OPERATION & MAINTENANCE MANUAL

DFI No.: D00171
Facility Type: Water Quality Biofiltration Swale

JULY, 2011

INDEX

1. Identification

Drainage Facility ID (DFI):	**D00171**
Facility Type:	Water Quality Biofiltration Swale
Construction Drawings:	(V-File Number) 37V-041
Location:	District: 2B (Old 2A)
	Highway No.: 047
	Mile Post: 65.70/65.90 (beg./end)
	Description: This facility is located north of the westbound lanes of US26 (Hwy 047) between Bethany Boulevard and Cornell Road. Access to the facility can be obtained from the unobstructed shoulder of westbound US26 (Hwy 047).

2. Facility Contact Information

Contact the Engineer of Record, Region Technical Center, or Geo-Environmental's Senior Hydraulics Engineer for:

- Operational clarification
- Maintenance clarification
- Repair or restoration assistance

Engineering Contacts:

Region Technical Center Hydro Unit Manager

Or

Geo-Environmental Senior Hydraulics Engineer (503) 986-3365.

3. Construction

Engineer of Record:	ODOT Designer – Region 1 Tech. Center, Bruce S. Council, P.E., (503) 731-8319
Facility Construction:	2004
Contractor:	Mowat Construction Company.

4. Storm Drain System and Facility Overview

A water quality swale is a flat-bottomed open channel designed to treat stormwater runoff from highway pavement areas. This type of facility is lined with grass. Treatment by trapping sedimentation occurs when stormwater runoff flows through the grass.

This water quality biofiltration swale is located north of the westbound lanes of US26 (Hwy 047) between Cornell Road and Bethany Boulevard. Access to the facility may be obtained from the unobstructed shoulder off these lanes.

The swale is approximately 1,115 feet in length. The swale receives runoff as sheet flow from the grassy slope to its north and from the adjacent westbound lanes of US26 (Hwy 047). After being received, the runoff drains toward the three inlets at the center of the swale (Points A, B, C on the Operational Plan, Appendix A).

From these inlets, the runoff is directed into a 48-inch diameter detention pipe facility (DFI D00174) (Points D, E). After detention, a 24-inch diameter storm pipe conveys the runoff to a manhole (Point F). From there, the water is discharged into a 24-inch diameter storm pipe, which conveys the runoff northwards.

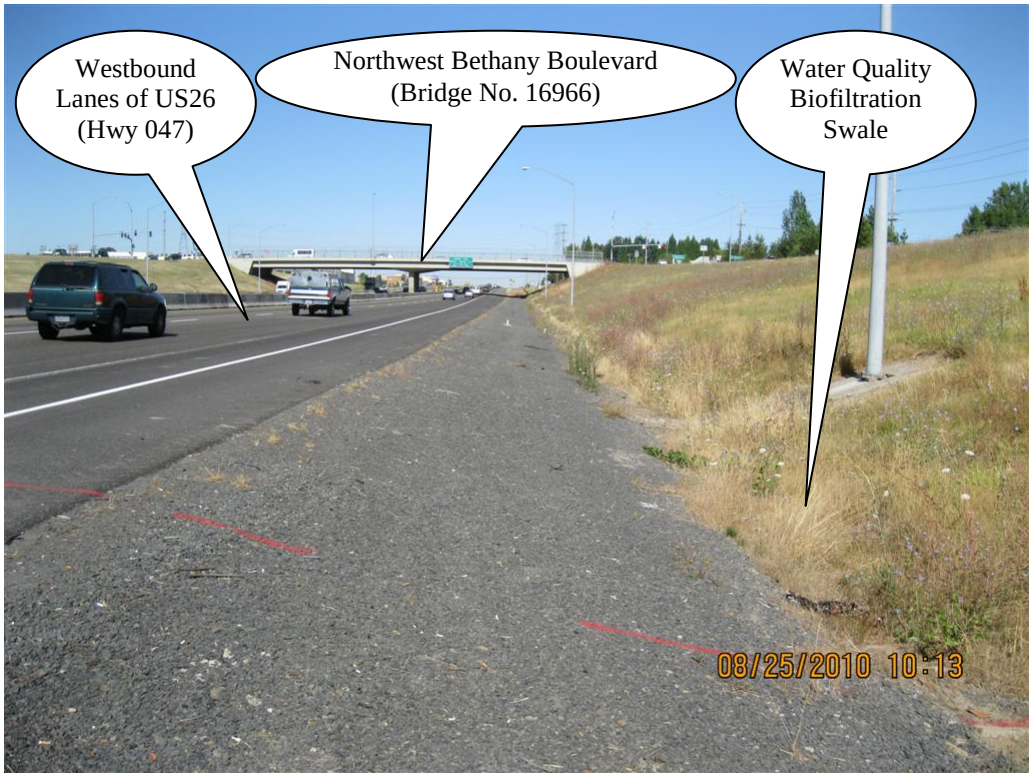

Photo 1: Water quality biofiltration swale. Westbound lanes of US26 (Hwy 047) are on the left. Photo taken facing west.

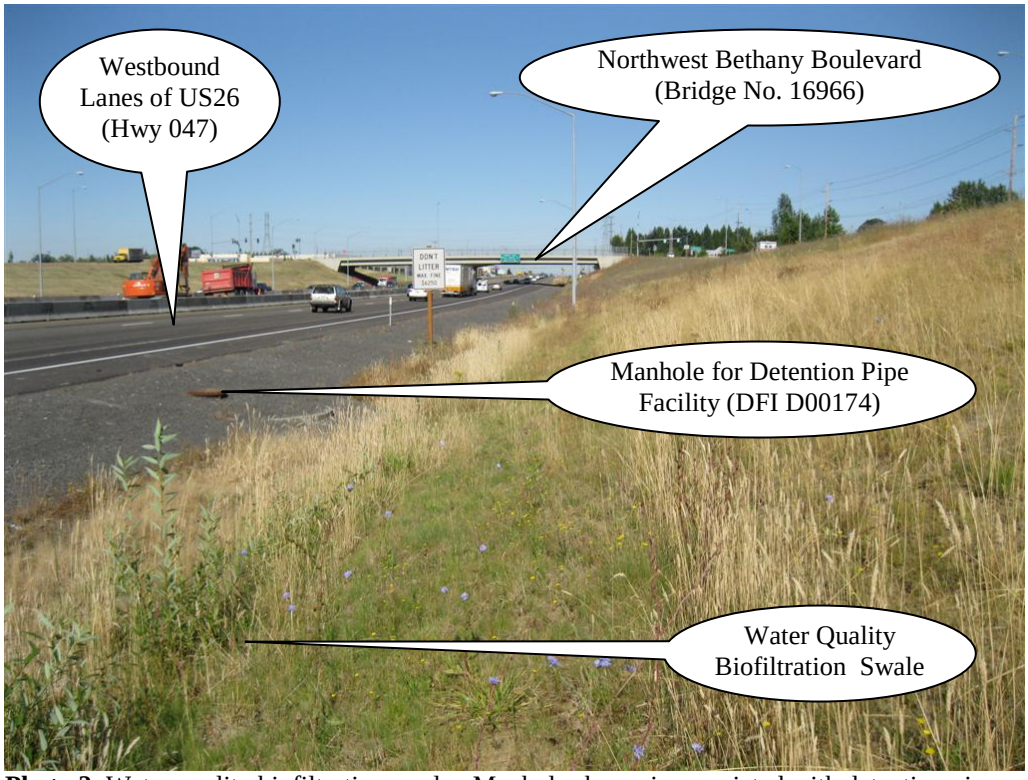

Photo 2: Water quality biofiltration swale. Manhole shown is associated with detention pipe facility (DFI D00174). Photo taken facing west.

