OPERATION & MAINTENANCE MANUAL

Water Quality Bioslope

Manual prepared: February 2019

DFI No. D01220

Figure 1: DFI No. D01220, looking south

Facility Specific O&M Manual – Modified Bioslope

1. Identification

Drainage Facility ID (DFI):	D01220
Facility Type:	Water Quality Bioslope/Media Filter Drain
	(MFD)
Construction Drawings:	(V-File Numbers) 43V-086
Location:	District: 2B
	Highway No.: 047
	Mile Post: 65.36 to 65.50, [Right side]

2. Manual Purpose

The purpose of this manual is to outline inspection needs and summarize maintenance actions.

3. Facility Location

The location map below details the facility location. The highway, mile posts, side streets, access location, and stormwater flow directions are noted on the map. **NOTE: Mile posts are based off of the V-File, and may vary from TransGIS mile posts.**

Facility location type: Roadway shoulder

Flow direction: East

Figure 2: Facility map

2

Facility Specific O&M Manual – Modified Bioslope

4. Facility Summary

The width is measured perpendicular to the edge of pavement and is equivalent to the flow length. The length is measured parallel to the edge of pavement and is equivalent to the length of the contributing impervious area.

The length and width of the applicable facility components are:

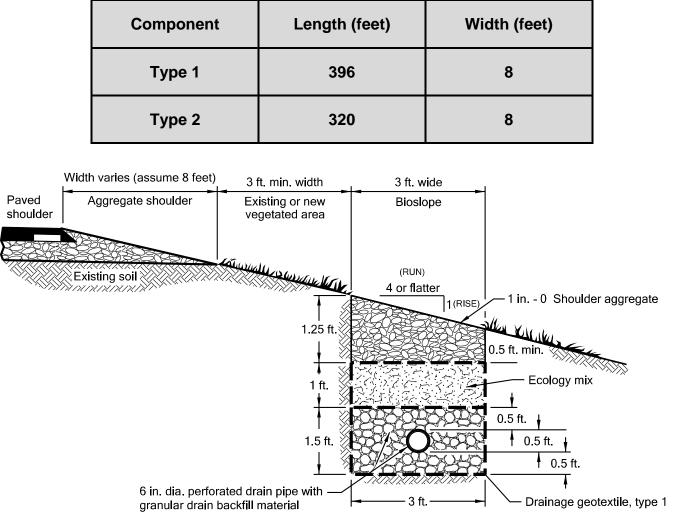

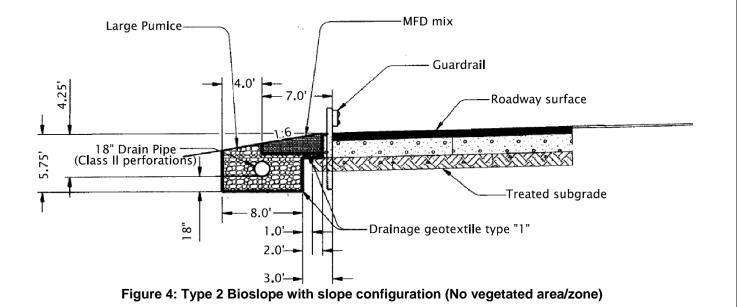

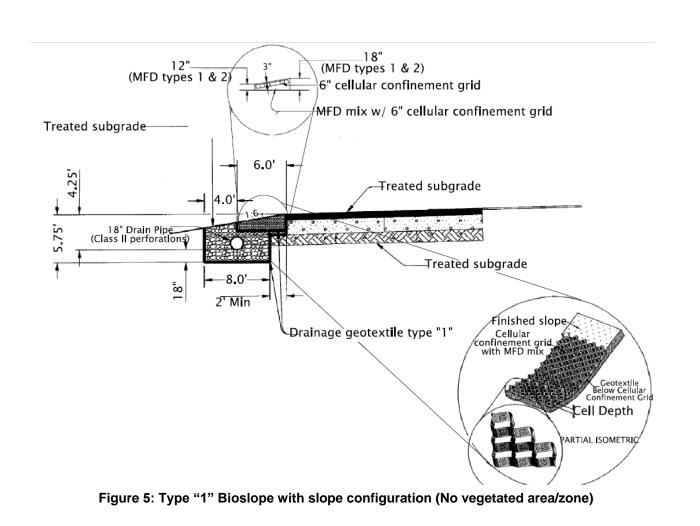

Figure 3: Bioslope Section (Typical)

The slope of the facility is presented by a vertical distance (rise) followed by the horizontal distance (run).

Side Slope	Rise (feet)	Run (feet)	
Type 1	1	6	
Туре 2	1	6	

4

<u>Site Specific Information</u>: There are two types of bioslopes within this one water quality facility. The Type 2 bioslope is 320 feet long from mile points 65.37 - 65.42. Type 2 has a guardrail in place and no confinement grid (See Figure 4). The Type 1 bioslope is 396 feet from mile points 65.42 - 65.50 (See Figure 5). The water flows through the facility and out into a drain pipe. The water then flows through D01222 and ultimately into Willow Creek.

The facility is a modified version of the typical bioslope (Figure 3). The main difference is the exclusion of a vegetation area between the edge of pavement and the bioslope section. This was developed as a result of right of way limitations, and in some locations, the prohibitive costs of moving adjacent high voltage line and frontage road.

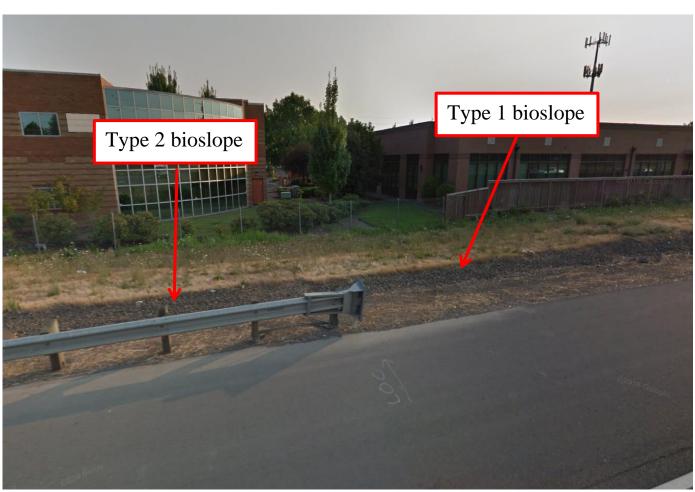

Figure 6: Type 1 and 2 bioslopes

5. Facility Access

Maintenance access to the facility:

□Roadside pad	⊠Roadside shoulder		
□ Access road with Gate	□Access road without Gate		

Figure 7: Maintenance Access

7 Facility Specific O&M Manual – Modified Bioslope

6. Operational Components / Maintenance Items

Classification and Standard Operational (Op) Plan:

This facility is classified as a:

Filter Strip (Op Plan A)	⊠ Bioslope (Op Plan B)			
A filter strip consists of a vegetated or media slope located parallel to the edge of pavement. It maintains sheet flow of stormwater runoff over the width of the strip.	A bioslope consists of a filter strip and treatment zone. It is a flow-through stormwater treatment facility located along roadside embankments.			
A standard operational plan illustrates the general facility footprint configuration and explains the purpose of each facility component. Operational plans (A, B) are provided in the Standard				

See Appendix A for the site specific operational plan.

Operational Components

Operation Manual.

Filter strips and bioslopes have many components that assist with treatment, conveyance, and infiltration of stormwater runoff. The components in use can vary depending on the facility design. The facility components table (Table 1) has been provided to highlight the applicable components for this facility. The component is in use when the box contains an "x" (e.g. \boxtimes).

The Standard Operation Manual for Water Quality Filter Strips and Bioslopes (implemented February 2019) outlines facility operation, typical footprint configuration, and component definitions and details. A link to the manual is attached to the feature marker in TransGIS.

8

Maintenance Items

Operational components marked in Table 1 should be inspected and maintained according to Section 7. Each facility component is defined and detailed in the Standard Operation Manual using the associated ID number indicated below.

Table 1: Bioslope/Filter Strip Components				
Facility Inlet				
Pavement Sheet Flow	\boxtimes	B1		
Flow Spreader		B2		
Ground Cover				
Vegetated Slope		B3

Outfall Channel		B18		
Storm Drain System		B19		
Outfall Components				
Pervious Berm		B20		
Riprap Pad		B21		

7. Maintenance

Maintenance Frequency/Maintain Records

- a. Inspect annually. Preferably prior to the rainy season.
- b. Clean and maintain as necessary. Refer to Activity 125 for conditions when maintenance is needed.
- c. Keep a record of inspections, maintenance, and repairs.

Maintenance Guide/Maintenance Actions

The ODOT Routine Road Maintenance Water Quality and Habitat Guide (the *Blue Book*) outlines the standard maintenance actions for water quality facilities under Activity 125.

There are standard maintenance tables for standard ODOT designs. The maintenance tables describe the maintenance component, the defect or problem, the condition when maintenance is needed, and the recommended maintenance to correct the problem. Use the following tables to maintain ODOT filter strips and bioslopes:

- Table 1 (General Maintenance): Contains general maintenance and inspection guidelines that are applicable to all ODOT water quality facilities
- Table 4 (Water Quality Filter Strips)
- Table 5 (Water Quality Bioslopes)

The ODOT Maintenance Guide can be viewed at the following website: http://www.oregon.gov/ODOT/HWY/OOM/pages/mguide.aspx

The *Blue Book* can be viewed at the following website: <u>http://www.oregon.gov/ODOT/Maintenance/Documents/blue_book.pdf</u>

8. Limitations

Filter strips and bioslopes are NOT designed to allow the use of heavy equipment. Vehicles entering the facility can create depressions (tire ruts), damage vegetation, and damage structural components (e.g. flow spreaders). These conditions may result in poor treatment and drainage performance.

9. Waste Material Handling

Material removed from the facility is defined as waste by the Department of Environmental Quality (DEQ). Refer to the road waste section of the ODOT Maintenance Yard Environmental Management System (EMS) Policy and Procedures Manual for disposal options:

http://www.oregon.gov/ODOT/HWY/OOM/pages/ems.aspx

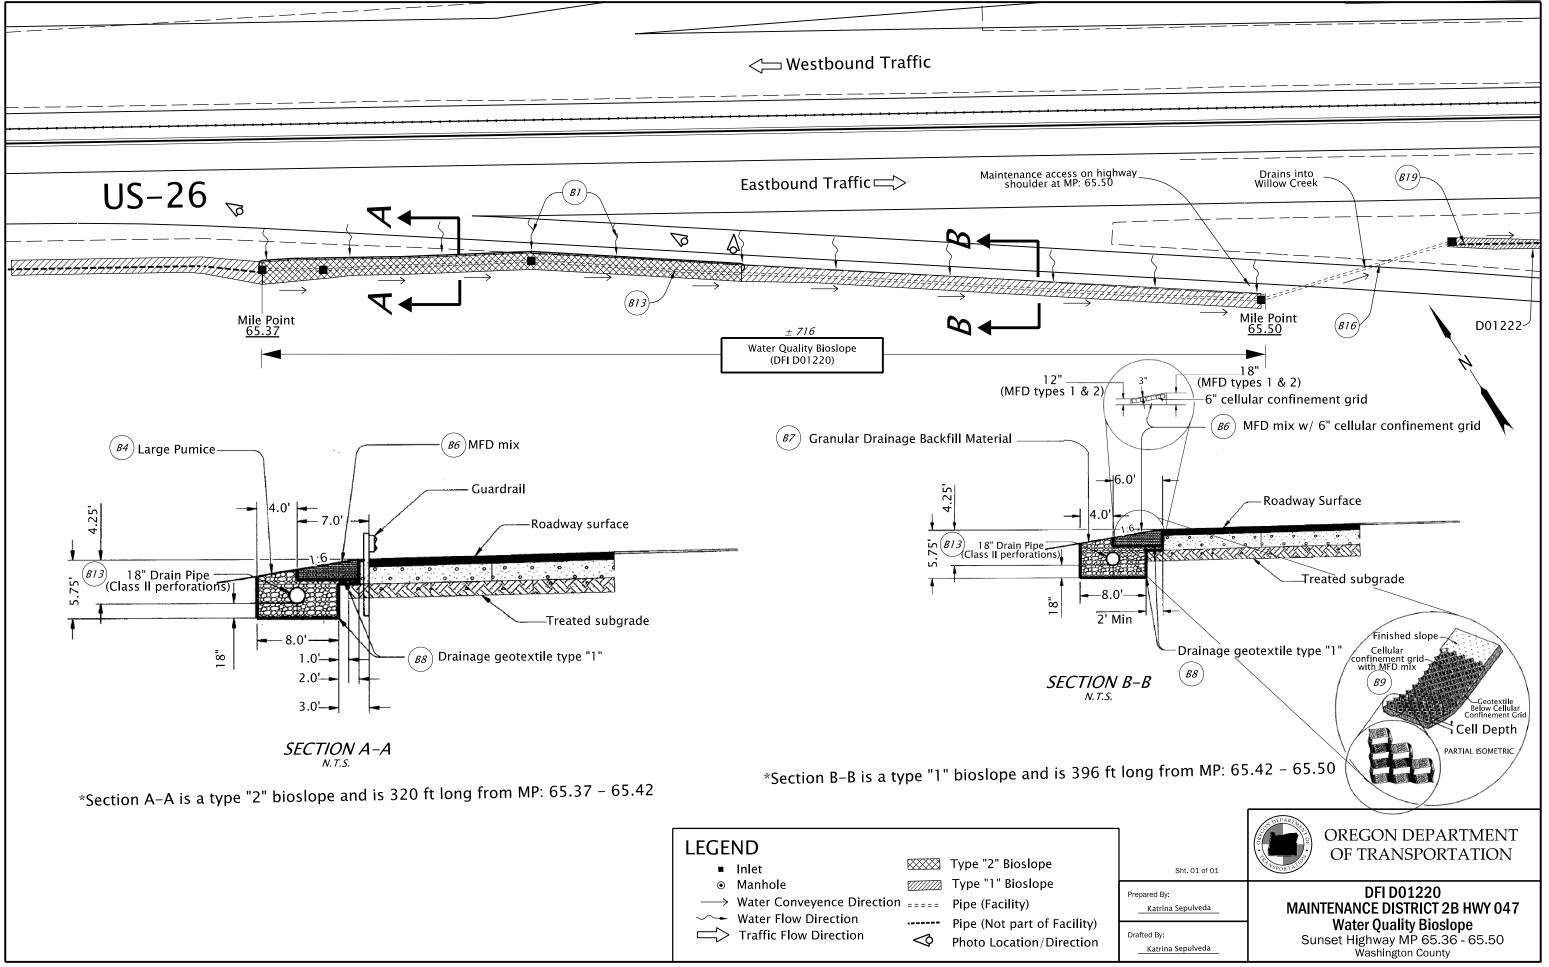

Contact any of the following for more detailed information about management of waste materials found on site:
