State of Oregon StateRAMP Adoption

Designated Procurement Officer (DPO)

June 26, 2024

Sherri Yoakum, CSS Business Security Advisor Manager

Introduction to StateRAMP

Oregon is in the process of adopting the StateRAMP vendor authorization process.

▶ StateRAMP represents the shared interests of state and local governments, third party assessment organizations, and service providers with IaaS, SaaS, and PaaS solutions.

▶ StateRAMP works to bring together service providers, policy makers, industry experts, and government officials to drive the future of cybersecurity.

StateRAMP

▶ StateRAMP is built on the National Institute of Standards and Technology Special Publication 800-53 version 5 framework, modeled in part after FedRAMP, and based on a "complete once, use many" concept that saves time and reduces costs for both service providers and governments.

▶ Like FedRAMP, StateRAMP relies on FedRAMP Authorized 3rd Party Assessor Organizations (3PAO) to conduct assessments.

ENTERPRISE
information services
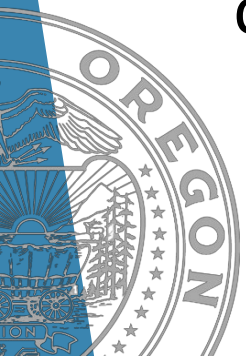

What does StateRAMP in Oregon mean for agencies?

▶ Streamlined RFP's/RFQ's and contracting procurement and identifying a safe and secure vendor.

▶ Oregon follows NIST 800-53 standards for cybersecurity but lacks pre-procurement audits. StateRAMP would fill this gap with upfront and continuous security checks.
