#### 1. Identification

Drainage Facility ID (DFI): **D00071** 

Facility Type: Water Quality Biofiltration Swale

Construction Drawings: (V-File Number) 40V-55

Location: District: 2B (Old 2A)

Highway No.: 001

Mile Post: 292.74 / 292.82 (beg./end)

Description: This facility is located on the west side of southbound I-5 (Hwy 001) at the junction of the S.W. Dartmouth Street

on-ramp, south of the Haines Street

Interchange.

#### 2. Facility Contact Information

Contact the Engineer of Record, Region Technical Center, or Geo-Environmental's Senior Hydraulics Engineer for:

- Operational clarification
- Maintenance clarification
- Repair or restoration assistance

#### **Engineering Contacts**:

Region Technical Center Hydro Unit Manager

Or

Geo-Environmental Senior Hydraulics Engineer (503) 986-3365.

#### 3. Construction

Engineer of Record: ODOT Designer – Region 2 Tech Center,

Gabrielle Crop, (503) 986-5838

Consultant Designer – Murray Smith and Associates, Janet Masters, (503) 225-9010

Facility construction: 2008

Contractor: Morse Bros., Inc. DBA Knife River, Tangent, OR

#### 4. Storm Drain System and Facility Overview

A water quality swale is a flat-bottomed open channel designed to treat stormwater runoff from highway pavement areas. This type of facility is lined with grass. Treatment by trapping sedimentation occurs when stormwater runoff flows through the grass.

The water quality biofiltration swale is approximately 400-feet and is located on the west side of I-5 (Hwy 001) just south of the Haines Street Interchange.

Drainage from the southbound lanes of the highway and a portion of the on-ramp is collected by a series of inlets and directed to the swale. See the Operational Plan in Appendix A. The stormwater is then treated by flowing through the swale. Flow spreaders are located approximately every 100-feet to control the velocities and minimize channelization or rutting of the swale bottom; see Photo 1 and Appendix B for the construction drawings. The swale bottom is lined with a rigid HDPE porous pavement system and geotextile fabric that additionally protects against erosion.

There are a total of two storm pipes that drain into this water quality swale. These pipes outfall into the swale at points A and B in the Operational Plan; see Appendix A. Treated water from this swale is collected by a ditch inlet, (indicated as point C in the Operational Plan), and conveyed into a 36-inch buried storm pipe detention system (DFI No. D00072) that ultimately discharges to a roadside ditch approximately 570 feet from the swale.

Photo 1: WQ Biofiltration Swale looking north. I-5 is located to the right.

Photo 2: Inlet B midsection of swale.

- 3 -

Photo 3: Ditch Inlet serves as outlet of swale.

For further information and details regarding the system refer to Appendix A for the Operational Plan and Appendix B for the Construction Project Plan sheets.

#### A. Maintenance equipment access:

The facility can be accessed for maintenance along the entire length via Interstate-5 (Hwy 001). Photo 3 includes a concrete maintenance pad intended for maintenance vehicles.

- B. Heavy equipment access into facility:
  - ☐ Allowed (no limitations)

  - □ Not allowed
- C. Special Features:
  - ☐ Amended Soils
  - □ Porous Pavers
  - □ Liners (Riprap and Drainage Geotextile)
  - □ Underdrains

#### 5. Facility Haz Mat Spill Feature(s)

The water quality biofiltration swale is considered an online system (no flow is bypassed) and can be used to store a volume of liquid by blocking the facility outlet at either the grate of the ditch inlet, or the 12-inch diameter pipe (located within the inlet/outlet structure itself). This pipe is noted as point C in the Operation Plan.

#### 6. Auxiliary Outlet (High Flow Bypass)

Auxiliary Outlets are provided if the primary outlet control structure can not safely pass the projected high flows. Broad-crested spillway weirs and over flow risers are the two most common auxiliary outlets used in stormwater treatment facility design. The auxiliary outlet feature is either a part of the facility or an additional storm drain feature/structure.

The auxiliary outlet feature for this facility is:
☐ Designed into facility

#### 7. Maintenance Requirements

Routine maintenance table for non-proprietary stormwater treatment and storage/detention facilities have been incorporated into ODOT's Maintenance Guide. These tables summarize the maintenance requirements for ponds, swales, filter strips, bioslopes, and detention tanks and vaults. Special maintenance requirements in addition to the routine requirements are noted below when applicable.

The ODOT Maintenance Guide can be viewed at the following website:

http://www.oregon.gov/ODOT/HWY/OOM/MGuide.shtml

Maintenance requirements for proprietary structures, such as underground water quality manholes and/or vaults with filter media are noted in Appendix C when applicable.

The following stormwater facility maintenance table (See ODOT Maintenance Guide) should be used to maintain the facility outlined in this Operation and Maintenance Manual or follow the Maintenance requirements outlined in Appendix C when proprietary structure is selected below:

	□ Table 1 (general maintenance)
	☐ Table 2 (stormwater ponds)
	☐ Table 4 (water quality filter strips)
	☐ Table 5 (water quality bioslopes)
	☐ Table 6 (detention tank)
	☐ Table 7 (detention vault)
	☐ Appendix C (proprietary structure)
	☐ Special Maintenance requirements:
Note:	Special maintenance requirements require concurrence from ODOT
SR	Hydraulics Engineer.

