance covering construction contracts. *Id.* at 996.

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Standards of equal protection review. The Contractors challenge the preferences given by the Ordinance to businesses owned and operated by minorities, women, and handicapped persons. In analyzing these classifications separately, the Court first considered which standard of equal protection review applies to each classification. *Id.* at 999.

Race, ethnicity, and gender. The Court found that choice of the appropriate standard of review turns on the nature of the classification. *Id.* at 999. Because under equal protection analysis classifications based on race, ethnicity, or gender are inherently suspect, they merit closer judicial attention. *Id.* Accordingly, the Court determined whether the Ordinance contains race- or gender-based classifications. The Ordinance’s classification scheme is spelled out in its definition of “socially and economically disadvantaged.” *Id.* The district court interpreted this definition to apply only to minorities, women, and handicapped persons and viewed the definition’s economic criteria as in addition to rather than in lieu of race, ethnicity, gender, and handicap. *Id.* Therefore, it applied strict scrutiny to the racial preference under *Croson* and intermediate scrutiny to the gender preference under [Mississippi University for Women v. Hogan](#), 458 U.S. 718, 724 (1982). *Id.* at 999.

A. Strict scrutiny. Under strict scrutiny, a law may only stand if it is “narrowly tailored” to a “compelling government interest.” *Id.* at 999. Under intermediate scrutiny, a law must be “substantially related” to the achievement of “important government objectives.” *Id.*

The Court agreed with the district court that the definition of “socially and economically disadvantaged individuals” included only individuals who are both victims of prejudice based on status and economically deprived. *Id.* at 999. Additionally, the last clause of the definition described economically disadvantaged individuals as those “whose ability to compete in the free enterprise system has been impaired ... as compared to others ... who are not socially disadvantaged.” *Id.* This

clause, the Court found, demonstrated the drafters wished to rectify only economic disadvantage that results from social disadvantage, i.e., prejudice based on race, ethnicity, gender, or handicapped status. *Id.* The Court said the plain language of the Ordinance foreclosed the City’s argument that a white male contractor could qualify for preferential treatment solely on the basis of economic disadvantage. *Id.* at 1000.

B. Intermediate scrutiny. The Court considered the proper standard of review for the Ordinance’s gender preference. The Court held a gender-based classification favoring women merited intermediate scrutiny. *Id.* at 1000, *citing*, [Hogan](#) 458 U.S. at 728. The Ordinance, the Court stated, is such a program. *Id.* Several federal courts, the Court noted, have applied intermediate scrutiny to similar gender preferences contained in state and municipal affirmative action contracting programs. *Id.* at 1001, *citing*, [Coral Constr. Co. v. King County](#), 941 F.2d 910, 930 (9th Cir.1991), *cert. denied*, 502 U.S. 1033 (1992); [Michigan Road Builders Ass’n, Inc. v. Milliken](#), 834 F.2d 583, 595 (6th Cir.1987), *aff’d mem.*, 489 U.S. 1061(1989); [Associated General Contractors of Cal. v. City and County of San Francisco](#), 813 F.2d 922, 942 (9th Cir.1987); [Main Line Paving Co. v. Board of Educ.](#), 725 F.Supp. 1349, 1362 (E.D.Pa.1989).

Application of intermediate scrutiny to the Ordinance’s gender preference, the Court said, also follows logically from *Croson*, which held municipal affirmative action programs benefiting racial minorities merit the same standard of review as that given other race-based classifications. *Id.* For these reasons, the Third Circuit rejected, as did the district court, those cases applying strict scrutiny to gender-based classifications. [Cone Corp. v. Hillsborough County](#), 908 F.2d 908 (11th Cir.), *cert. denied*, 498 U.S. 983, 111 S.Ct. 516, 112 L.Ed.2d 528 (1990). *Id.* at 1000-1001. The Court agreed with the district court’s choice of intermediate scrutiny to review the Ordinance’s gender preference. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Handicap. The district court reviewed the preference for handicapped business owners under the rational basis test. *Id.* at 1000, [citing 735 F.Supp. at 1307](#). That standard validates the classification if it is “rationally related to a legitimate governmental purpose.” *Id.* at 1001, [citing Cleburne, 473 U.S. at 445](#). The Court held the district court properly chose the rational basis standard in reviewing the Ordinance’s preference for handicapped persons. *Id.*

Constitutionality of the ordinance: race and ethnicity. Because strict scrutiny applies to the Ordinance’s racial and ethnic preferences, the Court stated it may only uphold them if they are “narrowly tailored” to a “compelling government interest.” *Id.* at 1001-2. The Court noted that in *Croson*, the Supreme Court made clear that combatting racial discrimination is a “compelling government interest.” *Id.* at 1002, [quoting, 488 U.S. at 492, 509](#). It also held a city can enact such a preference to remedy past or present discrimination where it has actively discriminated in its award of contracts or has been a “ ‘passive participant’ in a system of racial exclusion practiced by elements of the local construction industry.” [Id. at 1002, quoting, 488 U.S. at 492.](#)

In the Supreme Court’s view, the “relevant statistical pool” was not the minority population, but the number of qualified minority contractors. It stressed the city did not know the number of qualified minority businesses in the area and had offered no evidence of the percentage of contract dollars minorities received as subcontractors. [Id. at 1002, citing 488 U.S. at 502.](#)

Ruling the Philadelphia Ordinance’s racial preference failed to overcome strict scrutiny, the district court concluded the Ordinance “possesses four of the five characteristics fatal to the constitutionality of the Richmond Plan,” *Id.* at 1002, [quoting, 735 F.Supp. at 1298](#). As in *Croson*, the district court reasoned, the City relied on national statistics, a comparison between prime contract awards and the percentage of

minorities in Philadelphia’s population, the Ordinance’s declaration it was remedial, and “conclusory” testimony of witnesses regarding discrimination in the Philadelphia construction industry. [Id. at 1002, quoting, 1295–98.](#)

In a footnote, the Court pointed out the district court also interpreted *Croson* to require “specific evidence of systematic prior discrimination in the industry in question by th[e] governmental unit” enacting the ordinance. [735 F.Supp. at 1295](#). The Court said this reading overlooked the statement in *Croson* that a City can be a “*passive participant*” in private discrimination by awarding contracts to firms that practice racial discrimination, and that a city “has a compelling interest in assuring that public dollars ... do not serve to finance the evil of private prejudice.” *Id.* at 1002, n. 10, [quoting, 488 U.S. at 492.](#)

Anecdotal evidence of racial discrimination. The City contended the district court understated the evidence of prior discrimination available to the Philadelphia City Council when it enacted the 1982 ordinance. The City Council Finance Committee received testimony from at least fourteen minority contractors who recounted personal experiences with racial discrimination. *Id.* at 1002. In certain instances, these contractors lost out despite being low bidders. The Court found this anecdotal evidence significantly outweighed that presented in *Croson*, where the Richmond City Council heard “no direct evidence of race discrimination on the part of the city in letting contracts or any evidence that the city’s prime contractors had discriminated against minority-owned subcontractors.” *Id.*, [quoting, 488 U.S. at 480.](#)

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Although the district court acknowledged the minority contractors' testimony was relevant under *Croson*, it discounted this evidence because "other evidence of the type deemed impermissible by the Supreme Court ... unsupported general testimony, impermissible statistics and information on the national set-aside program ... overwhelmingly formed the basis for the enactment of the set-aside ... and therefore taint[ed] the minds of city councilmembers." *Id.* at 1002, quoting, [735 F.Supp. at 1296](#).

The Third Circuit held, however, given *Croson's* emphasis on statistical evidence, even had the district court credited the City's anecdotal evidence, the Court did not believe this amount of anecdotal evidence was sufficient to satisfy strict scrutiny. *Id.* at 1003, quoting, [Coral Constr., 941 F.2d at 919](#) ("anecdotal evidence ... rarely, if ever, can ... show a systemic pattern of discrimination necessary for the adoption of an affirmative action plan"). Although anecdotal evidence alone may, the Court said, in an exceptional case, be so dominant or pervasive that it passes muster under *Croson*, it is insufficient here. *Id.* But because the combination of "anecdotal and statistical evidence is potent," [Coral Constr., 941 F.2d at 919](#), the Court considered the statistical evidence proffered in support of the Ordinance.

Statistical evidence of racial discrimination. There are two categories of statistical evidence here, evidence undisputedly considered by City Council before it enacted the Ordinance in 1982 (the "pre-enactment" evidence), and evidence developed by the City on remand (the "post-enactment" evidence). *Id.* at 1003.

Pre-Enactment statistical evidence. The principal pre-enactment statistical evidence appeared in the 1982 Report of the City Council Finance Committee and recited that minority contractors were awarded only 0.09 percent of City contract dollars during the preceding three years, 1979 through 1981, although businesses owned by Blacks and Hispanics

accounted for 6.4 percent of all businesses licensed to operate in Philadelphia. The Court found these statistics did not satisfy *Croson* because they did not indicate what proportion of the 6.4 percent of minority-owned businesses were available or qualified to perform City construction contracts. *Id.* at 1003. Under *Croson*, available minority-owned businesses comprise the "relevant statistical pool." *Id.* at 1003. Therefore, the Court held the data in the Finance Committee Report did not provide a sufficient evidentiary basis for the Ordinance.

Post-Enactment statistical evidence. The "post-enactment" evidence consists of a study conducted by an economic consultant to demonstrate the disproportionately low share of public and private construction contracts awarded to minority-owned businesses in Philadelphia. The study provided the "relevant statistical pool" needed to satisfy *Croson* — the percentage of minority businesses engaged in the Philadelphia construction industry. *Id.* at 1003. The study also presented data showing that minority subcontractors were underrepresented in the private sector construction market. This data may be relevant, the Court said, if at trial the City can link it to discrimination occurring in the public sector construction market because the Ordinance covers subcontracting. *Id.* at n. 13.

The Court noted that several courts have held post-enactment evidence is admissible in determining whether an Ordinance satisfies *Croson*. *Id.* at 1004. Consideration of post-enactment evidence, the Court found was appropriate here, where the principal relief sought and the only relief granted by the district court, was an injunction. Because injunctions are prospective only, it makes sense the Court said to consider all available evidence before the district court, including the post-enactment evidence, which the district court did. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Sufficiency of the statistical and anecdotal evidence and burden of proof. In determining whether the statistical evidence was adequate, the Court looked to what it referred to as its critical component — the “disparity index.” The index consists of the percentage of minority contractor participation in City contracts divided by the percentage of minority contractor availability or composition in the “population” of Philadelphia area construction firms. This equation yields a percentage figure which is then multiplied by 100 to generate a number between 0 and 100, with 100 consisting of full participation by minority contractors given the amount of the total contracting population they comprise. *Id.* at 1005.

The Court noted that other courts considering equal protection challenges to similar ordinances have relied on disparity indices in determining whether *Croson’s* evidentiary burden is satisfied. *Id.* Disparity indices are highly probative evidence of discrimination because they ensure that the “relevant statistical pool” of minority contractors is being considered. *Id.*

A. Statistical evidence. The study reported a disparity index for City of Philadelphia construction contracts during the years 1979 through 1981 of 4 out of a possible 100. This index, the Court stated, was significantly worse than that in other cases where ordinances have withstood constitutional attack. *Id.* at 1004, citing, [Cone Corp., 908 F.2d at 916 \(10.78 disparity index\)](#); [AGC of California, 950 F.2d at 1414 \(22.4 disparity index\)](#); [Concrete Works, 823 F.Supp. at 834](#) (disparity index “significantly less than” 100); see also [Stuart, 951 F.2d at 451](#) (disparity index of 10 in police promotion program); compare [O’Donnell, 963 F.2d at 426](#) (striking down ordinance given disparity indices of approximately 100 in two categories). Therefore, the Court found the disparity index probative of discrimination in City contracting in the Philadelphia construction industry prior to enactment of the Ordinance. *Id.*

The Contractors contended the study was methodologically flawed because it considered only prime contractors and because it failed to consider the qualifications of the minority businesses or their interest in performing City contracts. The Contractors maintained the study did not indicate why there was a disparity between available minority contractors and their participation in contracting. The Contractors contended that these objections, without more, entitled them to summary judgment, arguing that under the strict scrutiny standard they do not bear the burden of proof, and therefore need not offer a neutral explanation for the disparity to prevail. *Id.* at 1005.

The Contractors, the Court found, misconceived the allocation of the burden of proof in affirmative action cases. *Id.* at 1005. The Supreme Court has indicated that “[t]he ultimate burden remains with [plaintiffs] to demonstrate the unconstitutionality of an affirmative action program.” *Id.* 1005. Thus, the Court held the Contractors, not the City, bear the burden of proof. *Id.* Where there is a significant statistical disparity between the number of qualified minority contractors willing and able to perform a particular service and the number of contractors actually engaged by the locality or the locality’s prime contractors, an inference of discriminatory exclusion could arise. *Id.* Moreover, evidence of a pattern of individual discriminatory acts can, if supported by appropriate statistical proof, lend support to a local government’s determination that broader remedial relief is justified. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court, following *Croson*, held where a city defends an affirmative action ordinance as a remedy for past discrimination, issues of proof are handled as they are in other cases involving a pattern or practice of discrimination. *Id.* at 1006. *Croson's* reference to an “inference of discriminatory exclusion” based on statistics, as well as its citation to Title VII pattern cases, the Court stated, supports this interpretation. *Id.* The plaintiff bears the burden in such a case. *Id.* The Court noted the Third Circuit has indicated statistical proof of discrimination is handled similarly under Title VII and equal protection principles. *Id.*

The Court found the City’s statistical evidence had created an inference of discrimination which the Contractors would have to rebut at trial either by proving a “neutral explanation” for the disparity, “showing the statistics are flawed ... demonstrating that the disparities shown by the statistics are not significant or actionable ... or presenting contrasting statistical data.” *Id.* at 1007. *A fortiori*, this evidence, the Court said is sufficient for the City to withstand summary judgment. The Court stated that the Contractors’ objections to the study were properly presented to the trier of fact. *Id.* Accordingly, the Court found the City’s statistical evidence established a prima facie case of racial discrimination in the award of City of Philadelphia construction contracts. *Id.*

Consistent with strict scrutiny, the Court stated it must examine the data for each minority group contained in the Ordinance. *Id.* The Census data on which the study relied demonstrated that in 1982, the year the Ordinance was enacted, there were construction firms owned in Philadelphia by Blacks, Hispanics, and Asian Americans, but not Native Americans. *Id.* Therefore, the Court held neither the City nor prime contractors could have discriminated against construction companies owned by Native Americans at the time of the Ordinance, and the Court affirmed summary judgment as to them. *Id.*

The Census Report indicated there were 12 construction firms owned by Hispanic persons, 6 firms owned by Asian American persons, 3 firms owned by persons of Pacific Islands descent, and 1 other minority-owned firm. *Id.* at 1008. The study calculated Hispanic firms represented 0.15 percent of the available firms and Asian American, Pacific Islander, and “other” minorities represented 0.12 percent of the available firms, and that these firms received no City contracts during the years 1979 through 1981. The Court did not believe these numbers were large enough to create a triable issue of discrimination. The mere fact that 0.27 percent of City construction firms — the percentage of all of these groups combined — received no contracts does not rise to the “significant statistical disparity.” *Id.* at 1008.

B. Anecdotal evidence. Nor, the Court found, does it appear that there was any anecdotal evidence of discrimination against construction businesses owned by people of Hispanic or Asian American descent. *Id.* at 1008. The district court found “there is no evidence whatsoever in the legislative history of the Philadelphia Ordinance that an American Indian, Eskimo, Aleut or Native Hawaiian has ever been discriminated against in the procurement of city contracts,” *Id.* at 1008, quoting, [735 F.Supp. at 1299](#), and there was no evidence of any witnesses who were members of these groups or who were Hispanic. *Id.*

The Court recognized that the small number of Philadelphia-area construction businesses owned by Hispanic or Asian American persons did not eliminate the possibility of discrimination against these firms. *Id.* at 1008. The small number itself, the Court said, may reflect barriers to entry caused in part by discrimination. *Id.* But, the Court held, plausible hypotheses are not enough to satisfy strict scrutiny, even at the summary judgment stage. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Conclusion on compelling government interest. The Court found that nothing in its decision prevented the City from re-enacting a preference for construction firms owned by Hispanic, Asian American, or Native American persons based on more concrete evidence of discrimination. *Id.* In sum, the Court held, the City adduced enough evidence of racial discrimination against Blacks in the award of City construction contracts to withstand summary judgment on the compelling government interest prong of the *Croson* test. *Id.*

Narrowly Tailored. The Court then decided whether the Ordinance’s racial preference was “narrowly tailored” to the compelling government interest of eradicating racial discrimination in the award of City construction contracts. *Id.* at 1008. *Croson* held this inquiry turns on four factors: (1) whether the city has first considered and found ineffective “race-neutral measures,” such as enhanced access to capital and relaxation of bonding requirements, (2) the basis offered for the percentage selected, (3) whether the program provides for waivers of the preference or other means of affording individualized treatment to contractors, and (4) whether the Ordinance applies only to minority businesses who operate in the geographic jurisdiction covered by the Ordinance. *Id.*

The City contended it enacted the Ordinance only after race-neutral alternatives proved insufficient to improve minority participation in City contracting. *Id.* It relied on the affidavits of City Council President and former Philadelphia Urban Coalition General Counsel who testified regarding the race-neutral precursors of the Ordinance — the Philadelphia Plan, which set goals for employment of minorities on public construction sites, and the Urban Coalition’s programs, which included such race-neutral measures as a revolving loan fund, a technical assistance and training program, and bonding assistance efforts. *Id.* The Court found the information in these affidavits

sufficiently established the City’s prior consideration of race-neutral programs to withstand summary judgment. *Id.* at 1009.

Unlike the Richmond Ordinance, the Philadelphia Ordinance provided for several types of waivers of the 15 percent goal. *Id.* at 1009. It exempted individual contracts or classes of contracts from the Ordinance where there were an insufficient number of available minority-owned businesses “to ensure adequate competition and an expectation of reasonable prices on bids or proposals,” and allowed a prime contractor to request a waiver of the 15 percent requirement where the contractor shows he has been unable after “a good faith effort to comply with the goals for DBE participation.” *Id.*

Furthermore, as the district court noted, the Ordinance eliminated from the program successful minority businesses — those who have won \$5 million in city contracts. *Id.* Also unlike the Richmond program, the City’s program was geographically targeted to Philadelphia businesses, as waivers and exemptions are permitted where there exist an insufficient number of MBEs “within the Philadelphia Standard Metropolitan Statistical Area.” *Id.* The Court noted other courts have found these targeting mechanisms significant in concluding programs are narrowly tailored. *Id.*

The Court said a closer question was presented by the Ordinance’s 15 percent goal. The City’s data demonstrated that, prior to the Ordinance, only 2.4 percent of available construction contractors were minority-owned. The Court found that the goal need not correspond precisely to the percentage of available contractors. *Id.* *Croson* does not impose this requirement, the Third Circuit concluded, as the Supreme Court stated only that Richmond’s 30 percent goal inappropriately assumed “minorities [would] choose a particular trade in lockstep proportion to their representation in the local population.” *Id.*, quoting, [488 U.S. at 507.](#)

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

The Court pointed out that imposing a 15 percent goal for each contract may reflect the need to account for those contractors who received a waiver because insufficient minority businesses were available, and the contracts exempted from the program. *Id.* Given the strength of the Ordinance’s showing with respect to other *Croson* factors, the Court concluded the City had created a dispute of fact on whether the minority preference in the Ordinance was “narrowly tailored.” *Id.*

Gender and intermediate scrutiny. Under the intermediate scrutiny standard, the gender preference is valid if it was “substantially related to an important governmental objective.” *Id.*, at 1009.

The City contended the gender preference was aimed at the “important government objective” of remedying economic discrimination against women, and that the 10 percent goal was substantially related to this objective. In assessing this argument, the Court noted that “[i]n the context of women-business enterprise preferences, the two prongs of this intermediate scrutiny test tend to converge into one.” *Id.* at 1009. The Court held it could uphold the construction provisions of this program if the City had established a sufficient factual predicate for the claim that women-owned construction businesses have suffered economic discrimination and the 10 percent gender preference is an appropriate response. *Id.* at 1010.

Few cases have considered the evidentiary burden needed to satisfy intermediate scrutiny in this context, the Court pointed out, and there is no *Croson* analogue to provide a ready reference point. *Id.* at 1010. In particular, the Court said, it is unclear whether statistical evidence as well as anecdotal evidence is required to establish the discrimination necessary to satisfy intermediate scrutiny, and if so, how much statistical evidence is necessary. *Id.* The Court stated that the Supreme Court gender-preference cases are inconclusive. The Supreme Court, the Court concluded, had not squarely ruled on the necessity of

statistical evidence of gender discrimination, and its decisions, according to the Court, were difficult to reconcile on the point. *Id.* The Court noted the Supreme Court has upheld gender preferences where no statistics were offered. *Id.*

The Supreme Court has stated that an affirmative action program survives intermediate scrutiny if the proponent can show it was “a product of analysis rather than a stereotyped reaction based on habit.” *Id.* at 1010. The Third Circuit found this standard requires the City to present probative evidence in support of its stated rationale for the gender preference, discrimination against women-owned contractors. *Id.* The Court held the City had not produced enough evidence of discrimination, noting that in its brief, the City relied on statistics in the City Council Finance Committee Report and one affidavit from a woman engaged in the catering business. *Id.*, But, the Court found this evidence only reflected the participation of women in City contracting generally, rather than in the construction industry, which was the only cognizable issue in this case. *Id.* at 1011.

The Court concluded the evidence offered by the City regarding women-owned construction businesses was insufficient to create an issue of fact. *Id.* at 1011. Significantly, the Court said the study contained no disparity index for women-owned construction businesses in City contracting, such as that presented for minority-owned businesses. *Id.* at 1011. Given the absence of probative statistical evidence, the City, according to the Court, must rely solely on anecdotal evidence to establish gender discrimination necessary to support the Ordinance. *Id.* But the record contained only one three-page affidavit alleging gender discrimination in the construction industry. *Id.* The only other testimony on this subject, the Court found, consisted of a single, conclusory sentence of one witness who appeared at a City Council hearing. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

This evidence the Court held was not enough to create a triable issue of fact regarding gender discrimination under the intermediate scrutiny standard. Therefore, the Court affirmed the grant of summary judgment invalidating the gender preference for construction contracts. *Id.* at 1011. The Court noted that it saw no impediment to the City re-enacting the preference if it can provide probative evidence of discrimination *Id.* at 1011.

Handicap and rational basis. The Court then addressed the two-percent preference for businesses owned by handicapped persons. *Id.* at 1011. The district court struck down this preference under the rational basis test, based on the belief according to the Third Circuit, that Croson required some evidence of discrimination against business enterprises owned by handicapped persons and therefore that the City could not rely on testimony of discrimination against handicapped individuals. *Id.*, citing [735 F.Supp. at 1308](#). The Court stated that a classification will pass the rational basis test if it is “rationally related to a legitimate government purpose,” *Id.*, citing, [Cleburne, 473 U.S. at 440](#).

The Court pointed out that the Supreme Court had affirmed the permissiveness of the rational basis test in [Heller v. Doe, 509 U.S. 312–43 \(1993\)](#), indicating that “a [statutory] classification” subject to rational basis review “is accorded a strong presumption of validity,” and that “a state ... has no obligation to produce evidence to sustain the rationality of [the] classification.” *Id.* at 1011. Moreover, “the burden is on the one attacking the legislative arrangement to negative every conceivable basis which might support it, whether or not the basis has a foundation in the record.” *Id.* at 1011.

The City stated it sought to minimize discrimination against businesses owned by handicapped persons and encouraged them to seek City contracts. The Court agreed with the district court that these are legitimate goals, but unlike the district court, the Court held the two-percent preference was rationally related to this goal. *Id.* at 1011.

The City offered anecdotal evidence of discrimination against handicapped persons. *Id.* at 1011. Prior to amending the Ordinance in 1988 to include the preference, City Council held a hearing where eight witnesses testified regarding employment discrimination against handicapped persons both nationally and in Philadelphia. *Id.* Four witnesses spoke of discrimination against blind people, and three testified to discrimination against people with other physical handicaps. *Id.* Two of the witnesses, who were physically disabled, spoke of discrimination they and others had faced in the work force. *Id.* One of these disabled witnesses testified he was in the process of forming his own residential construction company. *Id.* at 1011-12. Additionally, two witnesses testified that the preference would encourage handicapped persons to own and operate their own businesses. *Id.* at 1012.

The Court held that under the rational basis standard, the Contractors did not carry their burden of negating every basis which supported the legislative arrangement, and that City Council was entitled to infer discrimination against the handicapped from this evidence and was entitled to conclude the Ordinance would encourage handicapped persons to form businesses to win City contracts. *Id.* at 1012. Therefore, the Court reversed the district court’s grant of summary judgment invalidating this aspect of the Ordinance and remanded for entry of an order granting summary judgment to the City on this issue. *Id.*

L. Legal — Other federal circuit courts of appeal decisions involving state/local programs

Holding. The Court vacated the district court’s grant of summary judgment on the non-construction provisions of the Ordinance, reversed the grant of summary judgment to plaintiff contractors on the construction provisions of the Ordinance as applied to businesses owned by Black persons and handicapped persons, affirmed the grant of summary judgment to the plaintiff contractors on the construction provisions of the Ordinance as applied to businesses owned by Hispanic, Asian American, or Native American persons or women, and remanded the case for further proceedings and a trial in accordance with the opinion.

L. Legal — Other district court decisions regarding state/local programs

I. Recent District Court Decisions Regarding State/Local Government MBE/WBE/DBE Programs in Other Jurisdictions

1. *Kossman Contracting Co., Inc. v. City of Houston*, 2016 WL 1104363 (S.D. Tex. March 22, 2016).

Plaintiff Kossman is a company engaged in the business of providing erosion control services and is majority owned by a white male. 2016 WL 1104363 at *1. Kossman brought this action as an equal protection challenge to the City of Houston’s Minority and Women Owned Business Enterprise (“MWBE”) program. *Id.* The MWBE program that is challenged has been in effect since 2013 and sets a 34 percent MWBE goal for construction projects. *Id.* Houston set this goal based on a disparity study issued in 2012. *Id.* The study analyzed the status of minority-owned and women-owned business enterprises in the geographic and product markets of Houston’s construction contracts. *Id.*

Kossman alleges that the MWBE program is unconstitutional on the ground that it denies non-MWBEs equal protection of the law, and asserts that it has lost business as a result of the MWBE program because prime contractors are unwilling to subcontract work to a non-MWBE firm like Kossman. *Id.* at *1. Kossman filed a motion for summary judgment; Houston filed a motion to exclude the testimony of Kossman’s expert; and Houston filed a motion for summary judgment. *Id.*

The district court referred these motions to the Magistrate Judge. The Magistrate Judge, on February 17, 2016, issued its Memorandum & Recommendation to the district court in which it found that Houston’s motion to exclude Kossman’s expert should be granted because the expert articulated no method and had no training in statistics or economics that would allow him to comment on the validity of the disparity study. *Id.* at *1 The Magistrate Judge also found that the

MWBE program was constitutional under strict scrutiny, except with respect to the inclusion of Native American-owned businesses. *Id.* The Magistrate Judge found there was insufficient evidence to establish a need for remedial action for businesses owned by Native Americans, but found there was sufficient evidence to justify remedial action and inclusion of other racial and ethnic minorities and women-owned businesses. *Id.*

After the Magistrate Judge issued its Memorandum & Recommendation, Kossman filed objections, which the district court subsequently in its order adopting Memorandum & Recommendation, decided on March 22, 2016, affirmed and adopted the Memorandum & Recommendation of the magistrate judge and overruled the objections by Kossman. *Id.* at *2.

District court order adopting Memorandum & Recommendation of Magistrate Judge.

Dun & Bradstreet underlying data properly withheld and Kossman’s proposed expert properly excluded. The district court first rejected Kossman’s objection that the City of Houston improperly withheld the Dun & Bradstreet data that was utilized in the disparity study. This ruling was in connection with the district court’s affirming the decision of the Magistrate Judge granting the motion of Houston to exclude the testimony of Kossman’s proposed expert. Kossman had conceded that the Magistrate Judge correctly determined that Kossman’s proposed expert articulated no method and relied on untested hypotheses. *Id.* at *2. Kossman also acknowledged that the expert was unable to produce data to confront the disparity study. *Id.*

L. Legal — Other district court decisions regarding state/local programs

Kossman had alleged that Houston withheld the underlying data from Dun & Bradstreet. The court found that under the contractual agreement between Houston and its consultant, the consultant for Houston had a licensing agreement with Dun & Bradstreet that prohibited it from providing the Dun & Bradstreet data to any third-party. *Id.* at *2. In addition, the court agreed with Houston that Kossman would not be able to offer admissible analysis of the Dun & Bradstreet data, even if it had access to the data. *Id.* As the Magistrate Judge pointed out, the court found Kossman’s expert had no training in statistics or economics, and thus would not be qualified to interpret the Dun & Bradstreet data or challenge the disparity study’s methods. *Id.* Therefore, the court affirmed the grant of Houston’s motion to exclude Kossman’s expert.

Dun & Bradstreet data is reliable and accepted by courts; bidding data rejected as problematic. The court rejected Kossman’s argument that the disparity study was based on insufficient, unverified information furnished by others, and rejected Kossman’s argument that bidding data is a superior measure of determining availability. *Id.* at *3.

