OPERATION & MAINTENANCE MANUAL

DFI No. : D00149
Facility Type: Water Quality Biofiltration Swale

MARCH, 2011

INDEX

1. Identification

Drainage Facility ID (DFI):	**D00149**
Facility Type:	Water Quality Biofiltration Swale
Construction Drawings:	(V-File Number) 26V-105
Location:	District: 2B (Old 2A)
	Highway No.: 1
	Mile Post: 285.97; 286.01 (beg./end)
	Description: This facility is located in the southwest corner of the Elligsen Road and I-5 (Hwy 001) Interchange. Access to the facility can be obtained by the southbound on-ramp to I-5 (Hwy 001). An access gate is located immediately east of the facility.

2. Facility Contact Information

Contact the Engineer of Record, Region Technical Center, or Geo-Environmental's Senior Hydraulics Engineer for:

- Operational clarification
- Maintenance clarification
- Repair or restoration assistance

Engineering Contacts:

Region Technical Center Hydro Unit Manager

Or

Geo-Environmental Senior Hydraulics Engineer (503) 986-3365.

3. Construction

Engineer of Record:	ODOT Designer – Region 2 Tech. Center, John Marks, P.E., 503-986-2990
Facility construction:	1996
Contractor:	N/A

4. Storm Drain System and Facility Overview

A water quality swale is a flat-bottomed open channel designed to treat stormwater runoff from highway pavement areas. Water quality treatment occurs when the influent slowly flows through the vegetation contained in the swale.

This swale (Photo 1) is approximately 200-feet long. The facility is located on the southwest quadrant of the I-5 (Hwy 001) and Elligsen Road Interchange. It lies just off of the southbound on-ramp between Commercial Circle and Peters Road.

The facility receives runoff from a portion of I-5's (Hwy 001) north and southbound off-ramps and the southbound on-ramp of the Elligsen Road and I-5 (Hwy 001) Interchange. Water from the inlets is conveyed through a series of pipes into a manhole. The manhole then conveys water to the swale through a 30-inch pipe. Treated water exits the swale through a large culvert, approximately 42 to 60 inches, (Photo 3) located at the west end of the swale.

A. Maintenance equipment access:
   This facility can be accessed from the southbound I-5 (Hwy 001) on-ramp by an access gate located immediately east of the swale (Photo 4).

