OPERATION & MAINTENANCE MANUAL

DFI No. : D00763
Facility Type: Water Quality Biofiltration Swale

JUNE, 2017

INDEX

1. Identification

Drainage Facility ID (DFI):	**D00763**
Facility Type:	Water Quality Biofiltration Swale
Construction Drawings:	46V-113
Location:	District: 08
	Highway No.: 001
	Mile Post: 24.75; 24.82 (beg./end)
	Description: This facility is located in the west side of southbound I-5. Access to the facility can be obtained along the shoulder of I-5 Southbound.

2. Facility Contact Information

Contact the Engineer of Record, Region Technical Center, or Geo-Environmental's Senior Hydraulics Engineer for:

- Operational clarification
- Maintenance clarification
- Repair or restoration assistance

Engineering Contacts:

Region Technical Center Hydro Unit Manager

Or

Geo-Environmental Senior Hydraulics Engineer (503) 986-3365.

3. Construction

Engineer of Record:	DeLanie Cutsforth – Region 3 Tech Center, White City, (541) 774-6326
Facility construction:	2016
Contractor:	Hamilton Construction Co.

4. Storm Drain System and Facility Overview

A water quality swale is a flat-bottomed open channel designed to treat stormwater runoff from highway pavement areas. This type of facility is lined with grass. Treatment by trapping sedimentation occurs when stormwater runoff flows through the grass.

This facility is located along the southbound lane of I-5 (No. 001). Access for this facility is available from the western shoulder of southbound I-5. Stormwater enters the facility via roadway runoff and a drainage ditch located along the western side of southbound I-5. As the water flows north it is treated as it slows and spreads out within the swale before outfalling into an existing ditch.

A. Maintenance equipment access:
   This facility can be accessed from the southbound I-5 (Hwy 001) shoulder.

B. Heavy equipment access into facility:

   ☒ Allowed (no limitations)
   ☐ Allowed (with limitations)
   ☐ Not allowed

C. Special Features:

   ☒ Amended Soils
   ☒ Porous Pavers
   ☐ Liners
   ☐ Underdrains

5. Facility Haz Mat Spill Feature(s)

The water quality biofiltration swale can be used to store a volume of liquid by blocking the facility outlet through use of sandbags.

6. Auxiliary Outlet (High Flow Bypass)

Auxiliary Outlets are provided if the primary outlet control structure can not safely pass the projected high flows. Broad-crested spillway weirs and over flow risers are the two most common auxiliary outlets used in stormwater treatment facility design. The auxiliary outlet feature is either a part of the facility or an additional storm drain feature/structure.

The auxiliary outlet feature for this facility is:

☐ Designed into facility

☒ Other
There are no auxiliary outlets built into this facility. In the event that flows exceed design flows the water will overtop the swale.

7. Maintenance Requirements

Routine maintenance table for non-proprietary stormwater treatment and storage/detention facilities have been incorporated into ODOT's Maintenance Guide. These tables summarize the maintenance requirements for ponds, swales, filter strips, bioslopes, and detention tanks and vaults. Special maintenance requirements in addition to the routine requirements are noted below when applicable.

The ODOT Maintenance Guide can be viewed at the following website:

http://www.oregon.gov/ODOT/HWY/OOM/MGuide.shtml

Maintenance requirements for proprietary structures, such as underground water quality manholes and/or vaults with filter media are noted in Appendix C when applicable.

The following stormwater facility maintenance table (See ODOT Maintenance Guide) should be used to maintain the facility outlined in this Operation and Maintenance Manual or follow the Maintenance requirements outlined in Appendix C when proprietary structure is selected below:

☒ Table 1 (general maintenance)
☐ Table 2 (stormwater ponds)
☒ Table 3 (water quality biofiltration swales)
☐ Table 4 (water quality filter strips)
☐ Table 5 (water quality bioslopes)
☐ Table 6 (detention tank)
☐ Table 7 (detention vault)
☐ Appendix C (proprietary structure)
☐ Special Maintenance requirements:

Note: Special maintenance Requirements Require Concurrence from ODOT SR Hydraulics Engineer.