#### 8. Waste Material Handling

Material removed from the facility is defined as waste by DEQ. Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options: <a href="http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml">http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml</a>

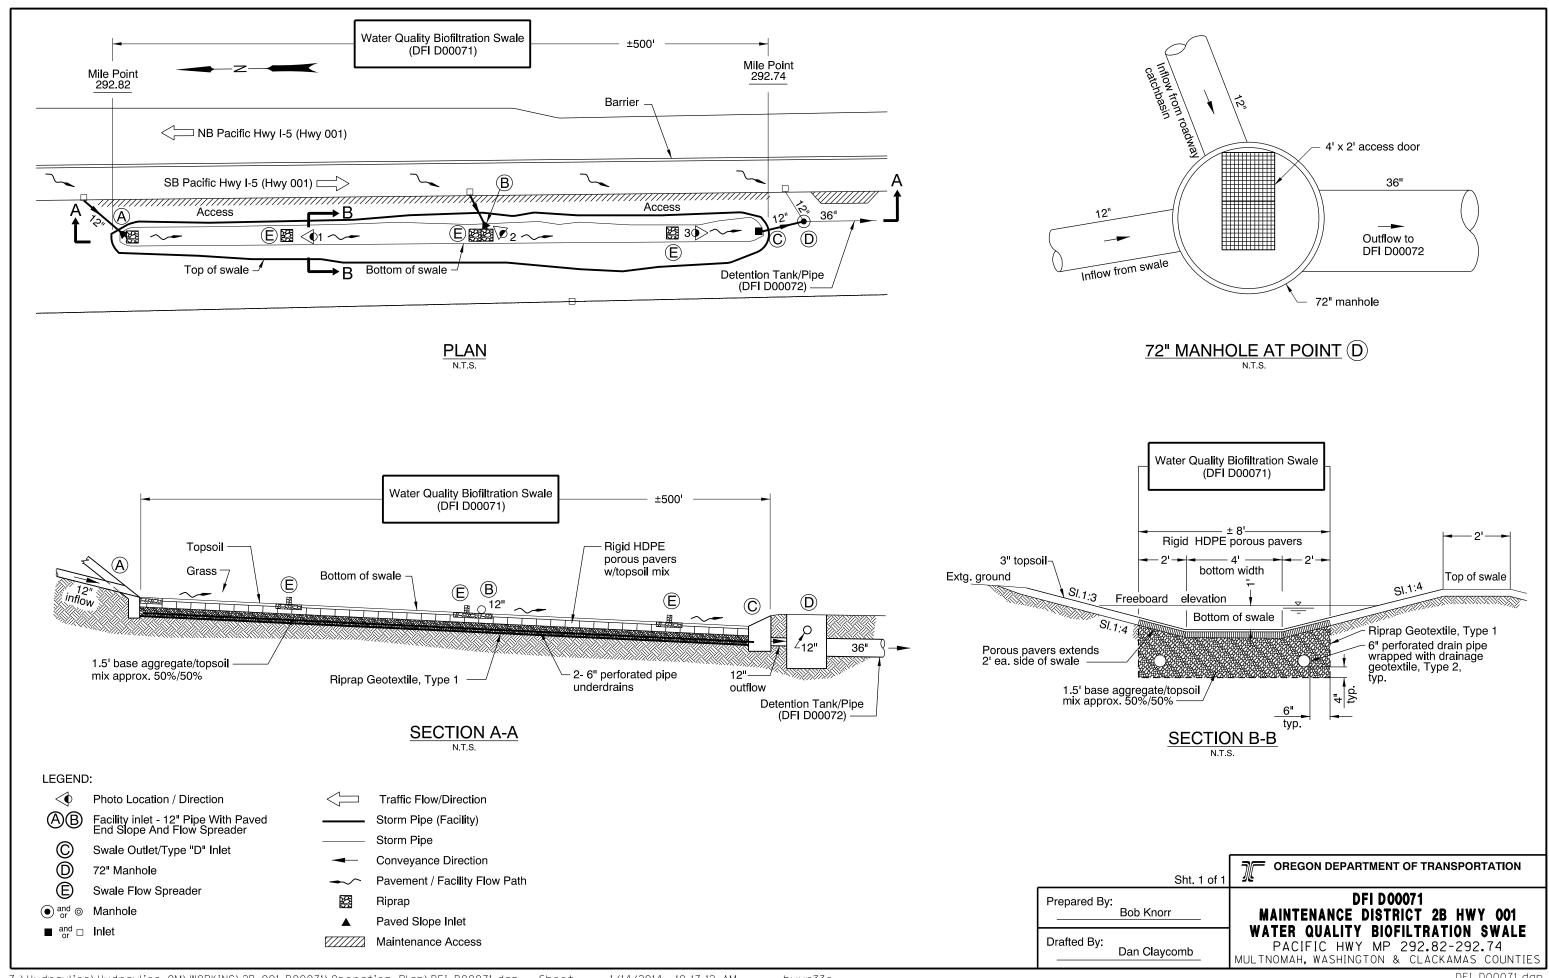

Contact any of the following for more detailed information about management of waste materials found on site:

ODOT Clean Water Unit	(503) 986-3008
ODOT Statewide Hazmat Coordinator	(503) 229-5129
ODOT Region Hazmat Coordinator	(503) 731-8304
