#### 1. Identification

Drainage Facility ID (DFI): D00384

Facility Type: Water Quality Biofiltration Swale

Construction Drawings: (V-File Number) 43V-063

Location: District: 7

Highway No.: 035

Mile Post: 70.43/70.44 (beg./end)

Description: This facility is located on the northern side of OR42 (Hwy 035, Coos Bay-

Roseburg Highway). Access can be obtained from the westbound shoulder of

the highway.

# 2. Facility Contact Information

Contact the Engineer of Record, Region Technical Center, or Geo-Environmental's Senior Hydraulics Engineer for:

- Operational clarification
- Maintenance clarification
- Repair or restoration assistance

#### **Engineering Contacts**:

Region Technical Center Hydraulics Engineer (541) 957-3693

Or

Geo-Environmental Senior Hydraulics Engineer (503) 986-3365.

#### 3. Construction

Engineer of Record: ODOT Designer – Region 3 Tech. Center, Brian

Banta, 541-957-3573

Facility construction: 2006

Contractor: LTM Inc. Construction Company.]

# 4. Storm Drain System and Facility Overview

A water quality swale is a flat-bottomed open channel designed to treat stormwater runoff from highway pavement areas. This type of facility is lined with grass. Treatment by trapping sedimentation occurs when stormwater runoff flows through the grass.

Stormwater is conveyed to the facility from sheet flow generated by OR42. Refer to the Operational Plan in Appendix A for further information. Water conveyed into the swale undergoes treatment as it flows through the length of the channel. The treated water flows out of the swale and into an 18-inch culvert. This culvert conveys stormwater under OR42 and discharges to the south directly off ODOT right-of-way.

A. Maii	ntenance	equipm	nent	access:
---------	----------	--------	------	---------

Maintenance crews can access the facility from the westbound shoulder of OR42.

В.	Heavy equipment access into facility:		
	<ul><li>☑ Allowed (no limitations)</li><li>☐ Allowed (with limitations)</li><li>☐ Not allowed</li></ul>		
C.	Special Features:		
	<ul><li>☑ Amended Soils</li><li>☐ Porous Pavers</li><li>☐ Liners</li><li>☐ Underdrains</li></ul>		

Photo 1: Looking west, sheet flow from OR42 on the left side of the picture contributes stormwater into the swale.

- 3 -

Photo 2: Looking east, sheet flow from OR42 on the right side of the picture contributes stormwater into the swale.

- 4 -

Photo 3: Looking east, flow from the swale discharges directly into an 18-inch culvert.

# 5. Facility Haz Mat Spill Feature(s)

The water quality biofiltration swale can be used to store a volume of liquid by blocking the 18-inch diameter outlet pipe at the outlet of the swale facility. Refer to Photo 3 for a picture of these culverts.

- 5 **-**

# 6. Auxiliary Outlet (High Flow Bypass)

Auxiliary Outlets are provided if the primary outlet control structure can not safely pass the projected high flows. Broad-crested spillway weirs and over flow risers are the two most common auxiliary outlets used in stormwater treatment facility design. The auxiliary outlet feature is either a part of the facility or an additional storm drain feature/structure.

The auxiliary outlet feature for this facility is:
□ Designed into facility
Other, as noted below     There is no auxiliary outlet for this facility.

### 7. Maintenance Requirements

Routine maintenance table for non-proprietary stormwater treatment and storage/detention facilities have been incorporated into ODOT's Maintenance Guide. These tables summarize the maintenance requirements for ponds, swales, filter strips, bioslopes, and detention tanks and vaults. Special maintenance requirements in addition to the routine requirements are noted below when applicable.

The ODOT Maintenance Guide can be viewed at the following website:

http://www.oregon.gov/ODOT/HWY/OOM/MGuide.shtml

Maintenance requirements for proprietary structures, such as underground water quality manholes and/or vaults with filter media are noted in Appendix C when applicable.

The following stormwater facility maintenance table (See ODOT Maintenance Guide) should be used to maintain the facility outlined in this Operation and Maintenance Manual or follow the Maintenance requirements outlined in Appendix C when proprietary structure is selected below:

☐ I able 1 (general maintenance)
☐ Table 2 (stormwater ponds)
∑ Table 3 (water quality biofiltration swales)
☐ Table 4 (water quality filter strips)
☐ Table 5 (water quality bioslopes)
☐ Table 6 (detention tank)
☐ Table 7 (detention vault)
☐ Appendix C (proprietary structure)

☐ Special Maintenance requirements:

Note: Special maintenance Requirements Require Concurrence from ODOT SR Hydraulics Engineer.