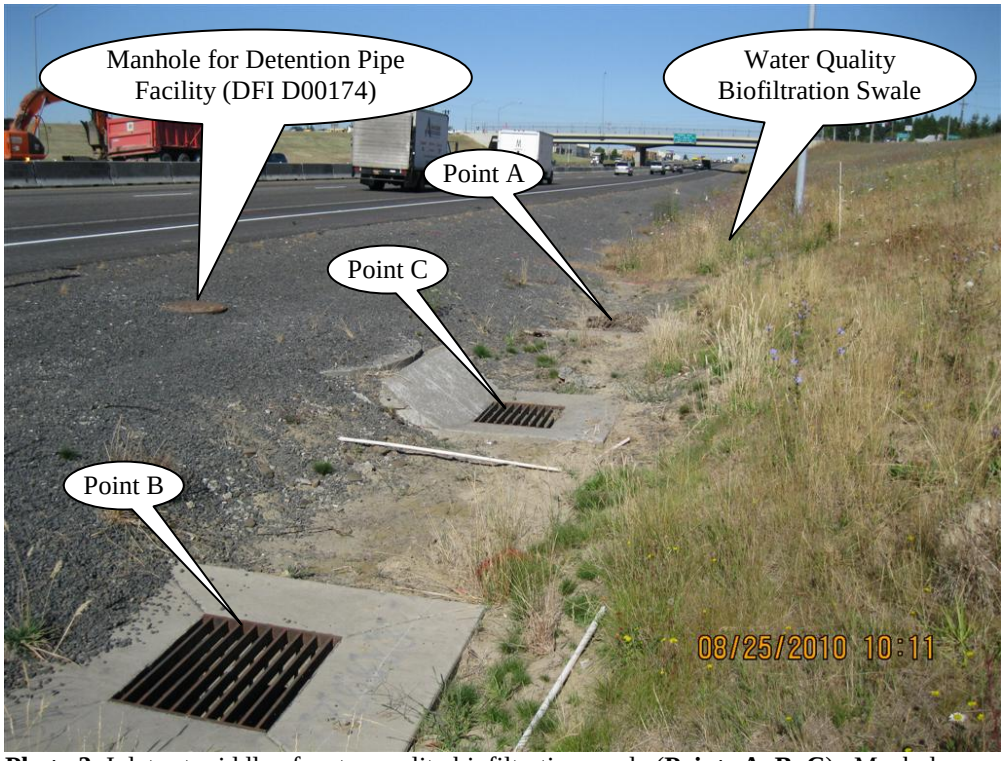

Photo 3: Inlets at middle of water quality biofiltration swale (**Points A, B, C**). Manhole shown is associated with detention pipe facility (DFI D00174) (**Point D**). Photo taken facing west.

