OPERATION & MAINTENANCE MANUAL

DFI No. : D00193
Facility Type: Water Quality Biofiltration Swale

JUNE, 2011

INDEX

1. Identification

Drainage Facility ID (DFI):	**D00193**
Facility Type:	Water Quality Biofiltration Swale
Construction Drawings:	(V-File Number) 39V-010
Location:	District: 2B (Old 2A)
	Highway No.: 140
	Mile Post: 4.80/4.81 (beg./end)
	Description: This facility is located on the west side of Hillsboro-Silverton Highway, Hwy 140 (OR 214), alongside SW Unger Road, south of Hillsboro. Access would be from either Unger Road or Hwy 140 (OR 214).

2. Facility Contact Information

Contact the Engineer of Record, Region Technical Center, or Geo-Environmental's Senior Hydraulics Engineer for:

- Operational clarification
- Maintenance clarification
- Repair or restoration assistance

Engineering Contacts:

Region Technical Center Hydro Unit Manager

Or

Geo-Environmental Senior Hydraulics Engineer (503) 986-3365.

3. Construction

Engineer of Record: ODOT Designer – Region 2 Tech. Center, Daniel Gunther, P.E., (503) 986-2990

Facility construction: 2005
Contractor: N/A

4. Storm Drain System and Facility Overview

A water quality swale is a flat-bottomed open channel designed to treat stormwater runoff from highway pavement areas. This type of facility is lined with grass. Treatment by trapping sedimentation occurs when stormwater runoff flows through the grass.

This water quality Biofiltration swale is located on the west side of Hillsboro-Silverton Highway, Hwy 140 (OR 214), alongside SW Unger Road, south of Hillsboro Hillsboro when approaching Farmington Road from the north. Access would be from either Unger Road or Hwy 140 (OR 214).

An 18-inch diameter pipe conveys stormwater from another water quality swale (DFI_D00194) across the highway into this 100-foot long facility; see Point A on the Operational Plans. Once in the facility the stormwater flows southward toward a rock check dam; see Point B on the Operational Plans. The stormwater flows from the swale into an existing ditch that runs adjacent to the facility. The ditch abuts the facility on its south side, moving water eastward, beneath the highway inside of a 30-inch diameter pipe and out beyond the right-of-way.