8. Waste Material Handling

Material removed from the facility is defined as waste by the Department of Environment Quality (DEQ). Refer to the roadwaste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options:

http://www.oregon.gov/ODOT/Maintenance/Documents/ems_manual.pdf

Contact any of the following for more detailed information about management of waste materials found on site:

ODOT Clean Water Unit (503) 986-3008
ODOT Statewide Hazmat Coordinator (503) 667-7442
ODOT Region 1 Hazmat Coordinator (503) 731-8290
ODOT Region 2 Hazmat Coordinator (503) 986-2647
ODOT Region 3 Hazmat Coordinator (541) 957-3594
ODOT Region 4 Hazmat Coordinator (541) 388-6186
ODOT Region 5 Hazmat Coordinator (541) 963-1590
ODEQ Northwest Region Office (503) 229-5263

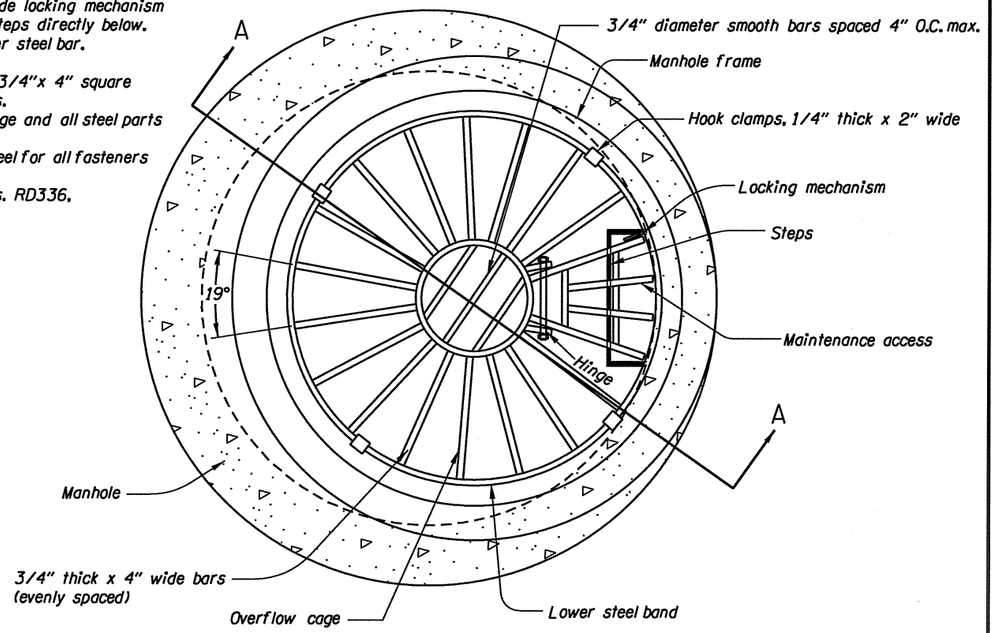
PROFILE

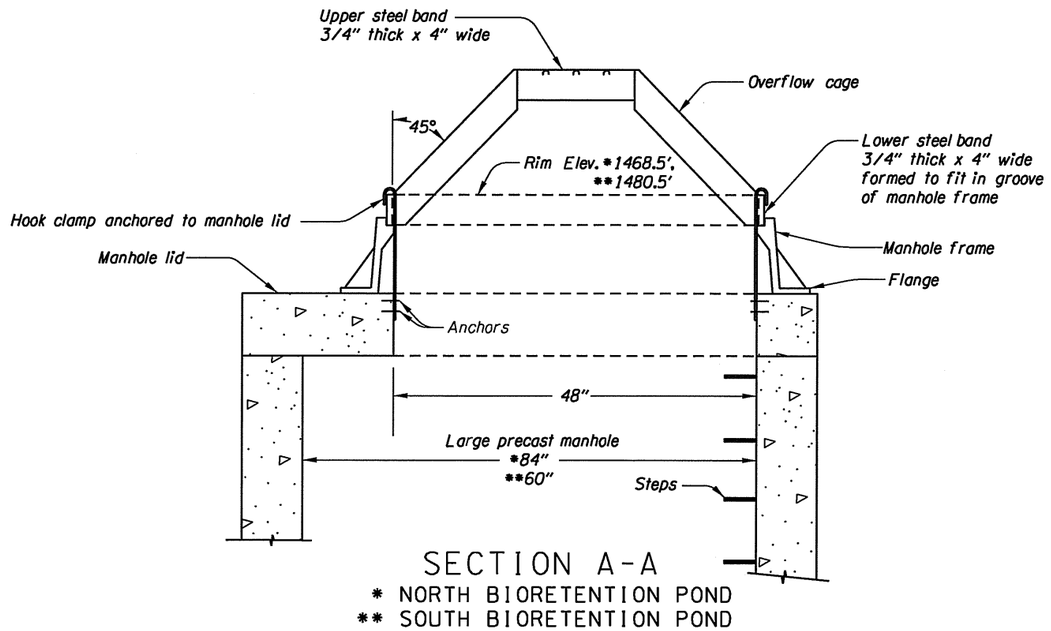
SHEET NO. 3C

MODIFIED MANHOLE WITH OVERFLOW CAGE TOP

(not to scale)

Notes:
1. All metal parts corrosion resistant.
2. Provide maintenance access by welding 4 cross bars to vertical bars as shown. Hinge upper ends with bolted flanges and provide locking mechanism on lower end. Locate ladder steps directly below.
3. Place 4 hook clamps over lower steel bar. Anchor to mahole lid.
4. Construct overflow cage with 3/4"x 4" square edge steel bars. Weld all joints.
5. Hot-dip galvanize overflow cage and all steel parts after fabrication.
6. Use galvanized or stainless steel for all fasteners and hardware.
7. To be accompanied by drg. nos. RD336, RD346 & RD356.