The district court held that because the disparity study consultant did not collect the data, but instead utilized data that Dun & Bradstreet had collected, the consultant could not guarantee the information it relied on in creating the study and recommendations. *Id.* at *3. The consultant’s role was to analyze that data and make recommendations based on that analysis, and it had no reason to doubt the authenticity or accuracy of the Dun & Bradstreet data, nor had Kossman presented any evidence that would call that data into question. *Id.* As Houston pointed out, Dun & Bradstreet data is extremely reliable, is frequently used in disparity studies, and has been consistently accepted by courts throughout the country. *Id.*

Kossman presented no evidence indicating that bidding data is a comparably more accurate indicator of availability than the Dun & Bradstreet data, but rather Kossman relied on pure argument. *Id.* at *3. The court agreed with the Magistrate Judge that bidding data is inherently problematic because it reflects only those firms actually solicited for bids. *Id.* Therefore, the court found the bidding data would fail to identify those firms that were not solicited for bids due to discrimination. *Id.*

The anecdotal evidence is valid and reliable. The district court rejected Kossman’s argument that the study improperly relied on anecdotal evidence, in that the evidence was unreliable and unverified. *Id.* at *3. The district court held that anecdotal evidence is a valid supplement to the statistical study. *Id.* The MWBE program is supported by both statistical and anecdotal evidence, and anecdotal evidence provides a valuable narrative perspective that statistics alone cannot provide. *Id.*

The district court also found that Houston was not required to independently verify the anecdotes. *Id.* at *3. Kossman, the district court concluded, could have presented contrary evidence, but it did not. *Id.* The district court cited other courts for the proposition that the combination of anecdotal and statistical evidence is potent, and that anecdotal evidence is nothing more than a witness’s narrative of an incident told from the witness’s perspective and including the witness’s perceptions. *Id.* Also, the court held the city was not required to present corroborating evidence, and the plaintiff was free to present its own witness to either refute the incident described by the city’s witnesses or to relate their own perceptions on discrimination in the construction industry. *Id.*

L. Legal — Other district court decisions regarding state/local programs

The data relied upon by the study was not stale. The court rejected Kossman’s argument that the study relied on data that is too old and no longer relevant. *Id.* at *4. The court found that the data was not stale and that the study used the most current available data at the time of the study, including Census Bureau data (2006-2008) and Federal Reserve data (1993, 1998 and 2003), and the study performed regression analyses on the data. *Id.*

Moreover, Kossman presented no evidence to suggest that Houston’s consultant could have accessed more recent data or that the consultant would have reached different conclusions with more recent data. *Id.*

The Houston MWBE program is narrowly tailored. The district court agreed with the Magistrate Judge that the study provided substantial evidence that Houston engaged in race-neutral alternatives, which were insufficient to eliminate disparities, and that despite race-neutral alternatives in place in Houston, adverse disparities for MWBEs were consistently observed. *Id.* at *4. Therefore, the court found there was strong evidence that a remedial program was necessary to address discrimination against MWBEs. *Id.* Moreover, Houston was not required to exhaust every possible race-neutral alternative before instituting the MWBE program. *Id.*

The district court also found that the MWBE program did not place an undue burden on Kossman or similarly situated companies. *Id.* at *4. Under the MWBE program, a prime contractor may substitute a small business enterprise like Kossman for an MWBE on a race and gender-neutral basis for up to 4 percent of the value of a contract. *Id.* Kossman did not present evidence that he ever bid on more than 4 percent of a Houston contract. *Id.* In addition, the court stated the fact the MWBE program placed *some* burden on Kossman is insufficient to support the conclusion that the program is not nearly tailored. *Id.* The court concurred with the Magistrate Judge’s observation that the

proportional sharing of opportunities is, at the core, the point of a remedial program. *Id.* The district court agreed with the Magistrate Judge’s conclusion that the MWBE program is nearly tailored.

Native American-owned businesses. The study found that Native American-owned businesses were utilized at a higher rate in Houston’s construction contracts than would be anticipated based on their rate of availability in the relevant market area. *Id.* at *4. The court noted this finding would tend to negate the presence of discrimination against Native Americans in Houston’s construction industry. *Id.*

This Houston disparity study consultant stated that the high utilization rate for Native Americans stems largely from the work of two Native American-owned firms. *Id.* The Houston consultant suggested that without these two firms, the utilization rate for Native Americans would decline significantly, yielding a statistically significant disparity ratio. *Id.*

The Magistrate Judge, according to the district court, correctly held and found that there was insufficient evidence to support including Native Americans in the MWBE program. *Id.* The court approved and adopted the Magistrate Judge explanation that the opinion of the disparity study consultant that a significant statistical disparity would exist if two of the contracting Native American-owned businesses were disregarded, is not evidence of the need for remedial action. *Id.* at *5. The district court found no equal-protection significance to the fact the majority of contracts let to Native American-owned businesses were to only two firms. *Id.* Therefore, the utilization goal for businesses owned by Native Americans is not supported by a strong evidentiary basis. *Id.* at *5.

The district court agreed with the Magistrate Judge’s recommendation that the district court grant summary judgment in favor of Kossman with respect to the utilization goal for Native American-owned business. *Id.* The court found there was limited significance to the Houston consultant’s opinion that utilization of Native American-owned

L. Legal — Other district court decisions regarding state/local programs

businesses would drop to statistically significant levels if two Native American-owned businesses were ignored. *Id.* at *5.

The court stated the situation presented by the Houston disparity study consultant of a “hypothetical non-existence” of these firms is not evidence and cannot satisfy strict scrutiny. *Id.* at *5. Therefore, the district court adopted the Magistrate Judge’s recommendation with respect to excluding the utilization goal for Native American-owned businesses. *Id.* The court noted that a preference for Native American-owned businesses could become constitutionally valid in the future if there were sufficient evidence of discrimination against Native American-owned businesses in Houston’s construction contracts. *Id.* at *5.

Conclusion. The district court held that the Memorandum & Recommendation of the Magistrate Judge is adopted in full; Houston’s motion to exclude the Kossman’s proposed expert witness is granted; Kossman’s motion for summary judgment is granted with respect to excluding the utilization goal for Native American-owned businesses and denied in all other respects; Houston’s motion for summary judgment is denied with respect to including the utilization goal for Native American-owned businesses and granted in all other respects as to the MWBE program for other minorities and women-owned firms. *Id.* at *5.

Memorandum and Recommendation by Magistrate Judge, dated February 17, 2016, S.D. Texas, Civil Action No. H-14-1203.

Kossman’s proposed expert excluded and not admissible. Kossman in its motion for summary judgment solely relied on the testimony of its proposed expert, and submitted no other evidence in support of its motion. The Magistrate Judge (hereinafter “MJ”) granted Houston’s motion to exclude testimony of Kossman’s proposed expert, which the district court adopted and approved, for multiple reasons. The MJ found that his experience does not include designing or conducting statistical

studies, and he has no education or training in statistics or economics. *See*, MJ, Memorandum and Recommendation (“M&R”) by MJ, dated February 17, 2016, at 31, S.D. Texas, Civil Action No. H-14-1203. The MJ found he was not qualified to collect, organize or interpret numerical data, has no experience extrapolating general conclusions about a subset of the population by sampling it, has demonstrated no knowledge of sampling methods or understanding of the mathematical concepts used in the interpretation of raw data, and thus, is not qualified to challenge the methods and calculations of the disparity study. *Id.*

The MJ found that the proposed expert report is only a theoretical attack on the study with no basis and objective evidence, such as data or testimony of construction firms in the relative market area that support his assumptions regarding available MWBEs or comparative studies that control the factors about which he complained. *Id.* at 31. The MJ stated that the proposed expert is not an economist and thus is not qualified to challenge the disparity study explanation of its economic considerations. *Id.* at 31. The proposed expert failed to provide econometric support for the use of bidder data, which he argued was the better source for determining availability, cited no personal experience for the use of bidder data, and provided no proof that would more accurately reflect availability of MWBEs absent discriminatory influence. *Id.* Moreover, he acknowledged that no bidder data had been collected for the years covered by the study. *Id.*

The court found that the proposed expert articulated no method at all to do a disparity study, but merely provided untested hypotheses. *Id.* at 33. The proposed expert’s criticisms of the study, according to the MJ, were not founded in cited professional social science or econometric standards. *Id.* at 33. The MJ concludes that the proposed expert is not qualified to offer the opinions contained in his report, and that his report is not relevant, not reliable, and, therefore, not admissible. *Id.* at 34.

L. Legal — Other district court decisions regarding state/local programs

Relevant geographic market area. The MJ found the market area of the disparity analysis was geographically confined to area codes in which the majority of the public contracting construction firms were located. *Id.* at 3-4, 51. The relevant market area, the MJ said, was weighted by industry, and therefore the study limited the relevant market area by geography and industry based on Houston’s past years’ records from prior construction contracts. *Id.* at 3-4, 51.

Availability of MWBEs. The MJ concluded disparity studies that compared the availability of MWBEs in the relevant market with their utilization in local public contracting have been widely recognized as strong evidence to find a compelling interest by a governmental entity for making sure that its public dollars do not finance racial discrimination. *Id.* at 52-53. Here, the study defined the market area by reviewing past contract information, and defined the relevant market according to two critical factors, geography and industry. *Id.* at 3-4, 53. Those parameters, weighted by dollars attributable to each industry, were used to identify for comparison MWBEs that were available and MWBEs that had been utilized in Houston’s construction contracting over the last five and one-half years. *Id.* at 4-6, 53. The study adjusted for owner labor market experience and educational attainment in addition to geographic location and industry affiliation. *Id.* at 6, 53.

Kossman produced no evidence that the availability estimate was inadequate. *Id.* at 53. Plaintiff’s criticisms of the availability analysis, including for capacity, the court stated was not supported by any contrary evidence or expert opinion. *Id.* at 53-54. The MJ rejected Plaintiff’s proposed expert’s suggestion that analysis of bidder data is a better way to identify MWBEs. *Id.* at 54. The MJ noted that Kossman’s proposed expert presented no comparative evidence based on bidder data, and the MJ found that bidder data may produce availability statistics that are skewed by active and passive discrimination in the market. *Id.*

In addition to being underinclusive due to discrimination, the MJ said bidder data may be overinclusive due to inaccurate self-evaluation by firms offering bids despite the inability to fulfill the contract. *Id.* at 54. It is possible that unqualified firms would be included in the availability figure simply because they bid on a particular project. *Id.* The MJ concluded that the law does not require an individualized approach that measures whether MWBEs are qualified on a contract-by-contract basis. *Id.* at 55.

Disparity analysis. The study indicated significant statistical adverse disparities as to businesses owned by African Americans and Asians, which the MJ found provided a *prima facie* case of a strong basis in evidence that justified the Program’s utilization goals for businesses owned by African Americans, Asian-Pacific Americans, and subcontinent Asian Americans. *Id.* at 55.

The disparity analysis did not reflect significant statistical disparities as to businesses owned by Hispanic Americans, Native Americans or nonminority women. *Id.* at 55-56. The MJ found, however, the evidence of significant statistical adverse disparity in the utilization of Hispanic-owned businesses in the unremediated, private sector met Houston’s *prima facie* burden of producing a strong evidentiary basis for the continued inclusion of businesses owned by Hispanic Americans. *Id.* at 56. The MJ said the difference between the private sector and Houston’s construction contracting was especially notable because the utilization of Hispanic-owned businesses by Houston has benefitted from Houston’s remedial program for many years. *Id.* Without a remedial program, the MJ stated the evidence suggests, and no evidence contradicts, a finding that utilization would fall back to private sector levels. *Id.*

L. Legal — Other district court decisions regarding state/local programs

With regard to businesses owned by Native Americans, the study indicated they were utilized to a higher percentage than their availability in the relevant market area. *Id.* at 56. Although the consultant for Houston suggested that a significant statistical disparity would exist if two of the contracting Native American-owned businesses were disregarded, the MJ found that opinion is not evidence of the need for remedial action. *Id.* at 56. The MJ concluded there was no-equal protection significance to the fact the majority of contracts let to Native American-owned businesses were to only two firms, which was indicated by Houston’s consultant. *Id.*

The utilization of women-owned businesses (WBEs) declined by 50 percent when they no longer benefitted from remedial goals. *Id.* at 57. Because WBEs were eliminated during the period studied, the significance of statistical disparity, according to the MJ, is not reflected in the numbers for the period as a whole. *Id.* at 57. The MJ said during the time WBEs were not part of the program, the statistical disparity between availability and utilization was significant. *Id.* The precipitous decline in the utilization of WBEs after WBEs were eliminated and the significant statistical disparity when WBEs did not benefit from preferential treatment, the MJ found, provided a strong basis in evidence for the necessity of remedial action. *Id.* at 57. Kossman, the MJ pointed out, offered no evidence of a gender-neutral reason for the decline. *Id.*

The MJ rejected Plaintiff’s argument that prime contractor and subcontractor data should not have been combined. *Id.* at 57. The MJ said that prime contractor and subcontractor data is not required to be evaluated separately, but that the evidence should contain reliable subcontractor data to indicate discrimination by prime contractors. *Id.* at 58. Here, the study identified the MWBEs that contracted with Houston by industry and those available in the relevant market by industry. *Id.* at 58. The data, according to the MJ, was specific and

complete, and separately considering prime contractors and subcontractors is not only unnecessary but may be misleading. *Id.* The anecdotal evidence indicated that construction firms had served, on different contracts, in both roles. *Id.*

The MJ stated the law requires that the targeted discrimination be identified with particularity, not that every instance of explicit or implicit discrimination be exposed. *Id.* at 58. The study, the MJ found, defined the relevant market at a sufficient level of particularity to produce evidence of past discrimination in Houston’s awarding of construction contracts and to reach constitutionally sound results. *Id.*

Anecdotal evidence. Kossman criticized the anecdotal evidence with which a study supplemented its statistical analysis as not having been verified and investigated. *Id.* at 58-59. The MJ said that Kossman could have presented its own evidence, but did not. *Id.* at 59. Kossman presented no contrary body of anecdotal evidence and pointed to nothing that called into question the specific results of the market surveys and focus groups done in the study. *Id.* The court rejected any requirement that the anecdotal evidence be verified and investigated. *Id.* at 59.

Regression analyses. Kossman challenged the regression analyses done in the study of business formation, earnings and capital markets. *Id.* at 59. Kossman criticized the regression analyses for failing to precisely point to where the identified discrimination was occurring. *Id.* The MJ found that the focus on identifying where discrimination is occurring misses the point, as regression analyses is not intended to point to specific sources of discrimination, but to eliminate factors other than discrimination that might explain disparities. *Id.* at 59-60. Discrimination, the MJ said, is not revealed through evidence of explicit discrimination, but is revealed through unexplainable disparity. *Id.* at 60.

L. Legal — Other district court decisions regarding state/local programs

The MJ noted that data used in the regression analyses were the most current available data at the time, and for the most part data dated from within a couple of years or less of the start of the study period. *Id.* at 60. Again, the MJ stated, Kossman produced no evidence that the data on which the regression analyses were based were invalid. *Id.*

Narrow Tailoring factors. The MJ found that the Houston MWBE program satisfied the narrow tailoring prong of a strict scrutiny analysis. The MJ said that the 2013 MWBE program contained a variety of race-neutral remedies, including many educational opportunities, but that the evidence of their efficacy or lack thereof is found in the disparity analyses. *Id.* at 60-61. The MJ concluded that while the race-neutral remedies may have a positive effect, they have not eliminated the discrimination. *Id.* at 61. The MJ found Houston’s race-neutral programming sufficient to satisfy the requirements of narrow tailoring. *Id.*

As to the factors of flexibility and duration of the 2013 Program, the MJ also stated these aspects satisfy narrow tailoring. *Id.* at 61. The 2013 Program employs goals as opposed to quotas, sets goals on a contract-by-contract basis, allows substitution of small business enterprises for MWBEs for up to 4 percent of the contract, includes a process for allowing good-faith waivers, and builds in due process for suspensions of contractors who fail to make good-faith efforts to meet contract goals or MWSBEs that fail to make good-faith efforts to meet all participation requirements. *Id.* at 61. Houston committed to review the 2013 Program at least every five years, which the MJ found to be a reasonably brief duration period. *Id.*

The MJ concluded that the 34 percent annual goal is proportional to the availability of MWBEs historically suffering discrimination. *Id.* at 61. Finally, the MJ found that the effect of the 2013 Program on third parties is not so great as to impose an unconstitutional burden on nonminorities. *Id.* at 62. The burden on nonminority SBEs, such as

Kossman, is lessened by the four-percent substitution provision. *Id.* at 62. The MJ noted another district court’s opinion that the mere possibility that innocent parties will share the burden of a remedial program is itself insufficient to warrant the conclusion that the program is not narrowly tailored. *Id.* at 62.

Holding. The MJ held that Houston established a *prima facie* case of compelling interest and narrow tailoring for all aspects of the MWBE program, except goals for Native American-owned businesses. *Id.* at 62. The MJ also held that Plaintiff failed to produce any evidence, much less the greater weight of evidence, that would call into question the constitutionality of the 2013 MWBE program. *Id.* at 62.

L. Legal — Other district court decisions regarding state/local programs

2. *H.B. Rowe Corp., Inc. v. W. Lyndo Tippet, North Carolina DOT, et al.*, 589 F. Supp.2d 587 (E.D.N.C. 2008), affirmed in part, reversed in part, and remanded, 615 F.3d 233 (4th Cir. 2010)

In *H.B. Rowe Company v. Tippet, North Carolina Department of Transportation, et al.* (“Rowe”), the United States District Court for the Eastern District of North Carolina, Western Division, heard a challenge to the State of North Carolina MBE and WBE Program, which is a State of North Carolina “affirmative action” program administered by the NCDOT. The NCDOT MWBE Program challenged in *Rowe* involves projects funded solely by the State of North Carolina and not funded by the USDOT. 589 F.Supp.2d 587.

Background. In this case plaintiff, a family-owned road construction business, bid on a NCDOT initiated state-funded project. NCDOT rejected plaintiff’s bid in favor of the next low bid that had proposed higher minority participation on the project as part of its bid. According to NCDOT, plaintiff’s bid was rejected because of plaintiff’s failure to demonstrate “good faith efforts” to obtain pre-designated levels of minority participation on the project.

As a prime contractor, plaintiff Rowe was obligated under the MWBE Program to either obtain participation of specified levels of MBE and WBE participation as subcontractors, or to demonstrate good faith efforts to do so. For this particular project, NCDOT had set MBE and WBE subcontractor participation goals of 10 percent and 5 percent, respectively. Plaintiff’s bid included 6.6 percent WBE participation, but no MBE participation. The bid was rejected after a review of plaintiff’s good faith efforts to obtain MBE participation. The next lowest bidder submitted a bid including 3.3 percent MBE participation and 9.3 percent WBE participation, and although not obtaining a specified level of MBE participation, it was determined to have made good faith efforts to do so. (Order of the District Court, dated March 29, 2007).

NCDOT’s MWBE Program “largely mirrors” the Federal DBE Program, which NCDOT is required to comply with in awarding construction contracts that utilize Federal funds. (589 F.Supp.2d 587; Order of the District Court, dated September 28, 2007). Like the Federal DBE Program, under NCDOT’s MWBE Program, the goals for minority and female participation are aspirational rather than mandatory. *Id.* An individual target for MBE participation was set for each project. *Id.*

Historically, NCDOT had engaged in several disparity studies. The most recent study was done in 2004. *Id.* The 2004 study, which followed the study in 1998, concluded that disparities in utilization of MBEs persist and that a basis remains for continuation of the MWBE Program. The new statute as revised was approved in 2006, which modified the previous MBE statute by eliminating the 10 percent and 5 percent goals and establishing a fixed expiration date of 2009.

Plaintiff filed its complaint in this case in 2003 against the NCDOT and individuals associated with the NCDOT, including the Secretary of NCDOT, W. Lyndo Tippet. In its complaint, plaintiff alleged that the MWBE statute for NCDOT was unconstitutional on its face and as applied. 589 F.Supp.2d 587.

March 29, 2007 Order of the District Court. The matter came before the district court initially on several motions, including the defendants’ Motion to Dismiss or for Partial Summary Judgment, defendants’ Motion to Dismiss the Claim for Mootness and plaintiff’s Motion for Summary Judgment. The court in its October 2007 Order granted in part and denied in part defendants’ Motion to Dismiss or for partial summary judgment; denied defendants’ Motion to Dismiss the Claim for Mootness; and dismissed without prejudice plaintiff’s Motion for Summary Judgment.

L. Legal — Other district court decisions regarding state/local programs

The court held the Eleventh Amendment to the United States Constitution bars plaintiff from obtaining any relief against defendant NCDOT, and from obtaining a retrospective damages award against any of the individual defendants in their official capacities. The court ruled that plaintiff's claims for relief against the NCDOT were barred by the Eleventh Amendment, and the NCDOT was dismissed from the case as a defendant. Plaintiff's claims for interest, actual damages, compensatory damages and punitive damages against the individual defendants sued in their official capacities also was held barred by the Eleventh Amendment and were dismissed. But, the court held that plaintiff was entitled to sue for an injunction to prevent state officers from violating a federal law, and under the *Ex Parte Young* exception, plaintiff's claim for declaratory and injunctive relief was permitted to go forward as against the individual defendants who were acting in an official capacity with the NCDOT. The court also held that the individual defendants were entitled to qualified immunity, and therefore dismissed plaintiff's claim for money damages against the individual defendants in their individual capacities. Order of the District Court, dated March 29, 2007.

Defendants argued that the recent amendment to the MWBE statute rendered plaintiff's claim for declaratory injunctive relief moot. The new MWBE statute adopted in 2006, according to the court, does away with many of the alleged shortcomings argued by the plaintiff in this lawsuit. The court found the amended statute has a sunset date in 2009; specific aspirational participation goals by women and minorities are eliminated; defines "minority" as including only those racial groups which disparity studies identify as subject to underutilization in state road construction contracts; explicitly references the findings of the 2004 Disparity Study and requires similar studies to be conducted at least once every five years; and directs NCDOT to enact regulations targeting discrimination identified in the 2004 and future studies.

The court held, however, that the 2004 Disparity Study and amended MWBE statute do not remedy the primary problem which the plaintiff complained of: the use of remedial race- and gender- based preferences allegedly without valid evidence of past racial and gender discrimination. In that sense, the court held the amended MWBE statute continued to present a live case or controversy, and accordingly denied the defendants' Motion to Dismiss Claim for Mootness as to plaintiff's suit for prospective injunctive relief. Order of the District Court, dated March 29, 2007.

The court also held that since there had been no analysis of the MWBE statute apart from the briefs regarding mootness, plaintiff's pending Motion for Summary Judgment was dismissed without prejudice. Order of the District Court, dated March 29, 2007.

September 28, 2007 Order of the District Court. On September 28, 2007, the district court issued a new order in which it denied both the plaintiff's and the defendants' Motions for Summary Judgment. Plaintiff claimed that the 2004 Disparity Study is the sole basis of the MWBE statute, that the study is flawed, and therefore it does not satisfy the first prong of strict scrutiny review. Plaintiff also argued that the 2004 study tends to prove non-discrimination in the case of women; and finally, the MWBE Program fails the second prong of strict scrutiny review in that it is not narrowly tailored.

The court found summary judgment was inappropriate for either party and that there are genuine issues of material fact for trial. The first and foremost issue of material fact, according to the court, was the adequacy of the 2004 Disparity Study as used to justify the MWBE Program. Therefore, because the court found there was a genuine issue of material fact regarding the 2004 Study, summary judgment was denied on this issue.

L. Legal — Other district court decisions regarding state/local programs

The court also held there was confusion as to the basis of the MWBE Program, and whether it was based solely on the 2004 Study or also on the 1993 and 1998 Disparity Studies. Therefore, the court held a genuine issue of material fact existed on this issue and denied summary judgment. Order of the District Court, dated September 28, 2007.

December 9, 2008 Order of the District Court (589 F.Supp.2d 587).

The district court on December 9, 2008, after a bench trial, issued an Order that found as a fact and concluded as a matter of law that plaintiff failed to satisfy its burden of proof that the North Carolina Minority and Women’s Business Enterprise program, enacted by the state legislature to affect the awarding of contracts and subcontracts in state highway construction, violated the United States Constitution.

Plaintiff, in its complaint filed against the NCDOT alleged that N.C. Gen. St. § 136-28.4 is unconstitutional on its face and as applied, and that the NCDOT while administering the MWBE program violated plaintiff’s rights under the federal law and the United States Constitution. Plaintiff requested a declaratory judgment that the MWBE program is invalid and sought actual and punitive damages.

As a prime contractor, plaintiff was obligated under the MWBE program to either obtain participation of specified levels of MBE and WBE subcontractors, or to demonstrate that good faith efforts were made to do so. Following a review of plaintiff’s good faith efforts to obtain minority participation on the particular contract that was the subject of plaintiff’s bid, the bid was rejected. Plaintiff’s bid was rejected in favor of the next lowest bid, which had proposed higher minority participation on the project as part of its bid. According to NCDOT, plaintiff’s bid was rejected because of plaintiff’s failure to demonstrate good faith efforts to obtain pre-designated levels of minority participation on the project. 589 F.Supp.2d 587.

North Carolina’s MWBE program. The MWBE program was implemented following amendments to N.C. Gen. Stat. §136-28.4. Pursuant to the directives of the statute, the NCDOT promulgated regulations governing administration of the MWBE program. See N.C. Admin. Code tit. 19A, § 2D.1101, et seq. The regulations had been amended several times and provide that NCDOT shall ensure that MBEs and WBEs have the maximum opportunity to participate in the performance of contracts financed with non-federal funds. N.C. Admin. Code Tit. 19A § 2D.1101.

North Carolina’s MWBE program, which affected only highway bids and contracts funded solely with state money, according to the district court, largely mirrored the Federal DBE Program which NCDOT is required to comply with in awarding construction contracts that utilize federal funds. 589 F.Supp.2d 587. Like the Federal DBE Program, under North Carolina’s MWBE program, the targets for minority and female participation were aspirational rather than mandatory, and individual targets for disadvantaged business participation were set for each individual project. N.C. Admin. Code tit. 19A § 2D.1108. In determining what level of MBE and WBE participation was appropriate for each project, NCDOT would take into account “the approximate dollar value of the contract, the geographical location of the proposed work, a number of the eligible funds in the geographical area, and the anticipated value of the items of work to be included in the contract.” *Id.* NCDOT would also consider “the annual goals mandated by Congress and the North Carolina General Assembly.” *Id.*

A firm could be certified as an MBE or WBE by showing NCDOT that it is “owner controlled by one or more socially and economically disadvantaged individuals.” NC Admin. Code tit. 1980, § 2D.1102.

L. Legal — Other district court decisions regarding state/local programs

The district court stated the MWBE program did not directly discriminate in favor of minority and women contractors, but rather “encouraged prime contractors to favor MBEs and WBEs in subcontracting before submitting bids to NCDOT.” 589 F.Supp.2d 587. In determining whether the lowest bidder is “responsible,” NCDOT would consider whether the bidder obtained the level of certified MBE and WBE participation previously specified in the NCDOT project proposal. If not, NCDOT would consider whether the bidder made good faith efforts to solicit MBE and WBE participation. N.C. Admin. Code tit. 19A§ 2D.1108.

There were multiple studies produced and presented to the North Carolina General Assembly in the years 1993, 1998 and 2004. The 1998 and 2004 studies concluded that disparities in the utilization of minority and women contractors persist, and that there remains a basis for continuation of the MWBE program. The MWBE program as amended after the 2004 study includes provisions that eliminated the 10 percent and 5 percent goals and instead replaced them with contract-specific participation goals created by NCDOT; established a sunset provision that has the statute expiring on August 31, 2009; and provides reliance on a disparity study produced in 2004.

The MWBE program, as it stood at the time of this decision, provides that NCDOT “dictates to prime contractors the express goal of MBE and WBE subcontractors to be used on a given project. However, instead of the state hiring the MBE and WBE subcontractors itself, the NCDOT makes the prime contractor solely responsible for vetting and hiring these subcontractors. If a prime contractor fails to hire the goal amount, it must submit efforts of ‘good faith’ attempts to do so.” 589 F.Supp.2d 587.

Compelling interest. The district court held that NCDOT established a compelling governmental interest to have the MWBE program. The court noted that the United States Supreme Court in *Croson* made clear that a state legislature has a compelling interest in eradicating and remedying private discrimination in the private subcontracting inherent in the letting of road construction contracts. 589 F.Supp.2d 587, *citing Croson*, 488 U.S. at 492. The district court found that the North Carolina Legislature established it relied upon a strong basis of evidence in concluding that prior race discrimination in North Carolina’s road construction industry existed so as to require remedial action.

The court held that the 2004 Disparity Study demonstrated the existence of previous discrimination in the specific industry and locality at issue. The court stated that disparity ratios provided for in the 2004 Disparity Study highlighted the underutilization of MBEs by prime contractors bidding on state funded highway projects. In addition, the court found that evidence relied upon by the legislature demonstrated a dramatic decline in the utilization of MBEs during the program’s suspension in 1991. The court also found that anecdotal support relied upon by the legislature confirmed and reinforced the general data demonstrating the underutilization of MBEs. The court held that the NCDOT established that, “based upon a clear and strong inference raised by this Study, they concluded minority contractors suffer from the lingering effects of racial discrimination.” 589 F.Supp.2d 587.

L. Legal — Other district court decisions regarding state/local programs

With regard to WBEs, the court applied a different standard of review. The court held the legislative scheme as it relates to MWBEs must serve an important governmental interest and must be substantially related to the achievement of those objectives. The court found that NCDOT established an important governmental interest. The 2004 Disparity Study provided that the average contracts awarded WBEs are significantly smaller than those awarded non-WBEs. The court held that NCDOT established based upon a clear and strong inference raised by the Study, women contractors suffer from past gender discrimination in the road construction industry.

