

Student Sample B

Grade 3 Opinion Writing Performance Task: Honey Bees

There are lots of bees in the area but there are problems. One of the problems' is that bee's build nests in building's, houses and sheds. If they are in large groups they can make lots of damage to our property (source 3). I think that problem will be solved if we can take the honey bees away before they make more honey bees. Another problems is that if there is lots of honey bees they can attack you all at once. And that would hurt because one little sting really hurts but imagine one hundred times the much of one sting that would really hurt (source 3). I think the problem can be solved if we limit the bees in everybody yards to about 30-45. That's how I think we can solve the problems.