# 8. Waste Material Handling

Material removed from the facility is defined as waste by DEQ. Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options: <a href="http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml">http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml</a>

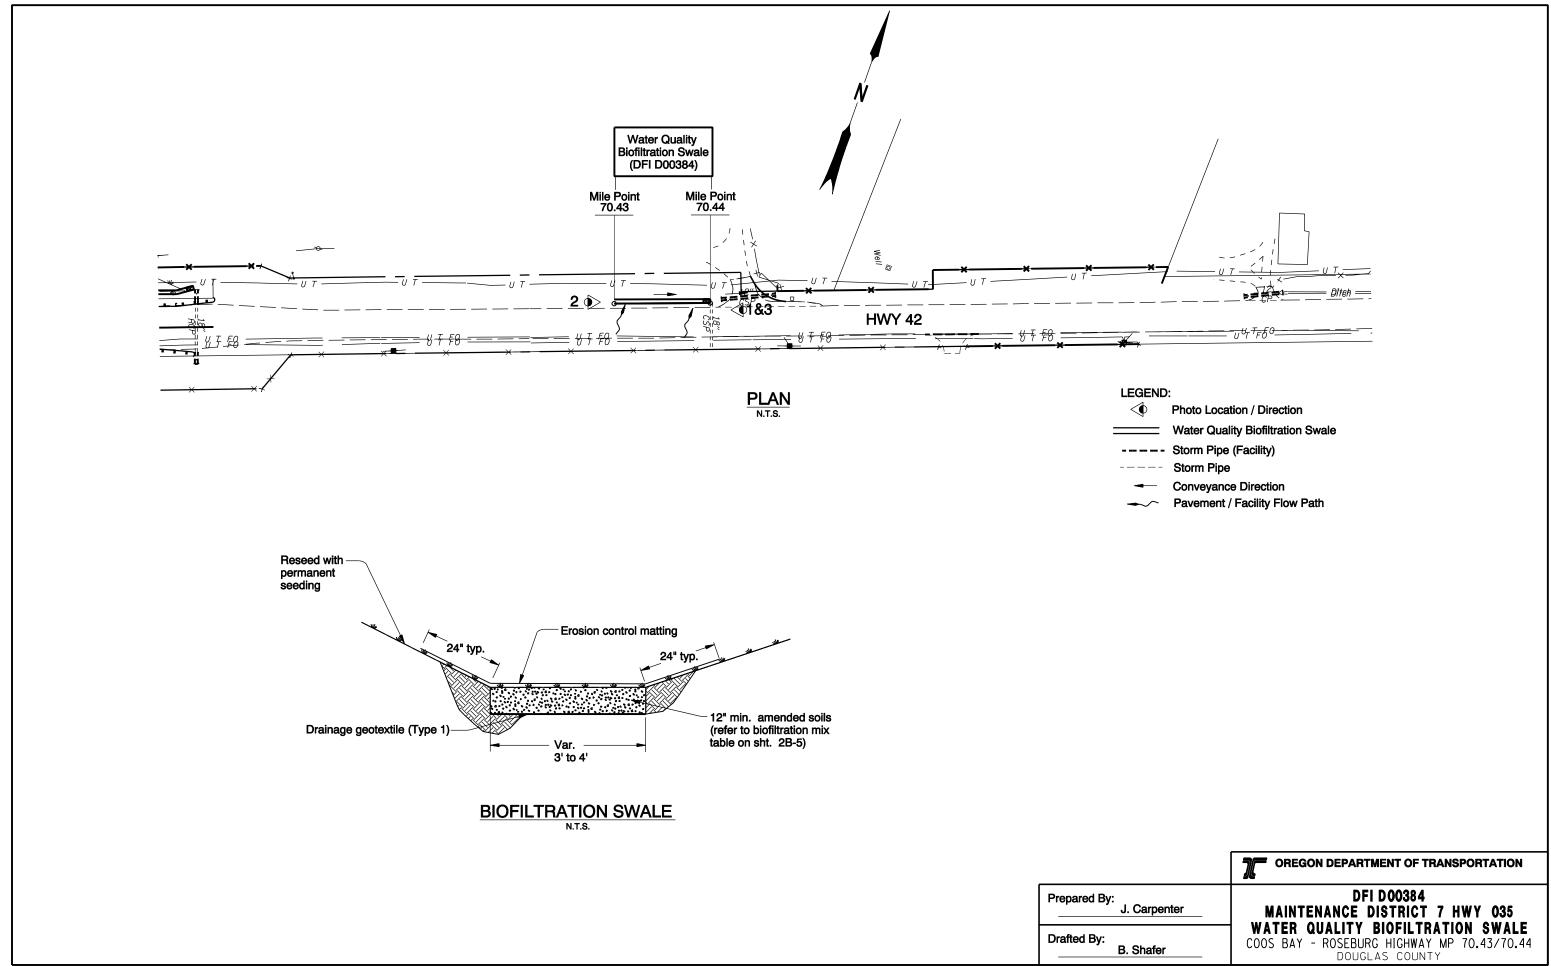

Contact any of the following for more detailed information about management of waste materials found on site:

ODOT Clean Water Unit	(503) 986-3008
ODOT Statewide Hazmat Coordinator	(503) 229-5129
ODOT Region Hazmat Coordinator	(541) 957-3594
ODEQ Northwest Region Office	(503) 229-5263

# **BIOFILTRATION MIX TABLE**

Biofiltration mix is used for the treatment zone along the entire biofiltration swale bottom to remove pollutants as stormwater runoff drains through this media mix. General design criteria includes:

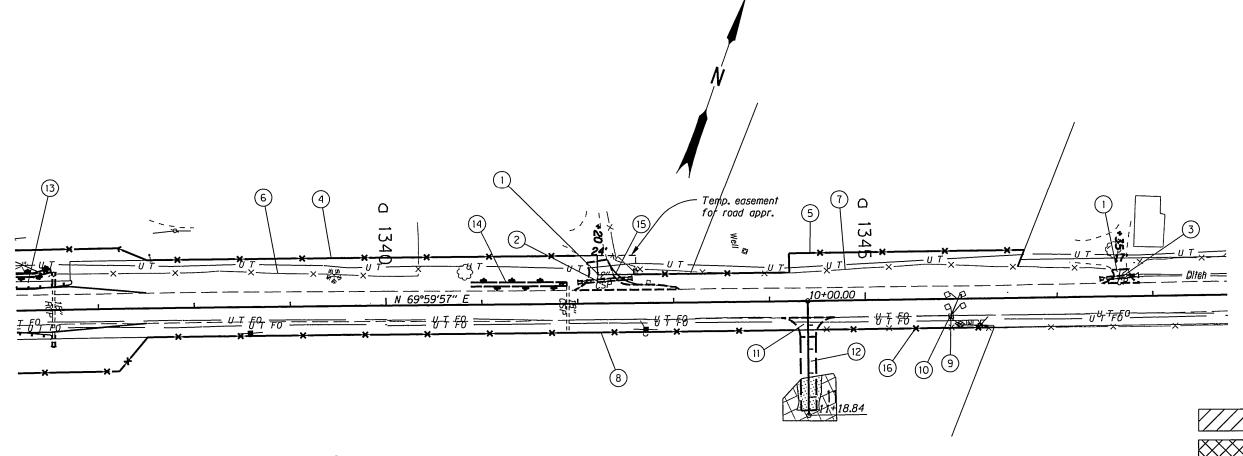

- The minimum depth is 12 inches
- The biofiltration mix consists of the following materials:

MEDIUM	DESCRIPTION	PERCENTAGE OF MEDIUM IN FILTER LAYER	
Sand	<ul> <li>Coarse grade with an effective particle size (D10) of 0.012" - 0.20" (0.3 - 0.5 mm)</li> <li>Uniformity coefficient of less than 4</li> <li>Washed</li> </ul>	40% - 50%	
Loam or loamy sand texture per USDA     Soil Textural Classification     Clay content of less than 5%		30% if loam or 40% if loamy sand	
Compost Coarse compost conforming to special provision 01040.15(b)		20% - 30%	
Total Composition		100%	
Total Organic Matter Content  Measured per ASTM Designation D2974 (Standard test method for Moisture, Ash and Organic Matter of Peat and other organic soils)		Approx. 10% by dry weight