Narrowly tailored. The district court noted that the Fourth Circuit of Appeals lists a number of factors to consider in analyzing a statute for narrow tailoring: (1) the necessity of the policy and the efficacy of alternative race neutral policies; (2) the planned duration of the policy; (3) the relationship between the numerical goal and the percentage of minority group members in the relevant population; (4) the flexibility of the policy, including the provision of waivers if the goal cannot be met; and (5) the burden of the policy on innocent third parties. 589 F.Supp.2d 587, quoting *Belk v. Charlotte-Mecklenburg Board of Education*, 269 F.3d 305, 344 (4th Cir. 2001).

The district court held that the legislative scheme in N.C. Gen. Stat. § 136-28.4 is narrowly tailored to remedy private discrimination of minorities and women in the private subcontracting inherent in the letting of road construction contracts. The district court's analysis focused on narrowly tailoring factors (2) and (4) above, namely the duration of the policy and the flexibility of the policy. With respect to the former, the court held the legislative scheme provides the program be reviewed at least every five years to revisit the issue of utilization of MWBEs in the road construction industry. N.C. Gen. Stat. §136-28.4(b). Further, the legislative scheme includes a sunset provision so that the program will expire on August 31, 2009, unless renewed by an act of the

legislature. *Id.* at § 136-28.4(e). The court held these provisions ensured the legislative scheme last no longer than necessary.

The court also found that the legislative scheme enacted by the North Carolina legislature provides flexibility insofar as the participation goals for a given contract or determined on a project-by-project basis. § 136-28.4(b)(1). Additionally, the court found the legislative scheme in question is not overbroad because the statute applies only to “those racial or ethnicity classifications identified by a study conducted in accordance with this section that had been subjected to discrimination in a relevant marketplace and that had been adversely affected in their ability to obtain contracts with the Department.” § 136-28.4(c)(2). The court found that plaintiff failed to provide any evidence that indicates minorities from non-relevant racial groups had been awarded contracts as a result of the statute.

The court held that the legislative scheme is narrowly tailored to remedy private discrimination of minorities and women in the private subcontracting inherent in the letting of road construction contracts, and therefore found that § 136-28.4 is constitutional.

The decision of the district court was appealed to the United States Court of Appeals for the Fourth Circuit, which affirmed in part and reversed in part the decision of the district court. *See* 615 F3d 233 (4th Cir. 2010), discussed above.

L. Legal — Other district court decisions regarding state/local programs

3. *Thomas v. City of Saint Paul*, 526 F. Supp.2d 959 (D. Minn 2007), affirmed, 321 Fed. Appx. 541, 2009 WL 777932 (8th Cir. March 26, 2009) (unpublished opinion), cert. denied, 130 S.Ct. 408 (2009)

In *Thomas v. City of Saint Paul*, the plaintiffs are African American business owners who brought this lawsuit claiming that the City of Saint Paul, Minnesota discriminated against them in awarding publicly-funded contracts. The City moved for summary judgment, which the United States District Court granted and issued an order dismissing the plaintiff's lawsuit in December 2007.

The background of the case involves the adoption by the City of Saint Paul of a Vendor Outreach Program ("VOP") that was designed to assist minority and other small business owners in competing for City contracts. Plaintiffs were VOP-certified minority business owners. Plaintiffs contended that the City engaged in racially discriminatory illegal conduct in awarding City contracts for publicly-funded projects. Plaintiff Thomas claimed that the City denied him opportunities to work on projects because of his race arguing that the City failed to invite him to bid on certain projects, the City failed to award him contracts and the fact independent developers had not contracted with his company. 526 F. Supp.2d at 962. The City contended that Thomas was provided opportunities to bid for the City's work.

Plaintiff Brian Conover owned a trucking firm, and he claimed that none of his bids as a subcontractor on 22 different projects to various independent developers were accepted. 526 F. Supp.2d at 962. The court found that after years of discovery, plaintiff Conover offered no admissible evidence to support his claim, had not identified the subcontractors whose bids were accepted, and did not offer any comparison showing the accepted bid and the bid he submitted. *Id.* Plaintiff Conover also complained that he received bidding invitations only a few days before a bid was due, which did not allow him adequate

time to prepare a competitive bid. *Id.* The court found, however, he failed to identify any particular project for which he had only a single day of bid, and did not identify any similarly situated person of any race who was afforded a longer period of time in which to submit a bid. *Id.* at 963. Plaintiff Newell claimed he submitted numerous bids on the City's projects all of which were rejected. *Id.* The court found, however, that he provided no specifics about why he did not receive the work. *Id.*

The VOP. Under the VOP, the City sets annual benchmarks or levels of participation for the targeted minorities groups. *Id.* at 963. The VOP prohibits quotas and imposes various "good faith" requirements on prime contractors who bid for City projects. *Id.* at 964. In particular, the VOP requires that when a prime contractor rejects a bid from a VOP-certified business, the contractor must give the City its basis for the rejection, and evidence that the rejection was justified. *Id.* The VOP further imposes obligations on the City with respect to vendor contracts. *Id.* The court found the City must seek where possible and lawful to award a portion of vendor contracts to VOP-certified businesses. *Id.* The City contract manager must solicit these bids by phone, advertisement in a local newspaper or other means. Where applicable, the contract manager may assist interested VOP participants in obtaining bonds, lines of credit or insurance required to perform under the contract. *Id.* The VOP ordinance provides that when the contract manager engages in one or more possible outreach efforts, he or she is in compliance with the ordinance. *Id.*

Analysis and Order of the Court. The district court found that the City is entitled to summary judgment because plaintiffs lack standing to bring these claims and that no genuine issue of material fact remains. *Id.* at 965. The court held that the plaintiffs had no standing to challenge the VOP because they failed to show they were deprived of an opportunity to compete, or that their inability to obtain any contract resulted from an act of discrimination. *Id.* The court found they failed to show any instance in which their race was a determinant in the denial of any contract. *Id.* at

L. Legal — Other district court decisions regarding state/local programs

966. As a result, the court held plaintiffs failed to demonstrate the City engaged in discriminatory conduct or policy which prevented plaintiffs from competing. *Id.* at 965-966.

The court held that in the absence of any showing of intentional discrimination based on race, the mere fact the City did not award any contracts to plaintiffs does not furnish that causal nexus necessary to establish standing. *Id.* at 966. The court held the law does not require the City to voluntarily adopt “aggressive race-based affirmative action programs” in order to award specific groups publicly-funded contracts. *Id.* at 966. The court found that plaintiffs had failed to show a violation of the VOP ordinance, or any illegal policy or action on the part of the City. *Id.*

The court stated that the plaintiffs must identify a discriminatory policy in effect. *Id.* at 966. The court noted, for example, even assuming the City failed to give plaintiffs more than one day’s notice to enter a bid, such a failure is not, per se, illegal. *Id.* The court found the plaintiffs offered no evidence that anyone else of any other race received an earlier notice, or that he was given this allegedly tardy notice as a result of his race. *Id.*

The court concluded that even if plaintiffs may not have been hired as a subcontractor to work for prime contractors receiving City contracts, these were independent developers and the City is not required to defend the alleged bad acts of others. *Id.* Therefore, the court held plaintiffs had no standing to challenge the VOP. *Id.* at 966.

Plaintiff’s claims. The court found that even assuming plaintiffs possessed standing, they failed to establish facts which demonstrated a need for a trial, primarily because each theory of recovery is viable only if the City “intentionally” treated plaintiffs unfavorably because of their race. *Id.* at 967. The court held to establish a prima facie violation of the equal protection clause, there must be state action. *Id.* Plaintiffs must offer facts and evidence that constitute proof of “racially discriminatory intent or purpose.” *Id.* at 967. Here, the court found that plaintiff failed to allege any single instance showing the City “intentionally” rejected VOP bids based on their race. *Id.*

The court also found that plaintiffs offered no evidence of a specific time when any one of them submitted the lowest bid for a contract or a subcontract, or showed any case where their bids were rejected on the basis of race. *Id.* The court held the alleged failure to place minority contractors in a preferred position, without more, is insufficient to support a finding that the City failed to treat them equally based upon their race. *Id.*

The City rejected the plaintiff’s claims of discrimination because the plaintiffs did not establish by evidence that the City “intentionally” rejected their bid due to race or that the City “intentionally” discriminated against these plaintiffs. *Id.* at 967-968. The court held that the plaintiffs did not establish a single instance showing the City deprived them of their rights, and the plaintiffs did not produce evidence of a “discriminatory motive.” *Id.* at 968. The court concluded that plaintiffs had failed to show that the City’s actions were “racially motivated.” *Id.*

The Eighth Circuit Court of Appeals affirmed the ruling of the district court. *Thomas v. City of Saint Paul*, 2009 WL 777932 (8th Cir. 2009)(unpublished opinion). The Eighth Circuit affirmed based on the decision of the district court and finding no reversible error.

L. Legal — Other district court decisions regarding state/local programs

4. *Thompson Building Wrecking Co. v. Augusta, Georgia*, No. 1:07CV019, 2007 WL 926153 (S.D. Ga. Mar. 14, 2007)(Slip. Op.)

This case considered the validity of the City of Augusta’s local minority DBE program. The district court enjoined the City from favoring any contract bid on the basis of racial classification and based its decision principally upon the outdated and insufficient data proffered by the City in support of its program. 2007 WL 926153 at *9-10.

The City of Augusta enacted a local DBE program based upon the results of a disparity study completed in 1994. The disparity study examined the disparity in socioeconomic status among races, compared black-owned businesses in Augusta with those in other regions and those owned by other racial groups, examined “Georgia’s racist history” in contracting and procurement, and examined certain data related to Augusta’s contracting and procurement. *Id.* at *1-4. The plaintiff contractors and subcontractors challenged the constitutionality of the DBE program and sought to extend a temporary injunction enjoining the City’s implementation of racial preferences in public bidding and procurement.

The City defended the DBE program arguing that it did not utilize racial classifications because it only required vendors to make a “good faith effort” to ensure DBE participation. *Id.* at *6. The court rejected this argument noting that bidders were required to submit a “Proposed DBE Participation” form and that bids containing DBE participation were treated more favorably than those bids without DBE participation. The court stated: “Because a person’s business can qualify for the favorable treatment based on that person’s race, while a similarly situated person of another race would not qualify, the program contains a racial classification.” *Id.*

The court noted that the DBE program harmed subcontractors in two ways: first, because prime contractors will discriminate between DBE and non-DBE subcontractors and a bid with a DBE subcontractor would be treated more favorably; and second, because the City would favor a bid containing DBE participation over an equal or even superior bid containing no DBE participation. *Id.*

The court applied the strict scrutiny standard set forth in *Croson and Engineering Contractors Association* to determine whether the City had a compelling interest for its program and whether the program was narrowly tailored to that end. The court noted that pursuant to *Croson*, the City would have a compelling interest in assuring that tax dollars would not perpetuate private prejudice. But, the court found (*citing to Croson*), that a state or local government must identify that discrimination, “public or private, with some specificity before they may use race-conscious relief.” The court cited the Eleventh Circuit’s position that “‘gross statistical disparities’ between the proportion of minorities hired by the public employer and the proportion of minorities willing and able to work” may justify an affirmative action program. *Id.* at *7. The court also stated that anecdotal evidence is relevant to the analysis.

The court determined that while the City’s disparity study showed some statistical disparities buttressed by anecdotal evidence, the study suffered from multiple issues. *Id.* at *7-8. Specifically, the court found that those portions of the study examining discrimination outside the area of subcontracting (*e.g.*, socioeconomic status of racial groups in the Augusta area) were irrelevant for purposes of showing a compelling interest. The court also cited the failure of the study to differentiate between different minority races as well as the improper aggregation of race- and gender-based discrimination referred to as Simpson’s Paradox.

L. Legal — Other district court decisions regarding state/local programs

The court assumed for purposes of its analysis that the City could show a compelling interest but concluded that the program was not narrowly tailored and thus could not satisfy strict scrutiny. The court found that it need look no further beyond the fact of the thirteen-year duration of the program absent further investigation, and the absence of a sunset or expiration provision, to conclude that the DBE program was not narrowly tailored. *Id.* at *8. Noting that affirmative action is permitted only sparingly, the court found: “[i]t would be impossible for Augusta to argue that, 13 years after last studying the issue, racial discrimination is so rampant in the Augusta contracting industry that the City must affirmatively act to avoid being complicit.” *Id.* The court held in conclusion, that the plaintiffs were “substantially likely to succeed in proving that, when the City requests bids with minority participation and in fact favors bids with such, the plaintiffs will suffer racial discrimination in violation of the Equal Protection Clause.” *Id.* at *9.

In a subsequent Order dated September 5, 2007, the court denied the City’s motion to continue plaintiff’s Motion for Summary Judgment, denied the City’s Rule 12(b)(6) motion to dismiss, and stayed the action for 30 days pending mediation between the parties. Importantly, in this Order, the court reiterated that the female- and locally-owned business components of the program (challenged in plaintiff’s Motion for Summary Judgment) would be subject to intermediate scrutiny and rational basis scrutiny, respectively. The court also reiterated its rejection of the City’s challenge to the plaintiffs’ standing. The court noted that under *Adarand*, preventing a contractor from competing on an equal footing satisfies the particularized injury prong of standing. And showing that the contractor will sometime in the future bid on a City contract “that offers financial incentives to a prime contractor for hiring disadvantaged subcontractors” satisfies the second requirement that the particularized injury be actual or imminent. Accordingly, the court concluded that the plaintiffs have standing to pursue this action.

L. Legal — Other district court decisions regarding state/local programs

5. *Hershell Gill Consulting Engineers, Inc. v. Miami-Dade County*, 333 F. Supp.2d 1305 (S.D. Fla. 2004)

The decision in *Hershell Gill Consulting Engineers, Inc. v. Miami-Dade County*, is significant to the disparity study because it applied and followed the *Engineering Contractors Association* decision in the context of contracting and procurement for goods and services (including architect and engineer services). Many of the other cases focused on construction, and thus *Hershell Gill* is instructive as to the analysis relating to architect and engineering services. The decision in *Hershell Gill* also involved a district court in the Eleventh Circuit imposing compensatory and punitive damages upon individual County Commissioners due to the district court's finding of their willful failure to abrogate an unconstitutional MBE/WBE Program. In addition, the case is noteworthy because the district court refused to follow the 2003 Tenth Circuit Court of Appeals decision in *Concrete Works of Colorado, Inc. v. City and County of Denver*, 321 F.3d 950 (10th Cir. 2003). See discussion, *infra*.

Six years after the decision in *Engineering Contractors Association*, two white male-owned engineering firms (the "plaintiffs") brought suit against Engineering Contractors Association (the "County"), the former County Manager, and various current County Commissioners (the "Commissioners") in their official and personal capacities (collectively the "defendants"), seeking to enjoin the same "participation goals" in the same MWBE program deemed to violate the Fourteenth Amendment in the earlier case. 333 F. Supp. 1305, 1310 (S.D. Fla. 2004). After the Eleventh Circuit's decision in *Engineering Contractors Association* striking down the MWBE programs as applied to construction contracts, the County enacted a Community Small Business Enterprise ("CSBE") program for construction contracts, "but continued to apply racial, ethnic, and gender criteria to its purchases of goods and

services in other areas, including its procurement of A&E services." *Id.* at 1311.

The plaintiffs brought suit challenging the Black Business Enterprise (BBE) program, the Hispanic Business Enterprise (HBE) program, and the Women Business Enterprise (WBE) program (collectively "MBE/WBE"). *Id.* The MBE/WBE programs applied to A&E contracts in excess of \$25,000. *Id.* at 1312. The County established five "contract measures" to reach the participation goals: (1) set-asides, (2) subcontractor goals, (3) project goals, (4) bid preferences, and (5) selection factors. *Id.* Once a contract was identified as covered by a participation goal, a review committee would determine whether a contract measure should be utilized. *Id.* The County was required to review the efficacy of the MBE/WBE programs annually, and reevaluated the continuing viability of the MBE/WBE programs every five years. *Id.* at 1313. However, the district court found "the participation goals for the three MBE/WBE programs challenged ... remained unchanged since 1994." *Id.*

In 1998, counsel for plaintiffs contacted the County Commissioners requesting the discontinuation of contract measures on A&E contracts. *Id.* at 1314. Upon request of the Commissioners, the county manager then made two reports (an original and a follow-up) measuring parity in terms of dollars awarded and dollars paid in the areas of A&E for blacks, Hispanics, and women, and concluded both times that the "County has reached parity for black, Hispanic, and Women-owned firms in the areas of [A&E] services." The final report further stated, "Based on all the analyses that have been performed, the County does not have a basis for the establishment of participation goals which would allow staff to apply contract measures." *Id.* at 1315. The district court also found that the Commissioners were informed that "there was even less evidence to support [the MBE/WBE] programs as applied to architects and engineers than there was in contract construction." *Id.* Nonetheless, the

L. Legal — Other district court decisions regarding state/local programs

Commissioners voted to continue the MBE/WBE participation goals at their previous levels. *Id.*

In May of 2000 (18 months after the lawsuit was filed), the County commissioned Dr. Manuel J. Carvajal, an econometrician, to study architects and engineers in the county. His final report had four parts:

- (1) Data identification and collection of methodology for displaying the research results;
- (2) Presentation and discussion of tables pertaining to architecture, civil engineering, structural engineering, and awards of contracts in those areas;
- (3) Analysis of the structure and empirical estimates of various sets of regression equations, the calculation of corresponding indices, and an assessment of their importance; and
- (4) A conclusion that there is discrimination against women and Hispanics — but not against blacks — in the fields of architecture and engineering.

Id. The district court issued a preliminary injunction enjoining the use of the MBE/WBE programs for A&E contracts, pending the United States Supreme Court decisions in *Gratz v. Bollinger*, 539 U.S. 244 (2003) and *Grutter v. Bollinger*, 539 U.S. 306 (2003). *Id.* at 1316.

The court considered whether the MBE/WBE programs were violative of Title VII of the Civil Rights Act, and whether the County and the County Commissioners were liable for compensatory and punitive damages.

The district court found that the Supreme Court decisions in *Gratz* and *Grutter* did not alter the constitutional analysis as set forth in *Adarand* and *Croson*. *Id.* at 1317. Accordingly, the race- and ethnicity-based classifications were subject to strict scrutiny, meaning the County must present “a strong basis of evidence” indicating the MBE/WBE program was necessary and that it was narrowly tailored to its purported purpose. *Id.* at 1316. The gender-based classifications were subject to intermediate scrutiny, requiring the County to show the “gender-based classification serves an important governmental objective, and that it is substantially related to the achievement of that objective.” *Id.* at 1317 (internal citations omitted). The court found that the proponent of a gender-based affirmative action program must present “sufficient probative evidence” of discrimination. *Id.* (internal citations omitted). The court found that under the intermediate scrutiny analysis, the County must (1) demonstrate past discrimination against women but not necessarily at the hands of the County, and (2) that the gender-conscious affirmative action program need not be used only as a “last resort.” *Id.*

The County presented both statistical and anecdotal evidence. *Id.* at 1318. The statistical evidence consisted of Dr. Carvajal’s report, most of which consisted of “post-enactment” evidence. *Id.* Dr. Carvajal’s analysis sought to discover the existence of racial, ethnic and gender disparities in the A&E industry, and then to determine whether any such disparities could be attributed to discrimination. *Id.* The study used four data sets: three were designed to establish the marketplace availability of firms (architecture, structural engineering, and civil engineering), and the fourth focused on awards issued by the County. *Id.* Dr. Carvajal used the phone book, a list compiled by info USA, and a list of firms registered for technical certification with the County’s Department of Public Works to compile a list of the “universe” of firms competing in the market. *Id.* For the architectural firms only, he also used a list of firms that had been issued an architecture professional license. *Id.*

L. Legal — Other district court decisions regarding state/local programs

Dr. Carvajal then conducted a phone survey of the identified firms. Based on his data, Dr. Carvajal concluded that disparities existed between the percentage of A&E firms owned by blacks, Hispanics, and women, and the percentage of annual business they received. *Id.* Dr. Carvajal conducted regression analyses “in order to determine the effect a firm owner’s gender or race had on certain dependent variables.” *Id.* Dr. Carvajal used the firm’s annual volume of business as a dependent variable and determined the disparities were due in each case to the firm’s gender and/or ethnic classification. *Id.* at 1320. He also performed variants to the equations including: (1) using certification rather than survey data for the experience / capacity indicators, (2) with the outliers deleted, (3) with publicly-owned firms deleted, (4) with the dummy variables reversed, and (5) using only currently certified firms.” *Id.* Dr. Carvajal’s results remained substantially unchanged. *Id.*

Based on his analysis of the marketplace data, Dr. Carvajal concluded that the “gross statistical disparities” in the annual business volume for Hispanic- and women-owned firms could be attributed to discrimination; he “did not find sufficient evidence of discrimination against blacks.” *Id.*

The court held that Dr. Carvajal’s study constituted neither a “strong basis in evidence” of discrimination necessary to justify race- and ethnicity-conscious measures, nor did it constitute “sufficient probative evidence” necessary to justify the gender-conscious measures. *Id.* The court made an initial finding that no disparity existed to indicate underutilization of MBE/WBEs in the award of A&E contracts by the County, nor was there underutilization of MBE/WBEs in the contracts they were awarded. *Id.* The court found that an analysis of the award data indicated, “[i]f anything, the data indicates an overutilization of minority-owned firms by the County in relation to their numbers in the marketplace.” *Id.*

With respect to the marketplace data, the County conceded that there was insufficient evidence of discrimination against blacks to support the BBE program. *Id.* at 1321. With respect to the marketplace data for Hispanics and women, the court found it “unreliable and inaccurate” for three reasons: (1) the data failed to properly measure the geographic market, (2) the data failed to properly measure the product market, and (3) the marketplace survey was unreliable. *Id.* at 1321-25.

The court ruled that it would not follow the Tenth Circuit decision of *Concrete Works of Colorado, Inc. v. City and County of Denver*, 321 F.3d 950 (10th Cir. 2003), as the burden of proof enunciated by the Tenth Circuit conflicts with that of the Eleventh Circuit, and the “Tenth Circuit’s decision is flawed for the reasons articulated by Justice Scalia in his dissent from the denial of certiorari.” *Id.* at 1325 (internal citations omitted).

The defendant intervenors presented anecdotal evidence pertaining only to discrimination against women in the County’s A&E industry. *Id.* The anecdotal evidence consisted of the testimony of three A&E professional women, “nearly all” of which was related to discrimination in the award of County contracts. *Id.* at 1326. However, the district court found that the anecdotal evidence contradicted Dr. Carvajal’s study indicating that no disparity existed with respect to the award of County A&E contracts. *Id.*

L. Legal — Other district court decisions regarding state/local programs

The court quoted the Eleventh Circuit in *Engineering Contractors Association* for the proposition “that only in the rare case will anecdotal evidence suffice standing alone.” *Id.* (internal citations omitted). The court held that “[t]his is not one of those rare cases.” The district court concluded that the statistical evidence was “unreliable and fail[ed] to establish the existence of discrimination,” and the anecdotal evidence was insufficient as it did not even reach the level of anecdotal evidence in *Engineering Contractors Association* where the County employees themselves testified. *Id.*

The court made an initial finding that a number of minority groups provided preferential treatment were in fact majorities in the County in terms of population, voting capacity, and representation on the County Commission. *Id.* at 1326-1329. For purposes only of conducting the strict scrutiny analysis, the court then assumed that Dr. Carvajal’s report demonstrated discrimination against Hispanics (note the County had conceded it had insufficient evidence of discrimination against blacks) and sought to determine whether the HBE program was narrowly tailored to remedying that discrimination. *Id.* at 1330. However, the court found that because the study failed to “identify who is engaging in the discrimination, what form the discrimination might take, at what stage in the process it is taking place, or how the discrimination is accomplished ... it is virtually impossible to narrowly tailor any remedy, and the HBE program fails on this fact alone.” *Id.*

The court found that even after the County Managers informed the Commissioners that the County had reached parity in the A&E industry, the Commissioners declined to enact a CSBE ordinance, a race-neutral measure utilized in the construction industry after *Engineering Contractors Association*. *Id.* Instead, the Commissioners voted to continue the HBE program. *Id.* The court held that the County’s failure to even explore a program similar to the CSBE ordinance indicated that the HBE program was not narrowly tailored. *Id.* at 1331.

The court also found that the County enacted a broad anti-discrimination ordinance imposing harsh penalties for a violation thereof. *Id.* However, “not a single witness at trial knew of any instance of a complaint being brought under this ordinance concerning the A&E industry,” leading the court to conclude that the ordinance was either not being enforced, or no discrimination existed. *Id.* Under either scenario, the HBE program could not be narrowly tailored. *Id.*

The court found the waiver provisions in the HBE program inflexible in practice. *Id.* Additionally, the court found the County had failed to comply with the provisions in the HBE program requiring adjustment of participation goals based on annual studies, because the County had not in fact conducted annual studies for several years. *Id.* The court found this even “more problematic” because the HBE program did not have a built-in durational limit, and thus blatantly violated Supreme Court jurisprudence requiring that racial and ethnic preferences “must be limited in time.” *Id.* at 1332, citing *Grutter*, 123 S. Ct. at 2346. For the foregoing reasons, the court concluded the HBE program was not narrowly tailored. *Id.* at 1332.

With respect to the WBE program, the court found that “the failure of the County to identify who is discriminating and where in the process the discrimination is taking place indicates (though not conclusively) that the WBE program is not substantially related to eliminating that discrimination.” *Id.* at 1333. The court found that the existence of the anti-discrimination ordinance, the refusal to enact a small business enterprise ordinance, and the inflexibility in setting the participation goals rendered the WBE program unable to satisfy the substantial relationship test. *Id.*

L. Legal — Other district court decisions regarding state/local programs

The court held that the County was liable for any compensatory damages. *Id.* at 1333-34. The court held that the Commissioners had absolute immunity for their legislative actions; however, they were not entitled to qualified immunity for their actions in voting to apply the race-, ethnicity- and gender-conscious measures of the MBE/WBE programs if their actions violated “clearly established statutory or constitutional rights of which a reasonable person would have known ... Accordingly, the question is whether the state of the law at the time the Commissioners voted to apply [race-, ethnicity- and gender-conscious measures] gave them ‘fair warning’ that their actions were unconstitutional.” *Id.* at 1335-36 (internal citations omitted).

The court held that the Commissioners were not entitled to qualified immunity because they “had before them at least three cases that gave them fair warning that their application of the MBE/WBE programs ... were unconstitutional: *Croson*, *Adarand* and [*Engineering Contractors Association*].” *Id.* at 1137. The court found that the Commissioners voted to apply the contract measures after the Supreme Court decided both *Croson* and *Adarand*. *Id.* Moreover, the Eleventh Circuit had already struck down the construction provisions of the same MBE/WBE programs. *Id.* Thus, the case law was “clearly established” and gave the Commissioners fair warning that the MBE/WBE programs were unconstitutional. *Id.*

The court also found the Commissioners had specific information from the County Manager and other internal studies indicating the problems with the MBE/WBE programs and indicating that parity had been achieved. *Id.* at 1338. Additionally, the Commissioners did not conduct the annual studies mandated by the MBE/WBE ordinance itself. *Id.* For all the foregoing reasons, the court held the Commissioners were subject to individual liability for any compensatory and punitive damages.

The district court enjoined the County, the Commissioners, and the County Manager from using, or requiring the use of, gender, racial, or ethnic criteria in deciding (1) whether a response to an RFP submitted for A&E work is responsive, (2) whether such a response will be considered, and (3) whether a contract will be awarded to a consultant submitting such a response. The court awarded the plaintiffs \$100 each in nominal damages and reasonable attorneys’ fees and costs, for which it held the County and the Commissioners jointly and severally liable.

L. Legal — Other district court decisions regarding state/local programs

6. *Florida A.G.C. Council, Inc. v. State of Florida*, 303 F. Supp.2d 1307 (N.D. Fla. 2004)

This case is instructive to the disparity study as to the manner in which district courts within the Eleventh Circuit are interpreting and applying *Engineering Contractors Association*. It is also instructive in terms of the type of legislation to be considered by the local and state governments as to what the courts consider to be a “race-conscious” program and/or legislation, as well as to the significance of the implementation of the legislation to the analysis.

The plaintiffs, A.G.C. Council, Inc. and the South Florida Chapter of the Associated General Contractors brought this case challenging the constitutionality of certain provisions of a Florida statute (Section 287.09451, *et seq.*). The plaintiffs contended that the statute violated the Equal Protection Clause of the Fourteenth Amendment by instituting race- and gender-conscious “preferences” in order to increase the numeric representation of “MBEs” in certain industries.

According to the court, the Florida Statute enacted race-conscious and gender-conscious remedial programs to ensure minority participation in state contracts for the purchase of commodities and in construction contracts. The State created the Office of Supplier Diversity (“OSD”) to assist MBEs to become suppliers of commodities, services and construction to the state government. The OSD had certain responsibilities, including adopting rules meant to assess whether state agencies have made good faith efforts to solicit business from MBEs, and to monitor whether contractors have made good faith efforts to comply with the objective of greater overall MBE participation.

The statute enumerated measures that contractors should undertake, such as minority-centered recruitment in advertising as a means of advancing the statute’s purpose. The statute provided that each State agency is “encouraged” to spend 21 percent of the monies actually

expended for construction contracts, 25 percent of the monies actually expended for architectural and engineering contracts, 24 percent of the monies actually expended for commodities and 50.5 percent of the monies actually expended for contractual services during the fiscal year for the purpose of entering into contracts with certified MBEs. The statute also provided that state agencies are allowed to allocate certain percentages for black Americans, Hispanic Americans and for American women, and the goals are broken down by construction contracts, architectural and engineering contracts, commodities and contractual services.