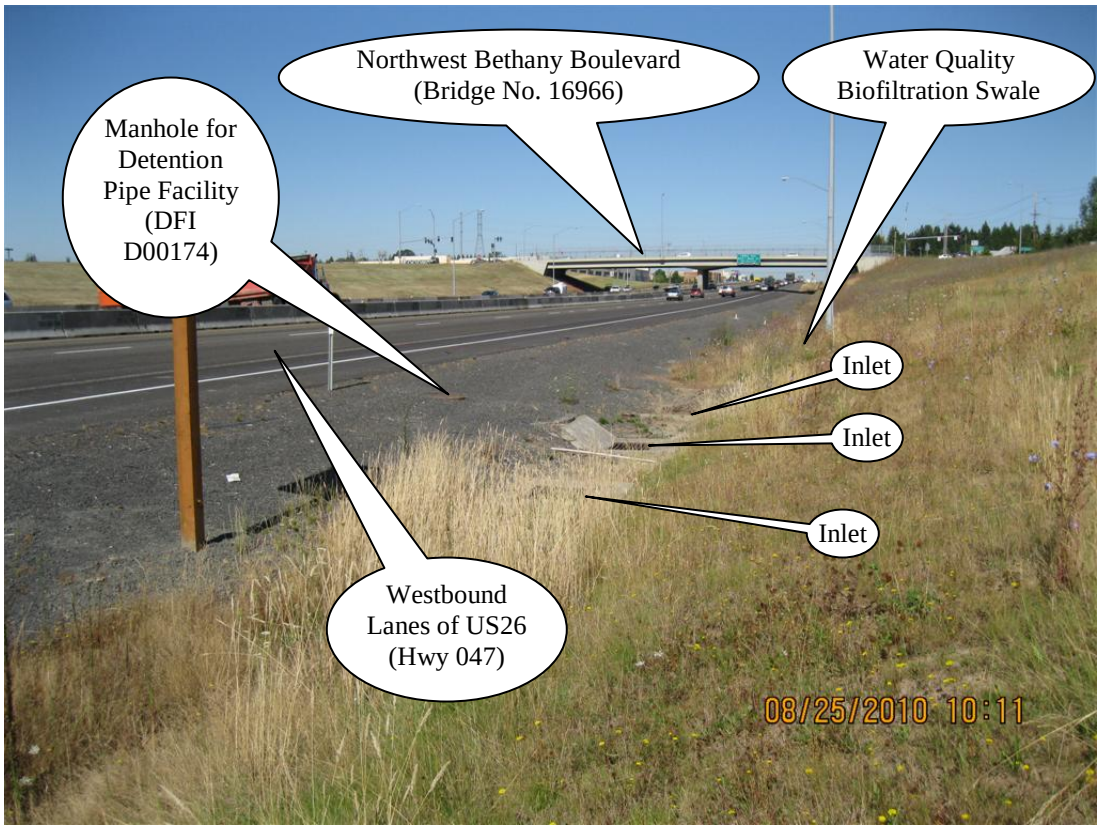

Photo 4: Inlets at middle of swale (**Points A, B, C**). Manhole shown is associated with detention pipe facility (DFI D00174) (**Point D**). Photo taken facing west.

Photo 5: Two of three inlets (**Points B, C**). Photo taken facing east.

For further information and details regarding the system refer to Appendix A for the Operational Plan and Appendix B for the Construction Project Plan sheets.

A. Maintenance equipment access:
The facility can be accessed for maintenance from the unobstructed shoulder off the westbound lanes of US26 (Hwy 047).

B. Heavy equipment access into facility:

☒ Allowed (no limitations)
☐ Allowed (with limitations)
☐ Not allowed

C. Special Features:

☒ Amended Soils – Drain rock with compost blend.
☐ Porous Pavers
☐ Liners
☒ Underdrains – 2 parallel, 4-inch diameter underdrains lengthwise under swale.

5. Facility Haz Mat Spill Feature(s)

The water quality biofiltration swale can be used to store a volume of liquid by using metal plates or sandbags to block the inlets at the middle of the swale (Points A, B, C; Photo 3).

6. Auxiliary Outlet (High Flow Bypass)

Auxiliary Outlets are provided if the primary outlet control structure cannot safely pass the projected high flows. Broad-crested spillway weirs and overflow risers are the two most common auxiliary outlets used in stormwater treatment facility design. The auxiliary outlet feature is either a part of the facility or an additional storm drain feature/structure.

The auxiliary outlet feature for this facility is:

☐ Designed into facility

☒Other, as noted – This facility has no auxiliary outlet features.

7. Maintenance Requirements

Routine maintenance table for non-proprietary stormwater treatment and storage/detention facilities have been incorporated into ODOT's Maintenance Guide. These tables summarize the maintenance requirements for ponds, swales, filter strips, bioslopes, and detention tanks and vaults. Special maintenance requirements in addition to the routine requirements are noted below when applicable.

The ODOT Maintenance Guide can be viewed at the following website:

http://www.oregon.gov/ODOT/HWY/OOM/MGuide.shtml

Maintenance requirements for proprietary structures, such as underground water quality manholes and/or vaults with filter media are noted in Appendix C when applicable.

The following stormwater facility maintenance table (See ODOT Maintenance Guide) should be used to maintain the facility outlined in this Operation and Maintenance Manual or follow the Maintenance requirements outlined in Appendix C when proprietary structure is selected below:

- ☒ Table 1 (general maintenance)
- ☐ Table 2 (stormwater ponds)
- ☒ Table 3 (water quality or biofiltration swales)
- ☐ Table 4 (water quality filter strips)
- ☐ Table 5 (water quality bioslopes)
- ☐ Table 6 (detention tank)
- ☐ Table 7 (detention vault)
- ☐ Appendix C (proprietary structure)
- ☐ Special Maintenance requirements:

Note: Special maintenance Requirements Require Concurrence from ODOT SR Hydraulics Engineer.

8. Waste Material Handling

Material removed from the facility is defined as waste by DEQ. Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options: http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml

Contact any of the following for more detailed information about management of waste materials found on site:

ODOT Clean Water Unit	(503) 986-3008
ODOT Statewide Hazmat Coordinator	(503) 229-5129
ODOT Region Hazmat Coordinator	(503) 731-8304