A. Maintenance equipment access:
   Access would be from either Unger Road or Hwy 140 (OR 214).

B. Heavy equipment access into facility:

   ☒ Allowed (no limitations)
   ☐ Allowed (with limitations)
   ☐ Not allowed

C. Special Features:

   ☐ Amended Soils
   ☐ Porous Pavers
   ☒ Liners
   ☐ Underdrains

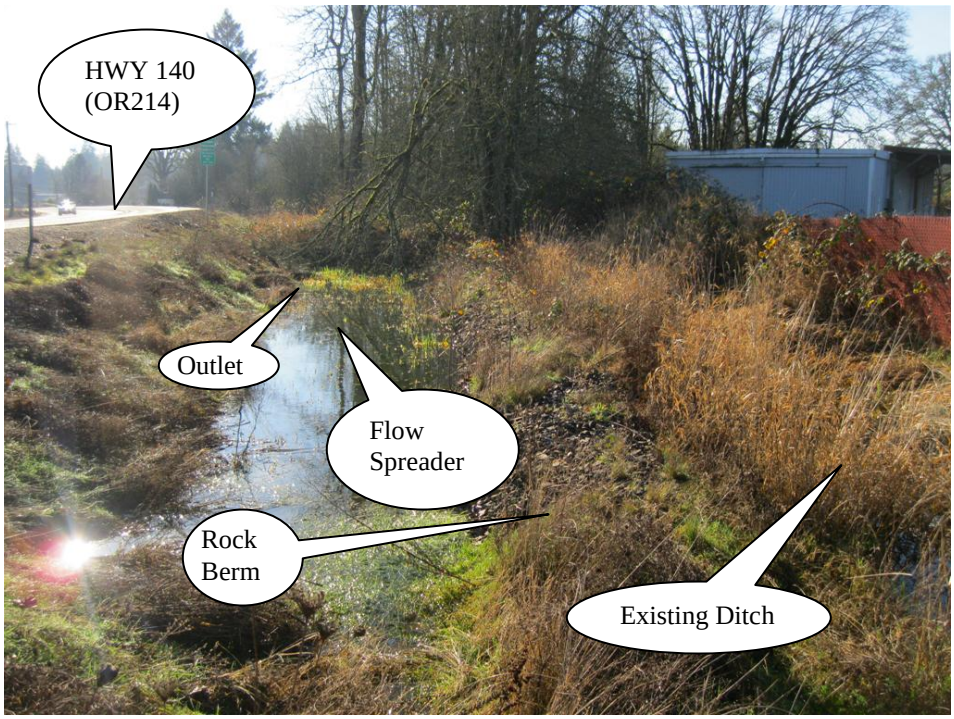

Photo 1: Facing south, this shows almost the whole facility and all the components.

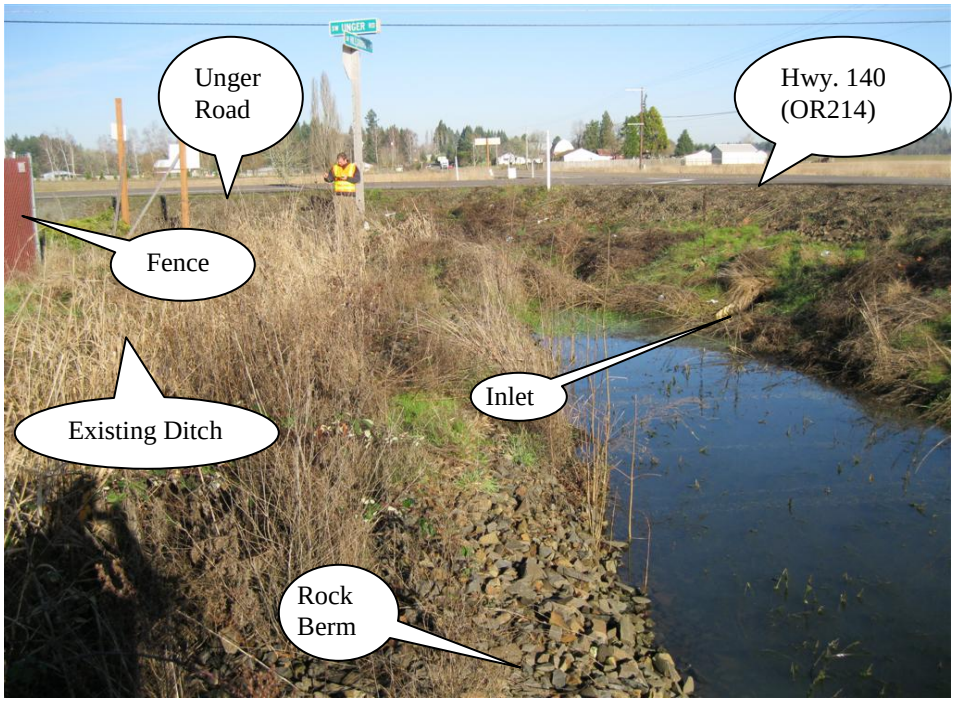

Photo2: Facing north, shows the inlet and the how the ditch runs adjacent to the swale.