The State took the position that the spending goals were “precatory.” The court found that the plaintiffs had standing to maintain the action and to pursue prospective relief. The court held that the statute was unconstitutional based on the finding that the spending goals were not narrowly tailored to achieve a governmental interest. The court did not specifically address whether the articulated reasons for the goals contained in the statute had sufficient evidence, but instead found that the articulated reason would, “if true,” constitute a compelling governmental interest necessitating race-conscious remedies. Rather than explore the evidence, the court focused on the narrowly tailored requirement and held that it was not satisfied by the State.

The court found that there was no evidence in the record that the State contemplated race-neutral means to accomplish the objectives set forth in Section 287.09451 *et seq.*, such as “simplification of bidding procedures, relaxation of bonding requirements, training or financial aid for disadvantaged entrepreneurs of all races [which] would open the public contracting market to all those who have suffered the effects of past discrimination.” *Florida A.G.C. Council*, 303 F.Supp.2d at 1315, quoting *Eng’g Contractors Ass’n*, 122 F.3d at 928, quoting *Croson*, 488 U.S. at 509-10.

L. Legal — Other district court decisions regarding state/local programs

The court noted that defendants did not seem to disagree with the report issued by the State of Florida Senate that concluded there was little evidence to support the spending goals outlined in the statute. Rather, the State of Florida argued that the statute is “permissive.” The court, however, held that “there is no distinction between a statute that is precatory versus one that is compulsory when the challenged statute ‘induces an employer to hire with an eye toward meeting ... [a] numerical target.’ *Florida A.G.C. Council*, 303 F.Supp.2d at 1316.

The court found that the State applies pressure to State agencies to meet the legislative objectives of the statute extending beyond simple outreach efforts. The State agencies, according to the court, were required to coordinate their MBE procurement activities with the OSD, which includes adopting an MBE utilization plan. If the State agency deviated from the utilization plan in two consecutive and three out of five total fiscal years, then the OSD could review any and all solicitations and contract awards of the agency as deemed necessary until such time as the agency met its utilization plan. The court held that based on these factors, although alleged to be “permissive,” the statute textually was not.

Therefore, the court found that the statute was not narrowly tailored to serve a compelling governmental interest, and consequently violated the Equal Protection Clause of the Fourteenth Amendment.

L. Legal — Other district court decisions regarding state/local programs

7. *The Builders Ass'n of Greater Chicago v. The City of Chicago*, 298 F. Supp.2d 725 (N.D. Ill. 2003)

This case is instructive because of the court's focus and analysis on whether the City of Chicago's MBE/WBE program was narrowly tailored. The basis of the court's holding that the program was not narrowly tailored is instructive for any program considered because of the reasons provided as to why the program did not pass muster.

The plaintiff, the Builders Association of Greater Chicago, brought this suit challenging the constitutionality of the City of Chicago's construction Minority- and Women-Owned Business ("MWBE") Program. The court held that the City of Chicago's MWBE program was unconstitutional because it did not satisfy the requirement that it be narrowly tailored to achieve a compelling governmental interest. The court held that it was not narrowly tailored for several reasons, including because there was no "meaningful individualized review" of MBE/WBEs; it had no termination date nor did it have any means for determining a termination; the "graduation" revenue amount for firms to graduate out of the program was very high, \$27,500,000, and in fact very few firms graduated; there was no net worth threshold; and, waivers were rarely or never granted on construction contracts. The court found that the City program was a "rigid numerical quota," not related to the number of available, willing and able firms. Formulistic percentages, the court held, could not survive the strict scrutiny.

The court held that the goals plan did not address issues raised as to discrimination regarding market access and credit. The court found that a goals program does not directly impact prime contractor's selection of subcontractors on non-goals private projects. The court found that a set-aside or goals program does not directly impact difficulties in accessing credit, and does not address discriminatory loan denials or higher interest rates. The court found the City has not sought to attack discrimination by primes directly, "but it could." 298 F.2d 725. "To monitor possible discriminatory conduct it could maintain its certification list and require those contracting with the City to consider unsolicited bids, to maintain bidding records, and to justify rejection of any certified firm submitting the lowest bid. It could also require firms seeking City work to post private jobs above a certain minimum on a website or otherwise provide public notice ..." *Id.*

The court concluded that other race-neutral means were available to impact credit, high interest rates, and other potential marketplace discrimination. The court pointed to race-neutral means including linked deposits, with the City banking at institutions making loans to startup and smaller firms. Other race-neutral programs referenced included quick pay and contract downsizing; restricting self-performance by prime contractors; a direct loan program; waiver of bonds on contracts under \$100,000; a bank participation loan program; a 2 percent local business preference; outreach programs and technical assistance and workshops; and seminars presented to new construction firms.

L. Legal — Other district court decisions regarding state/local programs

The court held that race and ethnicity do matter, but that racial and ethnic classifications are highly suspect, can be used only as a last resort, and cannot be made by some mechanical formulation. Therefore, the court concluded the City's MWBE Program could not stand in its present guise. The court held that the present program was not narrowly tailored to remedy past discrimination and the discrimination demonstrated to now exist.

The court entered an injunction, but delayed the effective date for six months from the date of its Order, December 29, 2003. The court held that the City had a "compelling interest in not having its construction projects slip back to near monopoly domination by white male firms." The court ruled a brief continuation of the program for six months was appropriate "as the City rethinks the many tools of redress it has available." Subsequently, the court declared unconstitutional the City's MWBE Program with respect to construction contracts and permanently enjoined the City from enforcing the Program. 2004 WL 757697 (N.D. Ill 2004).

L. Legal — Other district court decisions regarding state/local programs

8. *Associated Utility Contractors of Maryland, Inc. v. Mayor and City Council of Baltimore*, 218 F. Supp.2d 749 (D. Md. 2002)

This case is instructive because the court found the Executive Order of the Mayor of the City of Baltimore was precatory in nature (creating no legal obligation or duty) and contained no enforcement mechanism or penalties for noncompliance and imposed no substantial restrictions; the Executive Order announced goals that were found to be aspirational only.

The Associated Utility Contractors of Maryland, Inc. (“AUC”) sued the City of Baltimore challenging its ordinance providing for minority and women-owned business enterprise (“MWBE”) participation in city contracts. Previously, an earlier City of Baltimore MWBE program was declared unconstitutional. *Associated Utility Contractors of Maryland, Inc. v. Mayor and City Council of Baltimore*, 83 F. Supp.2d 613 (D. Md. 2000). The City adopted a new ordinance that provided for the establishment of MWBE participation goals on a contract-by-contract basis, and made several other changes from the previous MWBE program declared unconstitutional in the earlier case.

In addition, the Mayor of the City of Baltimore issued an Executive Order that announced a goal of awarding 35 percent of all City contracting dollars to MBE/WBEs. The court found this goal of 35 percent participation was aspirational only and the Executive Order contained no enforcement mechanism or penalties for noncompliance. The Executive Order also specified many “noncoercive” outreach measures to be taken by the City agencies relating to increasing participation of MBE/WBEs. These measures were found to be merely aspirational and no enforcement mechanism was provided.

The court addressed in this case only a motion to dismiss filed by the City of Baltimore arguing that the Associated Utility Contractors had no standing. The court denied the motion to dismiss holding that the association had standing to challenge the new MBE/WBE ordinance, although the court noted that it had significant issues with the AUC having representational standing because of the nature of the MBE/WBE plan and the fact the AUC did not have any of its individual members named in the suit. The court also held that the AUC was entitled to bring an as applied challenge to the Executive Order of the Mayor, but rejected it having standing to bring a facial challenge based on a finding that it imposes no requirement, creates no sanctions, and does not inflict an injury upon any member of the AUC in any concrete way. Therefore, the Executive Order did not create a “case or controversy” in connection with a facial attack. The court found the wording of the Executive Order to be precatory and imposing no substantive restrictions.

After this decision the City of Baltimore and the AUC entered into a settlement agreement and a dismissal with prejudice of the case. An order was issued by the court on October 22, 2003 dismissing the case with prejudice.

L. Legal — Other district court decisions regarding state/local programs

9. *Kornhass Construction, Inc. v. State of Oklahoma, Department of Central Services*, 140 F.Supp.2d 1232 (W.D. OK. 2001)

Plaintiffs, nonminority contractors, brought this action against the State of Oklahoma challenging minority bid preference provisions in the Oklahoma Minority Business Enterprise Assistance Act (“MBE Act”). The Oklahoma MBE Act established a bid preference program by which certified minority business enterprises are given favorable treatment on competitive bids submitted to the state. 140 F.Supp.2d at 1235–36. Under the MBE Act, the bids of nonminority contractors were raised by 5 percent, placing them at a competitive disadvantage according to the district court. *Id.* at 1235–1236.

The named plaintiffs bid on state contracts in which their bids were increased by 5 percent as they were nonminority business enterprises. Although the plaintiffs actually submitted the lowest dollar bids, once the 5 percent factor was applied, minority bidders became the successful bidders on certain contracts. 140 F.Supp. at 1237.

In determining the constitutionality or validity of the Oklahoma MBE Act, the district court was guided in its analysis by the Tenth Circuit Court of Appeals decision in *Adarand Constructors, Inc. v. Slater*, 288 F.3d 1147 (10th Cir. 2000). The district court pointed out that in *Adarand VII*, the Tenth Circuit found compelling evidence of barriers to both minority business formation and existing minority businesses. *Id.* at 1238. In sum, the district court noted that the Tenth Circuit concluded that the Government had met its burden of presenting a strong basis in evidence sufficient to support its articulated, constitutionally valid, compelling interest. 140 F.Supp.2d at 1239, *citing Adarand VII*, 228 F.3d 1147, 1174.

Compelling state interest. The district court, following *Adarand VII*, applied the strict scrutiny analysis, arising out of the Fourteenth Amendment’s Equal Protection Clause, in which a race-based affirmative action program withstands strict scrutiny only if it is narrowly tailored to serve a compelling governmental interest. *Id.* at 1239. The district court pointed out that it is clear from Supreme Court precedent, there may be a compelling interest sufficient to justify race-conscious affirmative action measures. *Id.* The Fourteenth Amendment permits race-conscious programs that seek both to eradicate discrimination by the governmental entity itself and to prevent the governmental entity from becoming a “passive participant” in a system of racial exclusion practiced by private businesses. *Id.* at 1240. Therefore, the district court concluded that both the federal and state governments have a compelling interest assuring that public dollars do not serve to finance the evil of private prejudice. *Id.*

The district court stated that a “mere statistical disparity in the proportion of contracts awarded to a particular group, standing alone, does not demonstrate the evil of private or public racial prejudice.” *Id.* Rather, the court held that the “benchmark for judging the adequacy of a state’s factual predicate for affirmative action legislation is whether there exists a strong basis in the evidence of the state’s conclusion that remedial action was necessary.” *Id.* The district court found that the Supreme Court made it clear that the state bears the burden of demonstrating a strong basis in evidence for its conclusion that remedial action was necessary by proving either that the state itself discriminated in the past or was “a passive participant” in private industry’s discriminatory practices. *Id.* at 1240, *citing to Associated General Contractors of Ohio, Inc. v. Drabik*, 214 F.3d 730, 735 (6th Cir. 2000) and *City of Richmond v. J.A. Croson Company*, 488 U.S. 469 at 486-492 (1989).

L. Legal — Other district court decisions regarding state/local programs

With this background, the State of Oklahoma stated that its compelling state interest “is to promote the economy of the State and to ensure that minority business enterprises are given an opportunity to compete for state contracts.” *Id.* at 1240. Thus, the district court found the State admitted that the MBE Act’s bid preference “is not based on past discrimination,” rather, it is based on a desire to “encourag[e] economic development of minority business enterprises which in turn will benefit the State of Oklahoma as a whole.” *Id.* In light of *Adarand VII*, and prevailing Supreme Court case law, the district court found that this articulated interest is not “compelling” in the absence of evidence of past or present racial discrimination. *Id.*

The district court considered testimony presented by Intervenors who participated in the case for the defendants and asserted that the Oklahoma legislature conducted an interim study prior to adoption of the MBE Act, during which testimony and evidence were presented to members of the Oklahoma Legislative Black Caucus and other participating legislators. The study was conducted more than 14 years prior to the case and the Intervenors did not actually offer any of the evidence to the court in this case. The Intervenors submitted an affidavit from the witness who serves as the Title VI Coordinator for the Oklahoma Department of Transportation. The court found that the affidavit from the witness averred in general terms that minority businesses were discriminated against in the awarding of state contracts. The district court found that the Intervenors have not produced — or indeed even described — the evidence of discrimination. *Id.* at 1241. The district court found that it cannot be discerned from the documents which minority businesses were the victims of discrimination, or which racial or ethnic groups were targeted by such alleged discrimination. *Id.*

The court also found that the Intervenors’ evidence did not indicate what discriminatory acts or practices allegedly occurred, or when they occurred. *Id.* The district court stated that the Intervenors did not identify “a single qualified, minority-owned bidder who was excluded from a state contract.” *Id.* The district court, thus, held that broad allegations of “systematic” exclusion of minority businesses were not sufficient to constitute a compelling governmental interest in remedying past or current discrimination. *Id.* at 1242. The district court stated that this was particularly true in light of the “State’s admission here that the State’s governmental interest was not in remedying past discrimination in the state competitive bidding process, but in ‘encouraging economic development of minority business enterprises which in turn will benefit the State of Oklahoma as a whole.’” *Id.* at 1242.

The court found that the State defendants failed to produce any admissible evidence of a single, specific discriminatory act, or any substantial evidence showing a pattern of deliberate exclusion from state contracts of minority-owned businesses. *Id.* at 1241 - 1242, footnote 11.

The district court also noted that the Sixth Circuit Court of Appeals in *Drabik* rejected Ohio’s statistical evidence of underutilization of minority contractors because the evidence did not report the actual use of minority firms; rather, they reported only the use of those minority firms that had gone to the trouble of being certified and listed by the state. *Id.* at 1242, footnote 12. The district court stated that, as in *Drabik*, the evidence presented in support of the Oklahoma MBE Act failed to account for the possibility that some minority contractors might not register with the state, and the statistics did not account for any contracts awarded to businesses with minority ownership of less than 51 percent, or for contracts performed in large part by minority-owned subcontractors where the prime contractor was not a certified minority-owned business. *Id.*

L. Legal — Other district court decisions regarding state/local programs

The district court found that the MBE Act’s minority bidding preference was not predicated upon a finding of discrimination in any particular industry or region of the state, or discrimination against any particular racial or ethnic group. The court stated that there was no evidence offered of actual discrimination, past or present, against the specific racial and ethnic groups to whom the preference was extended, other than an attempt to show a history of discrimination against African Americans. *Id.* at 1242.

Narrow tailoring. The district court found that even if the State’s goals could not be considered “compelling,” the State did not show that the MBE Act was narrowly tailored to serve those goals. The court pointed out that the Tenth Circuit in *Adarand VII* identified six factors the court must consider in determining whether the MBE Act’s minority preference provisions were sufficiently narrowly tailored to satisfy equal protection: (1) the availability of race-neutral alternative remedies; (2) limits on the duration of the challenged preference provisions; (3) flexibility of the preference provisions; (4) numerical proportionality; (5) the burden on third parties; and (6) over- or under-inclusiveness. *Id.* at 1242-1243.

First, in terms of race-neutral alternative remedies, the court found that the evidence offered showed, at most, that nominal efforts were made to assist minority-owned businesses prior to the adoption of the MBE Act’s racial preference program. *Id.* at 1243. The court considered evidence regarding the Minority Assistance Program, but found that to be primarily informational services only, and was not designed to actually assist minorities or other disadvantaged contractors to obtain contracts with the State of Oklahoma. *Id.* at 1243. In contrast to this “informational” program, the court noted the Tenth Circuit in *Adarand VII* favorably considered the federal government’s use of racially neutral alternatives aimed at disadvantaged businesses, including assistance with obtaining project bonds, assistance with securing capital financing,

technical assistance, and other programs designed to assist start-up businesses. *Id.* at 1243 *citing Adarand VII*, 228 F.3d at 1178-1179.

The district court found that it does not appear from the evidence that Oklahoma’s Minority Assistance Program provided the type of race-neutral relief required by the Tenth Circuit in *Adarand VII*, in the Supreme Court in the *Crososn* decision, nor does it appear that the Program was racially neutral. *Id.* at 1243. The court found that the State of Oklahoma did not show any meaningful form of assistance to new or disadvantaged businesses prior to the adoption of the MBE Act, and thus, the court found that the state defendants had not shown that Oklahoma considered race-neutral alternative means to achieve the state’s goal prior to adoption of the minority bid preference provisions. *Id.* at 1243.

In a footnote, the district court pointed out that the Tenth Circuit has recognized racially neutral programs designed to assist *all* new or financially disadvantaged businesses in obtaining government contracts tend to benefit minority-owned businesses, and can help alleviate the effects of past and present-day discrimination. *Id.* at 1243, footnote 15 *citing Adarand VII*.

The court considered the evidence offered of post-enactment efforts by the State to increase minority participation in State contracting. The court found that most of these efforts were directed toward encouraging the participation of certified minority business enterprises, “and are thus not racially neutral. This evidence fails to demonstrate that the State employed race-neutral alternative measures prior to or after adopting the Minority Business Enterprise Assistance Act.” *Id.* at 1244. Some of the efforts the court found were directed toward encouraging the participation of certified minority business enterprises and thus not racially neutral, included mailing vendor registration forms to minority vendors, telephoning and mailing letters to minority

L. Legal — Other district court decisions regarding state/local programs

vendors, providing assistance to vendors in completing registration forms, assuring the vendors received bid information, preparing a minority business directory and distributing it to all state agencies, periodically mailing construction project information to minority vendors, and providing commodity information to minority vendors upon request. *Id.* at 1244, footnote 16.

In terms of durational limits and flexibility, the court found that the “goal” of 10 percent of the state’s contracts being awarded to certified minority business enterprises had never been reached, or even approached, during the thirteen years since the MBE Act was implemented. *Id.* at 1244. The court found the defendants offered no evidence that the bid preference was likely to end at any time in the foreseeable future, or that it is otherwise limited in its duration. *Id.* Unlike the federal programs at issue in *Adarand VII*, the court stated the Oklahoma MBE Act has no inherent time limit, and no provision for disadvantaged minority-owned businesses to “graduate” from preference eligibility. *Id.* The court found the MBE Act was not limited to those minority-owned businesses which are shown to be economically disadvantaged. *Id.*

The court stated that the MBE Act made no attempt to address or remedy any actual, demonstrated past or present racial discrimination, and the MBE Act’s duration was not tied in any way to the eradication of such discrimination. *Id.* Instead, the court found the MBE Act rests on the “questionable assumption that 10 percent of all state contract dollars should be awarded to certified minority-owned and operated businesses, without any showing that this assumption is reasonable.” *Id.* at 1244.

By the terms of the MBE Act, the minority preference provisions would continue in place for five years after the goal of 10 percent minority participation was reached, and thus the district court concluded that the MBE Act’s minority preference provisions lacked reasonable durational limits. *Id.* at 1245.

With regard to the factor of “numerical proportionality” between the MBE Act’s aspirational goal and the number of existing available minority-owned businesses, the court found the MBE Act’s 10 percent goal was not based upon demonstrable evidence of the availability of minority contractors who were either qualified to bid or who were ready, willing and able to become qualified to bid on state contracts. *Id.* at 1246–1247. The court pointed out that the MBE Act made no attempt to distinguish between the four minority racial groups, so that contracts awarded to members of all of the preferred races were aggregated in determining whether the 10 percent aspirational goal had been reached. *Id.* at 1246. In addition, the court found the MBE Act aggregated all state contracts for goods and services, so that minority participation was determined by the total number of dollars spent on state contracts. *Id.*

The court stated that in *Adarand VII*, the Tenth Circuit rejected the contention that the aspirational goals were required to correspond to an actual finding as to the number of existing minority-owned businesses. *Id.* at 1246. The court noted that the government submitted evidence in *Adarand VII*, that the effects of past discrimination had excluded minorities from entering the construction industry, and that the number of available minority subcontractors reflected that discrimination. *Id.* In light of this evidence, the district court said the Tenth Circuit held that the existing percentage of minority-owned businesses is “not necessarily an absolute cap” on the percentage that a remedial program might legitimately seek to achieve. *Id.* at 1246, citing *Adarand VII*, 228 F.3d at 1181.

L. Legal — Other district court decisions regarding state/local programs

Unlike *Adarand VII*, the court found that the Oklahoma State defendants did not offer “substantial evidence” that the minorities given preferential treatment under the MBE Act were prevented, through past discrimination, from entering any particular industry, or that the number of available minority subcontractors in that industry reflects that discrimination. 140 F.Supp.2d at 1246. The court concluded that the Oklahoma State defendants did not offer any evidence of the number of minority-owned businesses doing business in any of the many industries covered by the MBE Act. *Id.* at 1246–1247.

With regard to the impact on third parties factor, the court pointed out the Tenth Circuit in *Adarand VII* stated the mere possibility that innocent parties will share the burden of a remedial program is itself insufficient to warrant the conclusion that the program is not narrowly tailored. *Id.* at 1247. The district court found the MBE Act’s bid preference provisions prevented nonminority businesses from competing on an equal basis with certified minority business enterprises, and that in some instances plaintiffs had been required to lower their intended bids because they knew minority firms were bidding. *Id.* The court pointed out that the 5 percent preference is applicable to *all* contracts awarded under the state’s Central Purchasing Act with no time limitation. *Id.*

In terms of the “under- and over-inclusiveness” factor, the court observed that the MBE Act extended its bidding preference to several racial minority groups without regard to whether each of those groups had suffered from the effects of past or present racial discrimination. *Id.* at 1247. The district court reiterated the Oklahoma State defendants did not offer any evidence at all that the minority racial groups identified in the Act had actually suffered from discrimination. *Id.*

Second, the district court found the MBE Act’s bidding preference extends to all contracts for goods and services awarded under the State’s Central Purchasing Act, without regard to whether members of the preferred minority groups had been the victims of past or present discrimination within that particular industry or trade. *Id.*

Third, the district court noted the preference extends to all businesses certified as minority-owned and controlled, without regard to whether a particular business is economically or socially disadvantaged, or has suffered from the effects of past or present discrimination. *Id.* The court thus found that the factor of over-inclusiveness weighs against a finding that the MBE Act was narrowly tailored. *Id.*

The district court in conclusion found that the Oklahoma MBE Act violated the Constitution’s Fifth Amendment guarantee of equal protection and granted the plaintiffs’ Motion for Summary Judgment.

L. Legal — Other district court decisions regarding state/local programs

10. *Associated Utility Contractors of Maryland, Inc. v. The Mayor and City Council of Baltimore*, 83 F. Supp.2d 613 (D. Md. 2000)

The court held unconstitutional the City of Baltimore’s “affirmative action” program, which had construction subcontracting “set-aside” goals of 20 percent for MBEs and 3 percent for WBEs. The court held there was no data or statistical evidence submitted by the City prior to enactment of the Ordinance. There was no evidence showing a disparity between MBE/WBE availability and utilization in the subcontracting construction market in Baltimore. The court enjoined the City Ordinance.

L. Legal — Other district court decisions regarding state/local programs

11. *Webster v. Fulton County*, 51 F. Supp.2d 1354 (N.D. Ga. 1999), *aff'd per curiam* 218 F.3d 1267 (11th Cir. 2000)

This case is instructive as it is another instance in which a court has considered, analyzed, and ruled upon a race-, ethnicity- and gender-conscious program, holding the local government MBE/WBE-type program failed to satisfy the strict scrutiny constitutional standard. The case also is instructive in its application of the *Engineering Contractors Association* case, including to a disparity analysis, the burdens of proof on the local government, and the narrowly tailored prong of the strict scrutiny test.

In this case, plaintiff Webster brought an action challenging the constitutionality of Fulton County's (the "County") minority and female business enterprise program ("M/FBE") program. 51 F. Supp.2d 1354, 1357 (N.D. Ga. 1999). [The district court first set forth the provisions of the M/FBE program and conducted a standing analysis at 51 F. Supp.2d at 1356-62].

The court, *citing Engineering Contractors Association of S. Florida, Inc. v. Metro. Engineering Contractors Association*, 122 F.3d 895 (11th Cir. 1997), held that "[e]xplicit racial preferences may not be used except as a 'last resort.'" *Id.* at 1362-63. The court then set forth the strict scrutiny standard for evaluating racial and ethnic preferences and the four factors enunciated in *Engineering Contractors Association*, and the intermediate scrutiny standard for evaluating gender preferences. *Id.* at 1363. The court found that under *Engineering Contractors Association*, the government could utilize both post-enactment and pre-enactment evidence to meet its burden of a "strong basis in evidence" for strict scrutiny, and "sufficient probative evidence" for intermediate scrutiny. *Id.*

The court found that the defendant bears the initial burden of satisfying the aforementioned evidentiary standard, and the ultimate burden of proof remains with the challenging party to demonstrate the unconstitutionality of the M/FBE program. *Id.* at 1364. The court found that the plaintiff has at least three methods "to rebut the inference of discrimination with a neutral explanation: (1) demonstrate that the statistics are flawed; (2) demonstrate that the disparities shown by the statistics are not significant; or (3) present conflicting statistical data." *Id.*, *citing Eng'g Contractors Ass'n*, 122 F.3d at 916.

[The district court then set forth the *Engineering Contractors Association* opinion in detail.]

The court first noted that the Eleventh Circuit has recognized that disparity indices greater than 80 percent are generally not considered indications of discrimination. *Id.* at 1368, *citing Eng'g Contractors Assoc.*, 122 F.3d at 914. The court then considered the County's pre-1994 disparity study (the "Brimmer-Marshall Study") and found that it failed to establish a strong basis in evidence necessary to support the M/FBE program. *Id.* at 1368.

First, the court found that the study rested on the inaccurate assumption that a statistical showing of underutilization of minorities in the marketplace as a whole was sufficient evidence of discrimination. *Id.* at 1369. The court cited *City of Richmond v. J.A. Croson Co.*, 488 U.S. 496 (1989) for the proposition that discrimination must be focused on contracting by the entity that is considering the preference program. *Id.* Because the Brimmer-Marshall Study contained no statistical evidence of discrimination by the County in the award of contracts, the court found the County must show that it was a "passive participant" in discrimination by the private sector. *Id.* The court found that the County could take remedial action if it had evidence that prime contractors were systematically excluding minority-owned businesses from

L. Legal — Other district court decisions regarding state/local programs

subcontracting opportunities, or if it had evidence that its spending practices are “exacerbating a pattern of prior discrimination that can be identified with specificity.” *Id.* However, the court found that the Brimmer-Marshall Study contained no such data. *Id.*

Second, the Brimmer-Marshall study contained no regression analysis to account for relevant variables, such as firm size. *Id.* at 1369-70. At trial, Dr. Marshall submitted a follow-up to the earlier disparity study. However, the court found the study had the same flaw in that it did not contain a regression analysis. *Id.* The court thus concluded that the County failed to present a “strong basis in evidence” of discrimination to justify the County’s racial and ethnic preferences. *Id.*

The court next considered the County’s post-1994 disparity study. *Id.* at 1371. The study first sought to determine the availability and utilization of minority- and female-owned firms. *Id.* The court explained:

Two methods may be used to calculate availability: (1) bid analysis; or (2) bidder analysis. In a bid analysis, the analyst counts the number of bids submitted by minority or female firms over a period of time and divides it by the total number of bids submitted in the same period. In a bidder analysis, the analyst counts the number of minority or female firms submitting bids and divides it by the total number of firms which submitted bids during the same period. Id. The court found that the information provided in the study was insufficient to establish a firm basis in evidence to support the M/FBE program. *Id.* at 1371-72. The court also found it significant to conduct a regression analysis to show whether the disparities were either due to discrimination or other neutral grounds. *Id.* at 1375-76.

The plaintiff and the County submitted statistical studies of data collected between 1994 and 1997. *Id.* at 1376. The court found that the data were potentially skewed due to the operation of the M/FBE program. *Id.* Additionally, the court found that the County’s standard

deviation analysis yielded non-statistically significant results (noting the Eleventh Circuit has stated that scientists consider a finding of two standard deviations significant). *Id.* (internal citations omitted).

The court considered the County’s anecdotal evidence, and quoted *Engineering Contractors Association* for the proposition that “[a]necdotal evidence can play an important role in bolstering statistical evidence, but that only in the rare case will anecdotal evidence suffice standing alone.” *Id.*, quoting *Eng’g Contractors Ass’n*, 122 F.3d at 907. The Brimmer-Marshall Study contained anecdotal evidence. *Id.* at 1379. Additionally, the County held hearings but after reviewing the tape recordings of the hearings, the court concluded that only two individuals testified to discrimination by the County; one of them complained that the County used the M/FBE program to only benefit African Americans. *Id.* The court found the most common complaints concerned barriers in bonding, financing, and insurance and slow payment by prime contractors. *Id.* The court concluded that the anecdotal evidence was insufficient in and of itself to establish a firm basis for the M/FBE program. *Id.*

The court also applied a narrow tailoring analysis of the M/FBE program. “The Eleventh Circuit has made it clear that the essence of this inquiry is whether racial preferences were adopted only as a ‘last resort.’” *Id.* at 1380, citing *Eng’g Contractors Assoc.*, 122 F.3d at 926. The court cited the Eleventh Circuit’s four-part test and concluded that the County’s M/FBE program failed on several grounds. First, the court found that a race-based problem does not necessarily require a race-based solution. “If a race-neutral remedy is sufficient to cure a race-based problem, then a race-conscious remedy can never be narrowly tailored to that problem.” *Id.*, quoting *Eng’g Contractors Ass’n*, 122 F.3d at 927. The court found that there was no evidence of discrimination by the County. *Id.* at 1380.