B. Heavy equipment access into facility:

   ☒ Allowed (no limitations)
   ☐ Allowed (with limitations)
   ☐ Not allowed

C. Special Features:

   ☐ Amended Soils
   ☐ Porous Pavers
   ☐ Liners
   ☐ Underdrains

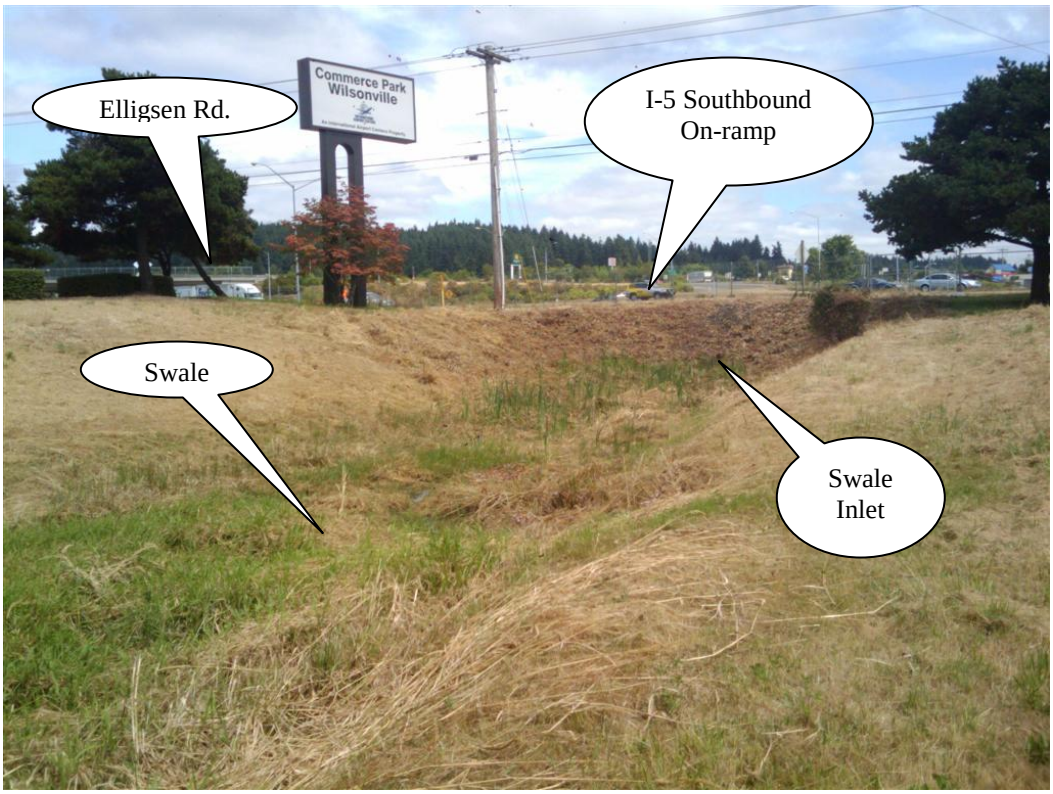

Photo 1: Swale (looking northeast)