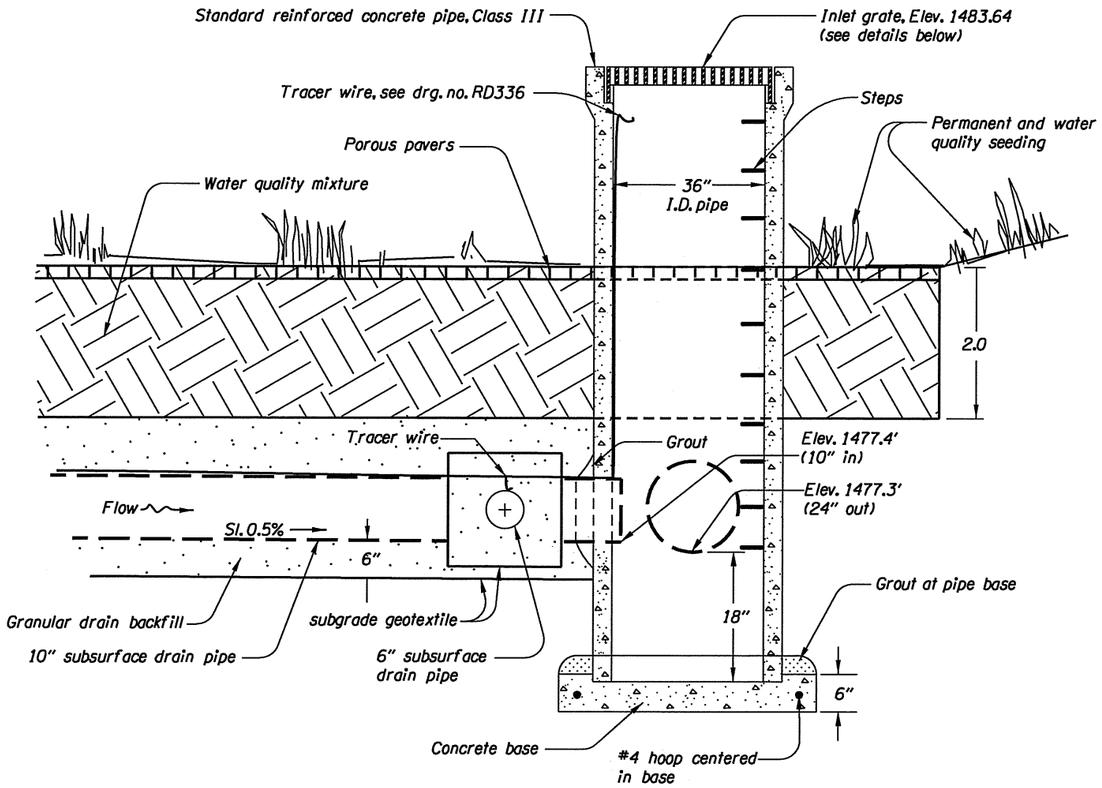
SECTION A-A

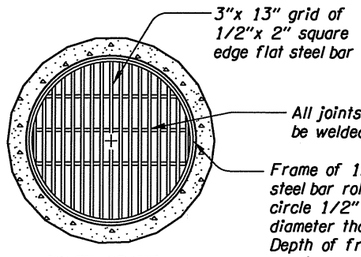
* NORTH BIORETENTION POND
** SOUTH BIORETENTION POND

DETAIL "B" - FIELD INLET

46V-113

(not to scale)





INLET GRATE

Notes:
1. Elevations shown are based on NAVD 1988 datum.
2. All dimensions shown are in feet unless otherwise noted.
3. All reinforcement shall be 2" clear of nearest face of conc.
4. All connecting pipes shall have a flexible, gasketted, and unrestrained joint within 18" of vertical 36" I.D. pipe. Joint type varies with manufacturer.
5. To be accompanied by drg. nos. RD312, RD336 & RD374.

11	10B-2 (54)	"GR" 412+68.0 to "GR" 413+99.0, Rt.	2.0	0.06

NOTES:
1. Construct spreader board level.
2. Extend spreader board a minimum of 3 feet into side slopes.
3. Reinforce side slopes at flow spreader locally with 1½"–¾" granular drain backfill material..
4. Fasten wood stakes to spreader board with 2½" galvanized wood screws every 3" (minimum).
5. Place plastic board flow spreader at beginning and end of swale and every 50 feet throughout length of biofiltration swale.
6. Install matting according to RD1055. Omit check slots. (2)
7. Install Type S2 markers at beginning and end of biofiltration swale. See sheet GJ-10 for details.

1½"–¾" Granular Drain Backfill Material

Water quality mix

Note: All dimensions are in feet unless otherwise noted.

Notes:

1. *Paddle:*
   - *Aluminum sheet, nominal thickness 0.050"*
   - *White non-reflective background*
   - *Mount paddle to one (1) type 1U steel post using 3/16" diameter aluminum blind rivets and washers. See standard drawing TM570 detail labeled "Steel Posts" for mounting a traffic target. Install paddle onto Type 1U steel post using same hole pattern.*
   - *Text and numbers are type C font in non-reflectorized black*
   - *Band is non-reflective blue tape*
   - *Do not mount paddle to other highway signing posts*
   - *Install paddle parallel to travel lane*
   - *Prepare paddle for each "DFI" noted in the marker table*
2. *Steel Posts:*
   - *See drg. no. TM571 for type 1U steel post dimensions*
3. *Place 7 feet from edge of pavement or as directed.*
4. *See marker table for installation locations.*
