Subject: DHS Secure Email No Longer Available

The Tumbleweed Secure Messenger was turned off today. The system had a failure this past weekend and we cannot find the root cause. Until a resolution is found and implemented, secure email will not be available.

This means that all external (internet) email (e.g., email sent to those who do not have a state.or.us address) sent from DHS will no longer be secure. Please remember not to send HIPAA protected information over the internet.

We are sorry for any inconvenience this causes and will notify you when we have a resolution.