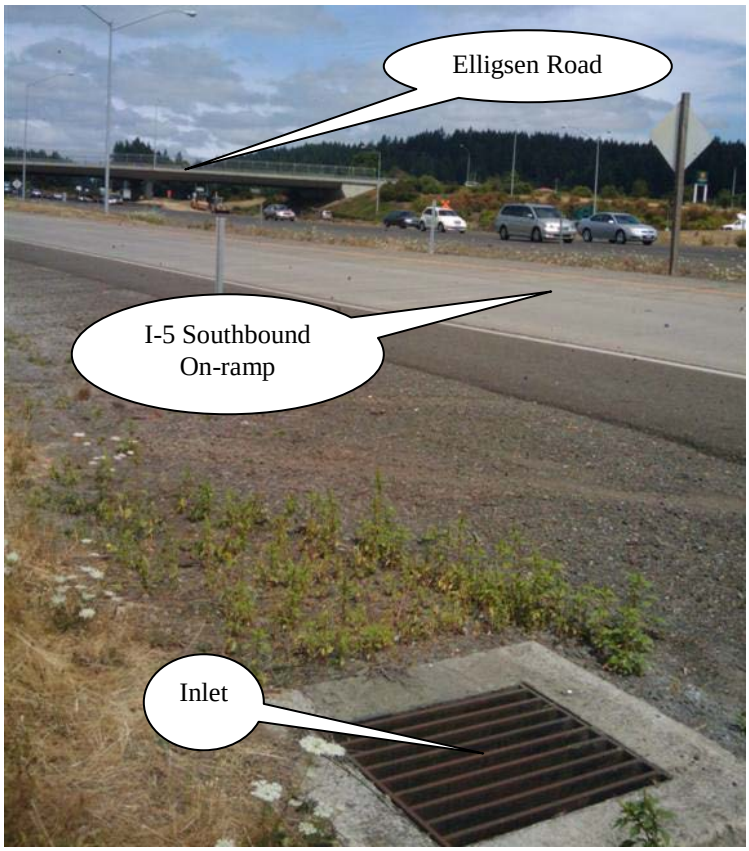

Photo 2: Inlet along the southbound on-ramp

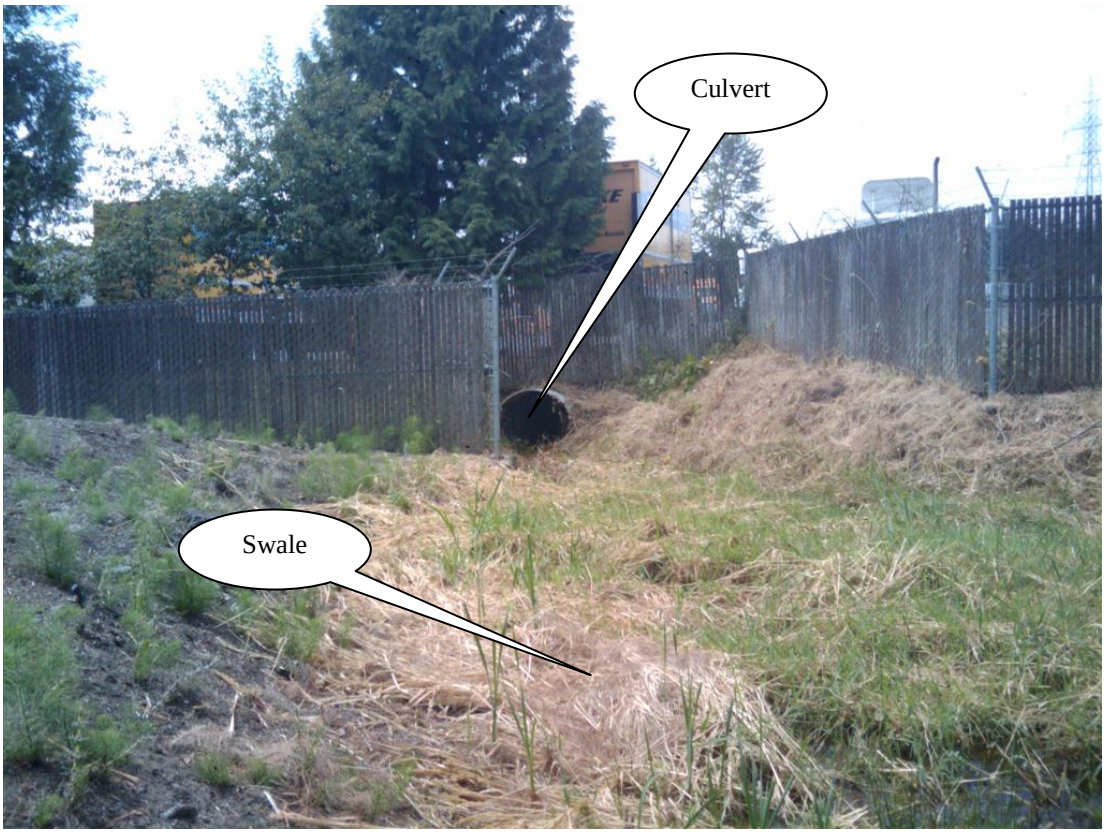

Photo 3: Swale outlet (looking west)

Photo 4: Swale access (looking north)

5. Facility Haz Mat Spill Feature(s)

The water quality biofiltration swale can be used to store a volume of liquid by blocking the large-diameter culvert (unknown size) located at the outlet of the water quality biofiltration swale. This culvert is noted as Point B in the Operational Plan; Appendix A. Also see Photo 3.

6. Auxiliary Outlet (High Flow Bypass)

Auxiliary Outlets are provided if the primary outlet control structure can not safely pass the projected high flows. Broad-crested spillway weirs and over flow risers are the two most common auxiliary outlets used in stormwater treatment facility design. The auxiliary outlet feature is either a part of the facility or an additional storm drain feature/structure.

The auxiliary outlet feature for this facility is:

☐ Designed into facility

☒ Other
There are no auxiliary outlets built into this facility. In the event that flows exceed design flows the water will overtop the swale.

7. Maintenance Requirements

Routine maintenance table for non-proprietary stormwater treatment and storage/detention facilities have been incorporated into ODOT's Maintenance Guide. These tables summarize the maintenance requirements for ponds, swales, filter strips, bioslopes, and detention tanks and vaults. Special maintenance requirements in addition to the routine requirements are noted below when applicable.

The ODOT Maintenance Guide can be viewed at the following website:

http://www.oregon.gov/ODOT/HWY/OOM/MGuide.shtml

Maintenance requirements for proprietary structures, such as underground water quality manholes and/or vaults with filter media are noted in Appendix C when applicable.

The following stormwater facility maintenance table (See ODOT Maintenance Guide) should be used to maintain the facility outlined in this Operation and Maintenance Manual or follow the Maintenance requirements outlined in Appendix C when proprietary structure is selected below:

☒ Table 1 (general maintenance)
☐ Table 2 (stormwater ponds)
☒ Table 3 (water quality biofiltration swales)
☐ Table 4 (water quality filter strips)
☐ Table 5 (water quality bioslopes)
☐ Table 6 (detention tank)
☐ Table 7 (detention vault)
☐ Appendix C (proprietary structure)
☐ Special Maintenance requirements:

Note: Special maintenance Requirements Require Concurrence from ODOT SR Hydraulics Engineer.

8. Waste Material Handling

Material removed from the facility is defined as waste by DEQ. Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options: http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml

Contact any of the following for more detailed information about management of waste materials found on site:

ODOT Clean Water Unit	(503) 986-3008
ODOT Statewide Hazmat Coordinator	(503) 229-5129
ODOT Region Hazmat Coordinator	(503) 731-8304
ODEQ Northwest Region Office	(503) 229-5263