L. Legal — Other district court decisions regarding state/local programs

The court found that even though a majority of the Commissioners on the County Board were African American, the County had continued the program for decades. *Id.* The court held that the County had not seriously considered race-neutral measures:

There is no evidence in the record that any Commissioner has offered a resolution during this period substituting a program of race-neutral measures as an alternative to numerical set-asides based upon race and ethnicity. There is no evidence in the record of any proposal by the staff of Fulton County of substituting a program of race-neutral measures as an alternative to numerical set-asides based upon race and ethnicity. There has been no evidence offered of any debate within the Commission about substituting a program of race-neutral measures as an alternative to numerical set-asides based upon race and ethnicity
Id.

The court found that the random inclusion of ethnic and racial groups who had not suffered discrimination by the County also mitigated against a finding of narrow tailoring. *Id.* The court found that there was no evidence that the County considered race-neutral alternatives as an alternative to race-conscious measures nor that race-neutral measures were initiated and failed. *Id.* at 1381. The court concluded that because the M/FBE program was not adopted as a last resort, it failed the narrow tailoring test. *Id.*

Additionally, the court found that there was no substantial relationship between the numerical goals and the relevant market. *Id.* The court rejected the County's argument that its program was permissible because it set "goals" as opposed to "quotas," because the program in *Engineering Contractors Association* also utilized "goals" and was struck down. *Id.*

Per the M/FBE program's gender-based preferences, the court found that the program was sufficiently flexible to satisfy the substantial relationship prong of the intermediate scrutiny standard. *Id.* at 1383. However, the court held that the County failed to present "sufficient probative evidence" of discrimination necessary to sustain the gender-based preferences portion of the M/FBE program. *Id.*

The court found the County's M/FBE program unconstitutional and entered a permanent injunction in favor of the plaintiff. *Id.* On appeal, the Eleventh Circuit affirmed per curiam, stating only that it affirmed on the basis of the district court's opinion. *Webster v. Fulton County, Georgia*, 218 F.3d 1267 (11th Cir. 2000).

L. Legal — Other district court decisions regarding state/local programs

12. *Associated Gen. Contractors v. Drabik*, 50 F. Supp.2d 741 (S.D. Ohio 1999)

The district court in this case pointed out that it had struck down Ohio's MBE statute that provided race-based preferences in the award of state construction contracts in 1998. 50 F.Supp.2d at 744. Two weeks earlier, the district court for the Northern District of Ohio, likewise, found the same Ohio law unconstitutional when it was relied upon to support a state mandated set-aside program adopted by the Cuyahoga Community College. *See F. Buddie Contracting, Ltd. v. Cuyahoga Community College District*, 31 F.Supp.2d 571 (N.D. Ohio 1998). *Id.* at 741.

The state defendants appealed this court's decision to the United States court of Appeals for the Sixth Circuit. *Id.* Thereafter, the Supreme Court of Ohio held in the case of *Ritchey Produce, Co., Inc. v. The State of Ohio, Department of Administrative*, 704 N.E. 2d 874 (1999), that the Ohio statute, which provided race-based preferences in the state's purchase of nonconstruction-related goods and services, was constitutional. *Id.* at 744.

While this court's decision related to construction contracts and the Ohio Supreme Court's decision related to other goods and services, the decisions could not be reconciled, according to the district court. *Id.* at 744. Subsequently, the state defendants moved this court to stay its order of November 2, 1998 in light of the Ohio State Supreme Court's decision in *Ritchey Produce*. The district court took the opportunity in this case to reconsider its decision of November 2, 1998, and to the reasons given by the Supreme Court of Ohio for reaching the opposite result in *Ritchey Produce*, and decide in this case that its original decision was correct, and that a stay of its order would only serve to perpetuate a "blatantly unconstitutional program of race-based benefits. *Id.* at 745.

In this decision, the district court reaffirmed its earlier holding that the State of Ohio's MBE program of construction contract awards is unconstitutional. The court cited to *F. Buddie Contracting v. Cuyahoga Community College*, 31 F. Supp.2d 571 (N.D. Ohio 1998), holding a similar local Ohio program unconstitutional. The court repudiated the Ohio Supreme Court's holding in *Ritchey Produce*, 707 N.E. 2d 871 (Ohio 1999), which held that the State of Ohio's MBE program as applied to the state's purchase of non-construction-related goods and services was constitutional. The court found the evidence to be insufficient to justify the Ohio MBE program. The court held that the program was not narrowly tailored because there was no evidence that the State had considered a race-neutral alternative.

Strict Scrutiny. The district court held that the Supreme Court of Ohio decision in *Ritchey Produce* was wrongly decided for the following reasons:

1. Ohio's MBE program of race-based preferences in the award of state contracts was unconstitutional because it is unlimited in duration. *Id.* at 745.
2. A program of race-based benefits cannot be supported by evidence of discrimination which is over 20 years old. *Id.*
3. The state Supreme Court found that there was a severe numerical imbalance in the amount of business the State did with minority-owned enterprises, based on its uncritical acceptance of essentially "worthless calculations contained in a twenty-one year-old report, which miscalculated the percentage of minority-owned businesses in Ohio and misrepresented data on the percentage of state purchase contracts they had received, all of which was easily detectable by examining the data cited by the authors of the report." *Id.* at 745.

L. Legal — Other district court decisions regarding state/local programs

4. The state Supreme Court failed to recognize that the incorrectly calculated percentage of minority-owned businesses in Ohio (6.7 percent) bears no relationship to the 15 percent set-aside goal of the Ohio Act. *Id.*
5. The state Supreme Court applied an incorrect rule of law when it announced that Ohio’s program must be upheld unless it is clearly unconstitutional beyond a reasonable doubt, whereas according to the district court in this case, the Supreme Court of the United States has said that all racial class classifications are highly suspect and must be subjected to strict judicial scrutiny. *Id.*
6. The evidence of past discrimination that the Ohio General Assembly had in 1980 did not provide a firm basis in evidence for a race-based remedy. *Id.*

Thus, the district court determined the evidence could not support a compelling state-interest for race-based preferences for the state of Ohio MBE Act, in part based on the fact evidence of past discrimination was stale and twenty years old, and the statistical analysis was insufficient because the state did not know how many MBEs in the relevant market are qualified to undertake prime or subcontracting work in public construction contracts. *Id.* at 763-771. The statistical evidence was fatally flawed because the relevant universe of minority businesses is not all minority businesses in the state of Ohio, but only those willing and able to enter into contracts with the state of Ohio. *Id.* at 761. In the case of set-aside program in state construction, the relevant universe is minority-owned construction firms willing and able to enter into state construction contracts. *Id.*

Narrow Tailoring. The court addressed the second prong of the strict scrutiny analysis, and found that the Ohio MBE program at issue was not narrowly tailored. The court concluded that the state could not satisfy the four factors to be considered in determining whether race-conscious remedies are appropriate. *Id.* at 763. First, the court stated that there was no consideration of race-neutral alternatives to increase minority participation in state contracting before resorting to “race-based quotas.” *Id.* at 763-764. The court held that failure to consider race-neutral means was fatal to the set-aside program in *Croson*, and the failure of the State of Ohio to consider race-neutral means before adopting the MBE Act in 1980 likewise “dooms Ohio’s program of race-based quotas.” *Id.* at 765.

Second, the court found the Ohio MBE Act was not flexible. The court stated that instead of allowing flexibility to ameliorate harmful effects of the program, the imprecision of the statutory goals has been used to justify bureaucratic decisions which increase its impact on nonminority business.” *Id.* at 765. The court said the waiver system for prime contracts focuses solely on the availability of MBEs. *Id.* at 766. The court noted the awarding agency may remove the contract from the set-aside program and open it up for bidding by nonminority contractors if no certified MBE submits a bid, or if all bids submitted by MBEs are considered unacceptably high. *Id.* But, in either event, the court pointed out the agency is then required to set aside additional contracts to satisfy the numerical quota required by the statute. *Id.* The court concluded that there is no consideration given to whether the particular MBE seeking a racial preference has suffered from the effects of past discrimination by the state or prime contractors. *Id.*

L. Legal — Other district court decisions regarding state/local programs

Third, the court found the Ohio MBE Act was not appropriately limited such that it will not last longer than the discriminatory effects it was designed to eliminate. *Id.* at 766. The court stated the 1980 MBE Act is unlimited in duration, and there is no evidence the state has ever reconsidered whether a compelling state interest exists that would justify the continuation of a race-based remedy at any time during the two decades the Act has been in effect. *Id.*

Fourth, the court found the goals of the Ohio MBE Act were not related to the relevant market and that the Act failed this element of the “narrowly tailored” requirement of strict scrutiny. *Id.* at 767-768. The court said the goal of 15 percent far exceeds the percentage of available minority firms, and thus bears no relationship to the relevant market. *Id.*

Fifth, the court found the conclusion of the Ohio Supreme Court that the burdens imposed on non-MBEs by virtue of the set-aside requirements were relatively light was incorrect. *Id.* at 768. The court concluded nonminority contractors in various trades were effectively excluded from the opportunity to bid on any work from large state agencies, departments, and institutions solely because of their race. *Id.* at 678.

Sixth, the court found the Ohio MBE Act provided race-based benefits based on a random inclusion of minority groups. *Id.* at 770-771. The court stated there was no evidence about the number of each racial or ethnic group or the respective shares of the total capital improvement expenditures they received. *Id.* at 770. None of the statistical information, the court said, broke down the percentage of all firms that were owned by specific minority groups or the dollar amounts of contracts received by firms in specific minority groups. *Id.* The court, thus, concluded that the Ohio MBE Act included minority groups randomly without any specific evidence that any group suffered from discrimination in the construction industry in Ohio. *Id.* at 771.

Conclusion. The court thus denied the motion of the state defendants to stay the court’s prior order holding unconstitutional the Ohio MBE Act pending the appeal of the court’s order. *Id.* at 771. This opinion underscored that governments must show several factors to demonstrate narrow tailoring: (1) the necessity for the relief and the efficacy of alternative remedies, (2) flexibility and duration of the relief, (3) relationship of numerical goals to the relevant labor market, and (4) impact of the relief on the rights of third parties. The court held the Ohio MBE program failed to satisfy this test.

L. Legal — Other district court decisions regarding state/local programs

13. *Phillips & Jordan, Inc. v. Watts*, 13 F. Supp.2d 1308 (N.D. Fla. 1998)

This case is instructive because it addressed a challenge to a state and local government MBE/WBE-type program and considered the requisite evidentiary basis necessary to support the program. In *Phillips & Jordan*, the district court for the Northern District of Florida held that the Florida Department of Transportation’s (“FDOT”) program of “setting aside” certain highway maintenance contracts for African American- and Hispanic-owned businesses violated the Equal Protection Clause of the Fourteenth Amendment to the United States Constitution. The parties stipulated that the plaintiff, a nonminority business, had been excluded in the past and may be excluded in the future from competing for certain highway maintenance contracts “set aside” for business enterprises owned by Hispanic and African American individuals. The court held that the evidence of statistical disparities was insufficient to support the Florida DOT program.

The district court pointed out that Florida DOT did not claim that it had evidence of intentional discrimination in the award of its contracts. The court stated that the essence of FDOT’s claim was that the two-year disparity study provided evidence of a disparity between the proportion of minorities awarded FDOT road maintenance contracts and a portion of the minorities “supposedly willing and able to do road maintenance work,” and that FDOT did not itself engage in any racial or ethnic discrimination, so FDOT must have been a passive participant in “somebody’s” discriminatory practices.

Since it was agreed in the case that FDOT did not discriminate against minority contractors bidding on road maintenance contracts, the court found that the record contained insufficient proof of discrimination. The court found the evidence insufficient to establish acts of discrimination against African American- and Hispanic-owned businesses.

The court raised questions concerning the choice and use of the statistical pool of available firms relied upon by the disparity study. The court expressed concern about whether it was appropriate to use Census data to analyze and determine which firms were available (qualified and/or willing and able) to bid on FDOT road maintenance contracts.

L. Legal — Recent decisions involving federal procurement that may impact programs

J. Recent Decisions and Authorities Involving Federal Procurement That May Impact MBE/WBE/DBE Programs

1. *Rothe Development, Inc. v. U.S. Dept. of Defense, U.S. Small Business Administration, et al.*, 836 F.3d 57, 2016 WL 4719049 (D.C. Cir. 2016), cert. denied, 2017 WL 1375832 (Oct. 16, 2017), affirming on other grounds, *Rothe Development, Inc. v. U.S. Dept. of Defense, U.S. Small Business Administration, et al.*, 107 F.Supp. 3d 183 (D.D.C. 2015)

In a split decision, the majority of a three-judge panel of the United States Court of Appeals for the District of Columbia Circuit upheld the constitutionality of section 8(a) of the Small Business Act, which was challenged by Plaintiff-Appellant Rothe Development Inc. (Rothe). Rothe alleged that the statutory basis of the United States Small Business Administration’s 8(a) business development program (codified at 15 U.S.C. § 637), violated its right to equal protection under the Due Process Clause of the Fifth Amendment. 836 F.3d 57, 2016 WL 4719049, at *1. Rothe contends the statute contains a racial classification that presumes certain racial minorities are eligible for the program. *Id.* The court held, however, that Congress considered and rejected statutory language that included a racial presumption. *Id.* Congress, according to the court, chose instead to hinge participation in the program on the facially race-neutral criterion of social disadvantage, which it defined as having suffered racial, ethnic, or cultural bias. *Id.*

The challenged statute authorizes the Small Business Administration (SBA) to enter into contracts with other federal agencies, which the SBA then subcontracts to eligible small businesses that compete for the subcontracts in a sheltered market. *Id.* *1. Businesses owned by “socially and economically disadvantaged” individuals are eligible to participate in the 8(a) program. *Id.* The statute defines socially disadvantaged individuals as persons “who have been subjected to racial or ethnic prejudice or cultural bias because of their identity as a member of a group without regard to their individual qualities.” *Id.*, quoting 15 U.S.C. § 627(a)(5).

The Section 8(a) statute is race-neutral. The court rejected Rothe’s allegations, finding instead that the provisions of the Small Business Act that Rothe challenges do not on their face classify individuals by race. *Id.* *1. The court stated that Section 8(a) uses facially race-neutral terms of eligibility to identify individual victims of discrimination, prejudice, or bias, without presuming that members of certain racial, ethnic, or cultural groups qualify as such. *Id.* The court said that makes this statute different from other statutes, which expressly limit participation in contracting programs to racial or ethnic minorities or specifically direct third parties to presume that members of certain racial or ethnic groups, or minorities generally, are eligible. *Id.*

In contrast to the *statute*, the court found that the SBA’s *regulation* implementing the 8(a) program does contain a racial classification in the form of a presumption that an individual who is a member of one of five designated racial groups is socially disadvantaged. *Id.* *2, citing 13 C.F.R. § 124.103(b). This case, the court held, does not permit it to decide whether the race-based regulatory presumption is constitutionally sound, because Rothe has elected to challenge only the statute. *Id.* Rothe’s definition of the racial classification it attacks in this case, according to the court, does not include the SBA’s regulation. *Id.*

L. Legal — Recent decisions involving federal procurement that may impact programs

Because the court held the statute, unlike the regulation, lacks a racial classification, and because Rothe has not alleged that the statute is otherwise subject to strict scrutiny, the court applied rational-basis review. *Id* at *2. The court stated the statute “readily survives” the rational basis scrutiny standards. *Id* *2. The court, therefore, affirmed the judgment of the district court granting summary judgment to the SBA and the Department of Defense, albeit on different grounds. *Id*.

Thus, the court held the central question on appeal is whether Section 8(a) warrants strict judicial scrutiny, which the court noted the parties and the district court believe that it did. *Id* *2. Rothe, the court said, advanced only the theory that the statute, on its face, Section 8(a) of the Small Business Act, contains a racial classification. *Id* *2.

The court found that the definition of the term “socially disadvantaged” does not contain a racial classification because it does not distribute burdens or benefits on the basis of individual classifications, it is race-neutral on its face, and it speaks of individual victims of discrimination. *Id* *3. On its face, the court stated the term envisions an individual-based approach that focuses on experience rather than on a group characteristic, and the statute recognizes that not all members of a minority group have necessarily been subjected to racial or ethnic prejudice or cultural bias. *Id*. The court said that the statute definition of the term “social disadvantaged” does not provide for preferential treatment based on an applicant’s race, but rather on an individual applicant’s experience of discrimination. *Id* *3.

The court distinguished cases involving situations in which disadvantaged nonminority applicants could not participate, but the court said the plain terms of the statute permit individuals in any race to be considered “socially disadvantaged.” *Id* *3. The court noted its key point is that the statute is easily read not to require any group-based racial or ethnic classification, stating the statute defines socially

disadvantaged *individuals* as those individuals who have been subjected to racial or ethnic prejudice or cultural bias, not those individuals who are *members or groups* that have been subjected to prejudice or bias. *Id*.

The court pointed out that the SBA’s implementation of the statute’s definition may be based on a racial classification if the regulations carry it out in a manner that gives preference based on race instead of individual experience. *Id* *4. But, the court found, Rothe has expressly disclaimed any challenge to the SBA’s implementation of the statute, and as a result, the only question before them is whether the statute itself classifies based on race, which the court held makes no such classification. *Id* *4. The court determined the statutory language does not create a presumption that a member of a particular racial or ethnic group is necessarily socially disadvantaged, nor that a white person is not. *Id* *5.

The definition of social disadvantage, according to the court, does not amount to a racial classification, for it ultimately turns on a business owner’s experience of discrimination. *Id* *6. The statute does not instruct the agency to limit the field to certain racial groups, or to racial groups in general, nor does it tell the agency to presume that anyone who is a member of any particular group is, by that membership alone, socially disadvantaged. *Id*.

The court noted that the Supreme Court and this court’s discussions of the 8(a) program have identified the regulations, not the statute, as the source of its racial presumption. *Id* *8. The court distinguished Section 8(d) of the Small Business Act as containing a race-based presumption, but found in the 8(a) program the Supreme Court has explained that the agency (not Congress) presumes that certain racial groups are socially disadvantaged. *Id*. at *7.

L. Legal — Recent decisions involving federal procurement that may impact programs

The SBA statute does not trigger strict scrutiny. The court held that the statute does not trigger strict scrutiny because it is race-neutral. *Id* *10. The court pointed out that Rothe does not argue that the statute could be subjected to strict scrutiny, even if it is facially neutral, on the basis that Congress enacted it with a discriminatory purpose. *Id* *9. In the absence of such a claim by Rothe, the court determined it would not subject a facially race-neutral statute to strict scrutiny. *Id*. The foreseeability of racially disparate impact, without invidious purpose, the court stated, does not trigger strict constitutional scrutiny. *Id*.

Because the statute does not trigger strict scrutiny, the court found that it need not and does not decide whether the district court correctly concluded that the statute is narrowly tailored to meet a compelling interest. *Id* *10. Instead, the court considered whether the statute is supported by a rational basis. *Id*. The court held that it plainly is supported by a rational basis, because it bears a rational relation to some legitimate end. *Id* *10.

The statute, the court stated, aims to remedy the effects of prejudice and bias that impede business formation and development and suppress fair competition for government contracts. *Id*. Counteracting discrimination, the court found, is a legitimate interest, and in certain circumstances qualifies as compelling. *Id* *11. The statutory scheme, the court said, is rationally related to that end. *Id*.

The court declined to review the district court's admissibility determinations as to the expert witnesses because it stated that it would affirm the district court's grant of summary judgment even if the district court abused its discretion in making those determinations. *Id* *11. The court noted the expert witness testimony is not necessary to, nor in conflict with, its conclusion that Section 8(a) is subject to and survives rational-basis review. *Id*.

Other issues. The court declined to review the district court's admissibility determinations as to the expert witnesses because it stated that it would affirm the district court's grant of summary judgment even if the district court abused its discretion in making those determinations. *Id* *11. The court noted the expert witness testimony is not necessary to, nor in conflict with, its conclusion that Section 8(a) is subject to and survives rational-basis review. *Id*.

In addition, the court rejected Rothe's contention that Section 8(a) is an unconstitutional delegation of legislative power. *Id* *11. Because the argument is premised on the idea that Congress created a racial classification, which the court has held it did not, Rothe's alternative argument on delegation also fails. *Id*.

Dissenting Opinion. There was a dissenting opinion by one of the three members of the court. The dissenting judge stated in her view that the provisions of the Small Business Act at issue are not facially race-neutral, but contain a racial classification. *Id* *12. The dissenting judge said that the act provides members of certain racial groups an advantage in qualifying for Section 8(a)'s contract preference by virtue of their race. *Id* *13.

The dissenting opinion pointed out that all the parties and the district court found that strict scrutiny should be applied in determining whether the Section 8(a) program violates Rothe's right to equal protection of the laws. *Id* *16. In the view of the dissenting opinion the statutory language includes a racial classification, and therefore, the statute should be subject to strict scrutiny. *Id* *22.

L. Legal — Recent decisions involving federal procurement that may impact programs

2. *Rothe Development Corp. v. U.S. Department of Defense, et al.*, 545 F.3d 1023 (Fed. Cir. 2008)

Although this case does not involve the Federal DBE Program (49 CFR Part 26), it is an analogous case that may impact the legal analysis and law related to the validity of programs implemented by recipients of federal funds, including the Federal DBE Program. Additionally, it underscores the requirement that race-, ethnic- and gender-based programs of any nature must be supported by substantial evidence. In *Rothe*, an unsuccessful bidder on a federal defense contract brought suit alleging that the application of an evaluation preference, pursuant to a federal statute, to a small disadvantaged bidder (SDB) to whom a contract was awarded, violated the Equal Protection clause of the U.S. Constitution. The federal statute challenged is Section 1207 of the National Defense Authorization Act of 1987 and as reauthorized in 2003. The statute provides a goal that 5 percent of the total dollar amount of defense contracts for each fiscal year would be awarded to small businesses owned and controlled by socially and economically disadvantaged individuals. 10 U.S.C. § 2323. Congress authorized the Department of Defense (“DOD”) to adjust bids submitted by non-socially and economically disadvantaged firms upwards by 10 percent (the “Price Evaluation Adjustment Program” or “PEA”).

The district court held the federal statute, as reauthorized in 2003, was constitutional on its face. The court held the 5 percent goal and the PEA program as reauthorized in 1992 and applied in 1998 was unconstitutional. The basis of the decision was that Congress considered statistical evidence of discrimination that established a compelling governmental interest in the reauthorization of the statute and PEA program in 2003. Congress had not documented or considered substantial statistical evidence that the DOD discriminated against minority small businesses when it enacted the statute in 1992 and reauthorized it in 1998. The plaintiff appealed the decision.

The Federal Circuit found that the “analysis of the facial constitutionality of an act is limited to evidence before Congress prior to the date of reauthorization.” 413 F.3d 1327 (Fed. Cir. 2005)(affirming in part, vacating in part, and remanding 324 F. Supp.2d 840 (W.D. Tex. 2004). The court limited its review to whether Congress had sufficient evidence in 1992 to reauthorize the provisions in 1207. The court held that for evidence to be relevant to a strict scrutiny analysis, “the evidence must be proven to have been before Congress prior to enactment of the racial classification.” The Federal Circuit held that the district court erred in relying on the statistical studies without first determining whether the studies were before Congress when it reauthorized section 1207. The Federal Circuit remanded the case and directed the district court to consider whether the data presented was so outdated that it did not provide the requisite strong basis in evidence to support the reauthorization of section 1207.

On August 10, 2007 the Federal District Court for the Western District of Texas in *Rothe Development Corp. v. U.S. Dept. of Defense*, 499 F.Supp.2d 775 (W.D.Tex. Aug 10, 2007) issued its Order on remand from the Federal Circuit Court of Appeals decision in *Rothe*, 413 F.3d 1327 (Fed Cir. 2005). The district court upheld the constitutionality of the 2006 Reauthorization of Section 1207 of the National Defense Authorization Act of 1987 (10 USC § 2323), which permits the U.S. Department of Defense to provide preferences in selecting bids submitted by small businesses owned by socially and economically disadvantaged individuals (“SDBs”). The district court found the 2006 Reauthorization of the 1207 Program satisfied strict scrutiny, holding that Congress had a compelling interest when it reauthorized the 1207 Program in 2006, that there was sufficient statistical and anecdotal evidence before Congress to establish a compelling interest, and that the reauthorization in 2006 was narrowly tailored.

L. Legal — Recent decisions involving federal procurement that may impact programs

The district court, among its many findings, found certain evidence before Congress was “stale,” that the plaintiff (Rothe) failed to rebut other evidence which was not stale, and that the decisions by the Eighth, Ninth and Tenth Circuits in the decisions in *Concrete Works*, *Adarand Constructors*, *Sherbrooke Turf* and *Western States Paving* (discussed above and below) were relevant to the evaluation of the facial constitutionality of the 2006 Reauthorization.

2007 Order of the District Court (499 F.Supp.2d 775). In the Section 1207 Act, Congress set a goal that 5 percent of the total dollar amount of defense contracts for each fiscal year would be awarded to small businesses owned and controlled by socially and economically disadvantaged individuals. In order to achieve that goal, Congress authorized the DOD to adjust bids submitted by non-socially and economically disadvantaged firms up to 10 percent. 10 U.S.C. § 2323(e)(3). *Rothe*, 499 F.Supp.2d. at 782. Plaintiff Rothe did not qualify as an SDB because it was owned by a Caucasian female. Although Rothe was technically the lowest bidder on a DOD contract, its bid was adjusted upward by 10 percent, and a third party, who qualified as an SDB, became the “lowest” bidder and was awarded the contract. *Id.* Rothe claims that the 1207 Program is facially unconstitutional because it takes race into consideration in violation of the Equal Protection component of the Due Process Clause of the Fifth Amendment. *Id.* at 782-83. The district court’s decision only reviewed the facial constitutionality of the 2006 Reauthorization of the 2007 Program.

The district court initially rejected six legal arguments made by *Rothe* regarding strict scrutiny review based on the rejection of the same arguments by the Eighth, Ninth, and Tenth Circuit Courts of Appeal in the *Sherbrooke Turf*, *Western States Paving*, *Concrete Works*, *Adarand VII* cases, and the Federal Circuit Court of Appeal in *Rothe*. *Rothe* at 825-833.

The district court discussed and cited the decisions in *Adarand VII* (2000), *Sherbrooke Turf* (2003), and *Western States Paving* (2005), as holding that Congress had a compelling interest in eradicating the economic roots of racial discrimination in highway transportation programs funded by federal monies, and concluding that the evidence cited by the government, particularly that contained in *The Compelling Interest* (a.k.a. the Appendix), more than satisfied the government’s burden of production regarding the compelling interest for a race-conscious remedy. *Rothe* at 827. Because the Urban Institute Report, which presented its analysis of 39 state and local disparity studies, was cross-referenced in the Appendix, the district court found the courts in *Adarand VII*, *Sherbrooke Turf*, and *Western States Paving*, also relied on it in support of their compelling interest holding. *Id.* at 827.

The district court also found that the Tenth Circuit decision in *Concrete Works IV*, 321 F.3d 950 (10th Cir. 2003), established legal principles that are relevant to the court’s strict scrutiny analysis. First, Rothe’s claims for declaratory judgment on the racial constitutionality of the earlier 1999 and 2002 Reauthorizations were moot. Second, the government can meet its burden of production without conclusively proving the existence of past or present racial discrimination. Third, the government may establish its own compelling interest by presenting evidence of its own direct participation in racial discrimination or its passive participation in private discrimination. Fourth, once the government meets its burden of production, Rothe must introduce “credible, particularized” evidence to rebut the government’s initial showing of the existence of a compelling interest. Fifth, Rothe may rebut the government’s statistical evidence by giving a race-neutral explanation for the statistical disparities, showing that the statistics are flawed, demonstrating that the disparities shown are not significant or actionable, or presenting contrasting statistical data. Sixth, the government may rely on disparity studies to support its compelling interest, and those studies may control for the effect that pre-existing

L. Legal — Recent decisions involving federal procurement that may impact programs

affirmative action programs have on the statistical analysis. *Id.* at 829-32.

Based on *Concrete Works IV*, the district court did not require the government to conclusively prove that there is pervasive discrimination in the relevant market, that each presumptively disadvantaged group suffered equally from discrimination, or that private firms intentionally and purposefully discriminated against minorities. The court found that the inference of discriminatory exclusion can arise from statistical disparities. *Id.* at 830-31.

The district court held that Congress had a compelling interest in the 2006 Reauthorization of the 1207 Program, which was supported by a strong basis in the evidence. The court relied in significant part upon six state and local disparity studies that were before Congress prior to the 2006 Reauthorization of the 1207 Program. The court based this evidence on its finding that Senator Kennedy had referenced these disparity studies, discussed and summarized findings of the disparity studies, and Representative Cynthia McKinney also cited the same six disparity studies that Senator Kennedy referenced. The court stated that based on the content of the floor debate, it found that these studies were put before Congress prior to the date of the Reauthorization of Section 1207. *Id.* at 838.

The district court found that these six state and local disparity studies analyzed evidence of discrimination from a diverse cross-section of jurisdictions across the United States, and “they constitute prima facie evidence of a nation-wide pattern or practice of discrimination in public and private contracting.” *Id.* at 838-39. The court found that the data used in these six disparity studies is not “stale” for purposes of strict scrutiny review. *Id.* at 839. The court disagreed with Rothe’s argument that all the data were stale (data in the studies from 1997 through 2002), “because this data was the most current data available at the

time that these studies were performed.” *Id.* The court found that the governmental entities should be able to rely on the most recently available data so long as those data are reasonably up-to-date. *Id.* The court declined to adopt a “bright-line rule for determining staleness.” *Id.*

The court referred to the reliance by the Ninth Circuit and the Eighth Circuit on the *Appendix* to affirm the constitutionality of the USDOT MBE [now DBE] Program, and rejected five years as a bright-line rule for considering whether data are “stale.” *Id.* at n.86. The court also stated that it “accepts the reasoning of the *Appendix*, which the court found stated that for the most part “the federal government does business in the same contracting markets as state and local governments. Therefore, the evidence in state and local studies of the impact of discriminatory barriers to minority opportunity in contracting markets throughout the country is relevant to the question of whether the federal government has a compelling interest to take remedial action in its own procurement activities.” *Id.* at 839, *quoting 61 Fed.Reg.* 26042-01, 26061 (1996).

