# **OPERATION & MAINTENANCE MANUAL**

# **Water Quality Biofiltration Swale**

Manual prepared: July 2019

**DFI No. D00615** 

Figure 1: DFI No. D00615, looking [west]

#### Identification

Drainage Facility ID (DFI): D00615

Facility Type: Water Quality Biofiltration Swale Construction Drawings: (V-File Numbers) 45v-073

Location: District: 3

Highway No.: 162

Mile Post: 3.83 to 3.83, [left]

#### 1. Manual Purpose

The purpose of this manual is to outline inspection needs and summarize maintenance actions.

#### 2. Facility Location

The location map below details the facility location. The highway, mile posts, side streets, access location, and stormwater flow directions are noted on the map.

Facility location type: Roadway shoulder

Flow direction: [south to north]

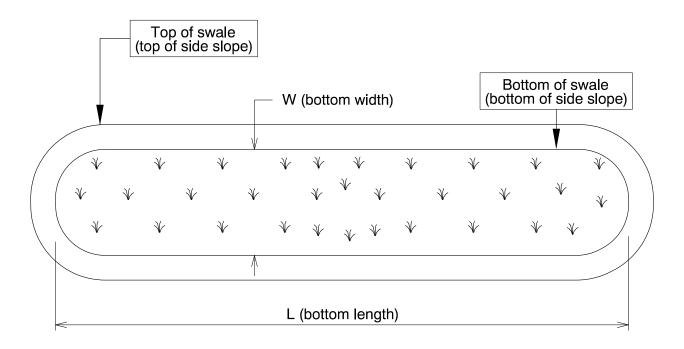

Figure 2: Facility location map

## 3. Facility Summary

The length and width of a swale is based on the bottom dimensions.

The bottom length and bottom width of the swale is:

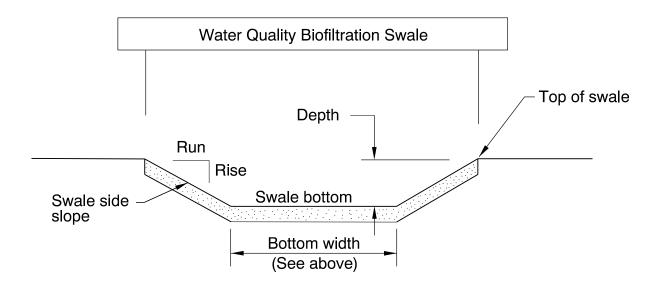

Bottom Length (feet)	Bottom Width (feet)	
105	9	

The depth of the swale is the vertical distance measured from the bottom of the swale to the top. The slope of the swale sides is presented by a vertical distance (rise) followed by the horizontal distance (run).

Depth and side slopes:

Depth (feet)	Rise (feet)	Run (feet)
1.5	1	6

<u>Site Specific Information:</u> Stormwater runoff from highway 162 enters a inlets along the concrete barrier before entering a pipe underneath highway 162 and flows to the north to the swale. Water exits in a ditch parallel to Gaffin road.

#### 4. Facility Access

Maintenance access to the facility:

☐Roadside pad	⊠Roadside shoulder		
☐Access road with Gate	☐Access road without Gate		

Figure 3: [access from shoulder looking west]

### 5. Operational Components / Maintenance Items

#### Classification

This facility is classified as an:

☑ On-line Swale	☐ Off-line Swale	
A swale that does not include a high	A swale that treats low/small flows	
flow bypass component; flow drains	and diverts high flows using a	
into and through the facility	bypass component	

#### **Bypass Component**

This facility includes a high flow bypass component:

⊠ No	□ Yes		
There is no bypass component. High flows drains into and through the facility	There is a bypass component. Only low/small flows drain into the swale. High flows are diverted around the swale using a bypass component		

#### **Operational Components**

A swale has many components that assist with treatment, conveyance, and reducing flow velocity to minimize erosion. The components in use can vary depending if the facility was designed to operate on-line or off-line. The facility components table (**Table 1**) has been provided to highlight the applicable components for this facility. The component is in use when the box contains an "x" (e.g.  $\boxtimes$ ).

The Standard Operation Manual for Water Quality Biofiltration Swales (implemented March 2017) outlines facility operation, typical footprint configuration, and component definitions and details. A link to the manual is attached to the feature marker in TransGIS.

https://gis.odot.state.or.us/TransGIS/

#### **Operational Plan**

The applicable standard operational plan for this facility is:

	☐ Operational Plan B ☐ Operational Pla			
An on-line swale with roadside ditches	An on-line swale with piped inlets and outlets	An off-line swale with a piped high flow bypass		
A standard operational plan illustrates the general facility footprint configuration and explains the purpose of each facility component. Operational plans (A, B, C) are provided in the Standard Operation Manual.				