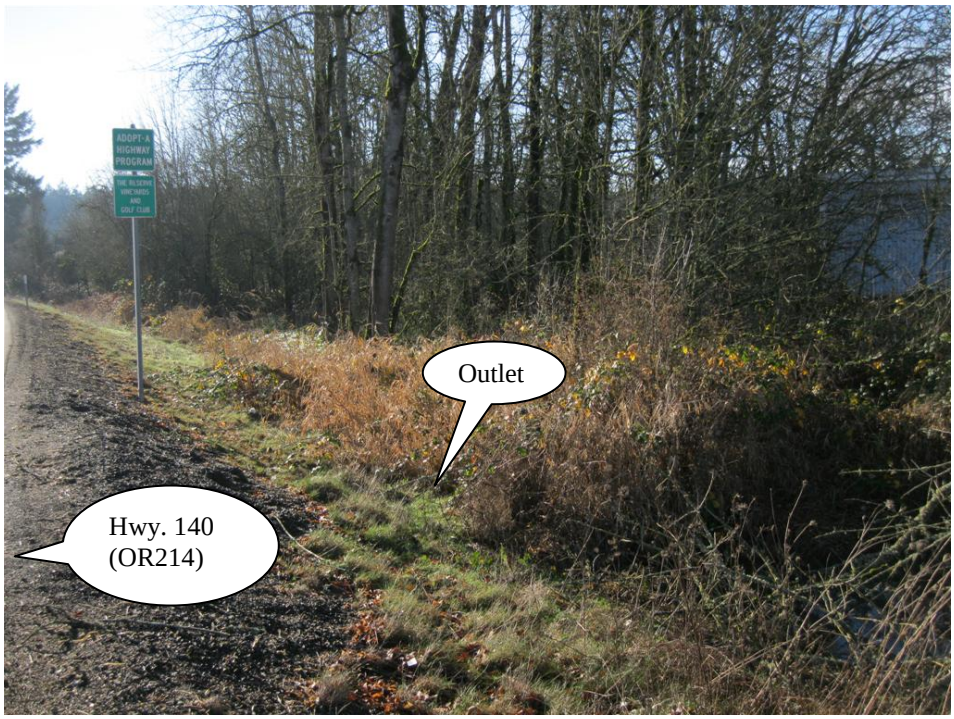

Photo 3: Facing south, looking at the outlet.

5. Facility Haz Mat Spill Feature(s)

The water quality biofiltration swale and existing ditch can be used to store a volume of liquid by blocking the 30 inch-diameter outlet pipe located near the outlet of the water quality biofiltration swale. This pipe is located to the south and east of the swale as shown on the Operational Plans.

6. Auxiliary Outlet (High Flow Bypass)

Auxiliary Outlets are provided if the primary outlet control structure can not safely pass the projected high flows. Broad-crested spillway weirs and over flow risers are the two most common auxiliary outlets used in stormwater treatment facility design. The auxiliary outlet feature is either a part of the facility or an additional storm drain feature/structure.

The auxiliary outlet feature for this facility is:

☐ Designed into facility

☒ Other, as noted below
There are no auxiliary outlet features for this facility

7. Maintenance Requirements

Routine maintenance table for non-proprietary stormwater treatment and storage/detention facilities have been incorporated into ODOT's Maintenance Guide. These tables summarize the maintenance requirements for ponds, swales, filter strips, bioslopes, and detention tanks and vaults. Special maintenance requirements in addition to the routine requirements are noted below when applicable.

The ODOT Maintenance Guide can be viewed at the following website:

http://www.oregon.gov/ODOT/HWY/OOM/MGuide.shtml

Maintenance requirements for proprietary structures, such as underground water quality manholes and/or vaults with filter media are noted in Appendix C when applicable.

The following stormwater facility maintenance table (See ODOT Maintenance Guide) should be used to maintain the facility outlined in this Operation and Maintenance Manual or follow the Maintenance requirements outlined in Appendix C when proprietary structure is selected below:

- ☒ Table 1 (general maintenance)
- ☐ Table 2 (stormwater ponds)
- ☒ Table 3 (water quality biofiltration swales)
- ☐ Table 4 (water quality filter strips)
- ☐ Table 5 (water quality bioslopes)
- ☐ Table 6 (detention tank)
- ☐ Table 7 (detention vault)
- ☐ Appendix C (proprietary structure)
- ☐ Special Maintenance requirements:

Note: Special maintenance Requirements Require Concurrence from ODOT SR Hydraulics Engineer.

8. Waste Material Handling

Material removed from the facility is defined as waste by DEQ. Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options: http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml

Contact any of the following for more detailed information about management of waste materials found on site:

ODOT Clean Water Unit (503) 986-3008

ODOT Statewide Hazmat Coordinator	(503) 229-5129
ODOT Region Hazmat Coordinator	(503) 731-8304
ODEQ Northwest Region Office	(503) 229-5263