The district court also discussed additional evidence before Congress that it found in Congressional Committee Reports and Hearing Records. *Id.* at 865-71. The court noted SBA Reports that were before Congress prior to the 2006 Reauthorization. *Id.* at 871.

The district court found that the data contained in the *Appendix*, the Benchmark Study, and the Urban Institute Report were “stale,” and the court did not consider those reports as evidence of a compelling interest for the 2006 Reauthorization. *Id.* at 872-75. The court stated that the Eighth, Ninth and Tenth Circuits relied on the *Appendix* to uphold the constitutionality of the Federal DBE Program, citing to the decisions in *Sherbrooke Turf*, *Adarand VII*, and *Western States Paving*. *Id.* at 872. The court pointed out that although it does not rely on the data contained in the *Appendix* to support the 2006 Reauthorization,

L. Legal — Recent decisions involving federal procurement that may impact programs

the fact the Eighth, Ninth, and Tenth Circuits relied on these data to uphold the constitutionality of the Federal DBE Program as recently as 2005, convinced the court that a bright-line staleness rule is inappropriate. *Id.* at 874.

Although the court found that the data contained in the Appendix, the Urban Institute Report, and the Benchmark Study were stale for purposes of strict scrutiny review regarding the 2006 Reauthorization, the court found that Rothe introduced no concrete, particularized evidence challenging the reliability of the methodology or the data contained in the six state and local disparity studies, and other evidence before Congress. The court found that Rothe failed to rebut the data, methodology or anecdotal evidence with “concrete, particularized” evidence to the contrary. *Id.* at 875. The district court held that based on the studies, the government had satisfied its burden of producing evidence of discrimination against African Americans, Asian Americans, Hispanic Americans, and Native Americans in the relevant industry sectors. *Id.* at 876.

The district court found that Congress had a compelling interest in reauthorizing the 1207 Program in 2006, which was supported by a strong basis of evidence for remedial action. *Id.* at 877. The court held that the evidence constituted prima facie proof of a nationwide pattern or practice of discrimination in both public and private contracting, that Congress had sufficient evidence of discrimination throughout the United States to justify a nationwide program, and the evidence of discrimination was sufficiently pervasive across racial lines to justify granting a preference to all five purportedly disadvantaged racial groups. *Id.*

The district court also found that the 2006 Reauthorization of the 1207 Program was narrowly tailored and designed to correct present discrimination and to counter the lingering effects of past discrimination. The court held that the government’s involvement in both present discrimination and the lingering effects of past discrimination was so pervasive that the DOD and the Department of Air Force had become passive participants in perpetuating it. *Id.* The court stated it was law of the case and could not be disturbed on remand that the Federal Circuit in *Rothe III* had held that the 1207 Program was flexible in application, limited in duration and it did not unduly impact on the rights of third parties. *Id.*, quoting *Rothe III*, 262 F.3d at 1331.

The district court thus conducted a narrowly tailored analysis that reviewed three factors:

1. The efficacy of race-neutral alternatives;
2. Evidence detailing the relationship between the stated numerical goal of 5 percent and the relevant market; and
3. Over- and under-inclusiveness.

Id. The court found that Congress examined the efficacy of race-neutral alternatives prior to the enactment of the 1207 Program in 1986 and that these programs were unsuccessful in remedying the effects of past and present discrimination in federal procurement. *Id.* The court concluded that Congress had attempted to address the issues through race-neutral measures, discussed those measures, and found that Congress’ adoption of race-conscious provisions were justified by the ineffectiveness of such race-neutral measures in helping minority-owned firms overcome barriers. *Id.* The court found that the government seriously considered and enacted race-neutral alternatives, but these race-neutral programs did not remedy the widespread discrimination that affected the federal procurement sector, and that

L. Legal — Recent decisions involving federal procurement that may impact programs

Congress was not required to implement or exhaust every conceivable race-neutral alternative. *Id.* at 880. Rather, the court found that narrow tailoring requires only “serious, good faith consideration of workable race-neutral alternatives.” *Id.*

The district court also found that the 5 percent goal was related to the minority business availability identified in the six state and local disparity studies. *Id.* at 881. The court concluded that the 5 percent goal was aspirational, not mandatory. *Id.* at 882. The court then examined and found that the regulations implementing the 1207 Program were not over-inclusive for several reasons.

November 4, 2008 decision by the Federal Circuit Court of Appeals. On November 4, 2008, the Federal Circuit Court of Appeals reversed the judgment of the district court in part, and remanded with instructions to enter a judgment (1) denying Rothe any relief regarding the facial constitutionality of Section 1207 as enacted in 1999 or 2002, (2) declaring that Section 1207 as enacted in 2006 (10 U.S.C. § 2323) is facially unconstitutional, and (3) enjoining application of Section 1207 (10 U.S.C. § 2323).

The Federal Circuit Court of Appeals held that Section 1207, on its face, as reenacted in 2006, violated the Equal Protection component of the Fifth Amendment right to due process. The court found that because the statute authorized the DOD to afford preferential treatment on the basis of race, the court applied strict scrutiny, and because Congress did not have a “strong basis in evidence” upon which to conclude that the DOD was a passive participant in pervasive, nationwide racial discrimination — at least not on the evidence produced by the DOD and relied on by the district court in this case — Section 1207 failed to meet this strict scrutiny test. 545 F.3d at 1050.

Strict scrutiny framework. The Federal Circuit Court of Appeals recognized that the Supreme Court has held a government may have a compelling interest in remedying the effects of past or present racial discrimination. 545 F.3d at 1036. The court cited the decision in *Croson*, 488 U.S. at 492, that it is “beyond dispute that any public entity, state or federal, has a compelling interest in assuring that public dollars, drawn from the tax contributions of all citizens, do not serve to finance the evil of private prejudice.” 545 F.3d. at 1036, *quoting Croson*, 488 U.S. at 492.

The court held that before resorting to race-conscious measures, the government must identify the discrimination to be remedied, public or private, with some specificity, and must have a strong basis of evidence upon which to conclude that remedial action is necessary. 545 F.3d at 1036, *quoting Croson*, 488 U.S. at 500, 504. Although the party challenging the statute bears the ultimate burden of persuading the court that it is unconstitutional, the Federal Circuit stated that the government first bears a burden to produce strong evidence supporting the legislature’s decision to employ race-conscious action. 545 F.3d at 1036.

Even where there is a compelling interest supported by strong basis in evidence, the court held the statute must be narrowly tailored to further that interest. *Id.* The court noted that a narrow tailoring analysis commonly involves six factors: (1) the necessity of relief; (2) the efficacy of alternative, race-neutral remedies; (3) the flexibility of relief, including the availability of waiver provisions; (4) the relationship with the stated numerical goal to the relevant labor market; (5) the impact of relief on the rights of third parties; and (6) the overinclusiveness or underinclusiveness of the racial classification. *Id.*

L. Legal — Recent decisions involving federal procurement that may impact programs

Compelling interest — strong basis in evidence. The Federal Circuit pointed out that the statistical and anecdotal evidence relied upon by the district court in its ruling below included six disparity studies of state or local contracting. The Federal Circuit also pointed out that the district court found that the data contained in the Appendix, the Urban Institute Report, and the Benchmark Study were stale for purposes of strict scrutiny review of the 2006 Authorization, and therefore, the district court concluded that it would not rely on those three reports as evidence of a compelling interest for the 2006 reauthorization of the 1207 Program. 545 F.3d 1023, citing to *Rothe VI*, 499 F.Supp.2d at 875. Since the DOD did not challenge this finding on appeal, the Federal Circuit stated that it would not consider the Appendix, the Urban Institute Report, or the Department of Commerce Benchmark Study, and instead determined whether the evidence relied on by the district court was sufficient to demonstrate a compelling interest. *Id.*

Six state and local disparity studies. The Federal Circuit found that disparity studies can be relevant to the compelling interest analysis because, as explained by the Supreme Court in *Croson*, “[w]here there is a significant statistical disparity between the number of qualified minority contractors willing and able to perform a particular service and the number of such contractors actually engaged by [a] locality or the locality’s prime contractors, an inference of discriminatory exclusion could arise.” 545 F.3d at 1037-1038, quoting *Croson*, 488 U.S.C. at 509. The Federal Circuit also cited to the decision by the Fifth Circuit Court of Appeals in *W.H. Scott Constr. Co. v. City of Jackson*, 199 F.3d 206 (5th Cir. 1999) that given *Croson*’s emphasis on statistical evidence, other courts considering equal protection challenges to minority-participation programs have looked to disparity indices, or to computations of disparity percentages, in determining whether *Croson*’s evidentiary burden is satisfied. 545 F.3d at 1038, quoting *W.H. Scott*, 199 F.3d at 218.

The Federal Circuit noted that a disparity study is a study attempting to measure the difference- or disparity- between the number of contracts or contract dollars actually awarded minority-owned businesses in a particular contract market, on the one hand, and the number of contracts or contract dollars that one would expect to be awarded to minority-owned businesses given their presence in that particular contract market, on the other hand. 545 F.3d at 1037.

Staleness. The Federal Circuit declined to adopt a per se rule that data more than five years old are stale per se, which rejected the argument put forth by *Rothe*. 545 F.3d at 1038. The court pointed out that the district court noted other circuit courts have relied on studies containing data more than five years old when conducting compelling interest analyses, citing to *Western States Paving v. Washington State Department of Transportation*, 407 F.3d 983, 992 (9th Cir. 2005) and *Sherbrooke Turf, Inc. v. Minnesota Department of Transportation*, 345 F.3d 964, 970 (8th Cir. 2003)(relying on the Appendix, published in 1996).

The Federal Circuit agreed with the district court that Congress “should be able to rely on the most recently available data so long as that data is reasonably up-to-date.” 545 F.3d at 1039. The Federal Circuit affirmed the district court’s conclusion that the data analyzed in the six disparity studies were not stale at the relevant time because the disparity studies analyzed data pertained to contracts awarded as recently as 2000 or even 2003, and because *Rothe* did not point to more recent, available data. *Id.*

L. Legal — Recent decisions involving federal procurement that may impact programs

Before Congress. The Federal Circuit found that for evidence to be relevant in the strict scrutiny analysis, it “must be proven to have been before Congress prior to enactment of the racial classification.” 545 F.3d at 1039, quoting *Rothe V*, 413 F.3d at 1338. The Federal Circuit had issues with determining whether the six disparity studies were actually before Congress for several reasons, including that there was no indication that these studies were debated or reviewed by members of Congress or by any witnesses, and because Congress made no findings concerning these studies. 545 F.3d at 1039-1040. However, the court determined it need not decide whether the six studies were put before Congress, because the court held in any event that the studies did not provide a substantially probative and broad-based statistical foundation necessary for the strong basis in evidence that must be the predicate for nation-wide, race-conscious action. *Id.* at 1040.

The court did note that findings regarding disparity studies are to be distinguished from formal findings of discrimination by the DOD “which Congress was emphatically not required to make.” *Id.* at 1040, footnote 11 (emphasis in original). The Federal Circuit cited the *Dean v. City of Shreveport* case that the “government need not incriminate itself with a formal finding of discrimination prior to using a race-conscious remedy.” 545 F.3d at 1040, footnote 11 quoting *Dean v. City of Shreveport*, 438 F.3d 448, 445 (5th Cir. 2006).

Methodology. The Federal Circuit found that there were methodological defects in the six disparity studies. The court found that the objections to the parameters used to select the relevant pool of contractors was one of the major defects in the studies. 545 F.3d at 1040-1041.

The court stated that in general, “[a] disparity ratio less than 0.80” — *i.e.*, a finding that a given minority group received less than 80 percent of the expected amount — “indicates a relevant degree of disparity,” and “might support an inference of discrimination.” 545 F.3d at 1041,

quoting the district court opinion in *Rothe VI*, 499 F.Supp.2d at 842; and citing *Engineering Contractors Association of South Florida, Inc. v. Metropolitan Dade County*, 122 F.3d 895, 914 (11th Cir. 1997). The court noted that this disparity ratio attempts to calculate a ratio between the expected contract amount of a given race/gender group and the actual contract amount received by that group. 545 F.3d at 1041.

The court considered the availability analysis, or benchmark analysis, which is utilized to ensure that only those minority-owned contractors who are qualified, willing and able to perform the prime contracts at issue are considered when performing the denominator of a disparity ratio. 545 F.3d at 1041. The court cited to an expert used in the case that a “crucial question” in disparity studies is to develop a credible methodology to estimate this benchmark share of contracts minorities would receive in the absence of discrimination and the touchstone for measuring the benchmark is to determine whether the firm is ready, willing, and able to do business with the government. 545 F.3d at 1041-1042.

The court concluded the contention by *Rothe*, that the six studies misapplied this “touchstone” of *Croson* and erroneously included minority-owned firms that were deemed willing or potentially willing and able, without regard to whether the firm was qualified, was not a defect that substantially undercut the results of four of the six studies, because “the bulk of the businesses considered in these studies were identified in ways that would tend to establish their qualifications, such as by their presence on city contract records and bidder lists.” 545 F.3d at 1042. The court noted that with regard to these studies available prime contractors were identified via certification lists, willingness survey of chamber membership and trade association membership lists, public agency and certification lists, utilized prime contractor, bidder lists, county and other government records and other type lists. *Id.*

L. Legal — Recent decisions involving federal procurement that may impact programs

The court stated it was less confident in the determination of qualified minority-owned businesses by the two other studies because the availability methodology employed in those studies, the court found, appeared less likely to have weeded out unqualified businesses. *Id.* However, the court stated it was more troubled by the failure of five of the studies to account officially for potential differences in size, or “relative capacity,” of the business included in those studies. 545 F.3d at 1042-1043.

The court noted that qualified firms may have substantially different capacities and thus might be expected to bring in substantially different amounts of business even in the absence of discrimination. 545 F.3d at 1043. The Federal Circuit referred to the Eleventh Circuit explanation similarly that because firms are bigger, bigger firms have a bigger chance to win bigger contracts, and thus one would expect the bigger (on average) non-MWBE firms to get a disproportionately higher percentage of total construction dollars awarded than the smaller MWBE firms. 545 F.3d at 1043 quoting *Engineering Contractors Association*, 122 F.3d at 917. The court pointed out its issues with the studies accounting for the relative sizes of contracts awarded to minority-owned businesses, but not considering the relative sizes of the businesses themselves. *Id.* at 1043.

The court noted that the studies measured the availability of minority-owned businesses by the percentage of firms in the market owned by minorities, instead of by the percentage of total marketplace capacity those firms could provide. *Id.* The court said that for a disparity ratio to have a significant probative value, the same time period and metric (dollars or numbers) should be used in measuring the utilization and availability shares. 545 F.3d at 1044, n. 12.

The court stated that while these parameters relating to the firm size may have ensured that each minority-owned business in the studies met a capacity threshold, these parameters did not account for the relative capacities of businesses to bid for more than one contract at a time, which failure rendered the disparity ratios calculated by the studies substantially less probative on their own, of the likelihood of discrimination. *Id.* at 1044. The court pointed out that the studies could have accounted for firm size even without changing the disparity ratio methodologies by employing regression analysis to determine whether there was a statistically significant correlation between the size of a firm and the share of contract dollars awarded to it. 545 F.3d at 1044 citing to *Engineering Contractors Association*, 122 F.3d at 917. The court noted that only one of the studies conducted this type of regression analysis, which included the independent variables of a firm-age of a company, owner education level, number of employees, percent of revenue from the private sector and owner experience for industry groupings. *Id.* at 1044-1045.

The court stated, to “be clear,” that it did not hold that the defects in the availability and capacity analyses in these six disparity studies render the studies wholly unreliable for any purpose. *Id.* at 1045. The court said that where the calculated disparity ratios are low enough, the court does not foreclose the possibility that an inference of discrimination might still be permissible for some of the minority groups in some of the studied industries in some of the jurisdictions. *Id.* The court recognized that a minority-owned firm’s capacity and qualifications may themselves be affected by discrimination. *Id.* The court held, however, that the defects it noted detracted dramatically from the probative value of the six studies, and in conjunction with their limited geographic coverage, rendered the studies insufficient to form the statistical core of the strong basis and evidence required to uphold the statute. *Id.*

L. Legal — Recent decisions involving federal procurement that may impact programs

Geographic coverage. The court pointed out that whereas municipalities must necessarily identify discrimination in the immediate locality to justify a race-based program, the court does not think that Congress needs to have had evidence before it of discrimination in all 50 states in order to justify the 1207 program. *Id.* The court stressed, however, that in holding the six studies insufficient in this particular case, “we do not necessarily disapprove of decisions by other circuit courts that have relied, directly or indirectly, on municipal disparity studies to establish a federal compelling interest.” 545 F.3d at 1046. The court stated in particular, the Appendix relied on by the Ninth and Tenth Circuits in the context of certain race-conscious measures pertaining to federal highway construction, references the Urban Institute Report, which itself analyzed over 50 disparity studies and relied for its conclusions on over 30 of those studies, a far broader basis than the six studies provided in this case. *Id.*

Anecdotal evidence. The court held that given its holding regarding statistical evidence, it did not review the anecdotal evidence before Congress. The court did point out, however, that there was not evidence presented of a single instance of alleged discrimination by the DOD in the course of awarding a prime contract, or to a single instance of alleged discrimination by a private contractor identified as the recipient of a prime defense contract. 545 F.3d at 1049. The court noted this lack of evidence in the context of the opinion in *Croson* that if a government has become a passive participant in a system of racial exclusion practiced by elements of the local construction industry, then that government may take affirmative steps to dismantle the exclusionary system. 545 F.3d at 1048, citing *Croson*, 488 U.S. at 492.

The Federal Circuit pointed out that the Tenth Circuit in *Concrete Works* noted the City of Denver offered more than dollar amounts to link its spending to private discrimination, but instead provided testimony from minority business owners that general contractors who use them in city construction projects refuse to use them on private projects, with the result that Denver had paid tax dollars to support firms that discriminated against other firms because of their race, ethnicity and gender. 545 F.3d at 1049, *quoting Concrete Works*, 321 F.3d at 976-977.

In concluding, the court stated that it stressed its holding was grounded in the particular items of evidence offered by the DOD, and “should not be construed as stating blanket rules, for example about the reliability of disparity studies. As the Fifth Circuit has explained, there is no ‘precise mathematical formula’ to assess the quantum of evidence that rises to the *Croson* ‘strong basis in evidence’ benchmark.” 545 F.3d at 1049, *quoting W.H. Scott Constr. Co.*, 199 F.3d at 218 n. 11.

Narrowly tailoring. The Federal Circuit only made two observations about narrowly tailoring, because it held that Congress lacked the evidentiary predicate for a compelling interest. First, it noted that the 1207 Program was flexible in application, limited in duration, and that it did not unduly impact on the rights of third parties. 545 F.3d at 1049. Second, the court held that the absence of strongly probative statistical evidence makes it impossible to evaluate at least one of the other narrowly tailoring factors. Without solid benchmarks for the minority groups covered by the Section 1207, the court said it could not determine whether the 5 percent goal is reasonably related to the capacity of firms owned by members of those minority groups — i.e., whether that goal is comparable to the share of contracts minorities would receive in the absence of discrimination.” 545 F.3d at 1049-1050.

L. Legal — Recent decisions involving federal procurement that may impact programs

3. *Rothe Development, Inc. v. U.S. Department of Defense and Small Business Administration*, 107 F. Supp. 3d 183, 2015 WL 3536271 (D.D.C. June 5, 2015), affirmed on other grounds, 2016 WL 471909 (D.C. Cir. September 9, 2016).

Plaintiff Rothe Development, Inc. is a small business that filed this action against the U.S. Department of Defense (“DOD”) and the U.S. Small Business Administration (“SBA”) (collectively, “Defendants”) challenging the constitutionality of the Section 8(a) Program on its face.

The constitutional challenge that Rothe brings in this case is nearly identical to the challenge brought in the case of *DynaLantic Corp. v. United States Department of Defense*, 885 F.Supp.2d 237 (D.D.C. 2012). The plaintiff in *DynaLantic* sued the DOD, the SBA, and the Department of Navy alleging that Section 8(a) was unconstitutional both on its face and as applied to the military simulation and training industry. See *DynaLantic*, 885 F.Supp.2d at 242. *DynaLantic’s* court disagreed with the plaintiff’s facial attack and held the Section 8(a) Program as facially constitutional. See *DynaLantic*, 885 F.Supp.2d at 248-280, 283-291. (See also discussion of *DynaLantic* in this Appendix below.)

The court in *Rothe* states that the plaintiff Rothe relies on substantially the same record evidence and nearly identical legal arguments as in the *DynaLantic* case, and urges the court to strike down the race-conscious provisions of Section 8(a) on their face, and thus to depart from *DynaLantic’s* holding in the context of this case. 2015 WL 3536271 at *1. Both the plaintiff Rothe and the Defendants filed cross-motions for summary judgment as well as motions to limit or exclude testimony of each other’s expert witnesses. The court concludes that Defendants’ experts meet the relevant qualification standards under the Federal Rules, and therefore denies plaintiff Rothe’s motion to exclude Defendants’ expert testimony. *Id.* By contrast, the court found sufficient reason to doubt the qualifications of one of plaintiff’s experts and to

question the reliability of the testimony of the other; consequently, the court grants the Defendants’ motions to exclude plaintiff’s expert testimony.

In addition, the court in *Rothe* agrees with the court’s reasoning in *DynaLantic*, and thus the court in *Rothe* also concludes that Section 8(a) is constitutional on its face. Accordingly, the court denies plaintiff’s motion for summary judgment and grants Defendants’ cross-motion for summary judgment.

DynaLantic Corp. v. Department of Defense. The court in *Rothe* analyzed the *DynaLantic* case, and agreed with the findings, holding and conclusions of the court in *DynaLantic*. See 2015 WL 3536271 at *4-5. The court in *Rothe* noted that the court in *DynaLantic* engaged in a detailed examination of Section 8(a) and the extensive record evidence, including disparity studies on racial discrimination in federal contracting across various industries. *Id.* at *5. The court in *DynaLantic* concluded that Congress had a compelling interest in eliminating the roots of racial discrimination in federal contracting, funded by federal money, and also that the government had established a strong basis in evidence to support its conclusion that remedial action was necessary to remedy that discrimination. *Id.* at *5. This conclusion was based on the finding the government provided extensive evidence of discriminatory barriers to minority business formation and minority business development, as well as significant evidence that, even when minority businesses are qualified and eligible to perform contracts in both public and private sectors, they are awarded these contracts far less often than their similarly situated nonminority counterparts. *Id.* at *5, citing *DynaLantic*, 885 F.Supp.2d at 279.

L. Legal — Recent decisions involving federal procurement that may impact programs

The court in *DynaLantic* also found that DynaLantic had failed to present credible, particularized evidence that undermined the government’s compelling interest or that demonstrated that the government’s evidence did not support an inference of prior discrimination and thus a remedial purpose. 2015 WL 3536271 at *5, citing *DynaLantic*, at 279.

With respect to narrow tailoring, the court in *DynaLantic* concluded that the Section 8(a) Program is narrowly tailored on its face, and that since Section 8(a) race-conscious provisions were narrowly tailored to further a compelling state interest, strict scrutiny was satisfied in the context of the construction industry and in other industries such as architecture and engineering, and professional services as well. *Id.* The court in *Rothe* also noted that the court in *DynaLantic* found that DynaLantic had thus failed to meet its burden to show that the challenge provisions were unconstitutional in all circumstances and held that Section 8(a) was constitutional on its face. *Id.*

Defendants’ expert evidence. One of Defendants’ experts used regression analysis, claiming to have isolated the effect in minority ownership on the likelihood of a small business receiving government contracts, specifically using a “logit model” to examine government contracting data in order to determine whether the data show any difference in the odds of contracts being won by minority-owned small businesses relative to other small businesses. 2015 WL 3536271 at *9. The expert controlled for other variables that could influence the odds of whether or not a given firm wins a contract, such as business size, age, and level of security clearance, and concluded that the odds of minority-owned small firms and non-8(a) SDB firms winning contracts were lower than small nonminority and non-SDB firms. *Id.* In addition, the Defendants’ expert found that non-8(a) minority-owned SDBs are statistically significantly less likely to win a contract in industries accounting for 94.0 percent of contract actions, 93.0 percent of dollars awarded, and in which 92.2 percent of non-8(a) minority-owned SDBs are registered. *Id.* Also, the

expert found that there is no industry where non-8(a) minority-owned SDBs have a statistically significant advantage in terms of winning a contract from the federal government. *Id.*

The court rejected Rothe’s contention that the expert opinion is based on insufficient data, and that its analysis of data related to a subset of the relevant industry codes is too narrow to support its scientific conclusions. *Id.* at *10. The court found convincing the expert’s response to Rothe’s critique about his dataset, explaining that, from a mathematical perspective, excluding certain NAICS codes and analyzing data at the three-digit level actually increases the reliability of his results. The expert opted to use codes at the three-digit level as a compromise, balancing the need to have sufficient data in each industry grouping and the recognition that many firms can switch production within the broader three-digit category. *Id.* The expert also excluded certain NAICS industry groups from his regression analyses because of incomplete data, irrelevance, or because data issues in a given NAICS group prevented the regression model from producing reliable estimates. *Id.* The court found that the expert’s reasoning with respect to the exclusions and assumptions he makes in the analysis are fully explained and scientifically sound. *Id.*

In addition, the court found that post-enactment evidence was properly considered by the expert and the court. *Id.* The court found that nearly every circuit to consider the question of the relevance of post-enactment evidence has held that reviewing courts need not limit themselves to the particular evidence that Congress relied upon when it enacted the statute at issue. *Id.*, citing *DynaLantic*, 885 F.Supp.2d at 257.

L. Legal — Recent decisions involving federal procurement that may impact programs

Thus, the court held that post-enactment evidence is relevant to constitutional review, in particular, following the court in *DynaLantic*, when the statute is over 30 years old and the evidence used to justify Section 8(a) is stale for purposes of determining a compelling interest in the present. *Id.*, citing *DynaLantic* at 885 F.Supp.2d at 258. The court also points out that the statute itself contemplates that Congress will review the 8(a) Program on a continuing basis, which renders the use of post-enactment evidence proper. *Id.*

The court also found Defendants' additional expert's testimony as admissible in connection with that expert's review of the results of the 107 disparity studies conducted throughout the United States since the year 2000, all but 32 of which were submitted to Congress. *Id.* at *11. This expert testified that the disparity studies submitted to Congress, taken as a whole, provide strong evidence of large, adverse, and often statistically significant disparities between minority participation in business enterprise activity and the availability of those businesses; the disparities are not explained solely by differences in factors other than race and sex that are untainted by discrimination; and the disparities are consistent with the presence of discrimination in the business market. *Id.* at *12.

The court rejects Rothe's contentions to exclude this expert testimony merely based on the argument by Rothe that the factual basis for the expert's opinion is unreliable based on alleged flaws in the disparity studies or that the factual basis for the expert's opinions are weak. *Id.* The court states that even if Rothe's contentions are correct, an attack on the underlying disparity studies does not necessitate the remedy of exclusion. *Id.*

Plaintiff's expert's testimony rejected. The court found that one of plaintiff's experts was not qualified based on his own admissions regarding his lack of training, education, knowledge, skill and experience in any statistical or econometric methodology. *Id.* at *13. Plaintiff's other expert the court determined provided testimony that was unreliable and inadmissible as his preferred methodology for conducting disparity studies "appears to be well outside of the mainstream in this particular field." *Id.* at *14. The expert's methodology included his assertion that the only proper way to determine the availability of minority-owned businesses is to count those contractors and subcontractors that actually perform or bid on contracts, which the court rejected as not reliable. *Id.*

The Section 8(a) Program is constitutional on its face. The court found persuasive the court decision in *DynaLantic*, and held that inasmuch as Rothe seeks to re-litigate the legal issues presented in that case, this court declines Rothe's invitation to depart from the *DynaLantic* court's conclusion that Section 8(a) is constitutional on its face. *Id.* at *15.

The court reiterated its agreement with the *DynaLantic* court that racial classifications are constitutional only if they are narrowly tailored measures that further compelling governmental interest. *Id.* at *17. To demonstrate a compelling interest, the government defendants must make two showings: first the government must articulate a legislative goal that is properly considered a compelling governmental interest, and second the government must demonstrate a strong basis in evidence supporting its conclusion that race-based remedial action was necessary to further that interest. *Id.* at *17. In so doing, the government need not conclusively prove the existence of racial discrimination in the past or present. *Id.* The government may rely on both statistical and anecdotal evidence, although anecdotal evidence alone cannot establish a strong basis in evidence for the purposes of strict scrutiny. *Id.*

L. Legal — Recent decisions involving federal procurement that may impact programs

If the government makes both showings, the burden shifts to the plaintiff to present credible, particularized evidence to rebut the government’s initial showing of a compelling interest. *Id.* Once a compelling interest is established, the government must further show that the means chosen to accomplish the government’s asserted purpose are specifically and narrowly framed to accomplish that purpose. *Id.*

The court held that the government articulated and established compelling interest for the Section 8(a) Program, namely, remedying race-based discrimination and its effects. *Id.* The court held the government also established a strong basis in evidence that furthering this interest requires race-based remedial action — specifically, evidence regarding discrimination in government contracting, which consisted of extensive evidence of discriminatory barriers to minority business formation and forceful evidence of discriminatory barriers to minority business development. *Id.* at *17, citing *DynaLantic*, 885 F.Supp.2d at 279.

