Many Oregon reservoirs have rising water levels, and rivers are full and running fast. This means the water is cold and there is significant floating debris. Remember to check and report boating obstructions [Boating Obstruction Reporting Tools \(arcgis.com\)](#)

The Bureau of Land Management would like to remind you that whenever you enter a burned area, there remains a potential for hazards including falling trees

and limbs, debris flows, falling rocks and other safety concerns. Please be aware of your surroundings.

Want to avoid being a #boatrampchamp? Check out [this link](#) for some tips on proper launching of your vessel. Proper launching techniques increase safety, help keep the flow of traffic moving at launch sites, and decrease the wear and tear on ramps, docks, and CVA equipment. Launching and docking fall squarely into the category of slow and steady wins the race.

Agate Lake
