# Identifying the “What”

## Comprehensive

A robust, person-centered, integrated treatment system is available to all Oregonians who need it.

## Accessible

Oregonians should be able to connect with treatment that matches their needs quickly

### AND

Experience seamless transitions between levels of care

## High Quality

Oregonians can trust that treatment options are high quality, informed by the latest evidence of effectiveness.

## Vision/Values Question:

What would be DIFFERENT in the treatment system in Oregon if your strategic priorities were successful?

- What are the **Components** of a fully functional system?
- How easy is it for an individual to first **Access** the initial care they need?
- How do we ensure seamless **Transitions** between levels throughout someone's recovery journey?
- How do we define **Quality** within each component of the treatment system?
  
- What **Data/Information** does the Treatment Committee Need to answer these questions?
- Are there **educational topics** you want to learn more about to assist in your strategy work?
  - Examples financial models, best practices, models from other states, etc

Thank you!