The government defendants in this case relied upon the same evidence as in the *DynaLantic* case and the court found that the government provided significant evidence that even when minority businesses are qualified and eligible to perform contracts in both the private and public sectors, they are awarded these contracts far less often than their similarly situated nonminority counterparts. *Id.* at *17. The court held that Rothe has failed to rebut the evidence of the government with credible and particularized evidence of its own. *Id.* at *17. Furthermore, the court found that the government defendants established that the Section 8(a) Program is narrowly tailored to achieve the established compelling interest. *Id.* at *18.

The court found, citing agreement with the *DynaLantic* court, that the Section 8(a) Program satisfies all six factors of narrow tailoring. *Id.* First, alternative race-neutral remedies have proved unsuccessful in addressing the discrimination targeted with the Program. *Id.* Second, the Section 8(a) Program is appropriately flexible. *Id.* Third, Section 8(a) is neither over nor under-inclusive. *Id.* Fourth, the Section 8(a) Program imposes temporal limits on every individual’s participation that fulfilled the durational aspect of narrow tailoring. *Id.* Fifth, the relevant aspirational goals for SDB contracting participation are numerically proportionate, in part because the evidence presented established that minority firms are ready, willing and able to perform work equal to 2–5 percent of government contracts in industries including but not limited to construction. *Id.* And six, the fact that the Section 8(a) Program reserves certain contracts for program participants does not, on its face, create an impermissible burden on non-participating firms. *Id.*; citing *DynaLantic*, 885 F.Supp.2d at 283-289.

Accordingly, the court concurred completely with the *DynaLantic* court’s conclusion that the strict scrutiny standard has been met, and that the Section 8(a) Program is facially constitutional despite its reliance on race-conscious criteria. *Id.* at *18. The court found that on balance the disparity studies on which the government defendants rely reveal large, statistically significant barriers to business formation among minority groups that cannot be explained by factors other than race, and demonstrate that discrimination by prime contractors, private sector customers, suppliers and bonding companies continues to limit minority business development. *Id.* at *18, citing *DynaLantic*, 885 F.Supp.2d at 261, 263.

L. Legal — Recent decisions involving federal procurement that may impact programs

Moreover, the court found that the evidence clearly shows that qualified, eligible minority-owned firms are excluded from contracting markets, and accordingly provides powerful evidence from which an inference of discriminatory exclusion could arise. *Id.* at *18. The court concurred with the *DynaLantic* court’s conclusion that based on the evidence before Congress, it had a strong basis in evidence to conclude the use of race-conscious measures was necessary in, at least, some circumstances. *Id.* at *18, citing *DynaLantic*, 885 F.Supp.2d at 274.

In addition, in connection with the narrow tailoring analysis, the court rejected Rothe’s argument that Section 8(a) race-conscious provisions cannot be narrowly tailored because they apply across the board in equal measures, for all preferred races, in all markets and sectors. *Id.* at *19. The court stated the presumption that a minority applicant is socially disadvantaged may be rebutted if the SBA is presented with credible evidence to the contrary. *Id.* at *19. The court pointed out that any person may present credible evidence challenging an individual’s status as socially or economically disadvantaged. *Id.* The court said that Rothe’s argument is incorrect because it is based on the misconception that narrow tailoring necessarily means a remedy that is laser-focused on a single segment of a particular industry or area, rather than the common understanding that the “narrowness” of the narrow-tailoring mandate relates to the relationship between the government’s interest and the remedy it prescribes. *Id.*

Conclusion. The court concluded that plaintiff’s facial constitutional challenge to the Section 8(a) Program failed, that the government defendants demonstrated a compelling interest for the government’s racial classification, the purported need for remedial action is supported by strong and un rebutted evidence, and that the Section 8(a) program is narrowly tailored to further its compelling interest. *Id.* at *20.

Plaintiff Rothe appealed the decision of the district court to the United States Court of Appeals for the District of Columbia Circuit. The Court of Appeals affirmed the decision of the district court on other grounds. See 836 F.3d. 57, 2016 WL 4719049 (D.C. Cir. September 9, 2016).

L. Legal — Recent decisions involving federal procurement that may impact programs

4. *DynaLantic Corp. v. United States Dept. of Defense, et al.*, 885 F.Supp.2d 237, 2012 WL 3356813 (D.D.C. Aug. 15, 2012), appeals voluntarily dismissed, United States Court of Appeals, District of Columbia, Docket Numbers 12-5329 and 12-5330 (2014)

Plaintiff, the DynaLantic Corporation (“DynaLantic”), is a small business that designs and manufactures aircraft, submarine, ship, and other simulators and training equipment. DynaLantic sued the United States Department of Defense (“DoD”), the Department of the Navy, and the Small Business Administration (“SBA”) challenging the constitutionality of Section 8(a) of the Small Business Act (the “Section 8(a) program”), on its face and as applied: namely, the SBA’s determination that it is necessary or appropriate to set aside contracts in the military simulation and training industry. 2012 WL 3356813, at *1, *37.

The Section 8(a) program authorizes the federal government to limit the issuance of certain contracts to socially and economically disadvantaged businesses. *Id.* at *1. DynaLantic claimed that the Section 8(a) is unconstitutional on its face because the DoD’s use of the program, which is reserved for “socially and economically disadvantaged individuals,” constitutes an illegal racial preference in violation of the equal protection in violating its right to equal protection under the Due Process Clause of the Fifth Amendment to the Constitution and other rights. *Id.* at *1. DynaLantic also claimed the Section 8(a) program is unconstitutional as applied by the federal defendants in DynaLantic’s specific industry, defined as the military simulation and training industry. *Id.*

As described in *DynaLantic Corp. v. United States Department of Defense*, 503 F.Supp. 2d 262 (D.D.C. 2007) (*see below*), the court previously had denied Motions for Summary Judgment by the parties and directed them to propose future proceedings in order to

supplement the record with additional evidence subsequent to 2007 before Congress. 503 F.Supp. 2d at 267.

The Section 8(a) Program. The Section 8(a) program is a business development program for small businesses owned by individuals who are both socially and economically disadvantaged as defined by the specific criteria set forth in the congressional statute and federal regulations at 15 U.S.C. §§ 632, 636 and 637; *see* 13 CFR § 124. “Socially disadvantaged” individuals are persons who have been “subjected to racial or ethnic prejudice or cultural bias within American society because of their identities as members of groups without regard to their individual qualities.” 13 CFR § 124.103(a); *see also* 15 U.S.C. § 637(a)(5). “Economically disadvantaged” individuals are those socially disadvantaged individuals “whose ability to compete in the free enterprise system has been impaired due to diminished capital and credit opportunities as compared to others in the same or similar line of business who are not socially disadvantaged.” 13 CFR § 124.104(a); *see also* 15 U.S.C. § 637(a)(6)(A). *DynaLantic Corp.*, 2012WL 3356813 at *2.

Individuals who are members of certain racial and ethnic groups are presumptively socially disadvantaged; such groups include, but are not limited to, Black Americans, Hispanic Americans, Native Americans, Indian tribes, Asian-Pacific Americans, Native Hawaiian Organizations, and other minorities. *Id.* at *2 *quoting* 15 U.S.C. § 631(f)(1)(B)-(c); *see also* 13 CFR § 124.103(b)(1). All prospective program participants must show that they are economically disadvantaged, which requires an individual to show a net worth of less than \$250,000 upon entering the program, and a showing that the individual’s income for three years prior to the application and the fair market value of all assets do not exceed a certain threshold. 2012 WL 3356813 at *3; *see* 13 CFR § 124.104(c)(2).

L. Legal — Recent decisions involving federal procurement that may impact programs

Congress has established an “aspirational goal” for procurement from socially and economically disadvantaged individuals, which includes but is not limited to the Section 8(a) program, of 5 percent of procurements dollars government wide. *See* 15 U.S.C. § 644(g)(1). *DynaLantic*, at *3. Congress has not, however, established a numerical goal for procurement from the Section 8(a) program specifically. *See Id.* Each federal agency establishes its own goal by agreement between the agency head and the SBA. *Id.* DoD has established a goal of awarding approximately 2 percent of prime contract dollars through the Section 8(a) program. *DynaLantic*, at *3. The Section 8(a) program allows the SBA, “whenever it determines such action is necessary and appropriate,” to enter into contracts with other government agencies and then subcontract with qualified program participants. 15 U.S.C. § 637(a)(1). Section 8(a) contracts can be awarded on a “sole source” basis (i.e., reserved to one firm) or on a “competitive” basis (i.e., between two or more Section 8(a) firms). *DynaLantic*, at *3-4; 13 CFR 124.501(b).

Plaintiff’s business and the simulation and training industry.

DynaLantic performs contracts and subcontracts in the simulation and training industry. The simulation and training industry is composed of those organizations that develop, manufacture, and acquire equipment used to train personnel in any activity where there is a human-machine interface. *DynaLantic* at *5.

Compelling interest. The Court rules that the government must make two showings to articulate a compelling interest served by the legislative enactment to satisfy the strict scrutiny standard that racial classifications are constitutional only if they are narrowly tailored measures that further compelling governmental interests.” *DynaLantic*, at *9. First, the government must “articulate a legislative goal that is properly considered a compelling government interest.” *Id.* quoting *Sherbrooke Turf v. Minn. DOT.*, 345 F.3d 964, 969 (8th Cir.2003). Second, in addition to identifying a

compelling government interest, “the government must demonstrate ‘a strong basis in evidence’ supporting its conclusion that race-based remedial action was necessary to further that interest.” *DynaLantic*, at *9, quoting *Sherbrooke*, 345 F.3d 969.

After the government makes an initial showing, the burden shifts to *DynaLantic* to present “credible, particularized evidence” to rebut the government’s “initial showing of a compelling interest.” *DynaLantic*, at *10 quoting *Concrete Works of Colorado, Inc. v. City and County of Denver*, 321 F.3d 950, 959 (10th Cir. 2003). The court points out that although Congress is entitled to no deference in its ultimate conclusion that race-conscious action is warranted, its fact-finding process is generally entitled to a presumption of regularity and deferential review. *DynaLantic*, at *10, citing *Rothe Dev. Corp. v. U.S. Dep’t of Def.* (“*Rothe III*”), 262 F.3d 1306, 1321 n. 14 (Fed. Cir. 2001).

The court held that the federal Defendants state a compelling purpose in seeking to remediate either public discrimination or private discrimination in which the government has been a “passive participant.” *DynaLantic*, at *11. The Court rejected *DynaLantic’s* argument that the federal Defendants could only seek to remedy discrimination by a governmental entity, or discrimination by private individuals directly using government funds to discriminate. *DynaLantic*, at *11. The Court held that it is well established that the federal government has a compelling interest in ensuring that its funding is not distributed in a manner that perpetuates the effect of either public or private discrimination within an industry in which it provides funding. *DynaLantic*, at *11, citing *Western States Paving v. Washington State DOT*, 407 F.3d 983, 991 (9th Cir. 2005).

L. Legal — Recent decisions involving federal procurement that may impact programs

The Court noted that any public entity, state or federal, has a compelling interest in assuring that public dollars, drawn from the tax dollars of all citizens, do not serve to finance the evils of private prejudice, and such private prejudice may take the form of discriminatory barriers to the formation of qualified minority businesses, precluding from the outset competition for public contracts by minority enterprises. *DynaLantic* at *11 quoting *City of Richmond v. J. A. Croson Co.*, 488 U.S. 469, 492 (1995), and *Adarand Constructors, Inc. v. Slater*, 228 F.3d 1147, 1167-68 (10th Cir. 2000). In addition, private prejudice may also take the form of “discriminatory barriers” to “fair competition between minority and nonminority enterprises ... precluding existing minority firms from effectively competing for public construction contracts.” *DynaLantic*, at *11, quoting *Adarand VII*, 228 F.3d at 1168.

Thus, the Court concluded that the government may implement race-conscious programs not only for the purpose of correcting its own discrimination, but also to prevent itself from acting as a “passive participant” in private discrimination in the relevant industries or markets. *DynaLantic*, at *11, citing *Concrete Works IV*, 321 F.3d at 958.

Evidence before Congress. The Court analyzed the legislative history of the Section 8(a) program, and then addressed the issue as to whether the Court is limited to the evidence before Congress when it enacted Section 8(a) in 1978 and revised it in 1988, or whether it could consider post-enactment evidence. *DynaLantic*, at *16-17. The Court found that nearly every circuit court to consider the question has held that reviewing courts may consider post-enactment evidence in addition to evidence that was before Congress when it embarked on the program. *DynaLantic*, at *17. The Court noted that post-enactment evidence is particularly relevant when the statute is over thirty years old, and evidence used to justify Section 8(a) is stale for purposes of determining a compelling interest in the present. *Id.* The Court then followed the 10th Circuit Court of Appeals’

approach in *Adarand VII*, and reviewed the post-enactment evidence in three broad categories: (1) evidence of barriers to the formation of qualified minority contractors due to discrimination, (2) evidence of discriminatory barriers to fair competition between minority and nonminority contractors, and (3) evidence of discrimination in state and local disparity studies. *DynaLantic*, at *17.

The Court found that the government presented sufficient evidence of barriers to minority business formation, including evidence on race-based denial of access to capital and credit, lending discrimination, routine exclusion of minorities from critical business relationships, particularly through closed or “old boy” business networks that make it especially difficult for minority-owned businesses to obtain work, and that minorities continue to experience barriers to business networks. *DynaLantic*, at *17-21. The Court considered as part of the evidentiary basis before Congress multiple disparity studies conducted throughout the United States and submitted to Congress, and qualitative and quantitative testimony submitted at Congressional hearings. *Id.*

The Court also found that the government submitted substantial evidence of barriers to minority business development, including evidence of discrimination by prime contractors, private sector customers, suppliers, and bonding companies. *DynaLantic*, at *21-23. The Court again based this finding on recent evidence submitted before Congress in the form of disparity studies, reports and Congressional hearings. *Id.*

L. Legal — Recent decisions involving federal procurement that may impact programs

State and local disparity studies. Although the Court noted there have been hundreds of disparity studies placed before Congress, the Court considers in particular studies submitted by the federal Defendants of 50 disparity studies, encompassing evidence from 28 states and the District of Columbia, which have been before Congress since 2006. *DynaLantic*, at *25-29. The Court stated it reviewed the studies with a focus on two indicators that other courts have found relevant in analyzing disparity studies. First, the Court considered the disparity indices calculated, which was a disparity index, calculated by dividing the percentage of MBE, WBE, and/or DBE firms *utilized* in the contracting market by the percentage of M/W/DBE firms *available* in the same market. *DynaLantic*, at *26. The Court said that normally, a disparity index of 100 demonstrates full M/W/DBE participation; the closer the index is to zero, the greater the M/W/DBE disparity due to underutilization. *DynaLantic*, at *26.

Second, the Court reviewed the method by which studies calculated the *availability* and *capacity* of minority firms. *DynaLantic*, at *26. The Court noted that some courts have looked closely at these factors to evaluate the reliability of the disparity indices, reasoning that the indices are not probative unless they are restricted to firms of significant size and with significant government contracting experience. *DynaLantic*, at *26. The Court pointed out that although discriminatory barriers to formation and development would impact capacity, the Supreme Court decision in *Croson* and the Court of Appeals decision in *O'Donnell Construction Co. v. District of Columbia, et al.*, 963 F.2d 420 (D.C. Cir. 1992) “require the additional showing that eligible minority firms experience disparities, notwithstanding their abilities, in order to give rise to an inference of discrimination.” *DynaLantic*, at *26, n. 10.

Analysis: Strong basis in evidence. Based on an analysis of the disparity studies and other evidence, the Court concluded that the government articulated a compelling interest for the Section 8(a) program and satisfied its initial burden establishing that Congress had a strong basis in evidence permitting race-conscious measures to be used under the Section 8(a) program. *DynaLantic*, at *29-37. The Court held that DynaLantic did not meet its burden to establish that the Section 8(a) program is unconstitutional on its face, finding that DynaLantic could not show that Congress did not have a strong basis in evidence for permitting race-conscious measures to be used under any circumstances, in any sector or industry in the economy. *DynaLantic*, at *29.

The Court discussed and analyzed the evidence before Congress, which included extensive statistical analysis, qualitative and quantitative consideration of the unique challenges facing minorities from all businesses, and an examination of their race-neutral measures that have been enacted by previous Congresses, but had failed to reach the minority owned firms. *DynaLantic*, at *31. The Court said Congress had spent decades compiling evidence of race discrimination in a variety of industries, including but not limited to construction. *DynaLantic*, at *31. The Court also found that the federal government produced significant evidence related to professional services, architecture and engineering, and other industries. *DynaLantic*, at *31. The Court stated that the government has therefore “established that there are at least some circumstances where it would be ‘necessary or appropriate’ for the SBA to award contracts to businesses under the Section 8(a) program. *DynaLantic*, at *31, *citing* 15 U.S.C. § 637(a)(1).

L. Legal — Recent decisions involving federal procurement that may impact programs

Therefore, the Court concluded that in response to plaintiff's facial challenge, the government met its initial burden to present a strong basis in evidence sufficient to support its articulated, constitutionally valid, compelling interest. *DynaLantic*, at *31. The Court also found that the evidence from around the country is sufficient for Congress to authorize a nationwide remedy. *DynaLantic*, at *31, n. 13.

Rejection of DynaLantic's rebuttal arguments. The Court held that since the federal Defendants made the initial showing of a compelling interest, the burden shifted to the plaintiff to show why the evidence relied on by Defendants fails to demonstrate a compelling governmental interest. *DynaLantic*, at *32. The Court rejected each of the challenges by DynaLantic, including holding that: the legislative history is sufficient; the government compiled substantial evidence that identified private racial discrimination which affected minority utilization in specific industries of government contracting, both before and after the enactment of the Section 8(a) program; any flaws in the evidence, including the disparity studies, DynaLantic has identified in the data do not rise to the level of credible, particularized evidence necessary to rebut the government's initial showing of a compelling interest; DynaLantic cited no authority in support of its claim that fraud in the administration of race-conscious programs is sufficient to invalidate Section 8(a) program on its face; and Congress had strong evidence that the discrimination is sufficiently pervasive across racial lines to justify granting a preference for all five groups included in Section 8(a). *DynaLantic*, at *32-36.

In this connection, the Court stated it agreed with *Croson* and its progeny that the government may properly be deemed a "passive participant" when it fails to adjust its procurement practices to account for the effects of identified private discrimination on the availability and utilization of minority-owned businesses in government contracting. *DynaLantic*, at *34. In terms of flaws in the evidence, the Court pointed out that the proponent of the race-conscious remedial program is not

required to unequivocally establish the existence of discrimination, nor is it required to negate all evidence of non-discrimination. *DynaLantic*, at *35, citing *Concrete Work IV*, 321 F.3d at 991. Rather, a strong basis in evidence exists, the Court stated, when there is evidence approaching a *prima facie* case of a constitutional or statutory violation, not irrefutable or definitive proof of discrimination. *Id.*, citing *Croson*, 488 U.S. 500. Accordingly, the Court stated that DynaLantic's claim that the government must independently verify the evidence presented to it is unavailing. *Id.* *DynaLantic*, at *35.

Also, in terms of DynaLantic's arguments about flaws in the evidence, the Court noted that Defendants placed in the record approximately 50 disparity studies which had been introduced or discussed in Congressional Hearings since 2006, which DynaLantic did not rebut or even discuss any of the studies individually. *DynaLantic*, at *35. DynaLantic asserted generally that the studies did not control for the capacity of the firms at issue, and were therefore unreliable. *Id.* The Court pointed out that Congress need not have evidence of discrimination in all 50 states to demonstrate a compelling interest, and that in this case, the federal Defendants presented recent evidence of discrimination in a significant number of states and localities which, taken together, represents a broad cross-section of the nation. *DynaLantic*, at *35, n. 15. The Court stated that while not all of the disparity studies accounted for the capacity of the firms, many of them did control for capacity and still found significant disparities between minority and nonminority owned firms. *DynaLantic*, at *35. In short, the Court found that DynaLantic's "general criticism" of the multitude of disparity studies does not constitute particular evidence undermining the reliability of the particular disparity studies and therefore is of little persuasive value. *DynaLantic*, at *35.

L. Legal — Recent decisions involving federal procurement that may impact programs

In terms of the argument by DynaLantic as to requiring proof of evidence of discrimination against each minority group, the Court stated that Congress has a strong basis in evidence if it finds evidence of discrimination is sufficiently pervasive across racial lines to justify granting a preference to all five disadvantaged groups included in Section 8(a). The Court found Congress had strong evidence that the discrimination is sufficiently pervasive across racial lines to justify a preference to all five groups. *DynaLantic*, at *36. The fact that specific evidence varies, to some extent, within and between minority groups, was not a basis to declare this statute facially invalid. *DynaLantic*, at *36.

Facial challenge: Conclusion. The Court concluded Congress had a compelling interest in eliminating the roots of racial discrimination in federal contracting and had established a strong basis of evidence to support its conclusion that remedial action was necessary to remedy that discrimination by providing significant evidence in three different areas. First, it provided extensive evidence of discriminatory barriers to minority business formation. *DynaLantic*, at *37. Second, it provided “forceful” evidence of discriminatory barriers to minority business development. *Id.* Third, it provided significant evidence that, even when minority businesses are qualified and eligible to perform contracts in both the public and private sectors, they are awarded these contracts far less often than their similarly situated nonminority counterparts. *Id.* The Court found the evidence was particularly strong, nationwide, in the construction industry, and that there was substantial evidence of widespread disparities in other industries such as architecture and engineering, and professional services. *Id.*

As-applied challenge. *DynaLantic* also challenged the SBA and DoD’s use of the Section 8(a) program as applied: namely, the agencies’ determination that it is necessary or appropriate to set aside contracts in the military simulation and training industry. *DynaLantic*, at *37.

Significantly, the Court points out that the federal Defendants “concede that they do not have evidence of discrimination in this industry.” *Id.* Moreover, the Court points out that the federal Defendants admitted that there “is no Congressional report, hearing or finding that references, discusses or mentions the simulation and training industry.” *DynaLantic*, at *38. The federal Defendants also admit that they are “unaware of any discrimination in the simulation and training industry.” *Id.* In addition, the federal Defendants admit that none of the documents they have submitted as justification for the Section 8(a) program mentions or identifies instances of past or present discrimination in the simulation and training industry. *DynaLantic*, at *38.

The federal Defendants maintain that the government need not tie evidence of discriminatory barriers to minority business formation and development to evidence of discrimination in any particular industry. *DynaLantic*, at *38. The Court concludes that the federal Defendants’ position is irreconcilable with binding authority upon the Court, specifically, the United States Supreme Court’s decision in *Croson*, as well as the Federal Circuit’s decision in *O’Donnell Construction Company*, which adopted *Croson*’s reasoning. *DynaLantic*, at *38. The Court holds that *Croson* made clear the government must provide evidence demonstrating there were eligible minorities in the relevant market. *DynaLantic*, at *38. The Court held that absent an evidentiary showing that, in a highly skilled industry such as the military simulation and training industry, there are eligible minorities who are qualified to undertake particular tasks and are nevertheless denied the opportunity to thrive there, the government cannot comply with *Croson*’s evidentiary requirement to show an inference of discrimination. *DynaLantic*, at *39, citing *Croson*, 488 U.S. 501. The Court rejects the federal government’s position that it does not have to make an industry-based showing in order to show strong evidence of discrimination. *DynaLantic*, at *40.

L. Legal — Recent decisions involving federal procurement that may impact programs

The Court notes that the Department of Justice has recognized that the federal government must take an industry-based approach to demonstrating compelling interest. *DynaLantic*, at *40, citing *Cortez III Service Corp. v. National Aeronautics & Space Administration*, 950 F.Supp. 357 (D.D.C. 1996). In *Cortez*, the Court found the Section 8(a) program constitutional on its face, but found the program unconstitutional as applied to the NASA contract at issue because the government had provided no evidence of discrimination in the industry in which the NASA contract would be performed. *DynaLantic*, at *40. The Court pointed out that the Department of Justice had advised federal agencies to make industry-specific determinations before offering set-aside contracts and specifically cautioned them that without such particularized evidence, set-aside programs may not survive *Croson* and *Adarand*. *DynaLantic*, at *40.

The Court recognized that legislation considered in *Croson*, *Adarand* and *O'Donnell* were all restricted to one industry, whereas this case presents a different factual scenario, because Section 8(a) is not industry-specific. *DynaLantic*, at *40, n. 17. The Court noted that the government did not propose an alternative framework to *Croson* within which the Court can analyze the evidence, and that in fact, the evidence the government presented in the case is industry specific. *Id.*

The Court concluded that agencies have a responsibility to decide if there has been a history of discrimination in the particular industry at issue. *DynaLantic*, at *40. According to the Court, it need not take a party's definition of "industry" at face value, and may determine the appropriate industry to consider is broader or narrower than that proposed by the parties. *Id.* However, the Court stated, in this case the government did not argue with plaintiff's industry definition, and more significantly, it provided no evidence whatsoever from which an inference of discrimination in that industry could be made. *DynaLantic*, at *40.

Narrowly tailoring. In addition to showing strong evidence that a race-conscious program serves a compelling interest, the government is required to show that the means chosen to accomplish the government's asserted purpose are specifically and narrowly framed to accomplish that purpose. *DynaLantic*, at *41. The Court considered several factors in the narrowly tailoring analysis: the efficacy of alternative, race-neutral remedies, flexibility, over- or under-inclusiveness of the program, duration, the relationship between numerical goals and the relevant labor market, and the impact of the remedy on third parties. *Id.*

The Court analyzed each of these factors and found that the federal government satisfied all six factors. *DynaLantic*, at *41-48. The Court found that the federal government presented sufficient evidence that Congress attempted to use race-neutral measures to foster and assist minority owned businesses relating to the race-conscious component in Section 8(a), and that these race-neutral measures failed to remedy the effects of discrimination on minority small business owners. *DynaLantic*, at *42. The Court found that the Section 8(a) program is sufficiently flexible in granting race-conscious relief because race is made relevant in the program, but it is not a determinative factor or a rigid racial quota system. *DynaLantic*, at *43. The Court noted that the Section 8(a) program contains a waiver provision and that the SBA will not accept a procurement for award as an 8(a) contract if it determines that acceptance of the procurement would have an adverse impact on small businesses operating outside the Section 8(a) program. *DynaLantic*, at *44.

L. Legal — Recent decisions involving federal procurement that may impact programs

The Court found that the Section 8(a) program was not over- and under-inclusive because the government had strong evidence of discrimination which is sufficiently pervasive across racial lines to all five disadvantaged groups, and Section 8(a) does not provide that every member of a minority group is disadvantaged. *DynaLantic*, at *44. In addition, the program is narrowly tailored because it is based not only on social disadvantage, but also on an individualized inquiry into economic disadvantage, and that a firm owned by a nonminority may qualify as socially and economically disadvantaged. *DynaLantic*, at *44.

The Court also found that the Section 8(a) program places a number of strict durational limits on a particular firm's participation in the program, places temporal limits on every individual's participation in the program, and that a participant's eligibility is continually reassessed and must be maintained throughout its program term. *DynaLantic*, at *45. Section 8(a)'s inherent time limit and graduation provisions ensure that it is carefully designed to endure only until the discriminatory impact has been eliminated, and thus it is narrowly tailored. *DynaLantic*, at *46.

In light of the government's evidence, the Court concluded that the aspirational goals at issue, all of which were less than 5 percent of contract dollars, are facially constitutional. *DynaLantic*, at *46-47. The evidence, the Court noted, established that minority firms are ready, willing, and able to perform work equal to 2–5 percent of government contracts in industries including but not limited to construction. *Id.* The Court found the effects of past discrimination have excluded minorities from forming and growing businesses, and the number of available minority contractors reflects that discrimination. *DynaLantic*, at *47.

Finally, the Court found that the Section 8(a) program takes appropriate steps to minimize the burden on third parties, and that the Section 8(a) program is narrowly tailored on its face. *DynaLantic*, at *48. The Court concluded that the government is not required to eliminate the burden on nonminorities in order to survive strict scrutiny, but a limited and properly tailored remedy to cure the effects of prior discrimination is permissible even when it burdens third parties. *Id.* The Court points to a number of provisions designed to minimize the burden on nonminority firms, including the presumption that a minority applicant is socially disadvantaged may be rebutted, an individual who is not presumptively disadvantaged may qualify for such status, the 8(a) program requires an individualized determination of economic disadvantage, and it is not open to individuals whose net worth exceeds \$250,000 regardless of race. *Id.*

Conclusion. The Court concluded that the Section 8(a) program is constitutional on its face. The Court also held that it is unable to conclude that the federal Defendants have produced evidence of discrimination in the military simulation and training industry sufficient to demonstrate a compelling interest. Therefore, *DynaLantic* prevailed on its as-applied challenge. *DynaLantic*, at *51. Accordingly, the Court granted the federal Defendants' Motion for Summary Judgment in part (holding the Section 8(a) program is valid on its face) and denied it in part, and granted the plaintiff's Motion for Summary Judgment in part (holding the program is invalid as applied to the military simulation and training industry) and denied it in part. The Court held that the SBA and the DoD are enjoined from awarding procurements for military simulators under the Section 8(a) program without first articulating a strong basis in evidence for doing so.

L. Legal — Recent decisions involving federal procurement that may impact programs

Appeals voluntarily dismissed, and Stipulation and Agreement of Settlement Approved and Ordered by District Court. A Notice of Appeal and Notice of Cross Appeal were filed in this case to the United States Court of Appeals for the District of Columbia by the United States and DynaLantic: Docket Numbers 12-5329 and 12-5330. Subsequently, the appeals were voluntarily dismissed, and the parties entered into a Stipulation and Agreement of Settlement, which was approved by the District Court (Jan. 30, 2014). The parties stipulated and agreed *inter alia*, as follows: (1) the Federal Defendants were enjoined from awarding prime contracts under the Section 8(a) program for the purchase of military simulation and military simulation training contracts without first articulating a strong basis in evidence for doing so; (2) the Federal Defendants agreed to pay plaintiff the sum of \$1,000,000.00; and (3) the Federal Defendants agreed they shall refrain from seeking to vacate the injunction entered by the Court for at least two years.

The District Court on January 30, 2014 approved the Stipulation and Agreement of Settlement, and So Ordered the terms of the original 2012 injunction modified as provided in the Stipulation and Agreement of Settlement.

L. Legal — Recent decisions involving federal procurement that may impact programs

5. *DynaLantic Corp. v. United States Dept. of Defense, et al.*, 503 F. Supp.2d 262 (D.D.C. 2007)

DynaLantic Corp. involved a challenge to the DOD’s utilization of the Small Business Administration’s (“SBA”) 8(a) Business Development Program (“8(a) Program”). In its Order of August 23, 2007, the district court denied both parties’ Motions for Summary Judgment because there was no information in the record regarding the evidence before Congress supporting its 2006 reauthorization of the program in question; the court directed the parties to propose future proceedings to supplement the record. 503 F. Supp.2d 262, 263 (D.D.C. 2007).

The court first explained that the 8(a) Program sets a goal that no less than 5 percent of total prime federal contract and subcontract awards for each fiscal year be awarded to socially and economically disadvantaged individuals. *Id.* Each federal government agency is required to establish its own goal for contracting but the goals are not mandatory and there is no sanction for failing to meet the goal. Upon application and admission into the 8(a) Program, small businesses owned and controlled by disadvantaged individuals are eligible to receive technological, financial, and practical assistance, and support through preferential award of government contracts. For the past few years, the 8(a) Program was the primary preferential treatment program the DOD used to meet its 5 percent goal. *Id.* at 264.

This case arose from a Navy contract that the DOD decided to award exclusively through the 8(a) Program. The plaintiff owned a small company that would have bid on the contract but for the fact it was not a participant in the 8(a) Program. After multiple judicial proceedings the D.C. Circuit dismissed the plaintiff’s action for lack of standing but granted the plaintiff’s motion to enjoin the contract procurement pending the appeal of the dismissal order. The Navy cancelled the proposed procurement, but the D.C. Circuit allowed the plaintiff to

circumvent the mootness argument by amending its pleadings to raise a facial challenge to the 8(a) program as administered by the SBA and utilized by the DOD. The D.C. Circuit held the plaintiff had standing because of the plaintiff’s inability to compete for DOD contracts reserved to 8(a) firms, the injury was traceable to the race-conscious component of the 8(a) Program, and the plaintiff’s injury was imminent due to the likelihood the government would in the future try to procure another contract under the 8(a) Program for which the plaintiff was ready, willing, and able to bid. *Id.* at 264-65.

On remand, the plaintiff amended its complaint to challenge the constitutionality of the 8(a) Program and sought an injunction to prevent the military from awarding any contract for military simulators based upon the race of the contractors. *Id.* at 265. The district court first held that the plaintiff’s complaint could be read only as a challenge to the DOD’s implementation of the 8(a) Program [pursuant to 10 U.S.C. § 2323] as opposed to a challenge to the program as a whole. *Id.* at 266. The parties agreed that the 8(a) Program uses race-conscious criteria so the district court concluded it must be analyzed under the strict scrutiny constitutional standard. The court found that in order to evaluate the government’s proffered “compelling government interest,” the court must consider the evidence that Congress considered at the point of authorization or reauthorization to ensure that it had a strong basis in evidence of discrimination requiring remedial action. The court cited to *Western States Paving* in support of this proposition. *Id.* The court concluded that because the DOD program was reauthorized in 2006, the court must consider the evidence before Congress in 2006.

L. Legal — Recent decisions involving federal procurement that may impact programs

The court cited to the recent *Rothe* decision as demonstrating that Congress considered significant evidentiary materials in its reauthorization of the DOD program in 2006, including six recently published disparity studies. The court held that because the record before it in the present case did not contain information regarding this 2006 evidence before Congress, it could not rule on the parties' Motions for Summary Judgment. The court denied both motions and directed the parties to propose future proceedings in order to supplement the record. *Id.* at 267.

APPENDIX M. ODOT and Local Agency Procurement — Procurement analysis

Keen Independent analyzed how ODOT and certain subrecipients procure construction, engineering services and other transportation goods and services as background for other study tasks. This review was based on examination of procurement practices for ODOT and a cross section of cities, counties and other subrecipients in the study.

The study team also reviewed previous recommendations made to ODOT in the 2016 ODOT Disparity Study and identified which ones had been implemented by the Department. In addition, Keen Independent collected information about how ODOT has operated the Federal DBE Program. This includes information related to its goal setting, program eligibility, good faith effort requirements, etc.

Appendix M is organized into the following three parts:

- Procurement analysis;
- DBE Program implementation analysis; and
- Previous disparity study recommendations analysis.

Procurement Analysis

The State of Oregon’s Public Contracting Code requires public agencies, including cities and counties, to establish and follow specific guidelines when procuring construction, goods or services from vendors.

These rules can be based on the following:

- The State of Oregon’s Public Contracting Code (ORS 279A, 279B, 279C);
- The State of Oregon’s Attorney General Model Rules (Chapter 137, Division 46-49);
- Rules and guidelines stipulated specifically by and for the contracting agency (subject to Oregon Revised Statutes); or
- A combination of the above options.

Figure M-1 summarizes ODOT procurement processes. Figures M-2 through M-8 provide information about each of the case study local agencies. Each table shows:

- Bidding thresholds;
- Bidding requirements;
- Basis for awarding contracts;
- Rules regarding advertisement of contracts; and
- Information about bonding and use of emergency contracts.

Information is provided for contracts in different industries (construction, architecture and engineering services, goods and services).

Based on analysis of ODOT practices and those for the case studies, procurement practices appear to be very similar across entities. In fact, several of the entities researched matched the procedures followed by ODOT. These included Lane County, Linn County, the City of Eugene and Metro.

M. ODOT and Local Agency Procurement — Procurement analysis

M-1. ODOT procurement practices

	Construction (public improvements)	Goods and services (including non-A&E-related professional services)	A&E, photogrammetric mapping, transportation planning, land surveying	Other services related to A&E
Bidding thresholds				
Requiring competitive sealed bids/proposals	Above \$100,000	Above \$150,000	Above \$250,000	Above \$250,000
Intermediate procurements	\$5,001–\$100,000	\$10,001–\$150,000	\$100,001–\$250,000	\$100,001–\$250,000
Small procurements ("direct appointment" for A&E)	\$5,000 or below	\$10,000 or below	\$100,000 or below	\$100,000 or below

M. ODOT and Local Agency Procurement — Procurement analysis

Bidding Thresholds

Across agencies, different bidding requirements apply based on the size of the contract. For ODOT, threshold amounts depend on the type of work, as summarized below:

- **Construction contracts.** Small procurements (\$5,000 or below), intermediate procurements (\$5,000–\$100,000) and competitive sealed bids/proposals (\$100,000 or above).
- **Goods and services contracts.** Small procurements (\$10,000 or below), intermediate procurements (\$10,000–\$150,000) and competitive sealed bids/proposals (\$150,000 or above).
- **Architecture and engineering and related services contracts.** Small procurements (\$100,000 or below), intermediate procurements (\$100,001–\$250,000) and competitive sealed bids/proposals (\$250,000 or above).
- **Professional services contracts.** Small procurements (\$10,000 or below), intermediate procurements (\$10,000–\$150,000) and competitive sealed bids/proposals (\$150,000 or above).

A majority of the other public entities researched within Oregon used the same thresholds or similar ones to those of ODOT.

Bidding Requirements

The typical bidding requirements for the different types of ODOT procurements are as follows:

- **Small procurements.** The contracting agency does not require competitive bids to award a contract.
- **Intermediate procurements.** The agency must solicit at least three firms for quotes/proposals to award a contract.
- **Competitive sealed bids/proposals.** The contracting agency must publicly advertise and open the contract for bids or proposals.

Similar bidding requirements were observed for other entities within Oregon.

M. ODOT and Local Agency Procurement — Procurement analysis

Basis for Award

The typical bases used to award procurements are as follows:

- **Small procurements.** Directly awarded to a vendor of the contracting agency's choice.
- **Intermediate procurements.** Awarded to the vendor whose offer will best serve the interests of the contracting agency, considering factors like qualifications and/or price.
- **Competitive sealed proposals.** Awarded based on ranking of proposed workscopes, qualifications, price and other non-price factors.
- **Competitive sealed bids.** Awarded to the lowest responsible bidder.

Other entities researched within Oregon used the same or similar basis when awarding contracts.

Means of Advertising or Other Public Notice

Public advertising is typically required for larger ODOT procurements. Advertisements can be placed in newspapers of general circulation as well as electronically. When done electronically, ads are normally placed within the agency's website (i.e., City website) or a procurement information network (i.e., OregonBuys). Additionally, if a construction contract is expected to be \$125,000 or more, ODOT must advertise the project in a statewide trade publication. Other agencies within Oregon observed the same standards for advertising contracts or followed similar ones to those of ODOT.

Bonds

Bid bonds can be required by ODOT during the competitive bidding process. Bid bonds are typically for 5 to 10 percent of the contract value. Performance and payment bonds for construction projects are also required and are usually for 100 percent of the contract value if the estimated cost of the contract is \$100,000 or more. Other entities in Oregon showed similar bond requirements.

Prequalification Process

Prime contractors interested in working on ODOT public improvement projects procured for highways and bridges may first need to be prequalified with the agency. Contractors being prequalified must file a prime contractor prequalification application with ODOT. Applicants provide background on the business, ownership information, work history and other information such as:

- References from previous work;
- Summary of experience for different types of work; and
- Summary of licenses and registrations held by the firm.

Applications for prequalification are typically required to be submitted at least 10 calendar days prior to the bid opening date of a project a contractor wishes to bid. However, it may take up to 30 days for the application to be processed and for it to be reviewed and either approved or denied. After an application has been reviewed and approved by ODOT, the prime contractor will be considered prequalified for two years and will be able to bid on contracts that have a stipulated prequalification requirement. However, subcontractors who are looking to participate with primes on construction projects are not required to become prequalified.

M. ODOT and Local Agency Procurement — Procurement analysis

In some cases, firms may also need to complete an additional contractor special prequalification process if a project requires firms with specialized knowledge or expertise. This additional process is not required for contracts \$100,000 or below.

Emergency Contracts

Typically, ODOT and other contracting agencies will also have procurement guideline exemptions that allow for bidding requirements to be waived for emergency purchases.

M. ODOT and Local Agency Procurement — Federal DBE Program

The Federal DBE Program provides for recipients of FHWA, FAA and FTA funds to set an overall goal for DBE participation and use DBE contract goals to meet any portion of their overall goal they do not project being able to meet using race-neutral means.¹ Federal regulations further direct agencies to reduce or eliminate the use of contract goals if they are exceeding their overall DBE goal.²

The following describes key aspects of the Federal DBE Program and how ODOT is currently operating the program.

Setting Overall Annual DBE Goals

The following describes how ODOT set an overall DBE goal for its FHWA-funded contracts for FFY2020–FFY2022.

After considering the options under 49 CFR 26.45(c), ODOT determined that it would determine the base figure of DBE relative availability through a percentage figure derived from a valid, applicable disparity study. In early 2018, the Department retained Keen Independent to conduct an update to the ODOT 2016 Disparity Study. Based on the results from this 2019 study, the agency made the following decisions:

- ODOT determined that its base figure would be 15.37 percent based on the final ODOT 2019 Disparity Study Update report, in which Keen Independent calculated the relative availability of current and potential DBEs on a dollar-weighted basis.

¹ 49 CFR Section 26.51(d).

- Following that, ODOT considered a potential step 2 adjustments to the base figure. After considering factors such as the current capacity of DBEs to perform work, information related to employment, self-employment, education, training and unions, disparities in the ability of DBEs to get financing and additional factors, the Department determined that it would not make such an adjustment.
- Then, ODOT examined the median race- and gender-neutral participation figure that Keen Independent calculated in its report based on the race-neutral portion of ODOT’s DBE participation for FHWA-funded contracts from FFY2016 through FFY2018. It determined that the portion of its DBE goal to be met through race- and gender-neutral measures for FFY2020–2022 would be 4.73 percent.
- ODOT subtracted the race-neutral measure mentioned above from its overall goal of 15.37 percent to determine that the portion to be met through race- and gender-conscious measures for FFY2020–2022 would be 10.64 percent.

Following the steps listed above, ODOT submitted to FHWA a triennial goal for FFY2020–FFY2022 of 15.37 percent. This goal is to be achieved through race-conscious and race-neutral projections of 10.64 percent and 4.73 percent, respectively.

² 49 CFR Section 26.51(f)(2). And, if an agency exceeds its overall goal in two consecutive years through the use of contract goals, it must reduce its use of contract goals proportionately in the following year (see 49 CFR Section 26.51(f)(4)).

M. ODOT and Local Agency Procurement — Federal DBE Program

Use of DBE Contract Goals

ODOT has used DBE goals on certain FHWA-funded contracts to help it achieve its overall DBE goal.

The Federal DBE Program outlines proper use of DBE contract goals, including:

- Only setting DBE contract goals on USDOT-funded contracts that have subcontracting possibilities;³
- Not having to set a DBE contract goal on every USDOT-funded contract;⁴
- The fact that a DBE goal for a specific contract is set separately from the overall DBE goal, and that it may be higher or lower than the overall goal depending on factors such as the type of work involved, the location of the work and the availability of DBEs for the work of the particular contract;⁵ and
- A DBE contract goal should not be divided into subgoals for specific DBE groups.⁶

³ 49 CFR Section 26.51(e)(1).

⁴ 49 CFR Section 26.51(e)(2).

⁵ Ibid.

Good faith efforts. Bidders or proposers comply with a DBE contract goal by making good faith efforts to meet it. A bidder or proposer can show this in one of two ways:

- By meeting the contract goal with verified, countable DBE participation; or
- Documenting that it made adequate good faith efforts to meet the goal, even though if it did not succeed in doing so.⁷

ODOT requires that evidence of a good faith effort be submitted by a bidder upon submission of their bid. Each solicitation for which a contract goal has been established requires the bidder to submit a DBE Commitment Certification AND Utilization Form which includes the following details:

- The names of DBE firms that will participate in the contract;
- A description of the work that each DBE will perform;
- The function/role that each DBE will be playing for the contract;
- The dollar amount of the participation of each DBE firm participating;
- Written and signed documentation of commitment to use a DBE subcontractor whose participation it submits to meet a contract goal; and
- If the contract goal is not met, evidence of good faith efforts.

⁶ 49 CFR Section 26.51(e)(4).

⁷ 49 CFR Section 26.53(a).

M. ODOT and Local Agency Procurement — Federal DBE Program

The Department also reviews documents submitted by a bidder on contracts with a DBE goal to determine whether the bidder has satisfied the good faith efforts requirement to utilize DBE firms. Some of the factors that the Department takes into account when assessing good faith efforts includes, but is not limited to:

- Attendance at a pre-bid meeting scheduled by ODOT to inform DBEs of subcontracting opportunities under a given solicitation;
- Advertisement in general circulation media, trade association publications, and minority focused media before bids are due;
- Documentation showing that the contractor identified and selected specific economically feasible units of the project to be performed by DBE firms in order to increase the likelihood of participation by DBE firms;
- Written notification to capable DBEs that their interest in the contract is solicited;
- Evidence that the contractor advised and made efforts to assist interested DBE firms in obtaining bonding, lines of credit, or insurance required by ODOT or the contractor;
- Documentation of efforts to negotiate with DBEs for specific subcontracts; and
- For each DBE the bidder contacted but rejected as unqualified, the reason and documentation supporting the bidder's conclusion.

If the Department determines that a bidder or proposer did not make good faith efforts to meet the contract goal, the bidder or proposer may request administrative reconsideration through a written appeal to an ODOT review committee.

As a part of this reconsideration:

- The bidder/offeror can provide written documentation or argument concerning the issue of whether it met the goal or made adequate good faith efforts.
- Upon request, the review committee can conduct an in-person meeting with the affected bidders/offerors to reconsider the denial of a contract award based on inadequate good faith efforts.
- The review committee thoroughly reviews all written documentation and/or oral arguments submitted by the bidder/offeror regarding whether it met the goal or adequate good faith efforts to do so.
- Within three days after hearing and considering the reconsideration matter, the review renders a decision on whether the bidder/offeror met the goal or made adequate good faith efforts to do so.
- The review committee then notifies the bidder/offeror in writing regarding the decision within four working days.
- The results of the reconsideration process is final and is not appealable to the USDOT.

M. ODOT and Local Agency Procurement — Federal DBE Program

DBE Termination. Once the prime contractor has identified a DBE subcontractor to meet a contract goal, it may not terminate that DBE or substitute another DBE without the Department's prior consent.

In this situation, ODOT requires the prime contractor to give written notice to the DBE subcontractor and ODOT's Office of Civil Rights of its intent to request termination and the reason for the request. Afterwards, the DBE subcontractor has five days to respond in writing and explain why it objects to the proposed termination and why ODOT should not approve the prime contractor's proposed termination.

If the prime contractor still believes that it must substitute the DBE, it must receive written consent from ODOT's Office of Civil Rights before replacing a designated DBE subcontractor. To support its request, the prime must provide supporting documentation (e.g., new or amended subcontracts, documentation of good-faith efforts) of why good cause exists to terminate the DBE.

M. ODOT and Local Agency Procurement — Federal DBE Program

Eligibility for DBE Program Certification

Minority- and woman-owned firms that have been certified by the Certification Office for Business Inclusion and Diversity (COBID) as DBEs can be counted towards satisfaction of a DBE goal. For a firm to be classified as a DBE in ODOT procurements, at least 51 percent of it must be owned by one or more individuals who are both socially and economically disadvantaged, and the management and daily business operations should be controlled by that individual or individuals. DBEs that have been certified by agencies in other states may also be eligible for DBE Program certification through COBID's certification application. To do so, the firms must provide a copy of their most recent certification letter and wait for COBID to confirm that the firm has a current valid certification with that other state agency.

To start the DBE certification process, a firm must first register through COBID's Certification Management System. Following that, they will be able to complete an online DBE Certification application. This will involve providing general information about the firm, majority owner information and additional details listed in 49 CFR Part 26. In addition, personal tax returns and federal tax returns for the firm for the last three years must be provided.

After a firm has submitted the required certification application materials, its application is reviewed by COBID. The applicant is advised in writing within 30 to 60 days from receipt of the application whether the application is complete and suitable for evaluation and, if not, what additional information or action is required. If additional information is required, the firm will receive a request for missing information which must be submitted.

However, if all of the information for the certification application is provided, COBID may conduct a phone or formal in-person interview to verify a DBE applicant's location, personnel and operations and substantiate or clarify information and documentation contained in the applicant file. This interview takes place at the firm's principal place of business or job site during a certification review. Afterwards, COBID will notify the applicant over mail about their application decision. In case of denial, the applicant has the opportunity to submit a written appeal to COBID within 21 calendar days from the date of their denial notice. If the applicant is denied their certification, they are also ineligible to reapply for a period of 12 months.

Once an applicant's certification is approved, the DBE certification is valid for three years. However, COBID will send annual "no change" statements to firms approximately 30 days before their one-year and two-year anniversaries of the DBE certification date. The firm must then complete the statement and provide federal tax information for the previous year and provide documentation supporting any changes prior to the anniversary date.

As the three-year period ends, firms must apply for recertification to the DBE Program. This process begins when COBID sends a certification review notice to a firm approximately two months prior to their certification anniversary date. After the firm has submitted the recertification application and provides the necessary documentation, COBID reviews the signed application and may conduct another on-site investigation to verify information submitted before making a decision on the firm's recertification.

M. ODOT and Local Agency Procurement — Implementation of 2016 study recommendations

Keen Independent also reviewed the recommendations previously provided in the 2016 ODOT Disparity Study regarding its contracting and business assistance guidelines. Figures M-9 through M-10 show the original recommendations followed by the current status at ODOT and whether they have implemented those recommendations.

M. ODOT and Local Agency Procurement — Implementation of 2016 study recommendations

M-9. 2016 ODOT Disparity Study recommendations and implementation

Objectives and recommendations	Has ODOT implemented the recommendation? If so, how?
1. Openness	
a. Continue outreach to potential bidders, proposers, subcontractors and suppliers	Yes. The Department offers in-person and virtual workshops and networking events to help them get acquainted with doing business with ODOT.
b. Disseminate information through an electronic newsletter	Yes. The Department has its newsletter posted within its website and allows the public to receive it through email.
c. Provide real-time training and assistance on how to win and perform work on ODOT projects	Yes. The Department offers in-person and virtual workshops and training events to help firms get acquainted with applying and doing business with ODOT.
2. Simplicity	
a. Simplify learning about, bidding on and performing ODOT work, especially small contracts	Yes. The Department provides online access to small contract information and advertises it to small businesses through its business programs, such as the Emerging Small Business Program.
b. Increase number of certified DBEs through targeted outreach and certification assistance	Yes. ODOT has continued to encourage the certification of eligible firms who can become DBEs and provides resources to firms on how to become certified.
3. Fairness	
a. Review how firm qualifications are assessed in construction and A&E contract awards	
b. Implement payment notification service for subcontractors and subconsultants	
c. Explore initiatives to limit opportunities for bid shopping and other unfair contracting practices	
d. Research other ways to improve treatment of subcontractors on ODOT contracts	
e. Continue support for apprenticeships and other programs to promote entry and advancement	Yes. The Department has continued to invest in creating a diverse workforce by offering its OJT/Apprenticeship Program, which is designed to increase minority and women representation in the construction industry.

M. ODOT and Local Agency Procurement — Implementation of 2016 study recommendations

M-10. 2016 ODOT Disparity Study recommendations and implementation

Objectives and recommendations	Has ODOT implemented the recommendation? If so, how?
4. Transparency	
a. Expand awareness of construction contract award information	Yes. ODOT has done this by making construction contract award information available on its website.
b. Provide comprehensive information about consultant contract awards, including subcontractors	Yes. ODOT has done this by making construction contract award information available on its website.
5. Impact	
a. Continue partnerships to provide general business assistance	Yes. The Department has continued to establish partnerships with trade organizations, chambers and business associations which small businesses can use as resources for workshops, technical assistance and for loans.
b. Build stronger DBEs and other small businesses within core transportation contracting disciplines	Yes. The Department has continued to offer business assistance to DBEs and other small businesses in order to foster greater participation among these firms in transportation-related contracts.
c. Consider an ESB contract goals program for state-funded contracts	Yes. The Department implemented its own Emerging Small Business Program (ESB), which applies to both state and non-state funded contracts.
d. Pursue changes in state law to allow expansion of Small Contracting Program and ESB/SBE Programs	Yes. The Department has updated its programs, including updating its ESB Program maximum contract amount from \$100,000 to \$250,000 after passage of Oregon HB 3055.
e. Consider including each DBE group as eligible for DBE contract goals program	Yes. All DBE groups are eligible for DBE contract goals program.
6. Monitored and improving	
a. Expand data collection and reporting, including a comprehensive business contact list	Yes. A business directory is available on ODOT's website. This include ownership, contact and certification information.
b. Continue to use external stakeholder groups that include DBEs and ESBs	Yes. The Department has continued to include DBEs and other types of disadvantaged firms in discussions when seeking input regarding business conditions and feedback on ODOT's processes and guidelines.
c. Plan future disparity studies	Yes. The Department has continued to plan future disparity studies. It had a disparity study update conducted by Keen Independent Research in 2019 and is currently set to release another one in 2022.

APPENDIX N. Step 2 Adjustment Reflecting Disparities in Business Ownership Rates

Federal regulations outline factors that an agency must consider when assessing whether to make any step 2 adjustments to its base figure.

This appendix provides the calculations for a potential upward step 2 adjustment that considers the additional availability of current and potential DBEs if there were no disparities in the rates of self-employment (business ownership) for people of color and women working in study industries in Oregon.

Analysis of Self-Employment Rates

Keen Independent’s analyses indicate that there are barriers that certain minority groups and women face related to business ownership in the Oregon construction, professional services, goods and other services industries (see Summary Report -Quantitative Analysis and Appendices E through J).

The study team used regression analyses to investigate whether race, ethnicity and gender affected rates of business ownership among workers in the Oregon study industries. (Appendix F provides detailed results of the business ownership regression analyses.)¹

- Those analyses revealed that African Americans, Hispanic Americans and white women working in construction were less likely than nonminorities and white men to own construction businesses, even after accounting for various gender-neutral personal characteristics. Each of these disparities was statistically significant.

¹ The study team examined U.S. Census data on business ownership rates using methods similar to analyses examined in court cases involving state departments of transportation in California, Illinois, and Minnesota.

- There was a statistically significant disparity in firm ownership for Subcontinent Asian Americans and white women in the Oregon professional services industry.
- In addition, there was a statistically significant difference in the rate of business ownership for Asian Americans in the goods industry.

Calculation of the Impact on the Overall DBE Goal

Keen Independent analyzed the impact that barriers in business ownership would have on the base figure if the above groups owned businesses at the same rate as similarly situated nonminorities and white men. This type of inquiry is sometimes referred to as a “but for” analysis because it estimates the availability of DBEs *but for* the effects of race- and gender-based discrimination.

The study team completed these “but for” analyses separately for construction, professional services, goods and other services contracts and then weighted the results based on the proportion of FHWA-funded contract dollars that ODOT awarded in each industry for FY2018–FY2020 (i.e., an 69.5% weight for construction, 23.7% weight for professional services, 4.8% for goods and 2.1% for other services). Figure N-1 calculates the impact on overall DBE availability, resulting in possible upward adjustment of the base figure to 34.39 percent. As explained in Appendix F, Business Ownership, the business ownership rate for white women working in the local professional services industry was higher than the benchmark rate.

N. Goal Setting — Summary

The rows and columns of Figure N-1 present the following information from Keen Independent’s “but for” analyses:

- a. **Current and potential availability.** Column (a) presents the current and potential availability of DBEs by group for construction, professional services, goods and other services. Each row presents the percentage availability by group. The current and potential combined availability of DBEs for ODOT FHWA-funded transportation contracts for October 2017 through September 2020 is 23.43 percent, as shown in bottom row of column (a).
- b. **Disparity indices for business ownership.** As presented in Appendix F, African Americans, Hispanic Americans and white women working in the construction industry were less likely to own construction firms than similarly situated nonminorities and white men. These differences were statistically significant for each of those groups.

Keen Independent calculated simulated business ownership rates if those groups owned businesses at the same rate as nonminorities and white males who share similar personal characteristics. The study team then calculated a business ownership disparity index for each group by dividing the observed business ownership rate by the benchmark business ownership rate and then multiplying the result by 100.

Column (b) of Figure N-1 presents disparity indices related to business ownership for the different racial/ethnic and gender groups. For example, as shown in column (b), African Americans own construction businesses at 37 percent of the rate that would be expected based on the simulated business ownership rates of white males who share similar personal characteristics. Appendix F explains how the study team calculated the disparity indices.

- c. **Availability after initial adjustment.** Column (c) presents availability estimates for MBEs and WBEs by industry after initially adjusting for statistically significant disparities in business ownership rates. The study team calculated those estimates by dividing the current and potential availability in column (a) by the disparity index for business ownership in column (b) and then multiplying by 100.
- d. **Availability after scaling to 100%.** Column (d) shows adjusted availability estimates that were re-scaled so that the sum of the availability estimates equals 100 percent for each industry. The study team re-scaled the adjusted availability estimates by taking each group’s adjusted availability estimate in column (c) and dividing it by the sum of availability estimates shown under “Total firms” in column (c) — and multiplying by 100. For example, the re-scaled availability estimate for African Americans shown for construction was calculated in the following way:
 $(34.76\% \div 127.26\%) \times 100 = 27.31\%$.

N. Goal Setting — Summary

e. Components of overall DBE goal with upward adjustment.

Column (e) of Figure N-1 shows the component of the total base figure attributed to the adjusted DBE availability for each industry. The study team calculated each component by taking the total availability estimate shown in column (d) for each industry and multiplying it by the proportion of total FHWA-funded contract dollars in each industry (i.e., 69.5% for construction, 23.7% for professional services, 4.8% for goods and 2.1 for services). For example, the study team used the 41.70 percent shown for current and potential DBEs availability for construction firms in column (d) and multiplied it by 69.5 percent for a result of 28.98 percent.

A similar weighting of DBE availability for other industries produced a value of 3.97 percent professional services, 1.00 percent for goods and 0.43 percent for other services.

The values in column (e) were then summed to equal the overall base figure adjusted for barriers in business ownership, which is 34.39 percent as shown in the bottom of column (e).

Finally, Keen Independent calculated the difference between the “but for” DBE availability (34.39%) and the current and potential availability (23.43%) to calculate the potential upward adjustment. This difference, and potential upward adjustment, is 10.96 percentage points (34.39% - 23.43% = 10.96%).

N. Goal Setting — Summary

N-1. Potential step 2 adjustment to ODOT overall DBE goal for FHWA-funded contracts considering disparities in the rates of business ownership

Current and potential DBEs	a. Weighted DBE Availability	b. Disparity index for business ownership	c. Availability after initial adjustment*	d. Availability after scaling to 100%	e. Components of overall DBE availability**
Construction					
African American	12.86 %	37	34.76 %	27.31 %	
Hispanic American	2.27	66	3.44	2.70	
Other minorities	2.90	n/a	2.90	2.28	
White women	7.78	65	11.97	9.41	
Minorities and women	25.81 %	n/a	53.07 %	41.70 %	28.98 %
All other businesses	74.19	n/a	74.19	58.30	
Total firms	100.00 %	n/a	127.26 %	100.00 %	
Professional services
