APPENDIX A: Operational Plan and Profile Drawing

APPENDIX B: ODOT Project Plan Sheets

1. Identification

Drainage Facility ID (DFI): **D00669**
Facility Type: Water Quality Biofiltration Swale
Construction Drawings: (V-File Number) 46V-022
Location: District: 2B
Highway No.: 068
Mile Post: 0.12;0.13 (beg./end)
Description: This facility is located on the north side of the OR 213 northbound on ramp from the Sunrise Corridor.

2. Facility Contact Information

Contact the Engineer of Record, Region Technical Center, or Geo-Environmental's Senior Hydraulics Engineer for:

- Operational clarification
- Maintenance clarification
- Repair or restoration assistance

Engineering Contacts:

Region Technical Center Hydro Unit Manager

Or

Geo-Environmental Senior Hydraulics Engineer (503) 986-3365.

3. Construction

4. Engineer of Record: Consultant Designer – [OBEC Consulting Engineers, Amy Jones, 971-634-2005]

Facility construction: [2014]
Contractor: Kerr Contractors, Inc.

5. Storm Drain System and Facility Overview

A water quality swale is a flat-bottomed open channel designed to treat stormwater runoff from highway pavement areas. This type of facility is lined with grass. Treatment by trapping sedimentation occurs when stormwater runoff flows through the grass.

This biofiltration swale is designed to treat runoff from the water quality design storm and provide infiltration prior to entering the existing storm drain pipe system in Interstate 205 prior to entering Dean Creek. It is located on the north side of the OR 213 northbound on ramp from the Sunrise Corridor.

The stormwater runoff sheet flows from paved areas along the Interstate 205 Alignment to a drainage curb on the north side of the ramp. A curb opening inlet has been constructed to direct the flows from the ramp and into the swale. The location of this is noted on the Operation Plan as point A in Appendix A.

Runoff exits the swale by way of a Type "D" inlet connected to a 12-inch storm drain outlet pipe. See Photo 1 and Point B on the Operational Plan in Appendix A.

The storm drain outlet pipe from the inlet and 12" pipe connect into a pipe system that drains to Dean Creek. The receiving waterway for the outlet pipe is Dean Creek.

A. Maintenance equipment access:

The swale and outfall structure can be accessed directly from the shoulder of the on ramp to OR 213 northbound.

B. Heavy equipment access into facility:

- Allowed (no limitations)
- Allowed (with limitations)
- Not allowed

C. Special Features:

- Amended Soils
- Porous Pavers
- Liners
- Underdrains

Photo 1: a view of water quality swale looking Northwest

6. Facility Haz Mat Spill Feature(s)

The water quality biofiltration swale can be used to store a volume of liquid by blocking the 12-inch diameter outlet pipe with the Type “D” inlet located at the outfall structure at the west end of the swale. A barrier such as a metal plate over the metal grate on the inlet could be used to prevent liquid from draining from the swale.

7. Auxiliary Outlet (High Flow Bypass)

There is no auxiliary outlet provided for the water quality swale. Storm events larger than the water quality storm will overtop the swale and sheet flow to the drainage system downstream of the swale.

8. Maintenance Requirements

Routine maintenance table for non-proprietary stormwater treatment and storage/detention facilities have been incorporated into ODOT’s Maintenance Guide. These tables summarize the maintenance requirements for ponds, swales, filter strips, bioslopes, and detention tanks and vaults. Special maintenance requirements in addition to the routine requirements are noted below when applicable.

The ODOT Maintenance Guide can be viewed at the following website:

<http://www.oregon.gov/ODOT/HWY/OOM/MGuide.shtml>

The following stormwater facility maintenance table (See ODOT Maintenance Guide) should be used to maintain the facility outlined in this Operation and Maintenance Manual:

- Table 1 (general maintenance)
- Table 2 (stormwater ponds)
- Table 3 (water quality biofiltration swales)
- Table 4 (water quality filter strips)
- Table 5 (water quality bioslopes)
- Table 6 (detention tank)
- Table 7 (detention vault)
- Appendix C (proprietary structure)
- Special Maintenance requirements:

9. Waste Material Handling

Material removed from the facility is defined as waste by DEQ. Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options: <http://egov.oregon.gov/ODOT/HWY/OOM/EMS.shtml>

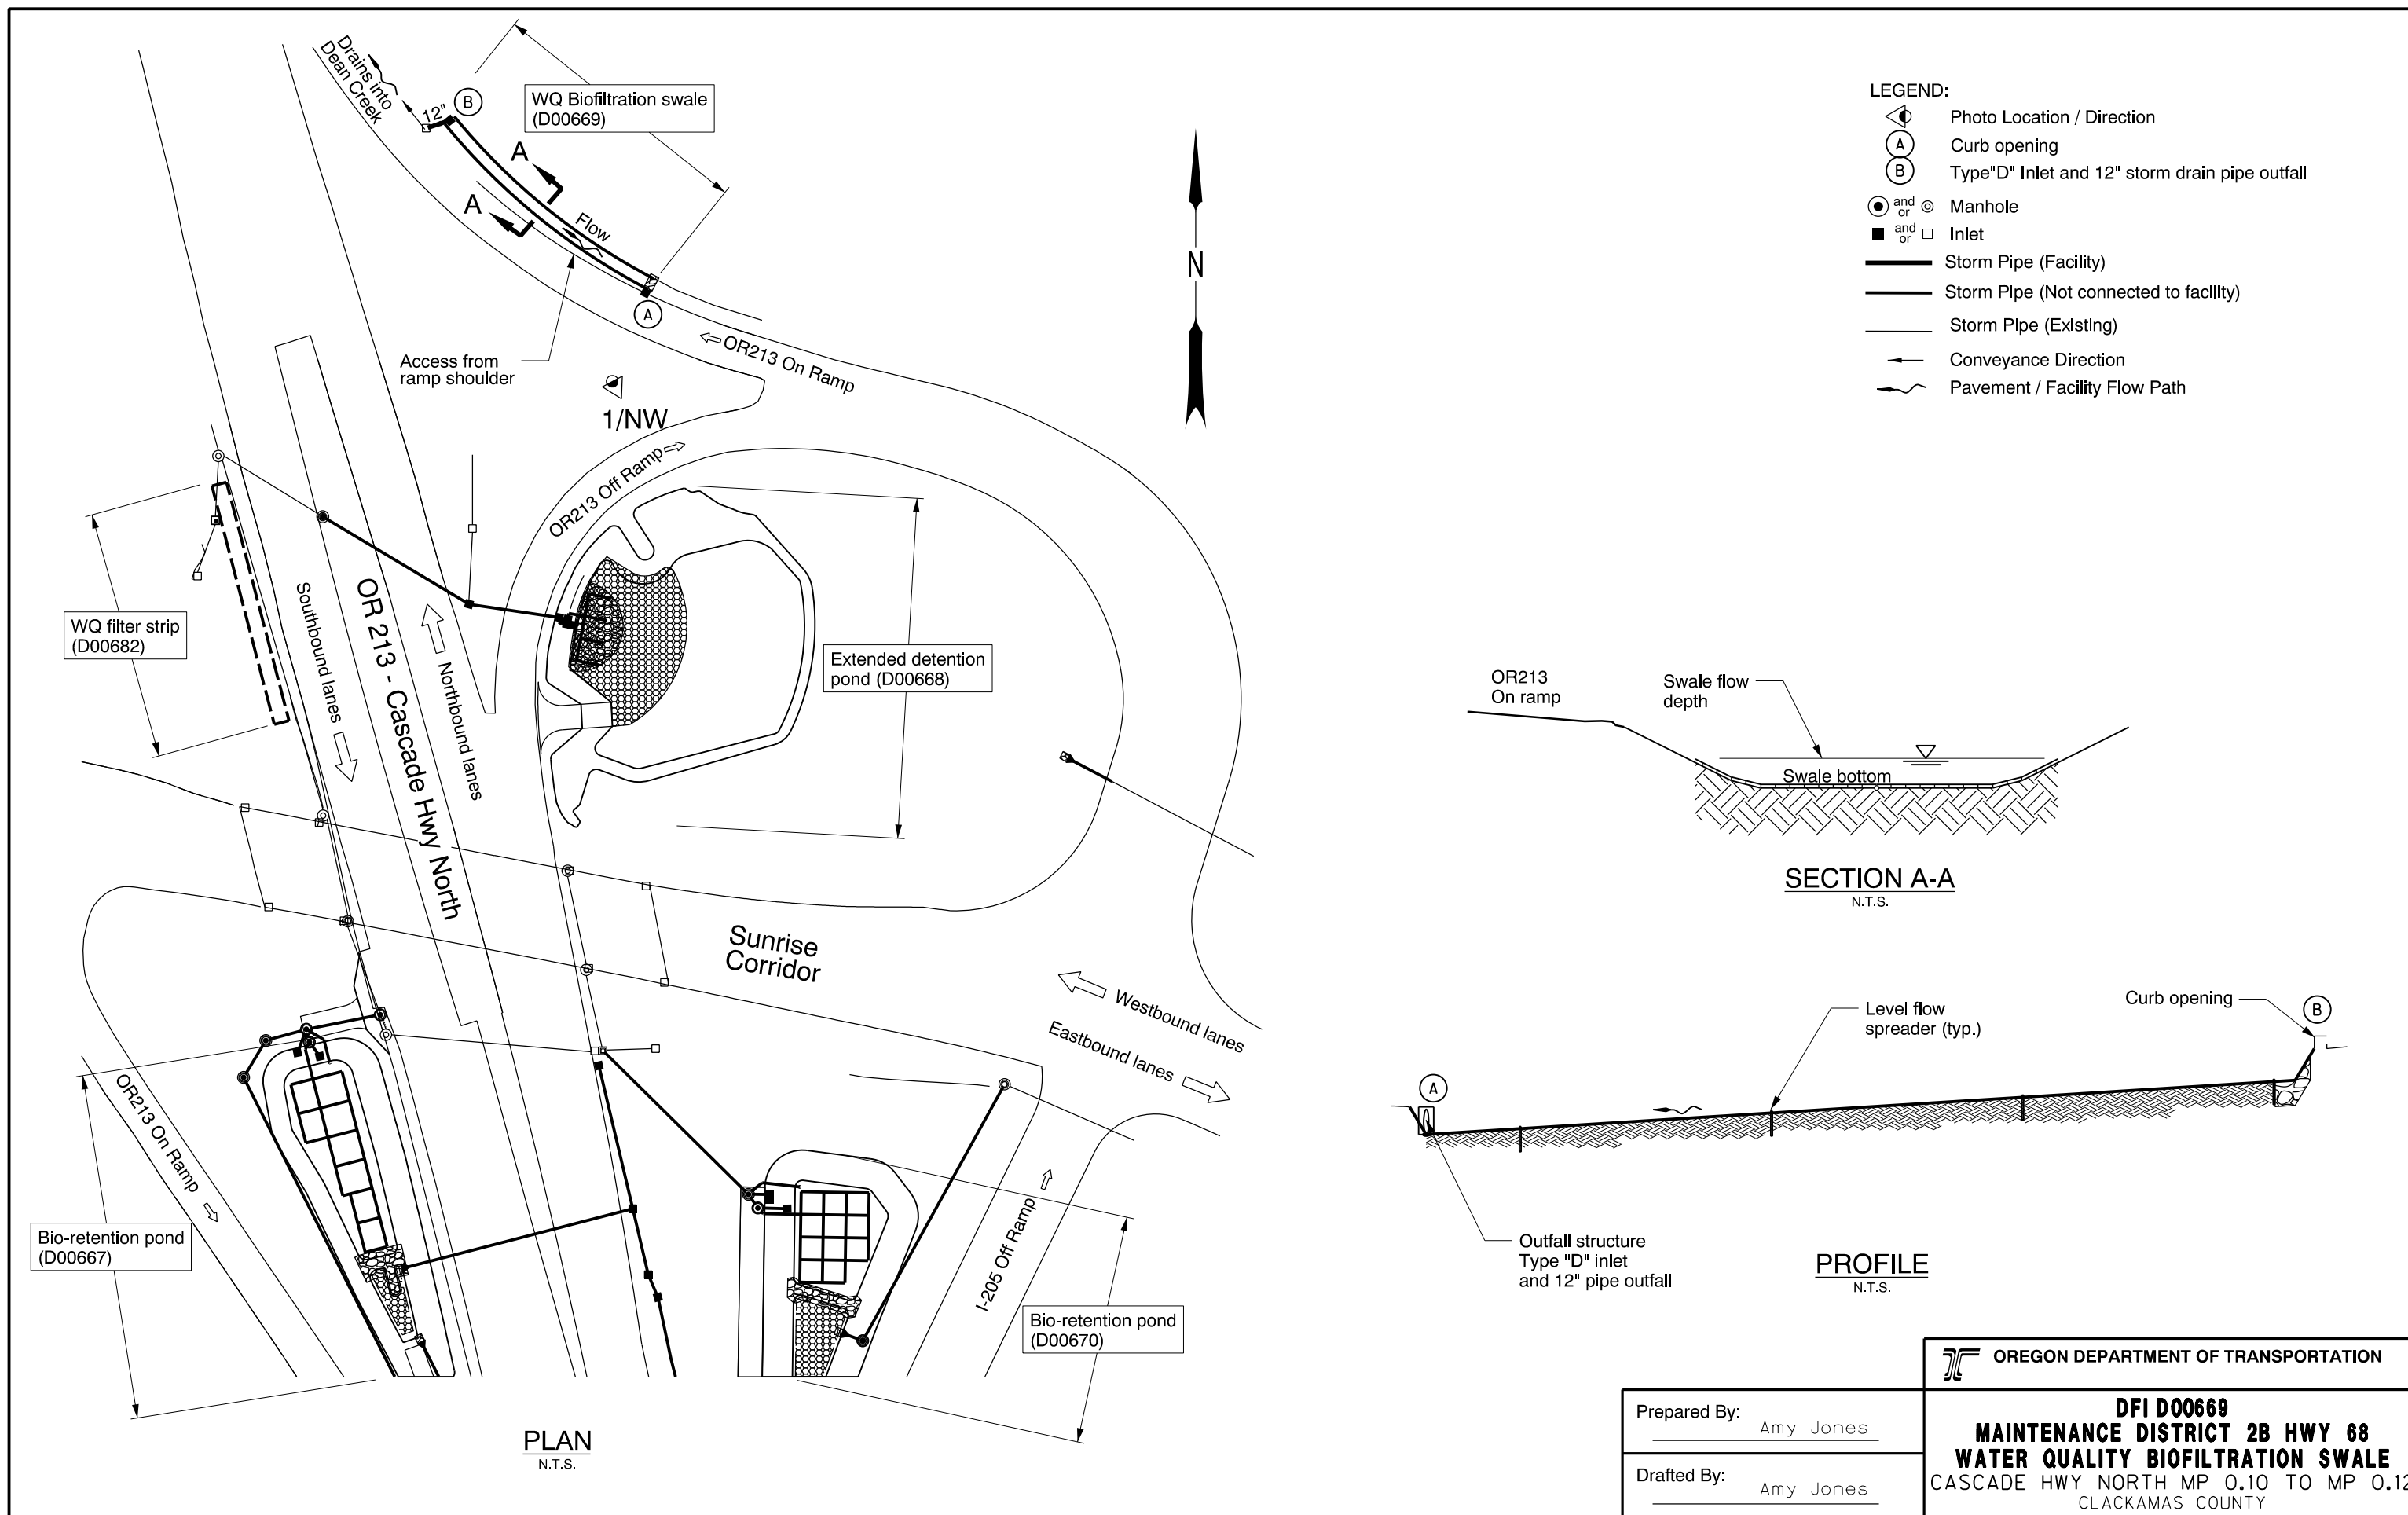

Contact any of the following for more detailed information about management of waste materials found on site:

ODOT Clean Water Unit	(503) 986-3008
ODOT Statewide Hazmat Coordinator	(503) 229-5129
ODOT Region Hazmat Coordinator	(503) 731-8290
ODEQ Northwest Region Office	(503) 229-5263