See Appendix A for the site specific operational plan.

#### **Maintenance Items**

Operational components marked in **Table 1** should be inspected and maintained according to Section 7. Each facility component is defined and detailed in the Standard Operation Manual using the associated ID number indicated below.

Table 1: Swale Components	ID#	
Manholes/Structures		
Pre-treatment manhole		<b>S1</b>

Weir type flow splitter/flow splitter manhole		S2		
Orifice type flow splitter/flow splitter manhole		S3		
Standard manhole		S4		
Swale Inlet				
Pavement sheet flow	×	S5		
Inlet Pipe (s)	×	S6		
Open channel inlet		<b>S7</b>		
Riprap pad	×	S8		
Ground Cover				
Grass bottom	×	S9		
Grass side slopes	×	S10		
Granular drain rock		S11		
Plantings		S12		
Underground Components				
Geotextile fabric		S13		
Water quality mix	×	S14		
Perforated pipe		S15		
Porous pavers (access grid)		<b>S</b> 16		
Flow Spreader				
Rock basin	$\boxtimes$	<b>S17</b>		
Anchored board (midpoint of swale or every 50 feet along swale bottom)		S18		
Other: concrete flow spreader	$\boxtimes$	<b>S19</b>		
Swale Outlet				
Catch basin with grate		S20		
Outlet Pipe (s)		S21		
Open channel outlet	$\boxtimes$	S22		
Auxiliary Outlet:		S23		
Outfall Type				
Waterbody (Creek/Lake/Ocean)	C	S24		
Ditch	$\boxtimes$	S25		
Storm drain system		S26		
Outfall Components				
Riprap pad		S27		
Riprap bank protection		S28		

#### 6. Maintenance

#### Maintenance Frequency/Maintain Records

- a. Inspect annually. Preferably prior to the rainy season.
- b. Clean and maintain as necessary. Refer to Activity 125 for conditions when maintenance is needed.
- c. Keep a record of inspections, maintenance, and repairs.

#### **Maintenance Guide/Maintenance Actions**

The ODOT Routine Road Maintenance Water Quality and Habitat Guide (the *Blue Book*) outlines the standard maintenance actions for water quality facilities under Activity 125.

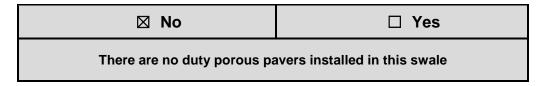

There are standard maintenance tables for standard ODOT designs. The maintenance tables describe the maintenance component, the defect or problem, the condition when maintenance is needed, and the recommended maintenance to correct the problem. Use the following tables to maintain ODOT swales:

- Table 1 (General Maintenance): Contains general maintenance and inspection guidelines that are applicable to all ODOT water quality facilities
- Table 3 (Maintenance of Water Quality or Biofiltration Swales): Contains maintenance information for swales

The *Blue Book* can be viewed at the following website: http://www.oregon.gov/ODOT/Maintenance/Documents/blue\_book.pdf

#### 7. Limitations

Access grid installed:

Swales are designed to allow equipment access along the bottom. If an access grid is **NOT** installed, vehicles entering the swale can create depressions (tire ruts), damage vegetation, and damage structural components (e.g. flow spreaders). These conditions may result in poor treatment and drainage performance.

Equipment wheels should be kept on the tops and side slopes. Mower arms may be run along the swale bottom.

#### 8. Waste Material Handling

Material removed from the facility is defined as waste by the Department of Environmental Quality (DEQ). Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options:

#### http://www.oregon.gov/ODOT/Maintenance/Documents/ems\_manual.pdf

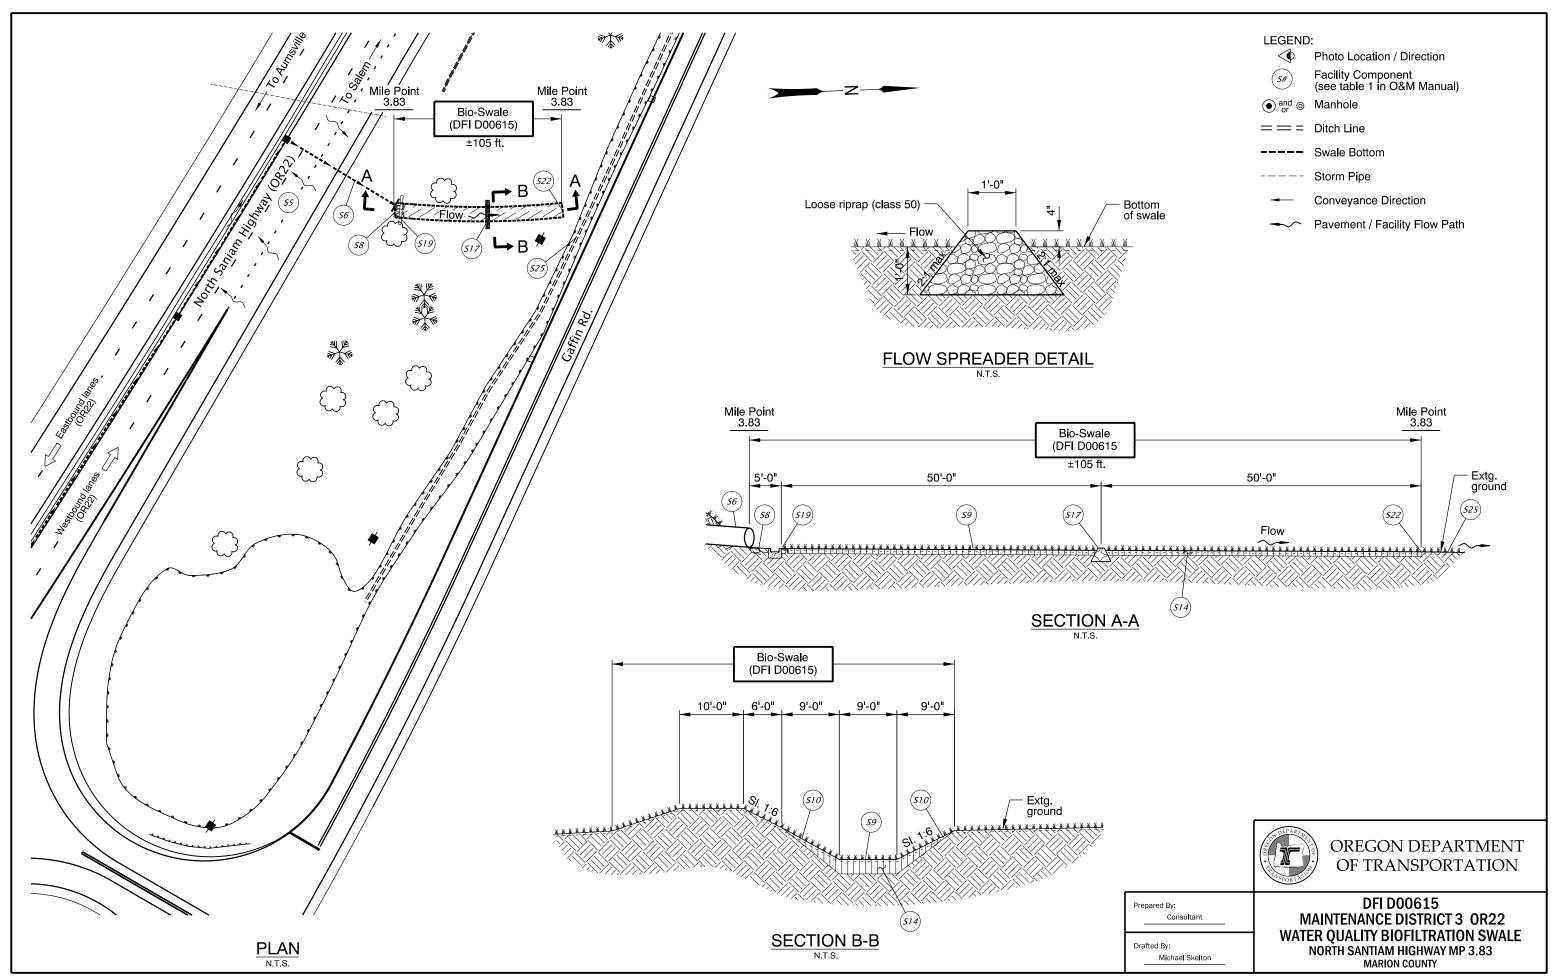

Contact any of the following for more detailed information about management of waste materials found on site:
